DIuerſitate etiam locorum differentia oritur. Vt enim locis nõnullis gigni omnino aliqua nequeunt, ſic aliis generantur quidem ſed pauciora, & vita breuiore, nec proſpera. Locis etiam vicinis diſcrimen huiuſmodi exiſtit: vt agri Mileſij locis ſibi propinquis cicadæ alteris gignuntur, alteris non. Amnis in Cephallenia inſula dirimit, cuius citra alterum latus cicadarum copia eſt, vltra alterum nullæ. In Pordoſelena, via interiacet, cuius vltra alterum latus gignitur cattus, citra alterum gigni non poteſt. Terræ Bœotiæ in Orchomenio agro talpæ habentur multæ: at in Lebadico vicino nullæ ſunt, neque ſi aliunde portatæ eò fuerint, volunt infodere. In Ithaca inſula lepores ſi aliunde illati dimittantur, viuere nequeunt: ſed eodem reuerſi, vnde maris introierint inſulam, moriuntur. In Sicilia formicæ, quæ equites appellantur, non ſunt. In Cyrenenſi agro ranæ vocales præterito tempore deerant. In Africa non aper, non ceruus, non capra ſylueſtris eſt. India, teſte Cteſia, quanquam non fide digno, ſuem nec ferum, nec manſuetum habet. Quæ autem ſanguine carent, & quæ ſeceſſus tempore conduntur, grandiora nimirum illa poſſidet. In Ponto neque mollia ſunt, neque teſtata, niſi locis quibuſdam pauca. In mari rubro teſtata omnia mira quadam magnitudine augẽtur. In Syria oues ſunt caudi lata ad cubiti mẽſuram. Capræ auriculis menſura palmari, & dodrantali, ac nonnullæ demiſſis, ita vt ſpectent ad terram. Boues nodos ſcapularum ſectunt, vt cameli. In Cilicia capræ tondentur, vt alibi oues. In Africa arietes ſtatim cornigeri generantur, nec ſolùm mares, vt Homerus ſcribit, ſed etiam fœminæ. Contrà, in Ponto per prouinciam Scythicam nullis cornua enaſcuntur. In Ægypto aliqua maiora quàm in Græcia, fiunt, vt boues, & oues: aliqua minora, vt canes, lupi, lepores, vulpes, corui, accipitres: aliqua magnitudine pari, vt cornices, & capræ. Cuius rei cauſam attribuunt cibo, qui aliis largè, aliis parcè ſit, vt lupis & accipitribus. Carniuoris enim parum cibi ſuppeditatur, propter raptus quo viuunt, penuriam: aues enim minores paucæ ibi habentur. Lepori verò, omníque non carniuoro generi, victus ieiunior ob eam rem eſt, quòd neque nuces nec poma ſunt diuturniora. Tum etiam multis locis, cæli, & ſitus conditio cauſæ eſt: vt in terra Illyrica, & Thracia, & in Epiro, aſini parui habentur: in Scythica, & Gallica nulli, propter immodicum frigus. In Arabia lacerti magnitudine cubitum excedunt. Mures etiam multo ſoricibus ardiores, quibus crura priora vel palmi menſura, poſteriora ad primum digiti nodum habentur. In Africa magnitudo anguium mira, ſicut & fertur. Iam enim nõnulli vbi triremi applicuiſſent, oſſa boum multorum vidiſſe narrant, quos abſumptos eſſe ab anguibus non dubitarent, cùm triremes productas in altum, quàm primùm angues inſectarentur, & nonnulli aggreſſi triremem euerterent. Item leones in Europa potiùs ſunt, & ea Europæ parte, quæ inter Acheloum amnem & Neſſum eſt. Pantheræ in Aſia, in Europa autem nullæ.

Beſtiæ denique omnes ferè efferatiores in Aſia ſunt, fortiores in Europa, multiformiores in Africa. Vnde prouerbio quodam dicitur: Semper aliquid noui Africam afferre. Facit enim illius ſiti aquarum penuria, vt feræ eodem concurrant bibendi cauſa: quo quidem loco etiam quæ alienigenæ ſunt, coeunt, & generant. quorum tempora eadem ferendi vteri ſint, & magnitudines non multo inter ſe diſcrepent. Redduntur mitiores inter ſe deſiderio fluuij: nam & contrà, quam cætera, potum quærunt: tempore enim hyberno magis quam æſtiuo. Inſuetum namque his eſt bibere æſtate, propterea quod imbres fieri per id tempus non ſoleant: & mures quidem, cùm biberint, moriuntur. Sed vel alibi coitu alienigenarum procreari apertum eſt: vt in Cyrenenſi agro, lupi cum canibus coeunt, & Laconici canes ex vulpe & cane generantur. Indicos etiam canes ex tigride & cane gigni confirmant: verùm non ſtatim, ſed tertio coitu: primo enim belluinos adhuc catulos procreari aiunt. alligantur canes locis deſertis, & niſi bellua incenſa libidine ſit, ſæpe lacerantur.

CAPVT XXIX.

Mores etiam animalium pro locorum qualitate differre, venenaque ſerpentum, vel mitiora vel aſperiora effici.

MOrum etiam diuerſitatem loca efficiunt: vt montana & aſpera ſuas beſtias reddunt & aſpectu efferatiores, & viribus robuſtiores, quam plana & molliora. argumento vel ſues Athimontis acceperim, quorum ne fœminas quidem ſpectare mares ſitus inferioris audent. Morſus etiam belluarum ex locorum diuerſitate plurimùm differunt: vt in Pharo, locíſque aliis, ſcorpiones non lædunt: at aliis, & præcipue in Scythia, multi, & magni, & nocui ſunt. Et, ſi vel hominem, vel quãuis beſtiam percuſſerint, interimunt. Nec ſues euadere poſſunt, quanquam cæteros virulentos ictus minimè ſentiunt: & nigri eorum potiſſimùm interimuntur. Quiſque tamen celerrimè interit, ſi ictus adierit aquam. Anguium quoque ictus per loca plurimùm differunt. aſpis enim anguis, ex quo medicamentum putrificum illud componunt, in Africa gignitur, cuius ictui nullum remedium eſt. Naſcitur eodem in agro, in quo laſer, ſerpens quidam puſillus, cuius remedium lapis eſt, quem ex ſepulchro cuiuſdam regis antiqui accipiunt, eóque perfuſo ex vino bibunt. Italiæ locis quibuſdam morſus etiam ſtellionum exitiales ſunt. Sed omnium venenatorum morſus grauiores ſunt, ſi alterum ederit alterum, vt ſcorpium deuorari à vipera certum eſt. Plurimis verò eorum aduerſatur ſaliua hominis. Serpens quidam minutus eſt, quem aliqui ſacrum appellant, quem angues prægmagni fugiunt. magnitudo huic ad cubitum, ſpecies hirſuta. quicquid momorderit, continuò circiter putreſcit. Eſt præterea in Indica regione ſerpens paruus, cuius vnius remedio carent incolæ.

CAPVT XXX.

Quo tempore piſcium genera præſtantiora in cibum reddantur.

DIſcrimen animalium vt proſperè contráve exigant, vel vtero pleno, exiſtere nouimus. Teſta enim intecta, vt pectines, omnéque oſtrearium ſiue concharium genus, atque etiam cruſta intecta, tunc optima ſunt, cùm grauida, vt latè in locuſtis & reliquis huiuſmodi patet. Sed quanquam teſta intecta grauida dicimus, tamen nullum eorum vel coitum vel partum videmus. Cruſta intecta nimirum & coire & parere percipiuntur. Mollia etiam præſtant, cùm grauida ſunt, vt lolligines, ſepiæ, polypi. Piſces, cùm impleri incipiunt coitu, boni omnes ferè ſunt; ſed procedente vteri tempore, alij præſtant, alij non. Alec, ſiue mæna, vtero grauis melior eſt: forma rotundior fœminæ, porrectior mari, & latior. Euenit vt cùm fœtu impleri fœmina incipit, maris color in nigriòrem, pluréſque varietates, mutetur, & caro deterrima cibo efficiatur. Vocantur à nonnullis per id tempus hirci. Mutantur piſces, qui merulæ, & qui turdi appellantur, atque etiam ſquillæ: vêre enim nigreſcunt, poſt ver albedinem ſuam recipiunt. Phuca etiam mutat colorem: cùm enim cæteris temporibus candida ſit, verno varia redditur. Solam hanc ex marinis piſcibus nidum ſibi conſternere, atque in ſtragula parere aiunt. alec etiã mutatur, vt dixi, & cerrus, vt ex albedine rurſus æſtate ad nigredinem redeant: quod maximè ſuis pinnis & branchiis declarant. Coruulus etiam cùm vtero fert, optimus eſt, perinde vt alec: mugilis verò, & lupus, & reliqui ferè omnes ſquama intecti deteriores ſunt, cùm ferunt. Similes ſibi, ferentes & non ferentes pauci ſunt, vt glaucus. Vitiantur etiam ſenectute piſces, & quidem thũni, vel ad rem ſalſamentariam ſenes improbi ſunt: multum enim carnis abſumitur: quod idem vel in cæteris piſcibus euenit. Declaratur eorum ſenectus duritie, magnitudinéque ſquamarum. Iam captus eſt thunnus ſenex, cuius pondus erat ad talenta quindecim, & caudæ interuallum ad cubita quinque, & palmum. Flũuiatiles, & lacuſtres piſces optimi ſunt poſt partum, & ſeminis genitalis emiſſionem. Sed nonnulli etiam, cùm ferunt, commendantur, vt ſaperdis: alij damnantur, vt ſilurus: cùm cæteri omnes mares ſuis fœminis ſint præſtantiores. Silurus fœmina præſtat ſuo mari: & in genere anguillarum quoque meliores ſunt, quas fœminas nominant: quæ nomen fœminæ temerè acceperunt: non ſunt enim fœminæ: ſed quia aſpectu à cæteris diſcrepant, fœminæ appellantur.

De affectibus animorum omnium animalium, [illegible] quæ perpetuas inter ſe inimicitias gerunt, & earum cauſis.

B Mores animalium obſcuriorum, parúmque viuentium temporis, minùs ſenſu percipiuntur: viuaciorum euidentiores ſunt. Habere enim vim quandam naturalem animantes in quauis animi affectione videntur, hoc eſt, prudentia, ſtultitia, fortitudine, ignauia, clementia, acerbitate, & reliquis habitibus generis eiuſdem. In nonnullis etiam commune aliquid diſciplinæ eruditioniſque habetur. alia enim viciſſim inter ſe; alia ab homine (quæ ſcilicet auditu non carent) non modò ſtrependi, verùm etiam ſignificandi differentias poſſunt dignoſcere. In omnibus verò, quorum procreatio eſt, fœminam & marem ſimili ferè modo C natura diſtinxit moribus, quibus mas differt à fœmina: quod præcipuè tum in homine tum etiam in iis quæ magnitudine præſtent, & quadrupedes viuiparæ ſint, percipitur. Sunt enim fœminæ moribus mollioribus, miteſcunt celeriùs, & malum faciliùs patiuntur. Diſcunt etiam, imitantúrque ingenioſiùs: vt in genere canum Laconico, fœminas eſſe ſagaciores, quàm mares, apertum eſt. Molotticum etiam genus venaticum, nihilo à cæteris diſcrepat. at pecuarium longè & magnitudine, & fortitudine contra belluas præſtat. Inſignes verò animo & induſtria, qui ex vtroque, Molotticum dico, & Laconicum, prodierint. Sed fœminæ omnes minùs quàm mares, ſunt ani- D moſæ, excepta panthera & vrſa: fœminæ enim in his generibus eſſe videntur animoſiores, cùm in cæteris ſint proculdubio molliores: verùm malitioſiores, aſtutiores, inſidioſiores fœminæ ſunt, atque in enutrienda prole ſolicitiores. Mares contrà animoſiores, ferociores, ſimpliciores, minúſque inſidioſi. Quorum veſtigia morum cùm in omnibus ferè inſunt, tum vel maximè in perfectioribus, & præcipuè in homine: hic enim natura perfectiſſima eſt, & ob eam rem habitus iſti conſpectiores in eo ipſo continentur: ita quòd mulier miſericors magis, & ad lacrymas propenſior, quàm vir, eſt, inuida item magis, & querula, & ma- E ledicentior, & mordacior: præterea anxia, & deſperans magis quàm mas, atque impudentior & mendacior: quinetiam facilior decipi, meminiſſéque aptior: adhæc vigilantior, ſegnior, immobilior denique eſt, & minùs cibi deſiderans: mas verò iuuantior, vt modò dixi, & fortior eſt. Nam & in mollium genere, cùm ſepia icta eſt tridente, mas fœminam adiuuat, fœmina mare percuſſo fugam arripit. Pugnant inter ſe ipſa animalia, quæ loca eadem incolunt, atque eiſdem veſcuntur cibis.

Nam ſi victus penuria ſit, fit certè ob eam rem, vt vel eiuſdem generis animantes pugnam inter ſe conſerant. Et quidem marinos vitulos ſitus eiuſdem pugnare inuicem aiunt & marem cum mare, & fœminam cum fœmina, donec alter ab altero vel occidatur, vel eijciatur. Idémque eorum catulos facere. Carniuora etiam & oppugnantur à cæteris omnibus, & ipſa cum cæteris pugnant: quoniam victus his ab animalibus eſt. Vnde augures ſua diſſidia & conſidia colligunt. Diſſidio bella, omnémque diſcordiam ſtatuunt, conſidio pacem omnémque concordiam. Quòd ſi cibi copia ſuppetat, haud ſcio an ea quæ nunc metuunt, & ferociunt, inter ſe eant, manſuetéque cùm inter ſe eunt, cum homine etiam agant. Cuius rei indicium facit cura quam Ægyptij animantibus impendunt. Quòd enim apud illos cibo non carent, ſed copioſè aluntur, ideo collegio vel ipſa efferatiſſima degunt: manſueſcunt enim ſui commodi ratione. Quale ſe genus crocodili exhibet ſacerdoti locis quibuſdam, propter cibi curam, quæ ibi inſumitur. Quod idem fieri cæteris etiam locis intelligi licet. Diſſidet aquila cum dracone: veſcitur enim aquila anguibus. Ichneumo cum phalange: venatur enim phalanges ichneumo. Auium variæ dictæ, cum alaudis. Pipo cum lutea: oua enim inuicem exedunt. Cornix cum noctua: cornix enim meridie oua ſurripiens noctuæ, abſumit, cùm non clarè interdiu noctua videat. Noctua contrà, oua cornicis noctu exedit: éſtque altera interdiu, altera noctu potentior. Item noctua cum orchilo: nam is quoque oua exedit noctuæ. Sed die vel cæteræ auiculæ omnes noctuam nimirum circumuolant: quod mirari vocatur: aduolantéſque percutiunt. Quapropter aucupes ea conſtituta, auicularum genera multa & varia capiunt. Quinetiam qui rex auium appellatur, priuatas contra eandem inimicitias gerit. Muſtela inimicus cornicis eſt, quippe qui eius oua & pullos violet. Turtur cum ignaria pugnat: locus enim paſcendi victúſque idem eorum eſt. Galgulus cum lybio, miluus cum coruo: eripit enim miluus à coruo quicquid tenet, vt qui & vnguibus ſit præſtantior, & volatu. Ita fit, vt eos quoque victus ratio faciat inimicos. Adhæc interea, quæ cibum ſibi à mari petunt, anàs, gauia, & harpa, inuicem diſſident. Buteo in alio genere hoſtis ranæ & rubetæ, & anguis eſt: rapit enim eos atque exedit. Turtur & luteus pugnant. Occiditur à luteo turtur, & à cornice tympanus nomine. Colarem vlula, cæterique adunci rapiunt, vnde his oritur bellum. Inter ſtellionem etiam, & araneum, bellũ eſt: deuorátur enim aranei à ſtellione. Pipo inimica ardeolæ eſt: oua enim & pulli ardeolæ violantur à pipone. Salo prælium cum aſino eſt, propterea quòd aſinus ſpinetis ſua vlcera ſcabendi cauſa atterat: tum igitur ob eam rem, tum etiam quòd ſi vocem rudentis audierit, oua abigat per abortum, pulli etiam metu labantur in terram. Itaque ob eam iniuriam aduolans, vlcera eius roſtro excauat. Lupus aſino, tauro, & vulpi eſt hoſtis. Cùm enim carne ipſa alatur, boues inuadit, & aſinos, & vulpes. Hac eadem de cauſa, & cum circo accipitre vulpi inimicitiæ ſunt: circus enim, quia vnguibus eſt aduncis, & carne viuit, vulpem inuadit, ac vulnerat. Coruus tauro, & aſino aduerſarius eſt, quippe qui aduolans feriat, & eorum oculos laceret.

A Aquila etiam cum ardeola pugnat, vnguibus etenim valens aggreditur: hæc autem repugnando emoritur. Æſalo cum vulture: crex cum galgulo, & merula, & vireone, quem ex flagratione procreatum quidam fabulantur: nocet enim his, & eorum pullis. Sitta & trochilus aquila: ſitta enim oua aquilæ frangit: aquila tum ob eam rem, tum etiam quòd carniuora eſt, aduerſatur. Florus odio equum habet, pellitur enim ab equo pabulo herbæ qua veſcitur. Nubeculans hic, nec valens acie oculorum eſt, quippe qui vocem quidem equi imitetur, atque aduolans equum fuget: ſed interdum excipiatur occidatúrque ab equo. Colit hic paludes, & ripas. Coloris eſt pulchri & B victu facilis. Colotæ hoſtis aſinus eſt: dormit enim colota in præſepibus, & narem ſubiens aſini, ne comedat, impedit. Ardeolarum tria ſunt genera, pella, alba, ſtellaris, piger cognomine. Pellæ coitus difficilis eſt: vociferatur enim, & ſanguinem ex oculis, vt aiunt, emittit, cùm coit. Parit etiam ægrè, ſummóque cum dolore. Prælium cum iis init, à quibus læditur, hoc eſt, cum aquila, à qua rapitur: cum vulpe, à qua noctu capitur: cum alauda, à qua oua eius diripiuntur. Serpens muſtelæ ſuíſque aduerſarius eſt, muſtelæ, quòd eadem in domo verſantur: victus enim ex eiſdem appetatur, neceſſe eſt: ſuis verò, quia ab ea deuoratur. Æſalo vulpi eſt inimicus: ferit enim, pi- C lóſque eius euellit, occiditque catulos, vncis namque vnguibus eſt. Coruus vulpi amicus eſt, pugnat enim cum æſalone: vnde fit vt huic, cùm ab illo percutitur, auxilietur. Vultur etiam & æſalo inuicem inimici ſunt: vngues enim vtrique vnci habentur. aquilæ etiam pugnat vultur & olor, nutritque eam ſæpius olor. Oloribus verò vt alter alterum deuoret, in more eſt, maximè in volucrum genere. Sunt porrò alia ſemper inter ſe infeſta, alia hominum ritu, cùm res ita tulerit. Aſinus item & ſpinus inimici inter ſe ſunt: victus enim ſpino à vepribus, quas aſinus tenellas adhuc paſcit. Florus, ſpinus, ægithus, quem ſalum voco, odium inter ſe exer- D cent: & nimirum ſanguinem ægithi & flori miſceri non poſſe dicitur. amici cornix, & ardeola, iunco & alauda, galgulus & lædus. Colit enim galgulus fruteta, & nemora, lædus ſaxa, & montes: ſuíſque locis vterque contentus degit pacificè. amici etiam pifex, herpa, miluus. Vulpes etiam, cum ſerpente amicè viuit: ambo enim cauernis gaudent: & merula quoque turturem amat. Leo & lupus ceruarius inimici ſunt: cùm enim carne alantur, victum ex eiſdem petant neceſſe eſt. Elephanti etiam pugnant inter ſe vehementer, & dentibus alter alterum ferit. Qui autem victus fuerit, adeò animum amittit, vt ne vocem quidem victoris toleret. Differunt inter ſe e- E lephantes mirum in modũ robore, atque animo. Sunt apud Indos in vſu rei bellicæ non ſolùm mares, ſed etiam fœminæ: veruntamen fœminæ pauciores ſunt, & longè timidiores. Euertit ædificia elephantus, dentes admouens magnos. Palmas verò ſua fronte impellit, donec declinet, tum pedibus inculcans proſternit in terram. Venatio talis elephantorum eſt: Conſcendunt mites aliquos animoſóſque elephantos, qui venantur curſúque inſequuntur feros: quos cùm occuparint, ferire præcipiunt ſuis, dum fatigent, viréſque diſſoluãt.

Tum

Tum rector in defatigatum illum inſilit, regitque falce, poſt breui tempore fera miteſcit, atque obtemperat. Quandiu inſidat rector, mitem ſe quiſque exhibet: cùm deſcenderit, alij manſuetudinem ſeruant, alij ſuam repetunt feritatem. Itaque immiteſcentium crura priora præpediunt vinculis, vt quieſcant. Capiuntur & natu iam grandes, & pulli. Sed amicitiæ atque inimicitiæ in his belluis, victus vitæque ratione, ita exiſtunt.

CAPVT II.

De iis piſcibus, qui gregatim amicéque viuunt, quíve non gregatim inimicíve ſunt.

PIſcium autem alij gregatim degũt, amicique ſunt: alij non gregatim, inimicique viuũt. Qui amici ſunt, congregantur, partim cùm vtero ferunt, partim cùm fœtum ædiderint. Gregales denique ſunt thunni, aleces, gobiones, vocæ, lacerti, coruuli, ſiue graculi, dentices, mulli, malleoli, elegini, ſacri, ariſtulæ, ſargiaci, lollij, papaueres, iuliæ, limariæ, ſcombri, monedulæ: horum nonnulli non modò gregales ſunt, verùm etiam coniugales. Reliqui omnes coniugia agunt quidem, ſed greges ſtatis temporibus, vt modò dixi, conſtituunt, ſcilicet aut cùm vterum gerunt, aut poſt partum. Lupus, & mugilis, quanquam inimici ſunt capitales, tamen ſtato tempore congregantur: coeunt enim in gregem ſæpius, non ſolum quæ eiuſdem generis ſunt, ſed etiam quibus idem aut ſimilis paſtus appetitur, dummodo ſit abundè cibarij. Sæpe mugiles cauda abſciſſa viuunt, atque etiam congri, meatu tenus excrementario. Abſcinditur mugilis cauda à lupo, congri à muræna. Ineunt prælium maiores contra minores: maior enim quiſque atque robuſtior minorem inferioremque deuorat. Sed de marinis generibus ſatis.

CAPVT III.

De genere ouili amente, & ſtulto.

MOres autem animalium, vt dictum iam eſt, differunt inter ſe fortitudine, ignauia, manſuetudine, ferocitate, mente, dementia. Iam enim genus ouile amens, & moribus, vt dici ſolet, ſtultiſſimis eſt, quippe quod omnium quadrupedum ineptiſſimum ſit. Repit in deſerta ſine cauſa. Hyeme obſtante ipſum ſæpe egreditur ſtabulo: occupatum à niue, niſi paſtor compulerit, abire non vult, ſed perit deſiſtens, niſi mares à paſtore ducantur: ita enim reliquus grex conſequitur. Caprarum ex grege ſi quis vnam villo mento dependente, quem aruncum vocant, apprehenderit, cæteræ ſtant velut ſtupidæ ſuos in vnam illam oculos conijcientes. Cubant difficiliùs oues quàm capræ: magis enim capræ quieſcunt, accedúntque ad hominem familiariùs: ſed ſunt frigoris impatientiores quàm oues. Docent paſtores ſuas oues gregari, facto ſtrepitu. Nam ſi cùm tonuerit, aliqua relinquatur, quæ non concurrerit, abortum, ſi eſt grauida, facit. Vnde fit vt ſi quem domi ſtrepitum moueris, omnes concurrant, propter conſuetudinem. Cubant oues capræque vniuerſæ per cognationem.

Προβάτων καὶ αἰγῶν ἤθη.

ΤΑ δ' ἤθη τῶν ζώων, ὥσπερ εἴρηται πρότερον, διαφέρει κατά τε δειλίαν καὶ πρᾳότητα, καὶ ἀνδρίαν καὶ ἡμερότητα, καὶ νοῦν τε καὶ ἄνοιαν. τό, τε γὰρ τῶν προβάτων ἦθος, ὥσπερ λέγεται, εὔηθες, καὶ ἀνόητον. πάντων γὰρ τῶν τετραπόδων κάκιστον ἐστι, καὶ ἕρπει εἰς τὰς ἐρημίας πρὸς οὐδὲν, καὶ πολλάκις χειμῶνος ὄντος, ἐξέρχεται ἔνδοθεν. καὶ ὅταν ὑπὸ τοῦ νιφετοῦ ληφθῶσιν, ἂν μὴ κινήσῃ ὁ ποιμὴν, οὐκ ἐθέλουσιν ἀπιέναι, ἀλλ' ἀπόλλυνται καταλειπόμενα, ἐὰν μὴ ἄρρενας κομίσωσιν οἱ ποιμένες· τότε δ' ἀκολουθοῦσι. τῶν δ' αἰγῶν ὅταν τις μιᾶς λάβηται τὸ ἄκρον τοῦ ἠρύγγου, (ἔστι δὲ οἷον θρίξ) αἱ ἄλλαι ἑστᾶσιν ὥσπερ * μεμωρανθεῖσαι, καὶ βλέπουσιν εἰς ἐκείνην. ἐγκαθεύδει δὲ ψυχρότεραι αἱ οἶες αἰγῶν· αἱ γὰρ αἶγες, * μᾶλλον μηρυκάζουσι, καὶ προσοικειοῦνται πρὸς τοὺς ἀνθρώπους. εἰσὶ δὲ αἶγες δυσριγότεραι τῶν οἰῶν. διδάσκουσι δ' οἱ ποιμένες τὰ πρόβατα συνθεῖν, ὅταν ψοφήσῃ. ἐὰν γὰρ βροντήσαντος, ὑπολειφθῇ τις, καὶ μὴ συνδράμῃ, ἐκτιτρώσκει, ἐὰν τύχῃ κύουσα. διὸ ἐὰν ψοφήσῃ, ἐν τῇ οἰκίᾳ συνθέουσι, διὰ τὸ ἔθος. ἀπόλλυνται δὲ καὶ οἱ ταῦροι, ὅταν ἀπαγελήσαντες ἀποπλανηθῶσιν, ὑπὸ θηρίων. κατακεῖνται δὲ αἱ οἶες καὶ αἶγες ἀθρόαι κατὰ συγγένειαν.

CAPVT IV.

De ſocietate boum, equarumque mutuo inter ſe amore.

BOues & paſcunt per ſocietates, atque cõſuetudines, &, ſi vnus aberrarit, reliqui ſequuntur. Quapropter boarij niſi præuenerint, totum armentum requirant, neceſſe eſt. Equæ ſocietate B coniunctæ: ſi altera fortè perierit, altera pullum parente orbatum enutrit. Equarum denique genus miro quodam amore prolis teneri putatur: cuius rei indicium eſt, quòd ſæpius ſteriles, auferunt pullos à matribus, quos ipſæ amore proſequentes tueantur: ſed quoniam lacte careant, deprauant eos quos diligunt.

CAPVT V.

De ceruæ prudentia in pullis edendis, déque maris ceruinum amiſſione & reparatione.

C FErarum quadrupedum cerua maximè prudẽtia præſtare videtur, tùm quia circa ſemitas pariat, quò ſcilicet belluæ propter homines minùs accedunt: tum etiam, quia cùm peperit, inuolucrum primum exedit, mox ſeſelim herbam petit, quam cùm ederit, redit ad prolem. Præterea hinnulum ducens in ſtabula, aſſuefacit, quo refugere debeat. Saxum hoc eſt abruptum, vno aditu, quo loco eam ſi quis inuadit, expectare repugnaréque affirmant. Mas itèm cum pinguerit, quod valde tempore fructuum fit, nuſquam apparet, ſed longè ſecedit, vt qui pondere ſuæ corpulentiæ capi ſe poſſe faciliùs ſentiat. Cornua etiam locis difficilibus amittit, & quà inueniri nequeant: vnde illud prouerbium ortum: Quà cerui amittũt cor- D nua. Quaſi enim ſua amiſerit arma, cauet ne inermis reperiatur. Cornu ſiniſtrum compertum eſſe à nemine adhuc fertur: occulit enim id, tanquam quodam medicamento præditum. Anniculis nondum cornua naſcuntur, niſi quoad indicij gratia ſit initium quoddam prætuberans, quod breue hirtúmque eſt. Bimis cornua primùm oriũtur ſimplicia, & recta, ad ſubularum ſimilitudinem: quamobrem ſubulones per id temporis eos vocant. Trimis bifida exeunt, quadrimis trifida, atque deinceps ad hunc modum procedit numerus vſque ad annum ſextum. ab hoc ſimilia ſemper prodeunt, ita ne ſit dignoſcere ætatem ramorum E numero. Sed ſenes cognoſcimus maximè indicio duplici illo: dentes enim aut nullos, aut paucos habent, atque adminiculis carent. Vocantur adminicula, rami qui imis cornibus prominent ante frontem, quibus in pugna vtuntur iuniores: ſenes autem carent. amittunt ſingulis annis cornua menſe Aprili, quæ cum amiſerint, occultant ſeſe interdiu, vt ſuperius dixi, idque opacis faciunt locis, vt muſcarum tædio vacent. Paſcuntur per id tempus noctu, donec recipiant cornua, quæ primùm quaſi cute veſtita & hirtiuſcula emittunt:

ſed cùm creuerint, ſoli exponũt, vt excoquantur, A & ſiccent. Vbi iam nihil attritu arborum, cùm eã ſcalpant, indolent, tunc ea relinquunt loca, confiſi habere iam quo repugnare poſſint, cùm res exigit. Captus iam ceruus eſt, hederam ſuis enatam cornibus gerens viridem, quæ cornu adhuc tenello fortè inſerta, quaſi ligno viridi coaluerit. Cerui morſi vel à phalangio, vel à quouis generis eiuſdẽ, cancros edunt: quod idem homini etiam prodeſſe putatur, ſed non caret faſtidio. Ceruæ ſtatim à partu exedunt inuolucrum, vt dictum eſt: nec fieri poteſt, vt id accipias. Priùs enim quàm in terram demittant, ipſæ arripiunt. Vis in eo medica eſſe creditur. Cerui ſibilo & cantu venantium capiuntur: mulcentur enim alliciuntúrque ea voluptate. B Itaque alter venantium cantat palam, aut ſibilat, alter clàm ferit à tergo, vbi ſocius tempus iam eſſe ſignificarit. Sed ſi ceruus erectas auriculas teneat, acerrimè ſentit, nec latere inſidiæ poſſunt: ſin demiſſas, facilè interimitur.

CAPVT VI.

De quibuſdam animalibus, quæ prudentia quadam natura inſtituit.

VRſæ cùm fugiunt, ſuos catulos propellunt, ſuſceptóſque portant: cùm ab inſectante iam occupantur, arbores ſcandunt. Solent vrſi arum C herbam comedere cùm è latibulo egrediuntur, vt dictum eſt. Ligna etiam manducant, quaſi dentiant. Sed ex cæteris quoque quadrupedibus multæ prudenter ſibi opitulari videntur. Nam & in Creta inſula capras ſylueſtres ſagitta transfixas dictamnum herbam quærere aiunt: hoc enim ſpicula ex corpore eijci. Canes etiam ægreſcentes herba quadam comeſa vomitant. Panthera cùm venenum, pardalianches dictum ab angore, ederit, quo leones etiam intereunt, ſtercus hominis quærit: eo enim ipſo iuuatur. Quocirca venatores ſtercus ibi propinquum ſuſpendunt ex arbore aliqua, ne procul bellua abeat, petẽs ſuum medicamentum. Itaque inſiliens ibidem, & ſpe capiendi perſeuerans, in ſe efferenda emoritur. D Eandem ſeſe abſcondentem venari ferunt, propterea quòd ſuo odore belluas delectari intelligat. Propius enim ita accedunt, quas corripiat. Ichneumo Ægypti, vbi aſpidem anguem ſuum hoſtem aſpexerit, non prius aggreditur, quàm ſocios vocet, & limo obducto, contra ictus morſúſque ſeſe loricet. Modus armandi, vt primùm madefaciat corpus, & in terra ſe volutet. Crocodilis hiantibus trochili aues inuolantes depurgant dentes, quo munere & ipſi aluntur: & crocodilus ſentiens ſecum commodè agi, nihil nocet, ſed cùm egredi auem vult, ceruices mouet, ne comprimat. Teſtudo cum viperam ederit, mox cu- E nilam edit. Quod cum ita ſæpius factum animaduertiſſet quidã, vt guſtata cunila viperam teſtudo repeteret, herbam euulſit, quo facto teſtudo interiit. Muſtela quoties dimicatura cum ſerpente eſt, rutam comedit. odor etenim eius herbæ infeſtus ſerpentibus eſt. Draco cum per vſum pomorum nauſea infeſtatur, ſuccum ſylueſtris lactucæ exorbet: quod ita facere viſus ſæpius eſt.

C *De ea intelligentiæ parte, qua animalia quædam hominum rationem repræſentant, vt hirundines, & omne columbaceum genus: déque ætate columbarum, perdicum, & paſſerum.*

Omnino ratio brutorum magnam refert vitæ humanæ ſimilitudinem, magiſque in minore genere quàm in maiore videris intelligentiæ rationem. Quod primùm in auium genere hirundo in effingendo conſtituendóque nido oſtendit. Confingit implicito luto feſtucis, ad normam lutariæ paleationis: & ſi quando luti inopia eſt, ſe ipſa madefaciens volutat
D in puluere omnibus pennis. Stragulum ſibi etiam more hominum facit, duriora primùm ſubijciens, & modicè totum conſternens pro ſui corporis magnitudine: atque in enutrienda prole mira tam mas quàm fœmina æquitate laborat. Impartit pullis ſingulis cibum, obſeruans conſuetudine quadam, ne qui acceperit, bis accipiat. Excrementa etiam pullorum parentes eijciunt: poſt adultiores iam natos circu nagi, foráſque ipſos egerere edocent. Adhæc, columbi pleráque contemplationis huiuſmodi afferunt: neque enim cum pluribus adoleſcere, aut coire patiuntur, neque coniugium iam inde à primo ortu initum deſerunt, niſi cælebs aut vidua. Quin-
E etiam fœminæ parturienti mas adeſt, & cultu omnique officio fungitur. Sæpe etiam fœminam pigriùs euntem ad nidum propter partus laborem mas percutit, cogitque intrare. Excluſis iam pullis terram ſalſuginoſam potiſſimùm præmanducatam in eorum os, inferens ſuum, ingerit, atque ita præparat ad cibum recipiendum. adultos iam, cùm tempus prodeundi ex nido eſt, mas ſubigit. Ita magna ex parte columbæ mutuo degunt amore. Sed interdum nonnullæ etiam ex maritatis cum alijs coeunt. Pugnax hoc animal eſt: alter alterum infeſtat, nidúmque alter alterius ſubit, ſed rarò. Nam etſi ex longinquo minùs,

Vita palumbibus longa: nam ad vigeſimumquintum & ad trigeſimum annum protrahitur. Nonnullas quadraginta etiam annos compleuiſſe exploratũ habetur. Ætate autem prouectis vngues accreſcunt, quos recidere ſolent, qui alunt. Nihil, quo lædantur apertè, aliud his ſeneſcentibus accidit. Turtures, & columbæ vel ad annum octauum viuunt, ſcilicet quæ excæcatæ allectatrices aluntur. Perdicibus vita ad quinque & viginti annos. Nidulantur & palumbes & turtures ſemper locis eiſdem. CAPVT VIII.

De iis auibus quæ nidum non ædificant, déque Perdicis aſtutia.

AVes grauiores nidos ſibi non faciunt, vt coturnices, vt perdices, & reliquæ generis eiuſdem. Quibus enim volandi facultas deeſt, iis nidus non prodeſt, ſed facta in aprico area, (alibi enim nuſquam pariunt) atque materia, vt vepribus quibuſdam congeſtis, quoad accipitrum & aquilarum iniuriam deuitare poſſint, oua edunt, & incubant. Mox cùm excluſerint, protinus pullos educunt, proptereà quòd nequeunt ſuo volatu iis cibum adminiſtrare. Refouent ſuos pullos ſub ſe ipſæ ducendo, more gallinarum, & coturnices, & perdices: nec in eodem loco & pariũt, & incubãt, ne quis locum percipiat longioris temporis mora. Cùm ad nidum quis venãdo acceſſerit, prouoluit ſeſe perdix ante pedes venantis, quaſi iam poſſit capi, atque ita allicit ad ſe capiendam, hominem, eouſque dum pulli effugiant: tum ipſa auolat, & reuocat prolem. Parit oua non pauciora quàm decẽ, ſed ſæpius ſedecim. Malitioſa aſtutáque auis hæc eſt, vt dixi. Secernuntur verno tẽpore de grege per cantũ & pugnam, cõiugatim mares cũ fœminis, quãcunque ſibi quiſque fortè acceperit. Oua mares quæ cõpererint, peruoluunt, & frangunt præ ſua ſalacitate, ne fœmina incubet. Quod ne accidat fœmina emoliens, clanculum diffugiens parit. Sed fit ſæpius, vt præ turgore parturiendi quolibet loco edat, & mare præsẽti: verùm vt oua ſeruentur, nũquã ex eo, quo peperit, loco diſcedit.

De pico Martio, & tribus generibus eiuſdem.

CОntrà atque Martius picus, qui humi nunquam conſiſtere patitur: tundit hic quercus, vermium & culicum cauſa, quò exeant. Recipit enim egreſſos lingua ſua, quam maiuſculam & latiuſculam habet. Scandit per E arborem omnibus modis: nam vel reſupinus more ſtellionum ingreditur. Vngues etiam habet commodiores, quàm monedula, ad tutiorem arborum reptationem: his enim affixis aſcendit. Sunt pici, Martij cognomine, tria genera, vnum minus quàm merula: cui rubidæ aliquid plumæ ineſt: alterum maius quàm merula: tertium, non multò minus quàm gallina. Nidulatur (vt dictum eſt) in arboribus, cùm aliis tum oleis. Paſcitur formicis, & coſſis. Cùm coſſos venatur, tam vehementer excauare, vt ſternat arbores, dicitur. Iam verò miteſcens quidam amygdalum,

CAPVT X.

De prudentia Gruum.

GRues etiam multa prudenter faciunt: loca enim longinqua petunt, ſui commodi gratia, & volant altè, vt procul proſpicere poſſint. Et, ſi nubes tempeſtatemque viderint, conferunt ſe in terram, & humi quieſcunt. Ducem etiam habent, & eos qui clament, diſpoſiti in extremo agmine, vt vox percipi poſſit. Cùm conſiſtunt, cæteræ dormiunt, capite ſubter alam condito, alternis pedibus inſiſtentes. Dux detecto capite proſpicit, & quod ſenſerit, voce ſignificat. Platea fluuiatilis conchas maiuſculas læuéſque deuorat: quas vbi ſua ingluuie coxerit, euomit, vt hiantibus iam, legat, teſtis exuens, atque edat.

Praua hæc auis, & colore, & voce: & noctu apparet, die aufugit. accipiter etiam locis ſaxoſis & arduis nidulatur. auium quas ceperit, cor nunquam edit. Idque nonnulli in coturnice, & turdo, alij in aliis obſeruarunt. Quinetiam venandi differentia adnotatur, ne ſimili modo æſtate, vt hyeme rapiat. Vulturis vel pullum, vel nidum à nemine viſum adhuc, nonnulli aiunt. Et nimirum ob eam rem Herodotus Bryſonis rhetoris pater, aliunde ſitu eminentiore quodam venire dixit: argumentúmque afferebat, quòd breui tempore multi apparerent, & tamen vnde, conſtaret nemini. Sed cauſa huius rei eſt, quòd rupibus inacceſſis pariat: neque locorũ plurium incola auis hæc eſt. Edit non plus quàm vnum ouum, aut duo cumplurimum. A & fluuios, & lacus palmipedes omnes. Natura e-nim ipſa quærit, quod ſibi cōmodius ſit. Sed mul-tæ etiam fiſſipedes circa aquas paludéſque degunt, vt florus apud amnes: cui color pulcher, & vita commoda. Cataracta mari victitat, & cùm ſe alto ingurgitarit, manet nō minus temporis, quàm quo ſpatium tranſieris iugeri. Minor quàm accipiter auis hæc eſt. Olores etiam palmipedes ſunt, & a-pud lacus paludéſque viuunt: nec probitate victûs, morum, prolis, ſenectutis carent. aquilam, ſi pugnam cœperit, repugnantes vincunt: ipſi autem nunquam, niſi prouocati, inferunt pugnam. Canere ſoliti ſunt, & præcipuè iamiam morituri. Volát B etiam in pelagus longiùs. Et iam quidam cùm in mari Africo nauigarent, multos canentes voce flebili, & mori nonnullos conſpexere. Chalcis rarò apparet: montes etenim incolit. Nigro colore eſt, magnitudine accipitris, quem palumbarium nominãt, forma longa, ac tenui. Iones cymindem eam appellant. Cuius Homerus etiam meminit in Iliade, cùm dicit:

Chalcida dij perhibent, homines dixere cymindem.

Sunt qui eandem hanc auem non aliam eſſe ac ptyngem, velint. Interdiu minùs apparet, quia non clarè videt, ſed noctu venatur more aquilæ: & pugnat verò cum aquila adeò acriter, vt ſæpius ambæ implexæ deferantur in terram, & viuæ à paſto-C ribus capiantur. Parit hæc oua duo, & ſaxis ſpelūciſque nidulatur. Grues etiam pugnant inter ſe tam vehementer, vt dimicantes capiantur: hominem enim expectare potiùs, quàm pugna deſiſtere, patiuntur. Pariunt oua non ampliùs quàm bina.

CAPVT XIII.

De partu & nidificatione Picarum, Meropis, Luteæ, Argathylis, & Cinnamomi Arabici, déque Ciconiarum & Meropum prudentia in alendis parentibus.

D Pica voces plurimas commutat: ſingulis enim ferè diebus diuerſam emittit vocem. Parit oua circiter nouem numero. Nidum in arboribus facit ex pilis & lana. Glandes, cùm deficiunt, colligit, & in repoſitorio abditas reſeruat. Ciconias genitorum ſenectutem inuicem educare inuulgatum eſt. Sed ſunt qui merops quoque idem facere confirment, vicémque reddi: vt parentes non modò ſeneſcentes, verùm etiam ſtatim, cùm iam datur facultas, alantur opera liberorum: nec matrem, aut patrem exire, ſed in cubili manentes paſci labore eorum quos ipſi genuerunt, enutrierunt, e-E ducarũt. Pennæ huius auis inferiores pallidæ ſunt, ſuperiores cæruleæ, vt halcyonis: poſtremæ pinnulæ rubræ habentur. Parit ſex aut ſeptem æſtate in præcipitiis mollioribus, intrò vel ad quatuor cubita ſubiens. Lutea dicta à colore partis ſuæ inferioris pallido, magnitudine alaudæ eſt. Parit quatuor, aut quinque. Nidum ſibi ex alo herba euulſa ſtirpitus facit: ſed ſtragulum ſubijcit ex villo & lana. Hoc idem & merula facit, & pica, interioráque nidis ex eiſdem conſternunt. Solerti porrò ingenio argathylis in ripariarum genere ſuum inſtruit nidū: filis enim intexit lineis ſpecie pilæ, aditu arcto. In Arabia cinnamomus auis appellatur, quam ſurculos cinnamomi portare,

ac nidum ex his conficere aiunt. Nidificat excelſis arboribus, & ramis: ſed incolæ ſagittis plumbatis nidum petunt, atque ita diſcuſſo in terram, cinnamomum legunt.

CAPVT XIV.

De ſpecie, nidulatione, & partu Alcedonum.

Alcedo non multo amplior paſſere eſt, colore tum cæruleo, tum viridi, tum etiam leuiter purpureo inſignis. videlicet non particulatim colore ita diſtincta, ſed ex indiſcreto variè refulgens corpore toto, & alis, & collo: roſtrum ſubviride, longum & tenue: talis ſpecies eius eſt. Nidus marinæ ſimilis pilæ, & iis, quæ à flore maris haloſachnæ dicantur, ſed colore leuiter rufo: figura proxima cucurbitis medicinalibus, iis quibus collum porrectius eſt: magnitudo maximis amplior quàm ſpongiæ: ſunt enim alij maiores, alij minores. conſeptus ſtipatúſque vndique eſt. & cerebro tū inani tum ſolido conſtat. renititur ferramento acuto, vt vix poſſit diſcindi: ſed ſi vnà & ferro tundis, & manu collidis, facilè perinde vt flos aridus maris (haloſachnam dico) confringitur. Os eius anguſtum, quoad ſit exiguus aditus, vt etiamſi vertatur mare, influere nequeat. Habet ſua inania proxima cauis ſpongiarum. ambigitur ex quanam materia componatur: videtur tamen è ſpinis potiùs acus piſcis conſtitui: piſcibus enim alcedo viuit. Sed amnes etiam ſubit, aſcendens longiùs. Partus huic ouis maximè quinque conſumitur. Fœtificat toto ſuæ ætatis tempore. Parere nata menſes quatuor incipit.

CAPVT XV.

De partu, & nidificatione Vpupæ, Pari, Atricapillæ, Sali, & Vireonis.

Vpupa nidum potiſſimè è ſtercore hominis facit. Mutat faciem tempore æſtatis & hyemis, ſicvt cæterarum quoque agreſtium plurimæ. Parus oua plurima edit, vt aiunt. Atracapillam etiam plurima edere aliqui referunt, ſed poſt Africam ſtruthionem. Iam vel decem & ſeptem oua atricapillæ reperta ſunt: ſed plura etiam quàm viginti parit, & numero impari ſemper, vt narrant. Nidificat ea quoque in arboribus, & vermiculis alitur. Proprium huius, & luſciniæ, præter cæteras aues, vt linguæ ſummæ acumine careant. Salus vitæ commoditate & partus numero commendatur: ſed alterius pedis claudítate cedit. Vireo docilis, & ad vitæ munera ingenioſus notatur, ſed malè volat, nec grati coloris eſt.

CAPVT XVI.

De Velia aue, & eius colore, & ſtatura.

Velia cùm primis vitæ commoditate nota eſt. Conſiſtit æſtate in vmbra, & aura: hyeme in Sole, & apricis. Inſpectat paludes ab arundinibus ſummis. Paruo corpore eſt, ſed voce proba, colore etiam pulchro, necnon ingenio valet in vitæ officiis, & ſpeciem præ ſe fert decoram. Peregrina hæc auis eſſe videtur, quippe quæ rarò noſtris locis appareat.

Ὁ δὲ κόκκυξ, ὥσπερ εἴρηται ἐν ἑτέροις, οὐ ποιεῖ νεοττιάν, ἀλλ' ἐν ἀλλοτρίαις τίκτει νεοττιαῖς, μάλιστα μὲν ἐν ταῖς τῶν φαβῶν, καὶ ἐν ὑπολαΐδος, καὶ κορύδου, χαμαὶ· ἐπὶ δένδρου δὲ, ἐν τῇ τῆς χλωρίδος καλουμένης D νεοττιᾷ. τίκτει μὲν οὖν [ἓν ᾠόν,] ἐπῳάζει δ' οὐκ αὐτός, ἀλλ' ἐν ᾗ ἂν τέκῃ νεοττιᾷ, ἐκεῖνος ὁ ὄρνις ἐκκολάπτει καὶ ἐκτρέφει· καὶ ὥς φασιν, ὅταν αὐξάνηται ὁ τοῦ κόκκυγος νεοττός, ἐκβάλλει τὰ αὐτῆς, καὶ ἀπόλλυνται οὕτως. οἱ δὲ λέγουσιν ὡς καὶ ἀποκτείνασα ἡ τρέφουσα δίδωσι καταφαγεῖν. διὰ γὰρ τὸ καλὸν εἶναι τὸν τοῦ κόκκυγος νεοττὸν, ἀποδοκιμάζει τὰ αὑτῆς. τὰ μὲν οὖν πλεῖστα τούτων ὁμολογοῦσιν αὐτόπται γεγενημένοι τινές. περὶ δὲ τῆς φθορᾶς τῆς τῶν νεοττῶν τῆς ὄρνιθος, οὐχ ὡσαύτως πάντες λέγουσιν· ἀλλ' οἱ μὲν, φασὶν αὐτὸν ἐπιφοιτῶντα τὸν κόκκυγα, κατεσθίειν τὰ τῆς ὑποδεξαμένης ὄρνιθος νεόττια· οἱ δὲ, διὰ τὸ τῷ μεγέθει ὑπερέχειν τὸν νεοττὸν τοῦ κόκκυγος, ὑποκάπτοντα τὰ προσφερόμενα φθάνειν, ὥστε λιμῷ τοὺς ἑτέρους ἀπόλλυσθαι νεοττούς. οἱ δὲ, κρείττω ὄντα, ἀποκτιννύναι συντρεφομένους αὐτούς. δοκεῖ δὲ ὁ κόκκυξ φρόνιμος ποιεῖσθαι τὴν τέκνωσιν. διὰ γὰρ τὸ συνειδέναι αὑτῷ τὴν δειλίαν, καὶ ὅτι οὐκ ἂν δύναιτο βοηθῆσαι, διὰ τοῦτο ὥσπερ ὑποβολιμαίους ποιεῖ τοὺς ἑαυτοῦ νεοττοὺς, ἵνα σωθῶσι. τὴν γὰρ δειλίαν ὑπερβάλλει τοῦτο τὸ ὄρνεον. τίλλεται γὰρ ὑπὸ τῶν μικρῶν ὀρνέων, καὶ φεύγει αὐτά. CAPVT XXVI.

De Gallinagine, & Sturno, earúmque forma.

Gallinago dicta, per ſepes hortorum capitur, magnitudine quanta gallina eſt, roſtro longo, colore attagenæ. Currit celeriter, & hominem mirè diligit. Sturnus niger, albis diſtinctus maculis eſt, magnitudine merulæ.

CAPVT XXVII.

De Ibe, & duobus earum generibus.

Ibes Ægypti duplici genere diſtinguuntur: ſunt enim aliæ candidæ, aliæ nigræ. Candidæ apud Peluſium tantùm non ſunt, cùm in reliqua tota Ægypto habeantur. Nigræ contrà, apud Peluſium tantùm, in cætera Ægypto nullæ.

CAPVT XXVIII.

De duobus Aſionum generibus.

Aſiones aliqui omnibus anni temporibus patent, & ob eam rem perennes & ſemperaſiones vocabulo compoſito appellantur, qui eſui non ſunt, propter vitium carnis. Aliqui autumno interdum apparent, nec plus vno, aut altero die immorantur: qui & eſui ſunt, & valde probantur. Differunt hi nullo ferè alio à perennibus illis, niſi corpulentia pingui, & quòd vox his deeſt, illis non deeſt. De generatione eorum, quænam ſit, nihil adhuc exploratum habemus, niſi quòd Fauoniis flantibus apparent. Certum enim hoc eſt.

CAPVT XXIX.

De Cuculi fatu, & eius prudentia.

Cvculus, vt antea dictum eſt, non nidificat, ſed in nidis parit alienis, & præcipuè in palumbium, & curucæ, & alaudæ, humi, atque etiam in nido luteolæ appellatæ, ſuper arborem. Parit hic vnum ouum, nec ipſe incubat, ſed auis, in cuius nido pepererit, ea incubat, excludit, atque enutrit: quæ, cùm ipſe alienigena pullus accreuerit, ſuos eijcere dicitur, ita vt pereant. alij eos à genitrice occidi, & dari in cibo cuculi pullo aiunt, videlicet improbatos propter ſpeciem cuculi elegãtiorem. Sed quanquam plurima ex iis vidiſſe nonnulli cõfirmant, tamen de pullorum interitu non conuenit inter omnes. alij enim cuculum ipſum repetere nidum, cui ſuum ouum mandarit, pulloſque deuorare nutricis volunt; alij pullum cuculi, quòd magnitudine præſtet, poſſe percipere cibum omnem oblatum, atque ita cæteros fame perire autumant: alij ipſum vt fortiorem, cæteros paſtus conſortes occidere authores ſunt. Sed prudenter ſanè prolis ſuæ procreationem moliri videtur cuculus. Cùm enim ſe ignauum, minimeque opitulandi potentem nouerit, facit quaſi ſuppoſititios ſuos pullos, quò ſeruari poſſint. Timiditate enim hæc auis excedit, quippe quæ ab auiculis vellatur, & præ metu earum fugiat.

CAPVT XXX.

De Apodum nidulatione, & Caprimulgi forma.

APodes, quos aliqui cypſellos appellant, ſimiles eſſe hirundinum, dictum iam eſt. Haud enim diſcerni ab hirundine poſſunt, niſi quòd tibiis ſunt hirſutis. Nidum ſpecie ciſtellæ productæ longiùs, fictæ ex luto, vno aditu dato arctiſſimo, faciunt: idque locis anguſtis intra ſaxa & ſpecus, vt & belluas deuitare poſſint, & homines. Quem caprimulgum appellant, auis montana eſt, magnitudine paulo maior quàm merula, minor quàm B cuculus, moribus mollior parit oua duo aut tria cùm plurima. Sugit caprarum vbera aduolans, vnde nomen accepit. Cùm ſuxerit, vber extingui, caprámque excæcari aiunt. Parum clarè interdiu videt, ſed noctu perſpicax eſt.

CAPVT XXXI.

De coruorum nidificatione & fœtu.

COrui locis arctioribus, & vbi non ſatis cibi pluribus ſit, duo tãtùm incolunt: & ſuos pullos, cùm iam poteſtas volandi eſt, primùm nido C eijciunt, deinde regione tota expellũt. Parit coruus quatuor & quinque. Tempore, quo apud Pharſala hoſpites Mediæ periere, corui locis Athenarum Peloponneſique defuerunt, quaſi ſenſum haberent aliquem, quo inter ſe rerum euenta ſignificarent, & mouerentur.

CAPVT XXXII.

De ſex Aquilarum generibus, earúmque nidulatione, & venatione.

AQuilarum plura ſunt genera: vnũ, quod Pygargus ab albicante cauda dicitur, ac ſi albi- D cillam nomines. Gaudet hæc planis, & lucis, & oppidis. Hinnularia à nõnullis vocata cognomine eſt. Montes etiam ſyluáſque ſuis freta viribus petit. Reliqua genera, rarò plana & lucos adeunt. alterum genus magnitudine ſecundũ, & viribus, planga, aut clanga nomine, ſaltus, & conualles, & lacus incolere ſolitũ, cognomine anataria, & morphna à macula pennæ, quaſi næuiam dixeris: cuius Homerus etiam meminerat in exitu Priami. Tertium genus colore nigricãs, vnde nomẽ accepit, vt pulla & fuluia vocetur. Magnitudine minima, ſed viribus omniũ præſtantiſſima hæc eſt. Colit mõtes ac ſyluas, & leporaria cognominatur. Vna hæc fœtus E ſuos alit, atq; educit: pernix, cõcinna, polita, apta, intrepida, ſtrenua, liberalis, non inuida eſt: modeſta etiam, nec petulans, quippe quæ non clangat neque lippiat, aut murmuret. Quartum genus percnopterus ab alarum notis appellatum: capite albicãte, corpore maiore, quàm cæteræ adhuc dictæ, hæc eſt: ſed breuioribus alis, cauda longiore. Vulturis ſpeciem hæc refert: ſubaquila, & montana ciconia cognominatur. Incolit lucos, degener, nec vitiis cæterarũ caret, & bonorũ, quæ illæ obtinẽt, expers eſt: quippe quæ à coruo cæteriſq; id genus alitibus verberetur, fugetur, capiatur. Grauis eſt enim, victu iners, exanimata fert corpora. Famelica ſemper eſt, & querula, clamitat, & clangit.

ΤΩν δ' ἀετῶν ἐστὶ πλείονα γένη· ἓν μέν, ὁ καλούμενος πύγαργος· οὗτος κατὰ τὰ πεδία καὶ τὰ ἄλση, καὶ περὶ τὰς πόλεις γίνεται. ἔνιοι δὲ καλοῦσι νεβροφόνον αὐτόν. πέτεται δὲ καὶ εἰς τὰ ὄρη καὶ εἰς τὴν ὕλην, διὰ τὸ θάρσος. τὰ δὲ λοιπὰ γένη, ὀλιγάκις εἰς πεδία καὶ εἰς ἄλση φοιτᾷ. ἕτερον δὲ γένος ἀετοῦ ἐστιν, ὃ* πλάγγος καλεῖται, δεύτερος μεγέθει καὶ ῥώμῃ. οἰκεῖ δὲ βήσσας, καὶ ἄγκη καὶ λίμνας· ἐπικαλεῖται δὲ νηττοφόνος καὶ μορφνός· οὗ καὶ Ὅμηρος μέμνηται ἐν τῇ Πριάμου ἐξόδῳ. ἕτερος δέ, μέλας τὴν χρόαν, καὶ μέγεθος ἐλάχιστος καὶ κράτιστος τούτων. οὗτος οἰκεῖ ὄρη καὶ ὕλας· καλεῖται δὲ μελανάετος καὶ λαγωφόνος. ἐκτρέφει δὲ μόνος οὗτος τὰ τέκνα καὶ ἐξάγει. ἔστι δὲ ὠκυβόλος, καὶ εὐθήμων καὶ ἄφθονος, καὶ ἄφοβος, καὶ μάχιμος, καὶ εὔφημος· οὐ γὰρ μινυρίζει, οὐδὲ λέληκεν. ἔστι δ' ἕτερον γένος, περκνόπτερος, λευκὴ κεφαλή, μεγέθει δὲ μέγιστος· πτερὰ δὲ βραχύτατα, καὶ ὀρροπύγιον προμῆκες, γυπὶ ὅμοιος· ὀρειπέλαργος καλεῖται, καὶ* ὑπαετός. οἰκεῖ δ' ἄλση· τὰ μὲν κακὰ ταὐτὰ ἔχων τοῖς ἄλλοις, τῶν δ' ἀγαθῶν οὐδέν· ἁλίσκεται γὰρ καὶ διώκεται ὑπὸ κοράκων καὶ τῶν ἄλλων. βαρὺς γὰρ καὶ κακόβιος, καὶ τὰ τεθνεῶτα φέρων. πεινῇ δὲ ἀεὶ καὶ βοᾷ, καὶ μινυρίζει.

ἕτερον δ' ἐστὶ γένος ἀετῶν, οἱ καλούμενοι ἁλιάετοι. οὗτοι δ' ἔχουσιν αὐχένα τε μέγαν καὶ παχύν, καὶ πτερὰ καμπύλα, οὐροπύγιον δὲ πλατύ· οἰκοῦσι δὲ περὶ θάλατταν καὶ ἀκτάς. ἁρπάζοντες δὲ, καὶ οὐ δυνάμενοι φέρειν, πολλάκις καταφέρονται εἰς βυθόν. ἔτι δ' ἄλλο γένος ἐστὶν ἀετῶν, οἱ καλούμενοι γνήσιοι. φασὶ δὲ τούτους μόνους καὶ τῶν ἄλλων ὀρνίθων γνησίους εἶναι. τὰ γὰρ ἄλλα γένη μέμικται καὶ μεμοίχευται ὑπ' ἀλλήλων, καὶ τῶν ἀετῶν καὶ τῶν ἱεράκων, καὶ τῶν ἐλαχίστων. ἔστι δ' οὗτος μέγιστος τῶν ἀετῶν ἁπάντων, μείζων τε τῆς φήνης· τῶν δ' ἀετῶν καὶ ἡμιόλιος, χρῶμα ξανθός. φαίνεται δ' ὀλιγάκις, ὥσπερ ἡ καλουμένη κύμινδις. ὥρα δὲ τοῦ ἐργάζεσθαι ἀετοῦ καὶ πέτεσθαι ἀπ' ἀρίστου μέχρι δείλης. τὸ γὰρ ἕωθεν κάθηνται μέχρι ἀγορᾶς πληθούσης. γηράσκουσι δὲ τοῖς ἀετοῖς τὸ ῥύγχος αὐξάνεται τὸ ἄνω, γαμψούμενον ἀεὶ μᾶλλον, καὶ τέλος λιμῷ ἀποθνήσκουσιν. ἐπιλέγεται δέ τις καὶ μῦθος, ὡς τοῦτο πάσχει, διότι ἄνθρωπός ποτ' ὢν, ἠδίκησε ξένον. ἀποτίθεται δὲ τὴν περιττεύουσαν τροφὴν τοῖς νεοττοῖς, διὰ τὸ μὴ εὔπορον εἶναι καθ' ἑκάστην ἡμέραν αὐτὴν πορίζεσθαι, ἐνίοτε οὐκ ἔχουσιν ἔξωθεν κομίζειν. τύπτουσι δὲ ταῖς πτέρυξι, καὶ τοῖς ὄνυξιν ἀμύττουσιν, ἄν τινα λάβωσι σκευωρούμενον περὶ τὰς νεοττιάς. ποιοῦνται δ' αὐτὰς οὐκ ἐν πεδινοῖς τόποις, ἀλλ' ἐν ὑψηλοῖς, μάλιστα μὲν ἐν πέτραις ἀποκρήμνοις, οὐ μὴν ἀλλὰ καὶ ἐπὶ δένδρων. τρέφουσι δὲ τοὺς νεοττοὺς, ἕως ἂν δυνατοὶ γένωνται πέτεσθαι. τότε δ' ἐκ τῆς νεοττιᾶς αὐτοὺς ἐκβάλλουσι, καὶ ἐκ τοῦ τόπου τοῦ* περὶ αὐτὴν πάμπαν ἀπελαύνουσιν. ἐπέχει γὰρ ἓν ζεῦγος ἀετῶν πολὺν τόπον. διόπερ οὐκ ἐᾷ πλησίον αὐτῶν ἄλλους αὐλισθῆναι. τὴν θήραν δὲ ποιεῖται, οὐκ ἐκ τῶν σύνεγγυς τόπων τῆς νεοττιᾶς, ἀλλὰ συχνὸν ἀποπτάς. ὅταν δὲ κυνηγήσῃ καὶ ἄρῃ, τίθησι, καὶ οὐκ εὐθὺς φέρει, ἀλλὰ ἀποπειραθεὶς τοῦ βάρους, ἀφίησι. A Quintum genus eſt, quod haliæetus, hoc eſt, marina, vocatur, ceruice magna, & craſſa, alis curuantibus, cauda lata. Moratur hæc in litoribus, & oris: accidit huic ſæpius, vt cùm ferre quod ceperit nequeat, in gurgitem demergatur. Sextum genus gneſium, id eſt, verum germanúmque, appellant. Vnum hoc ex omni auium genere eſſe veri incorruptique ortus creditur. Cætera enim genera, & aquilarum, & accipitrum, & minutarum etiam auium, promiſcua adulterináque inuicē procreant. Maxima aquilarum omnium hæc eſt, maior etiā quàm oſſifraga: ſed cæteras aquilas vel ſeſquialtera portione excedit. Colore eſt rufa, conſpectu rara, more eius quam cymindem vocari diximus.
B Tempus aquilæ operandi volandique à prandio ad meridianum. Mane enim quieſcit vſquedum forum frequens, & prandendum iam ſit. Seneſcētibus aquilis roſtrum ſuperiùs accreſcit, incuruatúrque ſubinde magis magíſque, vt demum fame intereant. Cui rei data eſt fabula, vt hoc ita accidat aquilæ, quoniam cùm olim homo eſſet, hoſpiti iniuriam intulerit. Condunt reſeruántque ſuo in nido quantum cibi pullis ſuperſit. Quòd enim die quaque facultas venandi non datur, fit interdum ne, quod portent, extrinſecus habeant: ſi quē deprehenderint violantem nidum, verberant ſuis alis, & vnguibus lacerant. Nidulantur locis non
C planis, ſed celſis, præcipuè quidem arduis ſaxis, & præcipitibus, ſed arboribus etiam. Alunt ſuos pullos, donec poteſtas volandi fiat: tum nido eos expellunt: pòſt regione, quam ipſi genitores incolūt, tota exterminant. Tenēt enim ſingula aquilarum paria longum tractum: vnde fit ne vllo pacto vicinos habere patiantur. Venantur locis nōn ſuo nido propinquis, ſed longè diſtantibus. Rapta non protinus ferunt, ſed cùm corripuerint, & ſuſtulerint, deponunt, expertæque iam pondus requieſcunt. Leporem etiam non ſtatim rapiunt, ſed expectant dum prodeat in plana. Nec protinus de alto in terram ruunt, ſed paulatim deſcendunt. Quæ ideo faciunt, vt tutiores ab inſidiis ſint. Con-
D fidunt etiam locis editioribus, quia difficulter à terra tolluntur. Volant ſublimes, vt per quàm maximè procul aſpiciant: quapropter homines ſolam auium omnium aquilam eſſe diuinam perhibent. Omnes profectò, quibus vngues adunci, minimè in ſaxis conſiſtunt, quoniam ſaxi durities impedimento curuaturæ vnguium eſt. Venatur aquila lepores, hinnulos, vulpes, & reliqua quæ vincere valeat. Viuit tempore longo, quod diuturnitate nidi eiuſdem declaratur.

CAPVT XXXIII.

E *De aue quadam Scythica, & eius nidificatione.*

SCythiæ terræ incola auis eſt, magnitudine otidis, hoc eſt, auis tardæ, quæ duos procreat pullos: & quæ peperit oua non incubitu fouet, ſed condita in leporina aut vulpina pelle relinquit, atque ita obuoluta in ſumma arbore collocat. Cúmque à venatione vacat, cuſtodit. Et ſi quis ſcandit, impugnat, & verberat alis, perinde vt aquilæ faciunt.

CAPVT XXXIV.

De Noctua, Cicunia, & Oſſifraga.

NOctuæ, cicuniæ, & reliqua quæ interdiu nequeunt cernere, noctu venando cibum ſibi acquirunt. Verùm non tota nocte id faciunt, ſed veſpertino & matutino. Venantur autem mures, lacertas, verticillos, & eiuſmodi alias quaſdam beſtiolas. Quæ oſſifraga appellatur, probè & fœtificat, & viuit. Cœnæ gerula, & benigna eſt. Nutricat bene & ſuos pullos, & aquilæ: cùm enim illa ſuos nido eiecerit, hæc recipit eos, ac educat. Mittit namque ſuos aquila ante quàm tempus ſit, adhuc parentis operam deſiderantes, nec volandi adeptos facultatem: quod per inuidiam ita facere creditur. Natura enim inuida, & famelica eſt, nec copioſæ venationis. Magnum tamen quid nanciſcitur cùm venatur. Inuidet igitur ſuis liberis iam maiuſculis, atque edaciuſculis, & ob eam rem vnguibus ſecat. Pulli etiam ipſi inter ſe pugnare incipiunt de ſede, ac paſtu: itaque à parente eijciútur, & pulſantur: deiecti vociferantur, periclitantúrque: ſed oſſifraga recipit eos benignè, & tuetur, & alit, dum quantum ſatis ſit, adoleſcant. Parum hęc oculis valet: nubecula enim oculos habet læſos. at verò marina illa clariſſima oculorum acie eſt, ac pullos adhuc implumes cogit aduerſos intueri Solem. Percutit, qui recuſet, & vertit ad Solem: tum cuius oculi priùs lacrymarint, hunc occidit, reliquum educat. Vagatur hæc per mare, & litora, vnde nomen accepit: viuítque auium marinarum venatu, vt dictũ eſt. aggreditur ſingulas: cùm emergentem obſeruarit, refugit: auis, vt euolans vidit aquilam, metu percuſſa ſe rurſus ingurgitat, vt in diuerſa prolapſa emergat: ſed hæc acie oculorum valens, ſedulò aduolat, donec vel ſtrangulet in humore, vel per ſumma corripiat. Vniuerſas nunquã inuadit: arcent enim frequentes, reſpergentéſque ſuis alis repellunt.

CAPVT XXXV.

Fulicarum aucupatio.

FVlicæ ſpuma capiuntur, appetunt enim eam auidiùs. Quocirca ſpuma inſperſa eas venari in vſu eſt. Caro earum probi odoris eſt, excepta parte poſteriore vltima, quæ ſola limum olet. Pingueſcunt ſatis, & eſui ſunt.

CAPVT XXXVI.

De accipitrum generibus numero decem.

ACcipitrum genus præcipuum buteo eſt, triorcha à numero teſtium nuncupatus. ſecundum, æſalo. tertium, circus. Stellaris autem, palumbarius, & pernix differunt. appellantur ſubbuteones, qui latiores ſunt: alij percæ, & fringillarij vocantur: alij leues, & rubetarij, qui abundè viuunt, atque humiuolæ ſunt. Genera non pauciora quàm decem, eſſe accipitrum, aliqui prodiderunt: quæ modo quoque venandi inter ſe diſſident. alij enim columbam humi conſidentẽ rapiunt, volantem non appetunt. alij ſuper arborem, aut tale quid conſidentem venãtur: ſin humi

CAPVT XXXVII.

De ingenio marinorum, & fluuiatilium piſcium pro ratione commodioris vitæ.

SEd in marinis quoque animantibus permulta intelligi poſſunt, non ſine ſolerti ingenio effici ratione vitæ commodioris. Nam & inuulgata illa de rana, quæ piſcatrix cognominata eſt,
C & quæ de torpedine, vera omnino certáque ſunt. Rana enim his, quæ gemina ante oculos ſuos dependent, quorum fila capilli ſpeciem referunt, ſed poſtrema rotundis quibuſdam præpilantur, quaſi eſcæ cauſa additis: his, inquam, vbi locis arenoſis aut fæculentis obturbato ſolo ſe abſconderit, piſcatur, attollens illa ſibi pendentia fila. Dum enim piſciculi occurrunt, & capita machinamenti penſilis pulſant, ipſa ſubtrahens fila allicit, donec eos ſuum in os adducat. Torpedo piſces, quos appetit, afficit ea ipſa, quam ſuo in corpore continet, facultate torpendi: atque ita retardos præ ſtupore capit, & veſcitur. abdit ſe in arena, & limo, tum piſces, qui adnatantes obtorpuerint,
D corripit: quam rem plerique conſpectam à ſe retulerunt. Paſtinaca etiam ſe ipſam occultat, ſed non ſimili modo. argumentum ſic viuere hos piſces adduci poteſt, quod ſæpius habentes in ventre mugilem capiũtur, velociſſimum piſcem, cùm tardiſſimi ipſi ſint. Tum etiam rana, quæ caruerit præpilatis villorum illis capitibus, macilentior capitur. Torpedinem autem vel hominibus inſpirare torporem certum eſt. Obruunt arena ſeſe & aſelli, & raiæ, & paſſeres, & ſquatinæ: cùmque nullam ſui corporis partem intectam reliquerint, verberant radiolis ſui oris, quos piſcatores virgulas vocant, quas piſciculi cùm aſpexerint, adnatant quaſi ad algas, quibus veſci ſoliti ſunt. Quo in
E loco Anthias ſit, nullam ibi belluam eſſe, confeſſum eſt. Quo etiam indicio ſecurè ſpongiatores vrinantur, & ſacrum hunc piſcem ob eam rem nominant. Sed id caſu ſic euenire dixerim, quo modo & vbi ſit limax, neque ſus eſt, neque perdix: omnes enim limaces ab his eduntur. Serpens marina colore, & corpore congro proxima eſt, ſed obſcurior, atque acrior. Hęc ſi capta dimittatur foris, in arenam roſtro quàm primum adacto terebrat, ſubitque tota. Eſt ore acutiore hæc quàm terreſtres. Qui autem centipeda appellatur,

vbi hamum deuorarit, euomit foras ſua interiora, donec hamum eijciat: tum recipit intrò, ac valet eadem qua antè ſalubritate. appetitus his quoque nidorulentorum, vt terreſtribus, eſt. Mordent non ore ſed tactu totius corporis ſimiliter, vt quæ vrticæ vocantur. Piſces, qui vulpes nuncupantur, cum ſe deglutiſſe hamum ſenſerint, ſibi opitulantur, vt centipedæ. Longius namque ſeſe efferentes hami lineam abrodunt. Capiuntur enim locis nonnullis hamo multiplici, gurgite præalto, & fluctuoſo. Quinetiam amiæ, cum belluam viderint aliquam, colligunt ſeſe: & quæ magnitudine præſtant, luſtrantes gregem circumuallant: & ſi qua violatur, defendunt. Dentes his validi: & iam cùm aliæ belluæ, tum amia aggreſſa, vulnera accepiſſe acriùs viſa eſt. Fluuiatilium ſilurus mas plurimum curæ proli impendit: fœmina, vt peperit, abit. Sed mas quo in loco plurimus fœtus conſtiterit, perſeuerans oua cuſtodit: nec alium præbet vſum, niſi vt piſciculos ne deripiant fœtum, arceat: idque vel ad quadrageſimum & quinquageſimum diem facit, donec ſatis iam aucta ſoboles, ſe tueri à cæteris piſcibus valeat. Prehenditur ſæpe à piſcatoribus, vbi oua cuſtodit. Dum enim arcet piſciculos, quatit, proſilit, & ictum ſonúmque mouet. Manet apud oua tam ardente animo, vt cùm ſæpe à piſcatoribus oua, ſi præaltis gurgitibus ſubſidũt, educantur, quoad magis fieri poteſt, in vadum, ipſe tamen eodem ſtudio fœtum ſequatũr, neque deſerere vnquam patiatur: tunc ſi minor ſit natu, minúſque vſu exercitatus, facilè hamo capitur: ſed ſi peritus, & hamifraga eſt, morſu dentis ſui duriſſimi rumpit hamum, & fœtum aſſiduè cuſtodit. Omnia verò tum nantia, tum ſtabilia, locis eiſdem, quibus orta ſint, aut ſimilibus, degunt: ſuus enim quibuſque cibus in iis eſt. Vagantur maximè, & oberrant, quæ carne aluntur, præter pauca, vt mugilem, ſalpam, mullum, æricam. Quæ autem pholis appellatur, mucorem, quem ipſa emittit, ſibi obducit, ita vt in eo quaſi cubili quieſcat. Generis teſtati & expedis pecten potiſſimum, plurimúmque ſe mouet volatu. Nam purpura & eius ſimilia, parum admodum progrediuntur. De Euripo Pyrrhæo piſces per hyemem omnes, excepto gobione, foras enatant propter frigus: locus hic enim frigidior eſt: ſed ineunte vêre eôdem redeunt. Vacat Euripus ſcaro, & aloſa, & reliquis ſpinoſioris generis omnibus. Muſteli etiam & ſpinaces in eo mari nequaquam gignuntur, necnon locuſtæ, polypi, bolitænæ, atque alia quædam genera. Gobionem album Euripi non eſſe pelagium certum eſt. Vigent piſces ouipari vêris tempore, donec pariant: viuipari autumno, atque etiam mugiles, mulli, & reliqui generis eiuſdem. Apud Leſbum inſulam omnia tã pelagia quàm Euripica parere ſolent in Euripo. Coeunt autumno, pariũt vêre: cartilaginea etiam autumno. Mares cum fœminis circa coitum congregantur: ſed vêre ſubeunt Euripum diſiuncta: neque coniugium reperitur vllum, donec pariant, cùm coitus tempore complura ex his ſibi adhærentia capiantur. Mollium aſtutiſſima ſepia eſt: ſola hæc ſuo vtitur atramento, non modò cùm metuit, verùm etiam abſcondendi cauſa.

A Polypus atque lolligo atramentum pro metu mittunt, ſed accreſcit denuo poſtquam miſerunt, vt nunquam copia deſit atramenti. Cæterum ſepia, vt dixi, ſæpe vel ſine pauore, ſuo vtitur atramento ad ſe occultandam: & cùm progreſſa paululum ſe oſtenderit, redit in atramentum. Venatur etiam ſuis illis prælongis prætenturis non ſolùm pisciculos, ſed mugiles etiam ſæpius. Polypus fatuus quidem eſt, cùm ad manum demiſſam hominis accedit: ſed prudens rei familiaris, cùm omnia colligat, & ſuo in domicilio recondat: cúmque conſumpſerit quantum vtile ſit, abigit teſtas, & cancrorum cruſtas, & putamina conchularum, & ſpinas piſciculorum. B Sui etiam mutatione coloris venatur piſces: trahit enim ſibi colorem ſimilem iis quibus appropinquarit, ſaxis: quod idem etiam, cùm metuerit, facit. Sunt qui ſepiam quoque facere hoc idem autument: colorem namque eam ſibi contrahere ſimilem loco, in quo verſatur, confirmant. Sed piſcium ſola ſquatina ita affici ſolet: mutat enim hæc more polypi, ſuum colorem. Genus polyporum magna ex parte biennio viuere non poteſt: ſua enim natura tabi obnoxium eſt. Cuius rei indicium, cùm preſſus polypus aliquid ſubinde humoris emittat, demúmque abſumatur totus: quod fœminis à partu potiſſimum incidit. Stupent etiam fœminæ, vt neque vndis iactatæ C ſentiant, & manu vrinantis de facili capiantur. Sordeſcunt etiam, nec præterea aſſidendo venari poſſunt. Mares verò alueo tument, & in mucorem lenteſcunt. Indicium, ne bimatum compleát, eſſe videtur, quòd ab ortu eorum, qui æſtate fit, ad autumnum non facilè grandem polypum videris, cùm paulò ante id tempus pergrandes ſpectentur. A partu ita ſeneſcere debilitarique tam marem quàm fœminam, ferunt, vt vel à piſciculis deuorentur, & facilè à ſuis detrahantur cubilibus, cùm antea nihil tale iis vſu eueniat: tum verò paruos nouellóſque, quamuis recèns natos, tamen nullo eiuſmodi malo affici narrant: quinimo validiores D eſſe, quàm grandes, confirmant. Sepias etiam bimatu non viuere, apertum eſt. Mollium vnus polypus exit in ſiccum, graditur per aſperiora, vitat læuia. Validum cùm cæteris ſuis partibus hoc animal ſit, collo tamen imbecille, cùm premitur, eſt. Mollia ita ſe habent. Conchas tenuiores ſcabráſque efficere circum ſe velut loricam duram, eámque eo ampliorem, quo ipſæ ſunt ampliores, atque de ea quaſi latibulo aut caſula quadam prodire, aiunt. Nauta quoque polypus natura, & vitæ muneribus ſingularis eſt: nauigat enim per maris ſumma elatus. De imo gurgite effert ſe concha inuerſa, vt aſcendere poſſit facilius, & inani ſcapha enauiget: vbi verò emerſit, concham reuertit. E Habet inter ſua brachia membranulam quandam annexam ſimilem iis quæ digitis inſertæ palmipedum auium continentur: verum illæ craſſiuſculæ ſunt, hæc prætenuis eſt, & araneæ ſpeciem imitatur. Hac velificat, cum aura inſpirat, cirros pro gubernaculis vtroque demittit latere. Si quid metuerit, concham protinus mari replet, atque ita demergit. De generatione incrementóque eius conchæ, nihil adhuc exploratum habeo. Videtur tamen non ex coitu gigni, ſed ſponte, vt cæteræ conchæ, prouenire. Nec verò an concha ſolutus viuere poſſit, certum adhuc eſt.

CAPVT XXXVIII.

De ingenio inſectorum, & formicæ ſtudio.

INſectorum officioſiſſimum, & præ cæteris ferè omnibus animalibus genus formicarum & apum eſt: crabrones item ac veſpæ, &, propè dixerim, omnia huius cognata generis. Aranei etiam lautiores, & ſtrigoſiores, ingenioſiores in vitæ muneribus ſunt. Iam formicarum negotia omnibus in promptu habentur: vtque eadem ſemita ſemper ambulant, & cibaria recondunt, & cellas promptuarias faciunt, nec interdiu ſolùm, ſed etiam noctibus plena luna laborem exercent, nemo eſt, qui non videat.

CAPVT XXXIX.

De generibus Araneorum, eorúmque induſtria in venatione, & tela conficienda.

ARaneorum autem & phalangiorũ plura ſunt genera. Mordax, quod in duo diſtinguitur. alterum ſimile iis quæ lupos appellant, eſt, paruũ, varium, procax, ſalax, pulex nuncupatum: alterum maius, coloris nigri, cruribus prioribus nigris, tardum, & lentè ambulans, nec viribus valens, neque ſaliens. Cætera, quæ medicamentarij proponunt, aut nullum, aut certè exilem inferunt morſum. Genus ſecundum, quod lupi nomen accepit, partim exiguum eſt, quod non texit: partim maius, quod aſperam prauámque telam apud terram, aut ſepes, orditur. Bucculis intexere ſolitum primordiis intus poſitis obſeruatur. Dum aliquid in tela offendens commouerit, mox accurrit, vt capiat. Partim varium eſt, quod paucam vilémque telam ſub arboribus facit. Tertium genus, quod ſapientiſſimum lautiſſimúmque omnium eſt. texit enim, primùm filis quoquo verſus diſtendens in orbem, tum ſtamina ducens, initio à medio accepto, nec inſcitè medium ipſum accipit: deinde ſubtegmina inferens, atque ſtipans, cubile & repoſitorium alibi ſibi conſtituit: ſed venationem in medio ſui operis obſeruando exercet. Cùm enim beſtiola eò inciderit, motu medij excitus occurrit, deuincítque primùm obuoluens araneis: dum defatiget, infirmámque faciat: tum tollit, ac defert: & ſi fortè fame tenetur, exugit: hæc enim fruitio eius eſt. Sin minùs, recondito, quod ceperit, in repoſitorio, repetit venandi negotium, ſed priùs conſarcinato, quod per venatum laceſſitum eſt. Si quid inter medium & extrema inciderit, primùm ipſe in medium currit, inde ad id quod inciderit, velvt à ſtrato initio properat. Si quis telam lacerarit, texere iterum incipit. Venatur oriente Sole, aut occidente: quoniam beſtiolæ temporibus his potiſſimùm offendant. Fœmina & texit, & venatur, mas comes fruendi, non laborandi eſt. araneorum lautiorum, & telam ſpiſſiorem texentium, duo ſunt genera, alterum minus, alterum maius. Quod igitur longioribus eſt cruribus, pendens ſubtus obſeruat, ne beſtiolæ præ formidine ſibi caueant, ſed incautæ incidant in partem ſuperiorem: ineptius enim propter ſui corporis magnitudinem eſt. at alterum, quod moderatius eſt, ſupernè obſeruat, latens in quodam exiguo ſuæ telæ foramine.

CAPVT XL.

De generibus Apum, earúmque ſtudio in ædificandis fauis, déque his herbis, quibus apes aluntur.

B GEnus eſt inſectorum quoddam nomine adhuc vacans, quo vno comprehendatur: ſed formam ſuarum partium cognatam omnium referens, videlicet ea quæ fauos faciunt, vt apes, & reliqua ſimilis formæ inſecta: quorum genera nouem numero ſunt. Sex illa ex his gregalia, apes, reges apum, fuci, qui inter apes degunt, veſpæ annuæ, item crabrones, & teredines. Solitaria verò reliqua tria: ſirenis minor, qui fuſcus totus eſt: ſirenis maior, niger, varius: tertium, quem bombycem vocant, qui maximus inter hæc eſt. Formicæ nihil venantur, ſed facta ab aliis colli-

C gunt. Aranei nihil conficiunt, neque recondunt, ſed cibum ſolum venatu ſibi acquirunt. Ex nouem iis quæ modò enumeraui, generibus, apes (nã de cæteris pòſt) nihil venantur, ſed ipſæ ſibi cibaria faciunt, atque recondunt: mel enim cibus earum eſt. Cuius rei indicium faciunt, cùm apiarij eximere incipiunt fauos: quamuis enim ſuffiantur, vehementérque ex fumo laborẽt, tamen plus mellis tunc edunt, quàm prius. Quod enim cibi cauſa recondiderint, parciùs eo temporibus cæteris vtuntur. ſed habent etiam quo altero cibo alantur, quod quidam ceraginem, alij cereum vocant: verùm hoc deterius eſt, & dulcedine propè ficus. Congerunt id quoque, vt ceram, ſuis cruri-

D bus. Perquam varia in earum operatione, & vitæ ratio eſt. Cùm enim alueum receperint mundum, conſtruere incipiunt fauos, deferentes ex floribus, atque etiam arborum lacrymis, ſalicis, & vlmi, & reliquarum, quæ glutinum pariunt. His pauimentum quoque illinunt, ne beſtiolæ nocuæ ſubeant. Vocant hoc opus apiarij tectorium imum. aditus, etiamſi ampliores ſunt, fabrica obſtruentes coarctant. Effingunt fauos primùm in quibus ipſæ gignuntur: deinde in quibus reges dicti & fuci. Suos certè ſemper componunt, ſed regum, cùm fœtus largior eſt: fucorum autem cum copia mellis ſperatur. Fauos regum minores fa-

E ciunt iuxta ſuos; fucorum iuxta regum, minores quàm ſuos. Exordium operis à tecto, aluei, textúſque ad pauimentum perpetuo ſtabilimento agitur, pluréſque ad pauimentum telæ deducuntur. Cellæ autem & mellariæ & ſobolariæ geminæ omnes ſunt: vno enim eodémque interſepto, duæ ſibi iunguntur cellæ, modo poculi gemini: altera intus, altera foris. Compages, quæ parietibus faui adhærent, arctiores, & melle vacuæ relinquuntur, gemino aut triplici verſu: pleniores enim ſunt faui, quibus plus ceræ obducitur. Pars aditus aluei prior illita eſt ex com-

A moſce: ſic enim vocant, quod velut excrementum purgamentúmque ceræ eſt, bene nigrum acriſque odoris. Medentur hoc plagis, & huiuſcemodi ſuppurationibus. Proximum ab eo tectorium piſſatus cereus præbet: leuius id quàm commoſis, medicamentum eſt. Sunt qui fucos & per ſe fingere fauos eodem in alueo, & cum apibus negotium conficiendi faui partiri dicant: verùm mellificandi nullam habere facultatem, ſed veſci tum eos, tum eorum pullos melle, quod apes fecerint. Manent fuci magna temporis parte intus, cúmque exeunt, efferunt ſeſe fuſim in ſublime: gyróque volitant, & quaſi exercitium faciũt: quod vbi ſatis iam fecerint, redeunt domum, & epulis B perfruuntur. Reges nunquam prodeunt foras, vel vt paſcantur, vel alia cauſa, niſi vniuerſa cum plebe. Et ſi, cùm pergunt, rex ipſe fortè aberrarit, omnes inquirere odoratúque ſagaci perſequi donec inueniant, accepimus. Geſtari etiam eum à plebe, cùm volare non poteſt. Et ſi perierit, omnes diſcedere: vel ſi aliquamdiu manſerint, fauos quidem conficere, ſed mel nullum: nec fieri poſſe quin breui omnes diſcedant.* Ceram apes pertreptando flores, capiunt, priorum acumine pedum: mox priores in medios abſtergunt, & medios in blæſa poſteriorum, atque ita onuſtæ diſcedunt: & quidem grauari premique onere cernuntur, quoties redeunt. C Mos apibus, ne florum plura genera petant vno eodémque profectu, ſed ſingulis ſingula. Verbi gratia, à viola ad violam aduolant, nec aliud attingunt, quouſque ſuum in alueũ redeant. Hîc ſe quatiunt, & ſingulas, tres, aut quatuor ſequuntur: ſed quid accipiant, haud facilè videris, nec verò quemadmodum operantur, viſum adhuc eſt. Ceræ congeſtio notari potuit in oleis, cùm diutius in eadem morentur, propter frondem eius arboris ſpiſſiorem. Poſt hæc fœtificare incipiunt: nec prohibet quicquam quominus eadem in cella ſint, & pulli, & mel, & fuci. Gigni fucos ſeorſum dicitur, ſi dux viuit: ſed ſi obiit, D in apum loculamentis oriri ex ipſis apibus, atque hos fieri animoſiores, quocirca aculeatos vocari, quamuis aculeo careant: animo namque feriendi, non poteſtate, nomen hoc meruerunt. Sunt loculi ipſi fucorum ampliores, & finguntur ſeorſum quoque per ſe faui fucorum, ſed magna ex parte fauis apum inſeruntur, quapropter ſecandum eſt. Genera apum plura, vt dixi. Duo principum: alterum rufum, quod præſtantius eſt: alterum nigrum, magíſque varium, duplo amplius ape vtili. Tertium genus, quod optimum, breue hoc, in rotunditatem compactile, & varium eſt. Quartum longum, crabronibus ſimile. Præterea, quod fur appellatur, nigrum hoc, aluóque am-* E pliore eſt: quinetiam fucus, qui omnium maximus eſt, ſed ſine aculeo, & ignauus. Differunt inter ſe apes parentibus natæ vrbanis, & quæ ruſtico montanóque victu educatis prodierint: ſunt enim hæ ſylueſtres horridiores aſpectu, & iracundiores, & minores, ſed opere ac labore præſtantiores. Genus frugi fauos ſuos æquabiles conſtruit, ſupernúmque totum operimentum politum apponit, & ad ſingulos vſus fauum ſingulatim effingit, videlicet partem aliam ad mella, aliam ad prolem, aliam ad fucos accommodatam. Quòd ſi acciderit, vt eodẽ in fauo omnia hæc recipiantur, loculus alter deinceps diſpoſitus habetur inanis. at verò illæ porrectiores, fauos inæquales conficiunt,

A & operimentum retumidum perinde, vt crabrones, imponunt: fœtum etiam, & reliqua ſine ordine ſtatuunt. Duces improbi ex his oriuntur, & copia tum fucorum, tum etiam earum quos fures vocant: ſed mellis aut nihil, aut admodum parum opera earum conficitur. Incubant apes ſuis fauis, & concoquunt. Quod niſi fecerint, vitiari ex aranea fauos aiunt. Quod ſi de cætero ſe continere potuerint, vt incubitu perſeuerent, partus quaſi abortus fit. ſin minùs, toti pereunt faui. Gignuntur in iis quæ vitiãtur, vermiculi, qui mox pennis ſubnatis euolant. Curant etiam apes vt faui erecti ſtent. Quòd ſi qui corruerint, erigunt, & pilis fulciunt fornicatis, vt ſubire poſſint. Cùm e- B nim via, qua accedant, non datur, ceſſant incubitu (vnde fit vt faui araneentur.) Furis & fuci nullum eſt munus, ſed cæteris, quibuſcum viuũt, iniuriam faciunt, non tamen impunè ſemper: nam deprehenſi interdum à bonis apibus occiduntur. Enecant nimirum ipſæ etiam duces, qui plures quàm ſatis ſit, habeantur: & potiſſimùm improbos, ne principum multitudo ſeditiones in examine faciat. Necant præcipuè, cùm non ampla ſobolis copia exiſtit, nec habent tanquam coloniam mittant. Fauos etiam regum, eo tempore, ſi parati ſunt, diruunt: vtpote cùm deſint, quibus mittendis duces ipſi præficiantur. Necnon fauos tollunt fucorum, ſi mellis penuriam coniectantur, nec al- C uei annona ſuperioris anni abundant. Et apiarium eximentem de melle tunc præcipuè impugnãt, ac præſentes fucos expellunt, & quidem ſæpe viſuntur foris in alueo reſidentes exules. Flagrant odio breues contra longas, eáſque alueis pellere conãtur: qua in pugna ſi illæ vicerint, optimum ita fore examen putatur: ſed ſi hæ ſolæ remanſerint, otioſæ viuunt, & nihil boni integrè faciunt. Pereunt etiam ipſæ antè quàm autumnus ſit. Student bonæ apes, quoad fieri poteſt, ne quam intra alueum interimant: ſi quæ interierit intus, ſtatim foras cadauer educunt. Qui autem fures vocantur, & ſuos inuicem fauos offendunt, & alienos ſi latuerint, ſubeunt: ſed ſi capiantur, capite puniuntur, nec facilè aut latêre, aut aufugere poſ- D ſunt. Sunt enim in quoque aditu cuſtodes: & fur ipſe, ſi quando ſurripere ingreſſum potuerit, adeo in ſatietatem repletur, vt nequeat euolare, ſed ante alueum volutetur: itaque fuga perquam difficilis eſt. Reges nunquam foris viſuntur, niſi cùm migratur: & tunc ita, vt reliquæ omnes circa ipſum principem ſuum glomerentur. Cùm verò migrandum eſt, vox ſolitaria, & peculiaris quędam aliquot antè diebus intus mittitur: & biduo aut triduo paucæ circum alueum volant. an rex etiam inter eas ſit, nondum exploratum habemus, quoniam difficile cognitu eſt. Collectæ iam auolant, & per ſingulos reges diuiduntur. Et E ſi fortè paucæ prope multas conſiſtunt, concedũt paucæ ipſæ ad plures, ac regem, quem reliquerint, ſi ſequatur, interimunt. Diſceſſus & migratio ita agitur. Singulis autem muneribus ſe diſtribuunt, vt aliæ flores conuehant, aliæ extruant, aliæ poliãt fauos, & dirigant. aquam tunc portant, cùm prolem nutriunt. Carnem nullius animalis tangunt, nec obſonium appetunt. Nullum his tempus certum conſuetúmque eſt, quo operari incipiant:

A ſed ſi cibariis non carent, benéque degunt, æſtiuo potiſſimùm tempore opus aggrediuntur, & quamdiu ſerenum ſit, aſſiduè operantur. Nouellæ etiam tertio quam prodierint, die, ſtatim negotium ineunt, ſi cibus ſuppetit. Cùmque incubant, digrediuntur nonnullæ ad paſtum, ſed breui redeunt. Proles felicis examinis quadraginta diebus intermittitur, tantummodo à bruma. Cùm ſatis iam concreuiſſe pullitiem ſenſerint, cibo appoſito derelinquunt: ipſa verò, cùm datur facultas, rupto operculo exit. Beſtiolas quæ in alueis naſcuntur, & fauis officiunt, apes notæ melioris tollunt, & rem familiarem tuentur: ſed alteræ pro ſuo vitio negligunt, & perire patiuntur.

B Cùm autem fauos apiarij eximunt, cibi tantum relinquunt, quãtum per hyemem ſufficiat. Quod ſi ſatis ſit, ſeruatur examen: ſin minùs, vel moritur ibidem, ſi ne diſcedat, hyems obſtat: vel deſerit ſedem, ſi ſerenum nanciſcitur. Mel apibus tum æſtate tum hyeme in cibo eſt, ſed recondunt alterum quoque cibarij genus, cui durities ceræ proxima, quod ſandaracam nonnulli appellant. Inferunt iniuriam apibus maximè veſpæ, & auiculæ, quas paros vocant, atque etiam hirundo & merops: qui apiaſter eſt, tùm verò ranæ lutariæ, eas vbi ad aquam acceſſerint, rapiunt. Quamobrem eas apiarij per paludes & ſtagna, vnde apes aquantur, venari ſolent, & veſparum latibula, &

C hirundinum, ac meropum nidos propinquos alueis, tollunt. Nullum animal, niſi ſui generis, apes fugiunt. præliantur enim inter ſe, & cum veſpis. Sed cùm ruri ſunt, nec ſibi inuicem, neque vllis aliis iniuriantur: at verò apud ſuos alueos pugnant acerrimè, & hoſtes, quos vicerint, enecant. Intereunt quæ percuſſerint: quoniam ſine inteſtini eruptione, aculeus eximi non poteſt. Sæpius enim euadunt, ſi, qui ictus eſt, curam adhibet, vt aculeus infixus iunctus cum aluo extringatur, alioqui apis interit. Necant vel maxima animalia ictu ſui aculei. Iam equus occiſus ab apibus eſt. Sed principes minimè irritantur, & feriunt.

D Efferunt foras apes vita in alueo defunctas, & cætera. Mundiſſimum omnium hoc animal eſt. quamobrem ſæpenumero cùm alui neceſſitas eſt, euolant, & in receſſu reddunt excrementum, quoniam malè oleat. Oderunt non ſolum fœdos odores, ſed etiam vnguentorum delitias. Ex quo fit vt homines his delibutos percutiant. Pereunt apes tum aliis caſibus, tum verò cùm multi principes orti, partem quiſque ſecum, quò libuit, abducat. Rubeta etiam apes interimit: ſubiens enim aditus aluei, afflat, & obſeruans rapit euolantes. Nullo hæc affici malo ab apibus poteſt, ſed ab apiario facilè interimitur. Genus autem apum, quod improbum eſſe, ac fauos fingere aſperos diximus, no-

E uellis maximè tribuunt apiarij nonnulli: peccaréque ita per imperitiam eas arbitrantur: nouellæ autem ſunt anniculæ omnes, quarum examen quotannis auolare ſolitum eſt. Nec verò nouellæ ipſæ perinde ac veteranæ, pungunt. Cùm copia mellis non ſuppetit, apiarij fucos depellunt: & ficus, ac reliqua id genus dulcia in cibo apponunt.

Redduntur otioſiores, ſi in eximendis fauis plus mellis relinquatur: itaque pro examinis numero relinquendum eſt. agunt etiam anxiùs, ſi plus demeratur quàm vt reſiduum ſufficiat. atque etiamſi alueus iuſto amplior ſit, deſidioſiores redduntur: ægriùs enim, quaſi deſperent, operi incumbunt. Caſtrantur faui ſinguli ſextariis, aut ternis ſemiſextariis: ſed ſi exuberant, binis ſextariis caſtrari, aut quinis ſemiſextariis poſſunt, pauci ternis ſextariis. Impugnantur apes à veſpis, vt antè dixi: quamobrem apiarij eas venantur, conſtituta olla, & carne in ea poſita: vbi enim multæ iam ad carnem acceſſerint, appoſito operculo ſuper ignem ollam ponunt. Fuci autem, ſi pauci adſunt, iuuant. reddunt, n. apes in opere ſolicitiores. Præſagiunt apes & hyemem, & imbres. Cuius rei indiciũ eſt, quòd non auolant, ſed ſereno adhuc in alueo volitantur, quo apiarij hyemem expectant. Cùm verò mutuo inter ſe annexi alia ex alia dependet in alueo, indicium deſerendi cubilis eſt. Quod ne eueniat, apiarij alueis afflant ex vino dulci. Expedit conſeuiſſe apud aluearia pyros, fabas, medicam herbam, ſuriam, eruiliam, myrtum, papauer, ſerpyllum, amygdalam. Cognoſcunt ſuas apiarij nonnulli farina in prato reſperſa. Minùs apes fœtificant, ſi ver ſerotinum ſit, aut ſquallor, aut rubigo inciderit. Ratio apum ad hunc modum eſt.

CAPVT XLI.

De duobus veſparum generibus, & earum ſtudio in fauis conſtruendis.

VEſparum duo ſunt genera: alterum ferum, quod rarum eſt, naſcens in montibus, & pariens non ſub terra, ſed in quercu, ſpecie grandius, porrectius, nigrius: varium etiam aculeatúmque eſt, & robuſtius, ictuque acerbius, quàm alterum, eſt: aculeo enim maiori, quàm ex proportione ſui corporis, ſpiculatur. Viuit hoc toto anno: & quidem tempore hyberno, quercu cæſa euolare ſpectatur. Exigit hyemem in latebra, & ſemper in macerie diuerſatur. Sunt eius aliæ matrices, aliæ operariæ, vt & in altero genere, quod placidius eſt. Quæ autem ſit natura operariæ ac matricis, in eo ipſo placidiore genere percipi faciliùs poteſt. Sunt enim huius quoque duo genera: alterum duces, quas matrices appellant, alterum operariæ: maiores mitioreſque duces ſunt. Ætas operariarum annum non complet, ſed omnes hyeme inualeſcente moriuntur. Quod ea re conſtat, quia hyeme incipiẽte ſtupeſcãt: bruma autem nullæ omnino appareant: duces verò, qui matrices vocantur, tota hyeme viſuntur, atque ſub terra latent. Plerique enim, cùm per hyemem ararent, aut foderent, matrices viderunt, operarias nemo. Ortus talis veſparum eſt. Duces vbi iam locum ſibi opportunum delegerunt, fauos opere æſtiuo confingunt, & veſpeta (cellulas dico) conſtituunt quaternis foriculis, aut propè, in quibus veſpæ, non matrices naſcuntur. Quæ cùm increuerint,

A rurſus altera ampliora effingunt. Quorum item proles, cùm creuerit, alia faciunt, ita, vt poſtremo autumno plurima ampliſſimáque veſparum condita habeantur: in quibus dux, quæ matrix vocata eſt, non inſuper veſpas, ſed matrices generat: quæ quidem ſupernè per ſummum veſparium vermium ſpecie multo grandiorum gignuntur cellulis continuatis quatuor numero, aut paulo pluribus. alioqui increſcendi ratio ducibus eadem quæ veſpis eſt. Sed cùm veſpæ operariæ ſiluis affuerint, non præterea duces operantur, ſed operariæ ipſæ cibum ſuis ducibus ſubminiſtrant. Quod ea re conſtat, quia duces non item euo-
B lant, ſed intra tecta quieſcunt. Cæterùm vtrùm duces anni ſuperioris, nouellis iam procreatis ducibus, interimantur à veſpis nouellis, idque ſimili modo eueniat, an plus etiam temporis poſſint viuere, nondum exploratum eſt. Nec verò ſenectutem matricis, & veſparum generis feri, aut aliquem huiuſmodi affectum annotare adhuc quiſquam potuit. Eſt autem matrix latior, ponderoſior, craſſior, & maior, quàm veſpa, volatúque haud plurimum valet. Præ pondere enim ſui corporis volare longiùs nequit. Quo fit vt ſemper in veſpariis ſedeant effingentes fauos, & munere fungentes cellario. Inſunt porrò matrices nuncupatæ in veſpariis plurimis: ſed aculeatæ ſint nécne, am-
C bigitur. Videntur tamen & ipſæ, vt apum duces, gerere quidem aculeum, ſed non extringere, aut ferire. Veſparum autem aliæ carent aculeo, vt fuci: aliæ habent. Minores imbecilliorέſque ſunt quæ carent, neque repugnant. contrà, quæ habẽt, maiores, robuſtæ, atque pugnaces, quas nonnulli mares appellant: fœminas verò, eas quæ carent. Pleræque ex iis quæ aculeum gerunt, amittere eum putantur hyeme inſtante: ſed hoc ex nemine, qui vidiſſet, accepimus. *Veſpæ temporibus* ſiccis, locíſque aſperis *potiùs* oriuntur. Ortus ſub terra agitur. *Fingunt ſuos* fauos ex congerie ac terra, & ab *eodem* primordio quaſi ſtirpe vnumquemque ædificant. Cibum vel ex floribus qui-
D buſdam & fructibus petunt: ſed quàm plurimùm ex carne. Coire nonnullæ etiam ex cæteris viſæ ſunt: ſed an ambæ aculeo careant, aut habeant, vel altera habeat, altera careat, nondum exploratum eſt. Ferarum etiam nonnullæ coire viſæ ſunt, & alteram gerere aculeum conſtitit, ſed de altera incertum eſt. Fœtus non partu prouenire videtur: ſtatim enim auctior, quàm partus veſpæ patiatur, exiſtit. Si veſpam ex pedibus ceperis, bombilaréque ſiueris, aduolant quæ aculeo carent: quod nõ faciunt, quæ aculeatæ ſunt. Itaque argumento quidam hoc vtuntur, vt alteræ mares ſint, alteræ fœminæ. Capiuntur hyberno tempore, in ſpelun-
E cis, & quæ aculeum habent, & quæ carent. Condunt aliæ ſua veſparia pauca, & exigua: aliæ plura, & ampliora. Capitur magna matricum pars à ſolſtitio apud vlmos: colligunt enim hinc lentam & gummoſam materiam. Prodiere locis quibuſdam matrices ortu admodum numeroſo, cùm ſuperiori anno veſparum atque imbrium copia præceſſiſſet. Capiuntur per præcipitia, & terræ rimas, præruptáque directiora: omnéſque viſuntur aculeum gerere. Talis veſparum ratio eſt.

CAPVT XLII.

De crabronibus, victúque eorum, & alueis.

CRabrones, non floribus, vt apes, ſed carne magna ex parte viuunt. Vnde fit vt verſari vel in ſtercore ſæpe ſoleant. Venantur etiam muſcas maiuſculas, quas vbi ceperint, abſciſſo capite, reliquum corpus geſtantes auolant. Sed pomum etiam dulce appetunt. Cibus his talis eſt. Duces more apum veſparúmque habent, qui proportione ad crabrones maiores quàm veſparum ad veſpas, & apum ad apes ſunt. Degunt hi quoque intus, vt veſparum duces. Faciunt ſibi alueum ſub terra crabrones, terra egeſta: & vt formicæ excauant. Miſſio enim vt apum, nulla vel eorum vel veſparum fieri ſolet. Sed qui ſubinde oriantur nouelli, ibidem manent, & alueum terra egeſta faciunt ampliorem: amplificant maiorem in modū, & iam ex valentiore quodam examine qualli tres, & quatuor fauorum pleni excepti ſunt. Nec verò cibum ritu apum ſibi recondunt, ſed ieiuni latent per hyemem, quo tempore plurimi moriuntur: an etiam omnes, nondum certum eſt. Duces nō plures vno, ſingulis eorum examinibus oriuntur, vt inter apes gignuntur plures, qui examina diſtrahunt. Sed ſi qui crabrones ſuo alueo aberrarint, colligunt ſe ad aliquam arborem, fauóſque ibi cōficiunt, qui vel ſæpe conſpicui apparent: in quibus vnum procreant ducē, qui cùm adoleuerit, agmen adducit, & ſecum in alueo collocat. De coitu crabronum nihil adhuc exploratum habeo, nec vnde fœtificent. Sed cùm in genere apum careant aculeo, & fuci, & reges, atque etiam veſparum nonnullæ inaculeatæ ſint, vt antè dixi, crabrones omnes armari aculeo videntur. Sed de eorum duce conſiderandum accuratiùs eſt, an aculeum habeat.

A quidem ad fortitudinem, & timiditatem: ſed ad manſuetudinem quoque & feritatem etiã in ipſo ſylueſtrium genere. Leo enim quamuis in edendo ferociſſimus ſit, tamen paſtus, & fame iam vacans, facilis mitiſque maiorem in modum eſt. Nihil ſuſpicatur, nullius ſuſpicioſus eſt, feſtiuus, ludibundus, beneuolus admodum ſuis cum ſociis & familiaribus eſt. In venatu, dum cernitur, nunquam fugit, aut metuit, ſed etiam ſi venantium multitudine cedere cogitur, ſenſim pedatimque diſcedit, crebrò ſubſiſtens, atque reſpectans. Nactus verò opaca, fuga, qua maximè poteſt, veloci ſe ſubtrahit, donec in aperta deueniat, tum rurſus, B lentè incedit. Sed ſi quando locis nudis atque patentibus cogitur fugam apertè arripere, currit cõtentus, nec ſalit, curſuſque eius continens, vt canum, intenditur: cùm tamen ipſe inſectatur, vbi iam propinquarit, inſilit. Vera etiam illa de eo narrantur, ignem præcipuè formidare, vt Homerus quoque teſtatur, cùm dicat:

Ardentéſque faces, quas, quamuis ſæuiat, horret:

& percuſſorem agnoſcere, atque ex obſeruato inuadere. Si quis etiam non percuſſerit, ſed infeſter, hunc ſi ceperit, non vnguibus lacerat, nec vlla iniuria afficit, ſed quatit ſolùm: atque vbi ita perterruit, dimittit. adeunt vrbes, & iniuriam hominibus inferunt, potiſſimùm tempore ſuæ ſenectu- C tis: tunc enim per corporis imbecillitatem, & dẽtium defectionem, venari nequeunt. Viuere annos multos putantur. Et quidem qui captus eſt claudus, dentes complures fractos habebat. Quo argumento quidam longam eſſe leonum ætatem exiſtimarunt: haud enim hoc accidere niſi longo tempore potuiſſe. Leonum ſunt duo genera, quorum alterũ breuius, criſpioréque pilo, quod ignauius eſt: alterum longius, pilóque probiore, quod generoſius eſt. Fugiunt interdum leones demiſſa inter crura cauda, vt canes. Iam viſus eſt leo, qui, cùm ſuem aggrederetur, vt ſetis horrentem aſpexit, fugeret. Infirmus parte ilium eſt contra ictus, D ſed reliquo corpore multas patitur plagas, & capite validiſſimo eſt. Quæcumque vel momorderit, vel vnguibus lacerarit, ſanies pallẽs admodum de his vlceribus effluit, etiã per faſcias, atque ſpõgias, nec reprimi vllo pacto poteſt. Curantur eodem modo, quo morſus canini, vlcera. Thoes etiam quos lupos ceruarios diximus, hominem diligunt, & neque offendunt, neque metuunt valde. Pugnant cum canibus, & leonibus: quo fit ne eodem in loco ſint ceruarij, & leones. Optimi ceruarij, qui minores ſunt. Genera huius alij duo, alij tria ſtatuunt. Plura iis eſſe non videntur. Sed vt piſcium, auium, quadrupedum genera aliqua, ita ceruarij quoque per tempora immutantur: & co- E lorem diuerſum hyeme æſtatéve trahunt: atque æſtate nudi, hyeme hirti redduntur.

CAPVT XLV.

De natura, ſpecie, & partu Bonaſi.

BOnaſus gignitur in terra Pæonia, monte Meſſapo, qui Pæoniæ & Mediæ terræ collimitium eſt, & monapios à Pæonibus appellatur, magnitudine tauri, ſed corpore, quàm bos, latiore: breuior enim, & in latera auctior eſt. Tergus diſtentum eius locum ſeptem accubantium

occupat. Cætera, forma bouis ſimilis eſt, niſi quod ceruix iubata armorum tenus, vt equi, eſt, ſed villo molliore quàm iuba equina, & compoſitiore. Color pili totius corporis flauus, iuba prolixa, & ad oculos vſque demiſſa, & frequens colore inter cinereum & rufum, non qualis equorum, quos paroos vocant, eſt, ſed villo ſupra ſquallidiore, ſubter lanario. Nigri, aut admodum rufi, nulli ſunt. Vocem ſimilem boui emittunt. Cornua adunca in ſe flexa, & pugnæ inutilia gerunt, magnitudine palmari, aut paulò maiora, amplitudine non multò arctiore, quàm vt ſingula ſemiſextarium capiant, nigritie proba. Antiæ ad oculos vſque demiſſæ, ita vt in latus potiùs quàm antè pendeant. Caret ſuperiore dentium ordine, vt bos, & reliqua cornigera omnia. Crura hirſuta atque biſulca habet, caudam minorem quàm pro ſui corporis magnitudine, ſimilem bubulæ. Excitat puluerem, & fodit vt taurus. Tergore contra ictus prævalido eſt. Carnem habet guſtu ſuauem: quamobrem in vſu venandi eſt. Cùm percuſſus eſt, fugit: niſi defatigatus, nuſquam conſiſtit. Repugnat calcitrans, & proluuiem alui vel ad quatuor paſſus projiciens: quo præſidio facilè vtitur, & plerumque ita adurit, vt pili inſectantium canum abſumantur. Sed tunc ea vis eſt in fimo, cùm bellua excitatur, & metuit: nam ſi quieſcit, nihil vrere poteſt. Talis natura, & ſpecies huius animalis eſt. Tempore pariendi, vniuerſi in mõtibus enituntur. Sed priùs quàm fœtum edant, excremento alui circiter eum locũ in quo pariunt, ſe, quaſi vallo, circundant, & muniunt. Largam enim quandam eius excrementi copiam hæc bellua egerit.

CAPVT XLVI.

De ingenio & ſagacitate elephanti.

ELephantus, omnium ferarum mitiſſimus & placidiſſimus eſt: quippe qui permulta officia & erudiatur, & intelligat: quando etiam regem adorare condiſcit. Valet ſenſu, & reliqua ſagacitate ingenij excellit. Quam impleuerit coitu, eam rurſus non tangit. Viuere elephantos mares alij annos ducentos, alij centum & viginti aiunt: fœminas etiam ferè totidem: ſed florere ætate circa ſexageſimum narrant. Hyemis ac frigoris impatiẽs hoc animal eſſe dicitur. amat amnes, & quanquam non fluuiatile ſit, tamen riparium dici poteſt. Incedit etiam per aquam: & eatenus mergitur, quatenus eius promuſcis ſuperat. Reflat enim per eam & ſpiritum accipit, & reddit: ſed natare ſatis pondere ſui corporis non poteſt.

CAPVT XLVIII.

De manſuetudine, amore, & celeritate delphinorum.

IN marino etiam genere plurima de delphinis narrantur indicia morum placidorum, ac mi- B tium: amores quoque in pueros, & affectus libidinis, cùm circa Tarentum & Cariam, tum etiam locis aliis referunt. Fertur etiam delphino apud Cariam capto, atque ſaucio, ingẽtem reliquorum multitudinem cõueniſſe ad portum, immoratámque donec piſcator dimiſerit eum, quem ceperat, tum omnes ſimul recepto captiuo rediiſſe. Paruos item delphinos magnus aliquis ſemper comitatur cuſtodiæ cauſa. Iam conſpectus eſt delphinorum grex, maiorum & minorũ promiſcuus, poſt quem duo quidam paulò pòſt viderentur delphinulum defunctum labentem in imum, ſubire, & in ſumma pelagi dorſo euehere, quaſi miſeran- C tes, ne ab aliqua bellua deuoraretur. Quinetiam de velocitate huius animalis mira & incredibilia quædam accepimus. Omniũ enim velociſſimum eſſe creditur animalium tum aquatilium, tum terreſtrium. Superſiliunt etiam malos nauigiorũ maiorum: quod tunc potiſſimùm euenit, cùm aliquẽ inſectantur piſcem, quem deuorent: tunc enim, ſi, quem impetunt, longiùs fugit, ad ima gurgitum perſequuntur, propter famis neceſſitatem. Quòd reditus longior ſit, retinent ſeſe, quaſi ſpatium cogitantes, conuerſique feruntur perinde, ac ſagitta, pernices, vt celeritate opportuna longo tranſmiſſo itinere ad locum ſpirandi deueniant. Quo impetu fit vt ſe eiaculentur in aërem, & ſuperſiliant malos nauigiorum, quæ fortè affuerint. Hoc idem D vrinatores faciunt, cùm ſe in profundum dimiſerunt: pro viribus enim conuerſi enixiùs efferũtur, vt ſpirent. Degunt coniugatim mares cum fœminis. Quæritur quamobrem in terram erumpant, hoc enim interdum eos facere incerta de cauſa dicitur.

CAPVT XLIX.

De his animalibus, quæ pro actionibus aſſiciuntur, moribúſque immutantur.

E SEd vt quæque animalia pro ſuis affectibus agere, ſic pro ſuis quoque actionibus affici, immutarique moribus ſolent. Partes etiam corporis nonnullæ ſæpenumero ratione agendi immutantur, vt in auium genere euenit. Gallinæ enim, cùm mares vicerint, cucuriunt, & exemplo marium, tentant ſuperuentu coire. Criſta etiam caudáque erigitur, ita, ne facile prætereà ſit, an fœminæ ſint, cognoſcere. Nonnunquam etiã calcaria parua iis enaſcuntur. Iam verò & mares viſi nonnulli ſunt, qui, cùm fortè fœmina interiiſſet,

ipſi officio matris fungerentur in pullos, ductando, fouendo, educando, ita nè de cætero vel cucurire vel coire appeterent. Quinetiam inde à primo ortu Naturæ, ita nonnulli mares effœminati proueniunt, vt neque cucuriant neque per coitum agere velint, & Venerem eorum qui tentent ſuperuenire, patiantur. Cuculus etiam immutatur colore, & vocem minùs explanat, cùm ſe abditurus eſt, quod facere exortu caniculæ ſolet: apparere autem incipit ab ineunte vêre ad eius ſyderis ortum. Abditur & ea, quam œnanthem quidam appellant, ac ſi vitiſſoram dixeris, exortu eiuſdem ſyderis, occaſu verò apparet: vitat enim interdum frigora, aliâs æſtum. Necnon vpupa cùm colore tum verò ſpecie immutatur, vt Æſchylus poeta ſatis carmine ſuo expoſuit:

Quin fert ſui ſpectantem & epopem mali,
Colore ſpeciem multimodo pingens ſuam,
Saxicolam & improbum arma geſtantem alitem.
Adulti infantis forma hic ſeſe refert.
Nam vêre candicans vbi extitit nouo,
Aeſtate tum deinde, vt recanduit ſeges,
Alas repentè varius maculatas quatit.
Vagatur hic ſemper faſtidiens locos,
Deſerta quærit nemorum, & inuias plagas.

Complures etiam aliæ aues immutantur per tempora, & colore, & voce: vt merula, quæ ex nigra redditur rufa, & vocem mittit diuerſam. Strepitat enim per hyemem, cùm per æſtatem tumultuans cantet. Mutat & turdus colorem, quippe qui collo æſtate varius, hyeme murino diſtinctus ſpectetur: voce tamen eadem eſt. Luſcinia canere ſolet aſſiduè diebus ac noctibus quindecim, cùm ſylua fronde incipit opacare: dein canit quidem, ſed non aſſiduò: mox adulta æſtate, vocem mittit diuerſam, non inſuper variam, aut celerem, modulatámque, ſed ſimplicem: colore etiam immutatur. Et quidem in terra Itala per id tempus alio nomine appellatur. Apparet non diu: abdit enim ſeſe, & latet. Rubeculæ, & quæ ruticillæ appellantur, inuicem tranſeunt. Eſtque rubecula hyberni temporis, ruticilla æſtiui. Nec alio ferè inter ſe differunt, niſi pectoris colore, & caudæ. Sic & ficedulæ & atricapillæ vicibus commutantur: fit enim ineunte autumno ficedula, ab autumno protinus atricapilla: nec inter eas diſcrimen aliquod, niſi coloris, & vocis eſt. Auem autem eſſe eandem conſtat: quia dum immutaretur, hoc genus vtrumque conſpectum eſt, nondum abſolutè mutatum: nec alterutrum adhuc proprium vllum habens appellationis. Nec mirum, ſi hæc ita voce, aut colore mutantur, quando & palumbes hyeme non gemit, niſi quòd aliquando ex aſperrima hyeme placidum tempus ſucceſſiſſet, gemuerit: quod apud peritos in admiratione habitum eſt: cæterùm ineunte vêre gemere incipit. Denique aues tunc maximè, plurimáſque emittunt voces, cùm coeunt. Mos auium eſt vt aliæ ſeſe in puluere volutent: aliæ ſeſe lauent, aliæ nec puluere neque balneo vtantur. Sunt puluerantrices, quæ non altiuolæ, ſed terræ propinquæ: vt gallina, perdix, attagena, alauda, faſiana:

CAPVT L.

De iis animalibus quæ caſtratione immutantur, quæve ruminent.

Mvtantur verò animantium aliqua, forma, & moribus, non modò per ætates, & tempora, verùm etiam caſtratione. Caſtrantur autem ea quibus ſunt teſtes. Sunt auibus teſtes intus lumbis hærentes, & quadrupedum iis quæ oua pariunt. at verò iis quæ animal generant, eademque terreſtria ſunt, plurima quidem parte foris, ſed nonnullis etiam intus continentur: omnibus verò poſtrema aluo habentur. Caſtrantur gallinacei parte nouiſſima ſuæ alui, quæ cùm coeūt, concidit. Hanc enim ſi duobus aut tribus ferramentis aduſſeris, capos facies. Quòd ſi perfectus eſt qui caſtratur, criſta palleſcit, & cucurire deſinit, neque coitum Venereum repetit. Sed ſi adhuc pullus eſt, ne inchoari quidem ex iis quicquam poteſt, cùm accreſcit. Quod idem in homine quoque accidere certum eſt. Nam ſi puer adhuc excidatur, neque poſtgeniti pili innaſcuntur, neque vox immutatur, ſed ſuum ſeruat acumen. at ſi iam puber, poſtgeniti defluunt pili, præterquam pubis. Hæc enim quamuis minuatur, tamē manet: ſed congeniti non defluunt: nemo enim ſpado caluescit. Quadrupedum etiam exectorum vox omnium in fœmininam immutatur. Sed cùm cætera niſi nouella caſtrentur, intereant, aper vnus qua ætate caſtretur, non refert. Omnia denique, ſi dum creſcunt, caſtrantur, maiora & elegantiora quàm incaſtrata euadunt. Sed ſi poſtea quàm adoleuerunt, & iam incremento conſtiterunt, caſtres, nihil præterea accedere ad magnitudinem poteſt. Cerui, ſi cùm per ætatem nondum cornua gerunt, caſtrentur, non edunt cornua: ſed ſi corrnigeri exciduntur, non decidunt cornua, & magnitudine eadem ſeruantur. Vitulis tempus caſtrandi anniculis eſt, alioqui minores deformioréſque euadunt. Modus caſtrandi hic eſt; Tractos deorſum teſtes, atque obtentos, preſſóſque in imum ſcroti, cultello adacto, extrudunt: mox fibras ſurſum, quoad maximè fieri poteſt, reprimunt, & plagam infarciunt capillamētis, vt ſanies effluere poſſit: & ſi inflammatur, ignem adhibent ſcroto, & reſpergūt. Si bos à recenti caſtratu ineat, procreare poteſt. Apria etiam ſcropharum caſtratur, ne præterea coitum appetat, ſed breui tempore obeſetur. Caſtratur autem cùm biduo ieiunarit, ſuſpenſa pernis prioribus, reciſa cute inter femina, quà maribus teſtes maximè continentur: hac enim parte adhæret vuluis apria dicta, cuius exigua parte abſciſſa, conſarcinant. Cameli etiam fœminæ caſtrantur, cùm eis vti in prælio libet, ne concipiant vtero. Nonnulli ſuperioris Aſiæ incolæ, camelos vel ad tria millia poſſident. Currunt cameli celeriùs quàm equi Niſſani, propter laxiorem ſui gradus glomerationem. Et caſtrata denique auctiora, quàm incaſtrata, euadunt.

Animalia, quibus ruminare in more eſt, proficiũt, delectantúrque non minus in ruminando, quàm edendo. Ruminant quæ ſuperiore dentium ordine carent, vt boues, oues, capræ. Ex feris nullum adhuc ruminare conſtat, prætérquam ea quæ aliquando cum hominibus exigunt, vt ceruus: hunc etenim ruminare planum eſt. Iacent potiſſimùm, cùm ruminant, omnia, & hybernis præcipuè menſibus ſolent ruminare. Septem ferè menſibus hoc faciunt quæ intra tecta aluntur. Gregales leuiùs, minúſque temporis ruminant, quoniam foris paſcantur. Sunt etiam ex dentatis vtrimque nonnulla, quæ ruminent, vt mures Põtici, & piſcis, quem ab ea re ruminalem quidam appellarunt. Sũt item alui fluentioris ea quibus longiora ſunt crura: ſed propenſiora ad vomitum, quibus latius pectus eſt. Idque tum in quadrupedum genere, tum in auiũ, tum etiam in hominum, ita eſſe magna ex parte propenſum eſt.

A τὰ δὲ μηρυκάζοντα τῶν ζώων, χαίρει μηρυκάζοντα καὶ μηρυκάζουσιν, ὥσπερ ἐσθίοντα. μηρυκάζει δὲ τὰ μὴ* ἀμφώδοντα· οἷον βόες, καὶ πρόβατα, καὶ αἶγες. τῶν δὲ ἀγρίων οὐδὲν πω συνῶπται, ὅσα μὴ συντρέφεται ἐνίοτε, οἷον ἔλαφος· αὕτη δὲ μηρυκάζει. πάντα δὲ κατακείμενα μηρυκάζουσι μᾶλλον. μάλιστα δὲ τοῦ χειμῶνος μηρυκάζουσι· τά τε κατ' οἰκίαν τρεφόμενα, σχεδὸν ἑπτὰ μῆνας τοῦτο ποιεῖ. τὰ δ' ἀγελαῖα, καὶ ἧττον καὶ ἐλάττονα χρόνον μηρυκάζει, διὰ τὸ νέμεσθαι ἔξω. μηρυκάζουσι δὲ καὶ τῶν ἀμφωδόντων ἔνια. οἷον οἵ τε μῦες οἱ Ποντικοί, καὶ οἱ ἰχθύες, καὶ ὃν καλοῦσιν ἔνιοι ἀπὸ τοῦ ἔργου μήρυκα. ἔστι δὲ τὰ μὲν μακροσκελῆ τῶν ζώων, ὑγροκοίλια· τὰ δ' εὐρυστήθη, ἐμετικὰ μᾶλλον, B καὶ ἐπὶ τῶν τετραπόδων, καὶ ἐπὶ τῶν ὀρνίθων, καὶ ἐπ' ἀνθρώπων ὡς ἐπιτοπολύ.

Librum hunc poſt ſeptimum illico eſſe ſtatuendum cenſet maximus interpres: In eo namque, *inquit*, de hominis generatione per cõpendia diſputauit, certóſque affectus aſcripſit, tum parentum coniugationi, tum puerperæ, tum infanti ipſi. In hoc itaque quod erat reliquum, quemadmodum ea res conficeretur, ſubtiliùs contemplatus eſt. Quamobrem quæ verba in fine ſeptimi ſunt, προϊούσης δὲ τῆς ἡλικίας, vereor admodum ne fuerit tanquam teſſera ſequentis libri: iiſdem enim vocibus is qui hîc decimus inſcribitur, incipit. *Hæc ille, vt quidem opinio mea eſt, veriſſimè. niſi quòd videtur hic qui decimus vocatur liber, non ſolum poſt ſeptimum ſtatuendus: ſed etiam pars eſſe ſeptimi cenſendus. Idque tum auctoritate veteris Latini interpretis poteſt confirmari: tum eo etiam, quòd hac parte ſublata, liber ſeptimus breuior eſt multo quàm cæteri: vt non temerè dici queat deſiderari de eo aliquid. Porro capita, quæ hoc libello tractantur, ſunt hæc: De indiciis matricis bene ſe habentis, à qualitate eius & ſitu: déque eius affectionibus. De irrito conceptu, ſiue ſubuentaneo. De mola quæ in vtero mulierum generatur interdum.*

CAPVT I.

De matricibus, & qualitate ſitúque earum, quando bene valent.

APpetente hominis ętate, qua mutuo congreſſu tum vir tum fœmina deberent generare, nonnunquam in vtroque, aliquando in altero tantùm exiſtit impedimentũ. Principio quemadmodũ ſeſe habeat fœminarum vterus, contemplandum eſt, qui ſi impedimento quopiam afficiatur, manus ei medicæ adhibeatur. Si bene habeat: ad alia membra, quæ in cauſa ſint, curæ tempus tranſmittamus. Conſtare autem poterit matricis valetudo ex ipſis functionibus: ſicvt & alterius membri, cùm officium ſuum quantum ſatis eſt, facit: ac poſt- D quam peregit, & labore & dolore caret. Id quod cùm ex aliis membris, tum oculi exemplo perſpici ſanè poteſt. Quemadmodum enim oculus cùm neque gramioſus eſt, & primo videt, mox ab eo viſu nihil conturbatur, poſtremò retinet adhuc priſtinam videndi facultatem, ſanus eſt: ita matrix quoque: ſi neque dolet, & officio ſuo quantum ſatis eſt, fungitur, cum abſoluto opere ſuo nullum capiat dolorem, neque fatiſcat. II. Quanquam autem matrix ipſa non bene ſe habeat: dicitur aliquando tamen, ad officium ſuum perficiendum & bene & proſperè valere, ſi opus ipſum nihilo deteriùs efficiatur. III. Quemadmodum ſiue oculi partes non omnes rectè valent, ſiue aliqua inſit puſtula: nihil horum impedimento erit, quominus oculus exactè videat: ſic & ipſa matrix,

Deinde [illegible]dem conſtantem ſitum obtinere, niſi [illegible] quatenus promouere poſſit: idque ſine [illegible]modo atque difficultate. Neque ſi acceder[illegible] eam obtorpeſcere, quaſi nihil ſentiat [illegible]. Id quod facilè percipi poteſt. v. Matricem autem talem eſſe oportere, ex hiſce rationibus ſatis conſtat. Nam ſi non prodeat, nihil quicquam ad ſeſe attrahere valebit. Etenim longinquior erit, receſſus ille, quàm vt inde quippiam poſſit com-
B prehendere. Quòd ſi neque prope manere, neque prorſum adire valent, contumaces ſunt. at ſi ad tactum minimè moueantur, id verò vehementer curandum eſt, obedientiores vti ſint. Cùm his igitur præditas eſſe matrices neceſſe eſt, tum ſi non ſunt, certis remediis curandum eſt vt ſint ita. vi. Oportet præterea ritè ſolui menſtrua: ritè autem ſoluentur, ſi æqualibus ſtatiſque interuallis ſano in corpore emittantur. Ita enim fiet vt intelligamus, & commodè aperiri, & quo tempore corpus humorem illum tranſmittat, eum excipere poſſe. vii. Quòd ſi aut ſæpius, aut ſpiſſiùs, aut incertis ſpatiis temporis ſoluantur, ac reliquum corpus bene habeat,
C neque eiuſmodi erroris communis cauſſa ſit: neceſſe eſt ab ipſis matricibus nocumentum proficiſci. viii. Euenit ſanè propter contumaciam vti debito tempore ne aperiantur. Quare aut parum accipiunt humoris, aut plus attrahunt quàm par ſit: idque propter inflammationem quãdam. Quamobrem quemadmodum de oculo diximus, déque veſica, & aluo, atque aliis corporis partibus: ita matrices quoque medici curam videntur poſtulare. Quæcumque enim loca inflammata ſunt, eum trahunt ad ſeſe humorem, qui ipſa in loca excerni conſueuit: verùm neque quantitas, neque qualitas illa reſpondet, quibus humor ille præditus antea fluere ſolitus erat. ix. Ea ratione muliebris quoque vterus de
D ſeſe iudicium faciet, cùm morbo quopiam erit inflammatus: ſi plus humoris reddat, qui tamen ſimilitudine non differat à priore. Quod ſi humor ille, licèt ſimilis fuerit, putridus tamen ſit (qualem egerere conſueuère fœminæ valentiores) manifeſtò iam hæc apparebit ægritudo. Et matrices ipſas morbo laborare, neque prout decet, bene affectas eſſe, ea ſunt indicia. x. Alba autem menſtrua & putrida bene valentibus mulieribus non vno modo prodire ſolent. ſed aliis mẽſium initio, aliis cùm ceſſant. Quibuſcumque igitur mulieribus aut putridiora, aut ſine ordine vberiora, aut parciora menſtrua quàm ſanis fluũt: eæ multo ac-
E curatioris egent medicinæ ad exigenda hæc impedimenta, quæ prohibẽt generationem. Quibus verò temporum tantùm interualla incerta atque inæqualia ſunt, minùs hæc incõmodat ægritudo. nihilominus tamen matricis indicat habitudinem immutatam, neque conſtanti ſtatu conſtitutam eſſe. atque hoc affectio quædam potiùs, qua conceptiones prohibentur, quàm ægritudo, appellari meretur: propterea quòd etiam nullis adhibitis medicamentis redire ad priſtinam ſanitatem poſſunt, niſi alterius cuiuſpiam peccati fiat acceſſio. xi. Quod ſi aut ordinis, aut quantitatis ratio immutetur, ipſúmque corpus non eodem habitu conſtet ſibi, ſed aliquando humidius, aliquando ſiccius exiſtat: nequaquam vteri in cauſſa ſunt, propterea quòd oportet, eos tum in excipiendo, tũ in emittendo, rationẽ ſequi habitudinis quæ in corpore eſt. Igitur ſi corporis ſanitate variata hoc eis euenerit, nulla ipſi indigẽt medicatione.

Sin corrupta valetudine minus ſoluerint, quoniã A eiuſmodi excremẽtum alias in corporis partes deriuatum abſumatur, laborat ſanè corpus ipſum. Quod ſi abundantiùs emiſerint, iccirco quia eum in locũ à cætero corpore largiùs redundet, ne hoc quidem indicio eſt, vteros egere medicamẽtis: ſed curandum eſſe corpus ipſum. Denique menſtruorum immutatio hæc, quæ corporis conſequitur immutationem, nullam oſtẽdit in matricibus noxam, ſed eas bene valere. XII. Ipſæ autem matrices ſeipſis interdum deteriùs interdum meliùs habent. Siquidem humidiores aliquãdo, aliàs ſicciores ſunt. Et frequentat ipſas corpus plus, cùm plenius eſt. Cum autem minùs eſt plenum, minùs implet. Ita ab ſicciore corpore plus ſanguinis adipiſcuntur; ab humidiore, plus aquæ. Atque ea quidem quæ alba effluunt per initia menſium, ſpeciẽ lactis præ ſe ferunt: ſed odore carent. Quæ autem initio rubra ſunt, & cùm ceſſare incipiunt, extrema miſtione exeunt albidiora. Quæ vt nullam olent putredinem, ita ſpirant graue quid, & acre: neque tamen pus cõcretum, ſed liquidum repræſentant. Quanquam non ſine calore is menſium modus euenire ſolitus eſt. Quare eæ mulieres, quę talibus menſtruis exoluuntur, habent ad generationem liberorum matrices accommodatas.

Sect. XIII.

PRimum igitur contemplandum, an bene habeant matrices. Deinde, quonam ſitu earum corpus conſtitutum ſit. Oportet enim rectas eſſe: alioqui ſemen non attrahent. Si quidem ipſa quoque mulier prorſum ſemen ſuum proijcit. Idque ex earum venereis inſomniis perfectè manifeſtum eſt. Eo namque tempore vteri locus anterior humefactus nihilo minùs eget abſterſione, quàm ſi cum viro tum coiiſſent. ſine cuius viri coitione in eundem locum item proijciunt: nõn autem ad interiorem vteri receſſum. Cæterùm eam in partem matricis anteriorem cùm proiecerint ſemen, inde ſpiritus vi trahunt illud intro, quemadmodum naribus quoque fieri ſolet. Quo fit vt non vno coeũdi modo concipere poſſint: propterea quod in anteriorem matricis partem tam mulier quàm vir emittit ſemen. Si enim in ipſam matricem eijcerẽt, nequaquã fieret vt quouis concubitus modo concipere poſſent. XIV. Quod ſi fit, vt in rectum nõ ſpectent matrices, ſed aut ad femina, aut ad lumbos, aut ad pectinem: nequaquam poterunt concipere, propter eam, quam diximus, rationẽ. Nimirum ſemen ipſum quando nequeũt attrahere: atque hæc affectio ſi aut natura conſtituta extiterit, aut validioris morbi euenerit vi, nulla cura poterit emendari: Si verò aut à natura rupta fuerit, aut propter morboſam inflammationem contingat vt conuellatur, pro alterutrius ratione affectio hæc animaduertenda eſt. XV. Quæ igitur hoc agunt, vt prægnantes fiant, iis matricis os non ſolùm, vt diximus, rectum eſſe neceſſe eſt, ſed etiam bene affectum ad aperiendum. Erit autem bene affectum, ſi, quo tempore effluere incipiunt menſes, attrectatum inueniatur mollius quàm eſſet antea: neque penitus clauſum, niſi ſi menſium initia alba frequentiáque ſint. Nam ſi extiterint coloratiora, quaſi rubore ſpectatur caro: ſi tangatur, apertum manifeſtò occurret os, & neque contumax, neque cui tactus afferat dolorem, neque alia diuerſum affectione, quàm eſſe debuit. XVI. Cùm autem ceſſarunt menſtrua: occluſum vehementer ſiccúmque os eſſe debet, diem integrum & ſemiſſem, aut etiam alterum diem: neque durum tamen.

A His enim indiciis dignoſcētur, & bene valere matrices, & officio ſuo fungi, propterea quod [illegible] citò aperiuntur: & ore tamen molli [illegible]. Itaque fit, vt, cùm ſoluitur corpus, [illegible] quoque, neque vlli ſint impedimēto, [illegible] expellunt ea quæ in ipſius oris veſtibulo [illegible] autem largiore copia perfluxerit corpus, [illegible]tur. Quo indicio deprehenditur oris [illegible]tudo. Vbi autem defecerint indicia, ſi non ſtatim contrahatur, humoris inopia ſignificatur. atque ipſæ euadunt inanes, aridæ, ſiticuloſæ: neque partem vllam obtinent reliquiarum circum eum locum quà tranſmitti conſueuēre. XVIII. Igitur ſi vim habeant attrahendi, idque ſine moleſtia, & B cum ſenſu tamen fiat: argumentum eſt bene eſſe comparatas, nō ſolùm ad coitum, verumetiam ad concipiendum. Quanquam illud quoque inter bona indicia obſeruandum eſt: ne corpus à natura ſua delapſum ſit. Hoc enim pacto intelligemus, nullum eſſe impedimentum: quominus matrices, cùm opus ſit, occludi poſſint.

CAPVT III.

Declarat affectiones ab officiis matricis.

QVemadmodum vteri os bene maléve affici conſueuerit, his rationibus perſpici debet. Nunc ipſi matrici poſt purgationem quidnam ſoleat euenire dicendum eſt. Principio ſi C in ſomnis perinde afficietur, quaſi cum viro vbi coit: atque ita ſemen emittat facilè: bene eſt. tantóque melius ſi ei frequenter id contingat. tum vbi ſurrexerit, opus habeat aut abſterſione, aut alia curatura: qua vti ſolent à coitu mulieres. Oportet autem, ſi nihil exierit, nequaquam continenter retineri: ſed poſtquam expertecta mulier ſit, humeſcere matricem. idque non ſtatim ſemper: ſed interdum ſeriùs, atque adeo ad dimidium puſillæ diei. Humor autem ille talis eſto qualis in coitu emitti conſueuit. Hæc namque omnia argumenta ſunt: & matricem ſuſcipere id quod datur: & acceptabula tum attrahere tum continere poſſe, quod acceperint: poD ſtremo quoque eam inuitam emittere. XX. Præterea ſi intus & creentur flatus ſine vexatione: & emittantur, ſicvt & ab aluo. tum autem ipſæ ſi minores interdum, interdum ampliores ſponte ſua, non morbo vllo fiant. Hoc enim intelligemus, eas neque duriores vel natura, vel morbo, neque contumaces eſſe. ſed extendendo ſeſe dare locum poſſe ei quod receperint: cùm id capiet incrementum. Quòd ſi hoc ita non ſit, propter aut denſitatem, aut quia minùs ſentiant: ſiue id natura fiat, ſiue morbo contingat: eæ fœtus alere nec poterunt: & adhuc puſillos ſua vehementia corrumpent. De ea verò vehementia ſi quid deſit: etiam maiores fœtus interficiunt: ſin paulatim adE modum cedunt: eos interimunt fœtus, qui minùs ſunt valentiores. XXI. Oportet autem tum dextras tum ſiniſtras partes cùm attrectaris, eas inter ſe æquales inuenire: atque alia ad eundem modum. XXII. Inter coeundum quoque humeſcere neque ſæpe neque vehementer. Eſt autem humor hic, exudatio quaſi quædam loci illius: quemadmodum & oris ſaliua. quæ tum acceptis cibis, tum inter loquēdum ſolet euenire: itémque cùm multum laboramus: prætereà ſicut fit, vbi ciemus ex oculis lacrymas illuſtriorum aſpectu rerum atque etiā præ frigore, atque calore validiore quem ea obtinent membra, ſimul cum humiditate: quo tempore frigus viget. Sic & matrices humeſcunt, cùm

cùm id quod ad ſe pertinet, opus peragunt: ſi humidiore habitu affectæ ſint. Contingere autem ſolet id iis quæ bona ſunt habitudine. Quamobrem ſicut os ſpuitione, ita matrices nunc maiore nunc minore indigent curatura. Quædam enim tanta afficiuntur humectatione, vt virile ſemen nequaquam poſſint purius attrahere, propterea quod & hoc & illud quod à muliere deciditur, miſceatur. XXIII. Præter has affectiones autem illud quoque animaduertendum eſt: ſi id vſuueniat, vt per ſomnum cum viro coire videantur, imbecilliorésne à cubitu exurgant, an valentiores. Atque horum vtrumlibet ſempérne ita fiat, an interdum tantùm. Item an ſicciore primùm, deinde humeſcente vulua. Oportet enim hanc habitudinē conſequi eas mulieres quæ aptæ natæ ſunt ad generandum. Nam quòd exoluūtur, id argumentum eſt, earum corpus habere ſemper aliquid ſeminis ad emittendum, efficique vt mulier efficax ſit. Imbecillitas autem illa ex eo oritur, quoniam ſemen ipſum corpulentum eſt. Ab iis autem quæ ſine moleſtia emiſere, intelligamus nihil exiſſe præter modū, prætérque naturam, alioqui morboſa quæpiā ſecuta eſſet laſſitudo. Quòd autē valentiores exurgunt, atque ipſa matrix tunc ſiccior eſt, poſtea verò humeſcit, id indicat vniuerſi corporis vim ad ſemen & excipiendum & ſubtrahendum: corpúſque ipſum non deteriùs valere, quàm matricem. Spiritus enim vi attrahit introrſum matrix id quod extrinſecus appellitur, quemadmodum ſupradictum eſt: neque enim intro in ipſam proiicitur. XXIV. Cæterùm ſi quis & bona valetudine ſit & ætate integra, etiam iuuatur ad celeritatem ſeminis emittendi. Semen ex iis reb. eſt, quæ celeriter & augeſcere poſſunt, & augentur ſanè. Itaque tunc mulieres latet conceptio, quæ fit: neque enim ſeſe concepiſſe arbitrantur quoniam non ſenſere. Id autem iccirco fit: quia putant in proiectione ipſa vtriuſque tum viri tū mulieris ſemen iaci eodem momento temporis debere. XXV. Maximè verò illas latet conceptio: quæ negant fieri poſſe vt concipiant, niſi ſicca matrice ſint à coitu: propterea quòd oblatum ſemen manifeſtò nō retineatur. At verò tum à muliere tū à viro emitti plus poſſe ſeminis, quàm quantum aut retrahi valeat, aut requiratur ad cōceptionem, obſeruatum eſt. Quare cùm quantum ſatis ſit, attraxerit, multúmque reliquum factum ſit, tum verò neſciunt ſe concepiſſe. XXVI. Quod autem ita ſit, neque vniuerſo è ſemine conſletur fœtus, ex eo liquet, quòd animalia aliquot vnico initu multa concipiunt, tum autem ex gemellorum generatione, quæ coitu vnico fit, palam quoque eſt. Manifeſtò enim intelligimus non cuncto è ſemine conſtitui: ſed eius portione tantùm retenta in locis, maiorem partem abiectam eſſe ab ſuperfluo. XXVII. Igitur ſi multiplex fœtus vnico tantùm cōcipitur initu (id quod tum ſuillo in genere, tum in iis quæ gemellos aliquando pariunt, ſatis patet) ſanè ſemen ipſum toto à corpore nequaquam proficiſcitur: ſed ita à toto decidi conuenit, ſi in ſingulis formis diſtribuatur: atque inde totum illud in multa partiatur. Neque enim & ſimul, & particulatim poteſt. XXVIII. Præterea fœmina prorſum in matricis os ſemen proiicit: quem in locum etiam vir ipſe, quo coit tempore. Inde nanque trahit ſpiritu, quaſi bucca, aut narib. Quæcunque enim nullo admouentur inſtrumento, aut natura trahuntur ſurſum in caua loca, aut ſpiritus vi, ſicut ex hoc loco. Quo fit vt obſeruent mulieres, is ne locus ſiccus ſit, quemadmodum antea, quàm coïrent.

A xxix. Comparauit autem natura viam in mulieribus, qua ſemen egrediatur, ad hunc modum. Colem .n. habent, quemadmodum viri penem, ſed in ore ipſo per illum reflant puſillo meatu: ſitus paulo altior eſt quàm is quo vrinam reddunt. Quo fit vt ea pars aliter ſeſe habeat, quum ſibi in Venerem incitâtur, quàm cùm non appetunt. Ab hoc igitur cole fit ſeminis caſus. Anteriorem autem matricis regionem natura multò conſtituit maiorem, quàm is ſit meatus, per quem illum in locum excidit. Eſt autem id ſimile naribus hâc in parte. Nares enim meatum quendam habent peruium, tum in guttur, tum in aërem extrorſum. Eodem modo & in matrice meatus eſt
B paruus admodum & perangustus: quippe quantum ſatis ſit ad ſpiritus exitum. anteriorem autem matricis locum latum ac ſpacioſum: quem admodum nares quoque latiores ſunt, qua parte ad aërem flant, quàm qua reflant ad os & guttur. Ad eum modum mulieres quoque eam viam, quæ ad matricis anteriorem locum pertinet, habent maiorem & ampliorem, quàm eam quæ foras tendit. Quodcunque autem hunc in locum conficietur, ſimiles efficiet effectiones, propterea quòd mulier ipſa quoque prolificum iacit ſemen. xxx. Hæc autem eaſdem conſequantur cauſſas. Quas cauſſas qui aut ad morbum aut ad mortem referunt in alterutro: id,
C quod poſtremum eſt, loco principij contemplantur. Hoc autem animaduertere operæ pretium eſt. Etenim in quibuſdam, principia ipſa in cauſſa ſunt: in aliis autem, nulla. In aliquibus autem partim inſunt ſic, partim non ita. Quare contingit, eas affici ſecundùm proportionem: ſi quidem nonnullæ patiuntur omnes affectiones, quædam magnam partem, quibus magna cauſſa eſt: aliæ paucas: aliæ autem nihil penitus, quibus nulla eſt cauſſa. *Spiritu autem quæ agunt, vi id efficiunt.* Quare matricis eiuſmodi corpus facultatem obtinet attrahendi. xxxi. Euenit autem interdum tum mulieribus nocturna venere, tum viris, ſi coitu exonerati ſint, melius ha-
D beant, non robore, ſed valetudine. Id quòd fit propter ſeminis coagmentati copiam eo in loco, vnde emitti conſueuit. Quippe inde ſemine exeunte, nihilo fiunt imbecilliores. Neque enim tunc exoluuntur, cùm adhuc relinquitur, quod ſit & ſatis, & vtile & facile ad habendum: quippe perfluis partibus exoneratum. Itaque non robore, ſed leuitate fiunt habiliores. Verùm ſi ex iis quorum corpus indiget, quicquam ademptum ſit, imbecilliores fiunt. * quanquam affectus ille citò tollitur: vbi tantundem repoſitum ſit. xxxii. Cauendum eſt, mulieres ne patiantur id quod quibuſdam euenire ſolet. Hoc appellant Græci, ἐξανεμοῦσθαι: Latini, fruſtrari.
E Fit autem, vbi in coitu neque proiiciunt quicquam neque concipiunt. Vnde & nomen fruſtrationis comparatum eſt. In cauſſa eſt matrix quæ admodum arida ſit. Ea enim ita affecta attractum ad ſeſe humorem emittit foras. Is tum humor attenuatur præter modum, atque puſillum fit: Tum dilabitur, neque ſentitur, propter exiguitatē. Igitur matrix ſi vehementer ac ſupra modum ſicca ſit, celeriter ſemen abigit: citòque palam fit, fœminā non concepiſſe. Quòd ſi nō valde feſtinat ad eiiciendū, tantiſper videtur vterū gerere, ſi eius tumor cū priore ſtatu comparetur, donec abiiciat. at interea ſanè iiſdē affectionib. affliĉtantur, quibus eæ quæ verè vterum gerunt. Tum autē ſi plus tēporis adiiciatur, intumeſcit vterus adeò, vt apertè cōcepiſſe quoad excidat, videâtur. Ibi verò redit ad priſtinū ſtatū ſuum.

In ea igitur ſententia ſunt mulieres, hoc numinis cuiuſpiam euenire poteſtate. At id eſt aliquando medicabile: quippe eo morbo ſuapte natura mulier ſi non afficiatur. Animaduertimus autem carere hoc morbo eas quæ iaciente ſemen viro, ipſæ nullum iaciunt: quo fit vt ne cõcipiant quidem.

CAPVT IV.

XXXIII.

ALia quoque matricis impedimenta ſunt. Inter quæ conuulſio magnopere lædit. Item ignei calores, quos Græci φλεγμασίας vocant. Quoties diſtenditur matrix: aut quoties in locum confluxerit derepente magna humoris copia: neque aperitur os: tunc enim ex diſtentione conuellitur matrix. Poſſumus autem cognoſcere non conuelli matricem, cùm illam obſeruamus nullo igneo calore incendi. Id quod ex vſitatis eius functionibus patebit. Etenim ex conuulſione aliquando incenſio illa ſequi poteſt. XXXIIII. Item tubera matricis ſi occupauerint, atque ipſum vlcerum frequẽtia vitioſum ſit, impedimento erit ad concipiendum. Intelligimus autem vacuam eſſe ab his impedimentis matricem, ſi probè aperta ſit, ſi conniuet, poſtquam menſtrua ſunt ſoluta, ſiue cùm copiam ſui fecit viro. XXXV. Sunt autem nonnullæ fœminæ, quibus à principio ſui ortus matricis ora modo quodam coaluere. Aliàs propter cuiuſpiam morbi vim ita euenit. Qui morbus in nonnullis ſanè medicabilis eſt, in aliis non item. Deprehendes autem hoc incommodum ex his notis facilè. Neque enim aut recipere matrix, aut proiicere eorum poteſt quicquam, quæ opus habet. Quod ſi & recipit, & emittit, argumento erit, ipſam eo vitio carere. XXXVI. Quæ autem liberæ ab his impedimentis, atque eo, quem diximus, modo affectæ erunt, quanquam vterque aptus ſit ad generandum, neque vir ſterilis ſit, tamen niſi inter eos conueniat ad ſeminis emiſſionem, vt eodem fiat tempore, ſed valde diſcordes ſint: ij nunquam parentes fient.

CAPVT V.

XXXVII.

QVod autem ad viri pertinet generandi facultatem, inter alia argumenta quibus hoc deprehendimus, illud facile erit; ſi cum aliis coëat, neque concurrit ad ſeminis proiectionem, modò cætera omnia, quæ diximus, conueniant. Sic enim agnoſcemus, hanc vnam cauſam eſſe. Quippe ſi mulier quoque ſemen proiicit ad generandum, æqualem eſſe oportet curſum ab vtroque. Nam ſi ille citò peragat, illa autem nondum, (magna enim ex parte mulieres tardiores ſunt:) hoc erit impedimento. Ea enim cauſa eſt, propter quam coniuges inter ſe non generant. Nam ij generant, quorum proiectiones hinc atque hinc æqualiter concurrent. Ergo mulier ſi Veneris impetu agitata præſto ſit, & alacri & attento animo, vir autem triſtior, & frigidior: tunc neceſſariò ſemina inter ſe concurrent.

ADueniente autem coitus tempore, animantes ipſæ libidinis indicium mares inſectando manifeſtum oſtendunt. Etenim gallinæ, ſi gallus Venerem ſegniùs appetat, ſequuntur eum: atque ipſæ ſeſe ſubiiciunt illi: quemadmodum cætera quoque animalia. A XXXIX. Hoc idem alia quoque faciunt animalia. ſiquidem muliercula olim, ex earum cicadarum genere quæ canoræ ſunt, aliquas inuen[illegible] alendas curauit. Atque illæ ſponte ſua prægnantes inuentæ ſunt. XL. Ex his igitur liquet, vniuerſum fœmineum ſexum conferre ad ſemen: ſiquidem etiam vno in genere hoc fieri videmus. Neque enim differt illud animal quod hypenemium dicimus, ab hoc: niſi quòd ex illo animal non generatur. Hoc autem ab vtroque proceſſit. Quare ne ea quidem quæ ab ſolo maſculo proficiſcuntur, prolifica ſunt omnia, ſed è quibuſdam nihil oritur, niſi ex vtriſque, ſicut res exigit, componantur. Præterea mulieres per ſomnium afficiuntur, quaſi cum viris vbi concumbunt, atque B eas ijdem affectus conſequuntur, exolutio ſcilicet ac languor. Ergo in ſomnijs ſemen ſi videntur iacere, etiam tunc conijcient. Siquidem poſt ea inſomnia idem locus humectatur: indigéntque abſterſionis: quemadmodum cum viris ſi coeant. Palam igitur eſt, ab vtroque ſemen emitti: ſi ex eo proles generanda eſt. XLI. Locus autem in quem ſemen ſuum iacit matrix, quanquam in matrice ipſa eſt, nõn eſt alius tamen, quàm is, in quem iacit vir: tum inde trahit in ſe. Quare aliquæ fœminæ per ſeipſas generant, vt aues oua caſſa: aliquæ autem nihil gignunt, vt equæ & oues. An verò fit hoc propterea, quòd aues in matricem ia- C ciunt, propter quam nullum habent locum foris, in quem iaciant: ſicuti neque mas: quippe, ſi non init, in terram effundit ſemen. At genus quadrupedum habet extra matricem locum alium, in quem tam mas quàm fœmina conijciunt. Quod cum alijs humoribus confunditur, neque conſtituitur in matrice, idcirco quia in eam non eſt ingreſſum. At in auibus matrix ſemen arripit, atque concoquit, corpúſque efficit, animali quidem ſimile, ſed vita caſſum. Quare oportet animal ex vtriſque fieri.

XLII. CAPVT VII.

D INſtare autem licet. Nam ſi verum eſt quod aiunt, à nocturna Venere, qua inſomnia ſoluuntur, ſicca nihilominus vulua exurgere: ſatis patet matricem ad ſeſe ſurſum attrahere. Igitur quam ob cauſam eæ fœminæ ſine viris non gignunt? Quippe maris trahunt ſemen: vbi id cum ſuo cõmiſtum fuerit. Ergo capræ quoque cur non attrahent id quod foras permeat, ſicut iis euenit, quæ gerunt vterum annos multos? XLIII. Pariũt enim id quod molam vocant. Olim hoc euenit mulieri cuidam: quæ in concubitu cùm viſa eſſet facta grauida, propterea quòd tunc vterus intumuerat: tum cætera ſigna ſunt conſecuta. Elapſo E autẽ iuſto tempore pariundi, neque ipſa peperit, neque venter detumuit: ſed tertium quartumve ſuperauit annũ, donec non ſine periculo correpta eſt cruento alui profluuio, quam Græci δυσεντερίαν vocant. Atque ita grandem carnis molem peperit quam molam appellãt. Nonnullæ namque exoneratæ ſunt: ſed exacta ætate illius morbi atque earum vitæ idem finis fuit. XLIV. Eſtne igitur in cauſſa eiuſmodi affectionis, calor? propter quem matrix habeat ad ſeſe attrahendi facultatem? Quippe quæ etiam ſicca ſit. Quibus de cauſſis & tollere & ſeruare vellet. Quæ enim eiuſmodi ſunt: niſi ſemen ab vtroque miſtum ſit, ſed ab alterutro tantummodo, in ijs euenit, vt quaſi id, quod hypenemium vocabamus, fiat hoc quod molam nominant. Id autem neque animal eſt: propterea quòd ex ambobus ſeminibus non eſt confectum: neque inanimum, quia quod receptum eſt, habuit animantis principia, ſicut & hypenemia.

XLV. Diuturnæ autem geſtationis non vna cauſſa eſt. Nam & matricis natura ad id eſt comparata. Et auium genus quoddam, quoniam intra ſe numeroſa parit oua, ab iis commota matrix iccirco propellit, & parit. Quæ ſemel aperta vbi fuerit, ad vnum omnia exeunt. Neque enim quicquam eſt, quod arceat. Verùm quia ſemel repletum matricis corpus fuit, poſtquam eò redactum eſt vt eijciat, nullam obtinet amplius facultatem contra attrahendi. at verò quæ animalia viuum gerunt in vtero animal, eorum matrix ad expulſionem nō ſolicitatur: niſi ipſa igneos calores, quos vocant phlegmonas, patiatur. Id quod fieri conſueuit incrementum capiente fœtu, mutatóque in validiorem habitudinem: quo tempore excitatur etiam ad vberiores cibos capiendos. at caro iſta molæ, cùm animal non ſit, æquali ſuperficie contenta fuit. Itaque non niſi propter pondus ſuum in cauſſa eſſe poteſt tandem, vti matrix incendatur. Id quod nonnullis euenit aliquando. Quare quo ad viuunt, interdum gerunt: niſi fortè quæpiam ęgrotent, velvti illa quæ cruento alui profluuio capta fuit. XLVI. Vtrùm igitur propter calorem fit hoc, quemadmodum diximus: an potiùs propter humorem? Eſt enim quaſi plena, ſicvt & cùm clauſa eſt. An tum fit, cùm matrix, neque tam frigida eſt, vt amittere poſſit: neque tam calida, vt concoquere valeat? Quare neceſſe eſt, longinquam fieri ægritudinem. Videmus enim quædam, quæ ad coquendum multi egent temporis. Quæ autem percocta, ſunt adepta finem ſuum, celeritatem quoque nanciſcuntur. Huiuſmodi verò matrices peſſimè temperatæ cùm ſint, multum ponunt temporis. XLVII. Præterea mola, cùm animal non ſit, ac propterea nullum cieat motum, dolorem nullum facit: eſt enim parturiendi dolor ex motu ligamentorum, quem facit fœtus vitæ appetens. XLVIII. Tum autem duritia eiuſmodi corporis prohibet efficaciam concoctionis: adeo enim durum fit, vt etiam ſecuris aciem reſpuat. Quæ enim aut percocta, aut matura ſunt, omnia teneſcunt. Quæ autem prædecerpta, ea & immatura, & dura. XLIX. Non defuerunt autem medici, quibus ignota eſſet molæ res, quo pacto ſe haberet. Qui viderent ventris tumorem: cùm neque aqua intercus eſſet, neque menſtrua ſoluerentur, neque ceſſaret tumor. Nempe ergo falſi ſunt. at enimvero perrarò vſu venit, vti molæ generentur. Sed interdum confluunt in ventrem humores ſuperflui, iique frigidi ac liquidi: interdum ſecundùm naturam & habitum craſſiores: atque ij neque dolorem creant, neque calore afficiunt: quoniam ſunt frigidi ipſi. neque aliud afferunt nocumenti quicquam, cùm capiant incrementum, ſiue minus ſiue maius; ſed quaſi res imperfecta otiū agitat. L. Siſtuntur autem menſtrua iccirco, quia cum in focum ſuperflua inſumuntur: quemadmodum & nutricibus: quibus, præter puſillum admodum raro quicquam ſoluitur menſtruorum. LI. Fit autem vt tumor ex humoribus de carne confluentibus in locum, qui inter matricem atque aluum interiacet, molæ ſpecimen falſò præbeat. Dignoſcetur autem matrix tali carere morbo: ſi ipſa attrectando compoſita, neque tumida inueniatur. Quæ ſi ſit eiuſmodi, quaſi cùm aut fœtum aut molam gerunt, erit calida & frigida & ſicca: propterea quòd humor introrſum conuerſus ſit. Os quoque tale erit, quale cùm grauidæ ſunt. Quòd ſi alterius generis tumor ſit, erit ad tactum frigida, ſed non ſicca: os autem ſemper ſimile.

CAPVT I.

Duos eſſe & contemplandi & docendi præcipuè habitus.

IN omni contemplandi genere, omnique tum nobiliori tum ignobiliori docēdi via, & ratione, duos eſſe habitus conſtat, quorũ alterũ ſcientiam rei appellaſſe, alterum quaſi peritiam quandam, bene eſt. Hominis enim probè periti officium eſt, iudicare perſpicienter poſſe, quidnam rectè, aut non rectè, ab eo qui docet, exponitur: quippe cùm & hominem omnino peritum talem eſſe exiſtimemus, & peritiam ipſam non niſi facultatem huius officij eſſe ſtatuamus. Sed hunc omnibus ferè in rebus valere iudicio arbitramur numero vnum: illum verò cæteræ naturæ alicui delegamus. Fieri enim poteſt vt rem vnam quiſpiam ita vt alias omnes poſſit iudicare. Quamobrem naturalis quoque hiſtoriæ, ſiue contemplationis limites huiuſmodi aliqui poni debent, ad quos iudex modum explicandi referre poſſit, & approbare, ſemoto illo veritatis examine, quonam modo res, itáne an aliter ſe habeat. Verbi gratia, vtrùm ſubſtantias ſingulatim diſcutiendas cepiſſe præſtet, hoc eſt, naturam hominis, aut leonis, aut bouis, aut alius cuiuſquam generatim exponere aptius ſit: an rebus ſubiectis, quæ communiter omnibus accidunt, communi vſu quodam potiùs agendum. Sunt enim complura, quæ eadem in multis generibus diuerſis inter ſe ſint, vt ſomnus, ſpiratio, auctio, diminutio, mors: adhæc & reliqui id genus affectus, & diſpoſitiones. Nihil enim adhuc certi explanatíque habetur, quod de his dicere poſſimus: ſed cùm ſingulatim agimus, eadem ſæpe de multis referre neceſſe eſt. Nam & in equis, & in canibus, & in hominibus, ea, quæ modò dixi, omnia inſũt. Quapropter qui ſingulatim agere per accidētia velit, ſæpenumero verba eiſdē de rebus facere cogetur, quæ ſcilicet eædem animantibus

adiunctæ ſunt ſpecie diuerſis. Sunt etiam fortaſſe quæ cùm eandem ſortiantur appellationem, diſcrimine diſtent ſpeciei, vt animalium inceſſus: quippe qui ſpecie vnus eſſe minùs videatur: diſcrepant enim inter ſe volatio, natatio, ingreſſio, reptio. Quamobrem quonam modo tractandum ſit, latêre non conuenit, vtrum, inquam, communiter primum per generis complexionem, pòſt verò res proprias conſiderare oporteat: an protinus quæque perſequi ſingulatim, rectius eſt: non enim de hac re adhuc præfinitum eſt. Nec illud confeſſum eſt, vtrùm, vt mathematici rem ſuam cæleſtem demonſtrare conſueuerunt, ſic homo rerum naturalium ſtudioſus, primùm quæ patent in animantium genere, partéſque ſingulas explorare: deinde cauſam, quamobrem ita ſint, reddere debeat: an ſecus agendum ſit. adhæc, cùm plures cauſas generationis naturalis eſſe videamus, ſcilicet eam, cuius gratia res gignantur, atque eam, vnde mouendi principium ſit: definiendum de iis etiam eſt, quænam prima, quæ ſecunda haberi debeat. Principatum ſanè illa obtinere videtur, quam ſub hoc verbo, cuius gratia, ſignificamus: hæc enim ratio eſt. Ratio autem, principium eſt pariter in rebus tam arte quam natura conſtituendis. Vbi enim vel per intellectum vel per ſenſum medicus ſanitatem, opifex ædes definierit, rationes & cauſas rei, quam facit, reddere ſolet: & cur ita faciat, ſubiungit: quanquam illa, cuius gratia, cauſa, & ratio boni, & pulchri, naturæ operibus potiùs quàm artis, coniuncta eſt. Neceſſitas verò non æquè in rebus naturæ omnibus ineſt, ea videlicet ad quam omnes ferè authores rationes referre tentant priùs quàm doceant, quot modis accipi neceſſarium debeat. Ineſt idipſum rebus quidem æternis, ſimplici abſolutáque ratione, ſed caducis etiam, gignendiſque omnibus ex *ſuppoſitione* tribuitur: quomodo in artificioſis, vt ædibus, & quibuſuis aliis generis eiuſdem. Materiam enim talem adeſſe neceſſe eſt, ſi domus, aut quiuis alius finis futurus ſit: atque etiam fieri moue rique illud primum oportet, deinde hoc, ac deinceps ad hunc modum itur ad finem, cuius gratia res quæque & efficitur, & eſt. Eodémque modo in rebus quoque natura gignẽdis agitur: quanquam demonſtrandi modus, neceſſitatiſque ratio, in naturali doctrina diuerſa, atque ſcientiis ſpeculatiuis eſt. Dixi de his alio loco: principium enim alteris quod eſt, alteris quod erit, accommodatur. Quòd enim talis ſanitas, aut homo, vel hoc eſſe vel factum iri neceſſe eſt: non quia hoc vel eſt, vel fuit illud, neceſſariò vel eſt, vel erit: neque huiuſmodi demonſtrationis neceſſitatem ita perpetuitati annectere poſſumus, vt dicere liceat, hoc eſſe, quoniam illud eſt. Sed de his etiam alio loco diſputatum à nobis eſt, & quibus in rebus id liceat, & quæ poſſint reciprocari, & quam ob cauſam. Latêre autem ne illud quidem oportet, an ita agendum, quẽadmodum priores authores, qui quomodo res quæque fieret, quàm quomodo eſſet, tractare maluerunt: nõ enim inter hæc paruum intereſt. Sed enim exordiendum quod dictum iam eſt, vt primùm res perſequamur, quæ quoque in genere conſpectiores promptioréſque habentur: deinde cauſas reddamus, & generationẽ. Hoc enim in ædificiis etiam potiùs euenit. Quòd enim forma ædium talis eſt, aut quòd tales ſunt ædes, idcirco fieri ædes hunc potiùs in modum cenſemus: generatio enim, ſubſtantiæ gratia eſt, non ſubſtantia, generationis gratia.

A αὐτὰ δὲ μηδεμίαν ἔχει διαφοράν. ἕτερα δὲ ἴσως ἐστὶν, οἷς συμβαίνει τὴν μὲν κατηγορίαν ἔχειν τὴν αὐτὴν, διαφέρειν δὲ τῇ κατ' εἶδος διαφορᾷ, οἷον ἡ τῶν ζῴων πορεία. οὐ γὰρ φαίνεται μία τῷ εἴδει· διαφέρει γὰρ πτῆσις, καὶ νεῦσις, καὶ βάδισις, καὶ ἕρψις. διὸ δεῖ μὴ λεληθέναι πῶς ἐπισκεπτέον. λέγω δὲ πότερον κοινῇ κατὰ γένος πρῶτον, εἶτα ὕστερον περὶ τῶν ἰδίων θεωρητέον, ἢ καθ' ἕκαστον εὐθύς. νῦν γὰρ οὐ διώρισται περὶ αὐτοῦ, οὐδέ γε τὸ νῦν ῥηθησόμενον. οἷον πότερον, καθάπερ οἱ μαθηματικοὶ τὰ περὶ τὴν ἀστρολογίαν δεικνύουσιν, οὕτω δεῖ καὶ τὸν φυσικὸν, τὰ φαινόμενα πρῶτον περὶ τὰ ζῷα θεωρήσαντα, καὶ τὰ μέρη τὰ περὶ ἕκαστον, B ἔπειθ' οὕτω λέγειν τὸ διὰ τί, καὶ τὰς αἰτίας, ἢ ἄλλως πως. πρὸς δὲ τούτοις, ἐπεὶ πλείους ὁρῶμεν αἰτίας περὶ τὴν γένεσιν τὴν φυσικὴν, οἷον τήν τε οὗ ἕνεκα, καὶ τὴν ὅθεν ἡ ἀρχὴ τῆς κινήσεως, διοριστέον καὶ περὶ τούτων, ποία πρώτη καὶ δευτέρα πέφυκε. φαίνεται δὲ πρώτη, ἣν λέγομεν ἕνεκά τινος. λόγος γὰρ οὗτος· ἀρχὴ δὲ ὁ λόγος ὁμοίως ἔν τε τοῖς κατὰ τέχνην καὶ τοῖς φύσει συνεστηκόσιν. ἢ γὰρ τῇ διανοίᾳ, ἢ τῇ αἰσθήσει ὁρισάμενος, ὁ μὲν ἰατρὸς τὴν ὑγίειαν, ὁ δὲ οἰκοδόμος τὴν οἰκίαν, ἀποδιδόασι τοὺς λόγους καὶ τὰς αἰτίας οὗ ποιοῦσιν ἑκάστου, καὶ διότι ποιητέον οὕτως. μᾶλλον δ' ἐστὶ τὸ οὗ ἕνεκα, καὶ τὸ καλὸν, ἐν τοῖς φύσεως ἔργοις, ἢ ἐν τοῖς τῆς τέχνης. C τὸ δ' ἐξ ἀνάγκης, οὐ πᾶσιν ὑπάρχει τοῖς κατὰ φύσιν ὁμοίως, εἰς ὃ πειρῶνται πάντες σχεδὸν τοὺς λόγους ἀνάγειν, οὐ διελόμενοι ποσαχῶς λέγεται τὸ ἀναγκαῖον. ὑπάρχει δὲ τὸ μὲν ἁπλῶς τοῖς ἀιδίοις· τὸ δ' ἐξ ὑποθέσεως καὶ τοῖς ἐν γενέσει πᾶσιν, ὥσπερ ἐν τοῖς τεχναστοῖς, οἷον οἰκίᾳ, καὶ τῶν ἄλλων ὁτῳοῦν τῶν τοιούτων. ἀνάγκη δὲ τοιάνδε τὴν ὕλην ὑπάρξαι εἰ ἔσται οἰκία, ἢ ἄλλο τι τέλος· καὶ γενέσθαι τε καὶ κινηθῆναι δεῖ τόδε πρῶτον, εἶτα τόδε· καὶ τοῦτον δὴ τὸν τρόπον ἐφεξῆς μέχρι τοῦ τέλους, καὶ οὗ ἕνεκα γίνεται ἕκαστον καὶ ἔστιν. ὡσαύτως δὲ καὶ ἐν τοῖς φύσει γινομένοις. ἀλλ' ὁ τρόπος τῆς ἀποδείξεως καὶ τῆς ἀνάγκης ἕτερος, ἐπί τε τῆς φυσικῆς καὶ τῶν θεωρητικῶν ἐπιστημῶν. εἴρηται δ' ἐν ἑτέροις D περὶ τούτων. ἡ γὰρ ἀρχὴ, τοῖς μὲν τὸ ὄν, τοῖς δὲ τὸ ἐσόμενον. ἐπεὶ γὰρ τοιάδε ἐστὶν ἡ ὑγίεια, ἢ ὁ ἄνθρωπος, ἀνάγκη τόδε εἶναι, ἢ γενέσθαι· ἀλλ' οὐκ ἐπεὶ τόδε ἐστὶν ἢ γέγονεν, ἐκεῖνο ἐξ ἀνάγκης ἐστὶν, ἢ ἔσται. οὐδ' ἔστιν εἰς ἀΐδιον συναρτῆσαι τῆς τοιαύτης ἀποδείξεως τὴν ἀνάγκην, ὥστε εἰπεῖν, ἐπεὶ τόδε ἐστὶν, ὅτι τόδε ἐστί. διώρισται δὲ καὶ περὶ τούτων ἐν ἑτέροις, καὶ ποίοις ὑπάρχει, καὶ ποῖα ἀντιστρέφει, καὶ διὰ τίν' αἰτίαν. δεῖ δὲ μὴ λεληθέναι καὶ πότερον προσήκει λέγειν, ὥσπερ οἱ πρότερον ἐποιοῦντο τὴν θεωρίαν, πῶς ἕκαστον πέφυκε γίνεσθαι μᾶλλον, E ἢ πῶς ἐστί. τοῦτο γὰρ οὐ μικρόν τι διαφέρει ἐκείνου. ἔοικε δ' ἐντεῦθεν ἀρκτέον εἶναι, καθάπερ καὶ πρότερον εἴπομεν, ὅτι πρῶτον τὰ φαινόμενα ληπτέον περὶ ἕκαστον γένος, εἶτα τὰς αἰτίας τούτων λεκτέον, καὶ περὶ γενέσεως· μᾶλλον γὰρ καὶ τόδε συμβαίνει καὶ περὶ τὴν οἰκοδόμησιν, ἐπεὶ τοιόνδε ἐστὶ τὸ εἶδος τῆς οἰκίας, ἢ τοιόνδε ἐστὶν ἡ οἰκία, ὅτι γίνεται οὕτως. ἡ γὰρ γένεσις ἕνεκα τῆς οὐσίας ἐστὶν, ἀλλ' οὐχ ἡ οὐσία ἕνεκα τῆς γενέσεως.

A Quam ob rem Empedocles pleraque in animalibus propterea ita contineri, quia ita, cùm orirentur, acciderit, malè ait: vt & ſpinam haberi talem, quòd per contortionem diſiungi frangique accidit: neſcius & quàm ſemen genitale, quod conſtiterat, vim talem habere oportet, & quàm res, quæ effecerat, prior eſſet non modò ratione, verùm etiam tempore. Gignit etenim homo hominem. Itaque ortus talis euenit ſpeciei, quoniam talis, qui gignit, eſt. * Quinetiam de iis quæ ſponte fieri videntur, pariter atque de artificioſis animaduertere licet. Nonnulla enim vel ſponte, eadem, quæ arte, fieri poſſunt, vt ſanitas. His igitur B cauſa efficiens ſimilis antecedat neceſſe eſt: vt ars condendarum ſtatuarum prior ſtatuis eſt, quando ſponte fieri nequeunt. Artem autem, operis rationem eſſe omni abiunctam materia, certum eſt. Fortuitis quoque ratio ſimilis eſt: vt enim ars ſe habet, ita exiſtunt. Quam ob rem cenſendum ita potiſſimum, vt ob eam rem membris his homo conſtet, quia hoc homini eſſe eſt. Non enim fieri poteſt, vt ſine his membris homo ſit: ſin minus, proximum tamen aliud quicquam opinandum, & vel omnino fieri aliter non poſſe, vel bene ita fieri tantum poſſe ſtatuendum. Cùm itaque talis res ſit, generationem in hunc modum, talémque euenire neceſſe eſt. Quapropter membra non ſi- C ne ordine oriuntur: ſed primum hoc, deinde illud, atque in hunc modum omnia, quæ natura conſiſtunt, diſponuntur. Veteres igitur illi, & primi naturæ interpretes, materiale principium, atque eiuſmodi cauſam, quænam qualiſque eſſet, indagarunt: & quonam pacto hinc tota orirentur, & quo mouente, vt diſcordia, & concordia, aut mente, aut caſu, temeritatéque ſpontina, docuerunt: cùm ſubiecta materia talem quandam præ ſe ferre naturam videretur, vt feruidam ignis, gelidam terra, & alter leuem, altera grauem: ſic enim Mundum etiam generant. Hæc eadem de ortu plantarum & animalium quoque referunt. Ventrem enim, aluum, omnéque cibi & D excrementi conceptaculum, ita conſtitiſſe, cum in corpore humor laberetur, & rueret, nares ex rupto patuiſſe, cùm ſpiritus, ſiue flatus tranſmearet, atque diſpelleret. At verò aër, & aqua non niſi corporum materia eſt. Naturam enim omnes ex iis corporibus componunt, atque conſtituunt. Quòd ſi homo, cæteráque animalia, membráque eorum Natura conſtent, dicendum profectò de carne, de oſſe, de ſanguine, denique de omnibus tam ſimili quàm diſſimili ſtrue compactis: vt de facie, de manu, de pede, qua quodque eorum tale ſit, & qua ita conſtent facultate, ſiue virtute: non enim ſatis eſt, eatenus tantùm noſſe, quibus ex re- E bus compoſitum ſit, vt igne, terráve: ſed perinde agendum, vt ſi de lecto, aut de quolibet alio generis eiuſdem ageretur: formam enim potius quàm materiam eius declarare tentaremus, vt æs, aut lignum: vel ſi id minus, totius quidẽ ipſius ſpeciem non omitteremus: lectus enim hoc in hoc eſt, aut hoc tale eſt. Quocirca vel ipſam figuram explanari, qualiſque forma ſit, indicari congruit: quippe cùm formæ natura potior ſit, quàm materiæ. Igitur ſi animalium membrorúmque vnumquodque figura coloréq; eſt, rectè Democritus diſſerit, qui ex iis ipſis putaſſe animalia conſtare videtur: quippe qui perſpicuum eſſe dicat, qualis forma ſit homo, quaſi ſua ipſe homo figura coloréque pateat. Atqui mortuus homo quanquam figuræ formam

habet eandem, tamen homo non eſt. Adhæc, fieri non poteſt vt manus ſit quocunque modo conſtans, vt ænea, aut lignea, niſi æquiuoca nominis communione: ſicut quæ picta eſt: vtpote quæ ſuo fungi officio nequeat. quomodo nec lapideæ tibiæ ſuum aſſequi munus poſſunt: neque medicus pictus artem medicinalem exercere poteſt. pari ratione membrorum quoque hominis vita functi, nullum id eſſe inſuper poteſt, quod erat, cùm viueret: vt oculus, manus, pes, reliqua. Ergo ſimplici admodum & pingui Minerua dictum hoc eſt, ac perinde quaſi faber de lignea manu loqueretur. Sic enim Naturæ illi exploratores ortus & cauſas referunt figurarum: à quibus enim facultatibus condita fuerint, exponunt. Itaque faber ſecurim fortaſſe, aut terebrum dicet, illi terram, & aërem: ſed meliùs faber, vt qui parum ſufficere arbitretur, ſi vſque eò dicat, quòd inſtrumento incidente, partim caua partim plana extiterunt: ſed adijciat, quoniam talem adegerit ictum: & cauſam, cur ita exponat, videlicet, vt talem aut talem formam opus acciperet. Conſtat igitur non rectè illos diſſeruiſſe, atque animal tale eſſe dicere oportere, & quid qualéque tum id ipſum, tum etiam membrum vnumquodque explicari oportere, quomodo de forma lecti docendum eſt. Ergo ſi animal, vel anima, vel pars animæ, vel non ſine anima eſt, (quàm primùm enim à corpore anima diſceſſit, animal eſſe deſinit, neque membrum vllum niſi figuræ ſuæ ratione idem relinquitur: modo eorum quę fabulæ tranſiſſe in lapidem narrant.) Si hæc, inquam, ita ſtatui debent, hominis Naturæ ſtudioſi ſanè intereſt de anima & diſſerere & ſcire: & ſi non de omni anima, tamen de ea ipſa quæ tale animal eſt: & quidnam anima aut certè pars iſta animæ ſit, aut quæ etiam de iis quæ tali eius ſubſtantiæ accidant, præſertim cùm bifariam naturam *intelligamus*, vt altera *pro* materia ſit, altera pro ſubſtantia: quæ quidem & vt mouens, & vt finis eſt: taliſque animalium anima, vel omnis, vel pars aliqua eius ſit. Nam ob eam etiam rem, qui de natura agit, eò amplius docere de anima quàm de materia, debet, quo materia, natura potiùs per animam, quàm è contrario eſt. Lignum enim & lectus, & tripes, propterea eſt, quia idem potentia illa eſt. Sed quæret quiſpiam animaduertens ad id quod modò dixi: Vtrùm de anima omni docere naturalis ſcientiæ interſit, an de aliqua vna. At ſi de omni, nulla certè præter naturalem philoſophiam relinquetur ſcientia. Intellectus enim ſiue mens, rerum intelligibilium eſt: itaque rerum omnium notiones naturalis vna tenebit. Eſt enim eiuſdem ſcientiæ, vt tam de intellectu quàm de re intelligibili doceat: ſiquidem eadem contemplatio omnium eſt inter ſe coniunctorum, ſicut ſenſus etiam, & rei ſenſibilis. An non omnis anima principium motus eſt? neque partibus animæ omnibus id tribui debet, ſed augendi principium idem putandum, quod & in plantis eſt, alterandi vim eandem, quam ſentiendi, deferendi autem aliud quiddam, non vim intelligendi? delationem enim vel in cæteris eſſe animalibus nouimus, intellectum ſiue mentem in nullis. Conſtat igitur non de anima diſſerere omni oportere: quandoquidem non anima omnis natura eſt, ſed aliqua eius pars vna, aut etiam plures. Ad hæc rem à materia abſtractam nullam poteſt ſcientia naturalis contemplari, cùm natura rei alicuius gratia faciat omnia: rebus autem abſtractis abiunctum id eſt, quod ſub hoc, cuius gratia, verbo intelligimus. Vt enim ars in artificioſis, ita in rebus ipſis aliquod eſſe principium aliud, & talis cauſa videtur,

Non enim quodlibet, & vtcunque fors tulit, ex quouis ſemine oritur, ſed hoc ex hoc. Neque ex corpore quolibet ſemen quodlibet prodit: principium nanque, & efficiens rei, quæ gignitur, ſemen eſt: ſunt hæc enim natura, & proinde ex hoc enaſcuntur. Atque etiam priùs, quàm hoc, illud eſt, vnde ſemen expromitur. Semen enim ipſum generatio eſt, finis verò ſubſtantia: vtriſque autem his prius illud eſt, à quo proficiſcitur. Semen enim bifariàm accipitur, videlicet ex quo, & cuius. Nam & à quo

C deceſſit, eius ſemen eſt, vt equi: & eius, quod ex illo futurum eſt, vt muli: verùm non eodem modo, ſed vt dictum iam eſt. Adhæc, ſemen non niſi potentia eſt. Potentia autem quemadmodum ad actum ſe habeat, nouimus. Cauſæ igitur hæ ſunt duæ numero, altera, cuius gratia, altera ex neceſſitate: multa enim gignuntur, quia neceſſe eſt. Sed quæret fortaſſe quiſpiam, quam neceſſitatem intelligi velint, qui res fieri neceſſario aiunt: neuter enim accipi poteſt eorum modorum qui præfiniuntur, in iis quæ per philoſophiam tractata ſunt. E Natura docere, qui hoc non dicunt exiſtimare. Principium enim rerum Natura potiùs quàm materia eſt. Empedocles etiam in eam interdum incidit, ductus ab ipſa veritate: & ſubſtantiam, atque naturam eſſe rationem fateri compellitur: velvti cùm os quid ſit, reddit: quippe qui non aliquod elementum vnum eſſe id velit, non duo, aut tria: non omnia, ſed miſtionis elementorum rationem. Igitur & carnem, & cæteras eiuſmodi partes hunc eundem in modum eſſe, apertum eſt. Cauſa verò quam ob rem antiquiores illi authores non ad hunc venerint modum, quòd quid res eſſet, atque ſubſtantiæ definitionem ipſam explicare haudquaquam ſolebant. Sed Democritus hæc tetigit primus, non tamẽ quòd ad rerum naturalium ſtudium putauerit neceſſariam, ſed quòd ab ipſa re alliceretur.

Socratis verò temporibus vſus quidem definiendi increuit, ſed indagatio rerum naturalium deſiit: nam omne philoſophandi ſtudium ad vtilem virtutem ciuilémque vſum translatum eſt. Licet quodammodò dixi, ita demonſtrare. Data animalibus ſpiratio eſt huius gratia rei: ſed eam propter has effici res neceſſe eſt. Neceſſitas vero aliâs ita ſignificat, vt ſi res cuius gratia futura ſit, hæc haberi neceſſe ſit, aliâs ita, vt ſic ſe habeant, aptáque ſua natura ita ſint. Egredi enim calorem, rurſúſque ingredi, cùm in re obuia offendatur, aëremque interlabi, neceſſarium eſt. Sed cùm aer exterior refrigerando retorquet, ingreſſus atq; egreſſus caloris interioris rei alicuius gratia agitur. Hic modus tractandi eſt: hæc ad id genus doctrinæ via & ratio attinet. Hæc, & eiuſmodi, ſunt ea quorum cauſas accepiſſe operæpretium eſſe ducimus.

CAPVT II.

Contra dichotomiam Platonis, & eos qui genus ſingulare in duas diuidunt differentias.

SVnt verò, qui genus in duas ſecando differentias accipiant ſingulare: quod quidem partim non facile, partim nullo pacto fieri poteſt. Non enim deſunt, quorum vna tantùm ſit differentia, cætera autem ſuperuacua ſint. Verbi gratia, pedatum, bipes, fiſſipes, multifidum: hæc enim vna potiſſima eſt: ſin minùs ſæpius idem dici neceſſe erit. Adhæc, genus quoduis diſtrahi non debet, vt exempli gratia, aues aliæ in hoc, aliæ in illo diuiſionis membro collocentur, quod æditæ illæ diuiſiones faciunt: quippe cùm ita fiat, vt auium, aliæ cum aquatilibus conſtituantur, aliæ in alio ponantur genere. Sed vt nomen huic ſimilitudini, auis, illi, piſcis inditum eſt: ſic aliæ ſunt, quæ nomine vacent, vt illa compos ſanguinis, aut expers, vtraque enim nomine vno carent. Quòd ſi nihil ex iis quæ generis ſocietate iunguntur, diſtrahi debet, fruſtra illa ſeorſum in duas partes diſtinctio agitur, cùm ſeiungi ac diſtrahi ſit neceſſe, ſi ita diuidatur. Sunt enim ex multipedibus alia in terreſtri, alia in aquatili genere.

CAPVT III.

Contra eos qui differentias per priuationes diuidunt, & de recta ratione diuidendi.

PRiuatione item diuidere ita neceſſe eſt. Et quidem id faciunt, qui ſeorſum in duo ſecant. At priuationis, qua priuatio eſt, nulla eſt differentia: non. n. fieri poteſt vt ſpecies eius ſit, quod non eſt, vel vt impedati, aut impennati, ſicut pennati, & pedati. Differentiæ autem vniuerſalis, ſpecies habeat neceſſe eſt: nam niſi habeat, cur vniuerſalibus potiùs adnumerari quàm ſingularibus debeat? Sed quanquam ſunt differentiæ, quæ vniuerſales ſint & ſpecies habeant, vt pennatus, cùm pennarum alia fiſſa, alia continua ſit: pedatus etiam partim multifidus eſt, partim bifidus, quod in biſulcis animalibus patet: partim continuus, nulla fiſſura diductus, qualis eorum eſt quæ ſolidam habent vngulam: tamen difficile eſt, vel in eiuſmodi differentias, quarum ſpecies ſunt, diſpartire, vt quoduis animal contineatur in iis ipſis, nec idem in plures veniat, vt pennatum & impennatum. ambo. n. hæc in eadem ſpecie poſſunt contineri, vt formica, vt nitedula, ſiue cicindela, & alia quædam vtrunque recipiunt: omnium verò difficillimum, imò impoſſibile eſt, vt in ea quæ ſanguine carent, ita diuidamus.

A Differentiam vnamquanque in aliquo ſingulari ineſſe, & proinde oppoſitam neceſſe eſt. Quòd ſi fieri non poteſt, vt iis quæ ſpecie inter ſe differũt, ſpecies aliqua ſubſtantiæ indiuidua, vnáque [illegible] ſed differentiam intercedere neceſſe eſt, [illegible] homine differt. Bipedis enim ratio ali[illegible] que eſt. Vel ſi ſanguine conſtant, ſa[illegible] pat ipſe, niſi pro nulla eſſentiæ parte d[illegible] ri. Sed ſi hoc ita eſt, differentia vna d[illegible]bus inerit. Quòd ſi ita ſequetur, apertum iam [illegible], impoſſibile eſſe, vt priuatio ſit differentia. Quinetiam totidem differentiæ erũt, quot animalia indiuidua: ſiquidem & ea ipſa indiuidua ſunt, & differentiæ indiuiduæ: neque vlla differentia communis eſt. B Quod ſi ita fieri poteſt, vt non communis, ſed indiuidua ſit, conſtat, quæ diuerſa ſunt ſpecie animalia, in eodem, per illam quidem communẽ contineri. Itaque neceſſe eſt, vt ſi propriæ ſint differentiæ, in quas omnia indiuidua cadant, nulla cõmunis ſit. Sin minùs, quæ diuerſa ſunt, venient in eandem: cùm neque indiuiduum idem, diuerſas per diſtinctionem adire debeat differentias, neque diuerſa eandem, atque omnia in iis ipſis oporteat contineri. Species igitur indiuiduas colligi ita nõ poſſe, vt diuidunt, qui animalia, aut quoduis aliud genus ſeorſum in duo ſecant, apertum iam eſt: fit enim authoribus illis, vt vltimas differentias totidem eſſe, quot animalia omnia indiuidua ſpecie C neceſſe ſit. Cùm enim genus aliquod ſit, cuius differentiæ primæ album & nigrum habeantur, atque eorum vtrorumque aliæ ſint, itidémque vlterius vſque ad indiuidua, efficitur profectò, vt vltimæ, aut quatuor, aut aliquo numero eliciantur, videlicet qui ab vno multiplicari poſſit. Totidem autem ſpecies quoque erunt, cùm differentia ſpecies ſit in materia. Neque enim ſine materia pars vlla eſſe poteſt animalis, neque ſola materia: non enim quoquo modo habens quid corpus, animal eſt, nec partium vlla, vt ſæpius dictum eſt. Adhęc, diuidendum iis rebus eſt, quæ ſitæ in ſubſtantia ſunt, non iis, quæ accidunt: vt ſi quis ita figuras diuidat, vt aliæ angulos pares duobus rectis, aliæ pares pluribus habeant: accidit enim triangulæ D figuræ, vt pares duob. rectis angulos habeat. Oppoſitis item diuidendum eſt: diſtant enim inter ſe oppoſita omnia, vt albedo & nigredo: vt rectitudo & curuitas. Quòd ſi altera diuerſa ſunt, diuidendum per oppoſita eſt, & non ita, vt alterum natatione, alterum colore diſtinguatur. Animata etiam communibus corporis & animæ muneribus diuidenda ſunt: quod in iis etiam quæ modò diximus, patet: alia enim greſſilia ſunt, alia volatilia. Sunt enim nonnulla genera, quibus datum vtrunque eſt, vt partim volucres partim inuolucres ſint, velut formicarum genus: atque etiam ſyluestris vrbanique ratione ita diuiE detur: quod error eſt. Fit enim vt quæ ſpecie ſunt eadem, hæc diſtinguere videamur: cùm omnia quæ vrbana ſunt, eadem ſylueſtria quoque reperiantur, vt homines, equi, boues, canes in terra Indica, ſues, capræ, oues: quæ ſi æquiuoca ſunt, non ſeorſum diſtincta ſunt: ſed ſi eadem ſpecie, vnúmque ſunt, iam fieri non poteſt vt ſylueſtre atque vrbanum pro differentiis rectè capiantur. Omnino quancunque differentiam diuidis vna tantùm diuiſione, id accidere neceſſe eſt. Quapropter generatim ſumere animalia tentandum eſt, vt à vulgo iam authore diſtinctum eſt genus auis, piſcis, cæterorum, quæ ſingula multis differentiis deſcribuntur: nec bipartita illa ſectione agendum eſt.

Sic enim

A Sic enim aut omnino fieri nō poteſt vt inſtitutum aſſequamur, cùm idem in plures cadat diuiſiones, & contraria veniant in eandem: aut vna tantùm prouenìet differentia, quæ vel ſimplex, vel per cōplexionem, ſpeciem vltimam referat. Sed ſi nō differentiæ differentiam accipis, diuiſioné effici continuam perinde, vt orationem coniūctione vnam, neceſſe eſt: verbi cauſa, occurrit iis qui ita diuidere conſueuerunt, aliud pennatum aliud impennatum: pennati aliud vrbanum, aliud ſylueſtre: aut aliud album, aliud nigrum: non enim differentia pennati vrbanum, albúmve eſt, ſed hoc principiū eſt alterius differentiæ, impennato autem per accidens eſt. Quamobrem pluribus diuidēdum pro-
B tinus differentiis eſt quod vnum eſt, vt nos cenſemus: ſic enim priuationes differentiam facient, quam in bipartita ſectione facere nequeant. Apertum vel inde eſt, fieri non poſſe vt ex ſingularibus ſpeciebus quicquam accipiamus, bipartita generis ſectione, vt quidam fieri poſſe putarunt. Impoſſibile eſt enim vnam differentiam eſſe eorum, quæ vt ſingula diuiſionem recipiūt, ſiue ſimplicia, ſiue complexa accipiantur. Simplicia dico, ſi non habeant differentiam, qualis fiſſipedatio eſt: complexa autem, ſi habeant, vt multifidum ad fiſſipes eſt: id enim illa ſibi vult continuatio differentiarū, quæ de genere per diuiſionem deducuntur, perinde quaſi quid vnum omnis hæc ſeries referat: quā-
C quam vocabulo euenit, vt vltima tantùm differētia eſſe videatur, velut multifidum, aut bipes: pedatum autem & multipes ſuperuacua ſint. at verò plures huiuſcemodi differentias haberi nō poſſe conſtat eo argumento, quòd cùm pergis ſubinde, deuenies quidem ad vltimam differētiam, ſed non ad ſummam, & ſpeciem: quæ quidem differentia, vel fiſſipes tātùm eſt, vel omnis complexio, verbi gratia, ſi hominem diuidēs, pedatum, bipes, fiſſipes componis. at ſi *homo bipes tantummodo* eſſet, hæc differentia vna ſufficeret. *Sed quoniam* hæc vna non eſt, multas eſſe non ſub vna diuiſione neceſſe eſt. atqui fieri non poteſt vt plures e-
D iuſdem ſub bipartita vna ſint ſectione, ſed ſingulæ ſingulis finiant, neceſſe eſt. itaque fieri quoque nō poteſt vt per bipartitam illam diuiſionem, aliquod ſingulare animal accipiamus.

CAPVT IV.

De genere, & ſpecie.

SEd quæret quiſpiam, cur principio homines non complectendo appellarint nomine vno generis, quod beſtias tum aquatiles, tum volucres contineret: ſunt enim nonnulli affectus, tum his tum cæteris animalibus omnibus communes.
E Veruntamen rectè ad hunc modum definitum diſtinctúmque eſt: genera. n. quæcumque exceſſu inter ſe differant, & plus minúſve recipiant, hæc vni ſubiecta ſunt generi: quæ autem proportionem recipiunt, hæc ſeorſum poſita ſunt. Verbi gratia: Auis differt ab aue, aut eo quòd magis habeat quicquam, aut ſuperantiæ ratione: aliæ enim aliæ penna ſunt longiore, aliæ breuiore. Piſces verò proportione ab auibus differunt: quod .n. penna in auibus eſt, hoc idem ſquama in piſcibus habetur. Verùm id facere in omnibus nō facile eſt: magna .n. pars animaliū eadem affecta eſt proportione. Sed cùm vltimæ ſpecies ſubſtantiæ ſint, quæ quidem ſpecies nullo ſpeciei diſcrimine differant,

vt Socrates, Coriſcus: efficitur profectò vt vel vniuerſalia explicari priùs, vel idem ſæpius dicere neceſſe ſit, vt dictum iam eſt. Vniuerſalia verò communia ſunt: quæ enim in pluribus inſunt, h[illegible] niuerſalia appellamus. Sed quæſtio exiſti[illegible] dem tractari debeant: quia enim ſubſtan[illegible] quod ſpecie indiuiduum eſt, potiſſim[illegible] fore, ſi quis de ſingulis indiuiduis ſpecie [illegible] conſiderare potuerit: atque vt de homine, ita de auibus eſſe agendum: habet enim hoc genus ſpecies: ſed non de iis verùm de ſingulis indiuiduis auibus, vt de paſſere, de grue, de reliquis huiuſcemodi. Sed ſi ita eueniet, vt ſæpe de eodem dicatur

B affectu (quoniam communis pluribus ſit) efficietur ſane vt ſeorſum referre de ſingulis, & ſubabſurdũ ſit, & prolixum. Cæterum recte fortaſſe agetur, ſi quæ ad genera attinent, ea communi negotio explicemus: videlicet quæ rectè ab hominibus deſinita dicuntur, quæque naturam ſortiuntur communem, & ſpecies non longè inter ſe differentes complectuntur, vt auis, vt piſcis. & ſi quid aliud ſit, nomine quidem vacans, ſed genere pari modo ſpecies continens. Quæ autem nõ eiuſmodi ſunt, hęc ſingillatim doceamus: vt de homine, & ſi quid aliud tale habeatur. Genera autem ſi quam ſimilitudinem præ ſe ferant, figuris ferè partium, totiúſque corporis deſcribuntur: quale genus auium aut

Mollia etiam, atque oſtrea, figurarum affinitate ſua genera deſcribunt: partes enim eorum non proportionis ſimilitudine diſcrepãt, quomodo os hominis, & ſpina piſcis, ſed potiùs affectionibus corporis, id eſt, magnitudine, paruitate, mollitie, duritate, lenitate, aſperitate, & reliquis generis eiuſdem: atque omnino eo quòd magis minúſve quicquam habeát. Sed quemadmodum ratio tractandæ Naturæ probari debeat, vtque de iis rebus via apta, faciliméque contemplari docereque poſſimus, atque etiam de diuiſione, quem in modum fieri poſſit, vt commodè ſpecies ſumatur, & quare bipartita ſectio partim fieri nequeat, partim fruſtra fiat, dictum iam eſt. CAPVT V.

De ſubſtantiis naturalibus, partim mortalibus, partim immortalibus.

SVbſtantiæ, quæ Natura conſtant, partim ingenitæ immortaléſque ſeculis omnibus ſũt: partim ortus participes, atque interitus intelliguntur. ſed partem illam æternam, & proinde nobilem ac diuinam, minùs contemplari propterea poſſumus, quòd admodum pauca illius noſtro ſenſui patent, quorum beneficio tum de ea ipſa parte diuina,

E tum de iis quæ noſſe cupimus, facultas nobis cogitandi indagandíque ſuppeditetur. Res mortales atque caducas, vt ſtirpes, vt animantes, quod eas ſocias familiaréſque habemus, noſſe vberiùs poſſumus: quippe cùm multa ineſſe quoque in genere percipere poſſit, quicumque nõ laborem recuſat [illegible] maiorem: vtrumque tamẽ ſtudium nos delectat. Res namque illas ſuperiores, tametſi leuiter attingere poſſumus, tamen ob eius cognoſcendi generis excellẽtiam amplius oblectamur, quàm cùm hæc nobis iuncta omnia tenemus, quemadmodum quamlibet partem minimam(?) corporis noſtrarum puellæ deliciarum vidiſſe gratum ac iucundius eſt, quàm cæterorum hominum membra tota perſpexiſſe, & contrectaſſe. at hæc inferiora, quia & plura ſunt, & cognoſci plenius poſſunt:

idcirco præſtãtiam ſibi ſcientiæ vendicant. Quinetiã quòd & nobis propiora & Naturæ familiariora ſunt, hinc aliquid cum rerũ diuinarum ſtudio rependunt, atque cõpenſant. Sed cùm iam ſatis de iis egerimus, noſtrámque explicuerimus ſententiã, reſtat vt de animante Natura diſſeramus, nihil pro viribus omittentes, vel vilius vel nobilius. Nam & in iis quæ hoc in genere minus grata noſtro occurrunt ſenſui, Natura parens & author omnium, miras excitat voluptates hominibus qui intelligunt cauſas, atque ingenuè philoſophantur. Abſurdum enim, nullâque ratione probãdum eſt, ſi imagines quidem rerum naturalium, non ſine delectatione propterea inſpectamus, quod ingenium vnà contemplamur, quod illas cõdiderit, id eſt, artem pingendi, aut fingendi: rerum autem ipſarum Naturæ ingenio miráque ſolertia conſtitutarum contemplationem, non magis perſequamur, atque exoſculemur, modò cauſas perſpicere valeamus. Quamobrem viliorum animalium diſputationem perpenſionémque faſtidio puerili quodam ſpreuiſſe, moleſtéque tuliſſe, dignum nequaquam eſt, cùm nulla res ſit Naturæ, in qua non mirãdum aliquid inditum habeatur. Et quod Heraclitum dixiſſe ferunt ad eos qui cùm alloqui eum vellent, quòd fortè in caſa furnaria quadam caloris gratia ſedentem vidiſſent, accedere temperarunt: ingredi enim eos fidenter iuſſit, Quoniam, inquit, ne huic quidem loco dij deſunt immortales. Hoc idem in indaganda quoque natura animantium faciendum eſt. Aggredi enim quæque ſine vllo pudore debemus, cùm in omnibus Naturæ numen & honeſtum pulchrúmque inſit ingenium. Quippe cùm naturæ operibus iunctum illud præcipuè ſit, vbi nihil temerè, vicéque fortuita committatur, ſed alicuius gratia omnia agantur. Finis autem, cuius gratia quicquam vel conſtat, vel conditum eſt, boni honeſtique obtinet rationem. at verò ſi quis cæterorum animalium cõtemplationem ignobilem abiectámque putat, iam hic de ſe quoque idem arbitrari debet. Non enim fieri poteſt vt ea ſine magna abominatione inſpiciamus, ex quibus corpus conſtat humanum, vt ſanguinem, carnem, oſſa, venas, reliqua generis eiuſdem. Omnino ita cenſendum, vt qui de quauis corporis parte, aut de vaſe aliquo diſputat, non de materia, aut eius materiæ gratia doceat, ſed formæ totius ratione: ſicvt & cùm de ædibus agitur, non de lateribus, non de luto, non de lignis, ſed de forma ipſarum ædium docemus. Pari ratione qui de Natura agit, de compoſitione, totáque ſubſtantia tractet, non de iis quæ nunquã euenit vt à ſubſtantia ſeparentur. Sed primùm ea diſtingui ſingulis in generibus neceſſe eſt, quæ per ſe animalibus accidunt omnibus: pòſt verò cauſas perſequi eorum conandum eſt. Quod igitur antè diximus, multa in multis animalibus inſunt communia, partim ſimplici ratione, vt pedes, pennæ, ſquamæ, atque etiã affectus ſimiliter: partim proportione. Proportione, inquam, quòd aliis pulmo datus eſt, aliis pulmo quidem negatus, ſed vice pulmonis iunctum aliquid eſt, quod pulmoni reſpondeat. aliis item ſanguis ineſt, aliis ſanguinis proportionale, quod eandem in genere exangui obtinet vim, quam ſanguis in compote illo ſanguinis habet. Verùm ſi ſeorſum de ſingulis diſputetur, eueniet quod dictum iam eſt, vt ſæpe eadem iterentur, dum de omnibus, quæ adiuncta ſunt, agitur: quippe cùm eadem compluribus iuncta habeantur. Hæc ita placeat præfiniri, & ſtatui.

ARISTOTELIS STAGIRITÆ, de partibus Animalium & earum cauſis,

Liber II.

Capvt I.

Triplicem eſſe rerum omnium compoſitionem.

EX quibuſnam & quot numero mẽbris ſingula animalia conſtarẽt, libris hiſtoriarũ, qui de his ſcripti à nobis ſunt, planiùs explicauimus: nũc quas ob cauſas, quæq; ad hũc modũ ita ſe habẽt, conſideremus: E videlicet ita vt omnis ratio ſeiuncta ab iis quæ per hiſtorias expoſuimus, tractetur. Cùm itaq; triplex ſit cõpoſitio, prima ſtatui poteſt ea quæ ex primordiis conficitur, iis quæ nonnulli elementa appellant, terram dico, aquam, aërem, ignem: ſed melius fortaſſe dici poteſt, ex virtutibus confici elementorum, iiſque non omnibus, ſed vt antè expoſitum eſt: humiditas enim & ſiccitas, & caliditas & frigiditas, materia corporum ſunt compoſitorum. Cæteræ autem differentiæ eas ſequuntur, vt grauitas, leuitas: denſitas, raritas: aſperitas, lenitas, & reliquæ id genus affectiones. Secunda conſtitutio ex primis illis natura ſimilarium partium

inanimalibus eſt, vt oſſis, vt carnis, & reliquorum generis eiuſdem. Tertia, & vltima numero, partium diſſimilarium eſt, vt faciei, manus, & reliquorum eiuſmodi membrorum. Sed cùm contra in generatione, atque in eſſentia agatur: quæ enim poſteriora ſunt generatione, hæc natura priora ſunt: & quod primum natura eſt, id vltimum eſt generatione. non enim ædes, laterum aut lapidum gratia ſunt, ſed hæc ædium gratia petuntur: quod idem de quauis alia materia intelligimus. Nec inductione tantùm id patet, verùm etiam ratione: Omne enim quod gignitur, ex aliquo, & ad aliquid ſuam generationem deducit, & à principio ad principium pergit, hoc eſt, ab eo quod primum mouet, & naturam iam aliquam obtinet, ad formam aliquam, aut talem quempiam finem: homo enim hominem gignit, & ſtirps ſtirpem ex materia, quæ ſubiecta ſingulis eſt. Cùm igitur generatio, & eſſentia ita ſe habeant, tempore materiam generationémque eſſe priorem neceſſe eſt: ratione verò eſſentiam rei cuiuſque, & formam. Patet hoc definitione generationis: quippe cùm ædificationis definitio contineat ædium definitionem, ædium definitio non contineat ædificationis definitionem: idémque in cæteris euenit. Quamobrem elementorum materiam eſſe ſimilarium partium gratia neceſſe eſt. Sunt enim hæ poſteriores illis generatione: iis autem ipſis diſſimilares ſunt poſteriores. Iam enim finem hæ tenent, ac terminum, ternatio conſtitutionem adeptæ numero, ſcilicet vt perfici generationem in multis naturæ fert. Conſtant igitur animalia ex vtroque membrorum hoc genere. Verùm ſimilaria diſſimilarium gratia habentur: illorum enim officia ſunt, & actiones, vt oculi, vt narium, & faciei totius: item digiti, manus, & brachij totius. Sed cùm actiones motionéſque multiformes, tum animalibus totis, tum etiam membris eiuſmodi tribuantur: diuerſa virtutibus eſſe ea, ex quibus conſtant, neceſſe eſt: ad alia enim mollities, ad alia durities commodior eſt: & alia intendi alia flecti debent. Itaque partes ſimilares obtinent ſibi vires eiuſmodi ſingillatim accommodatas: alia enim mollis, alia dura, & alia humida, alia ſicca, & alia lenta, alia rigida. At verò diſſimilares, plures, & compoſitas vires continent: vis enim alia ad premendum, alia ad mittendum commoda manui eſt. Quamobrem partes organicæ, quas officiales & inſtrumentarias licet appellare, ex oſſibus, neruis, carne, cæteriſque eiuſmodi conſtant, non illa ex iis. Cauſa, cuius gratia, cur hæc ita ſe habent, hæc eſt. Sed cùm præterea quæratur, quam ob cauſam hæc ita ſe habere neceſſe ſit, ratio manifeſta eſt, quòd iam præfuit, vt ita ſe inuicem ex neceſſitate haberent: diſſimilares enim conſtare ex ſimilaribus poſſunt: tum pluribus, tum etiam ſingulis, vt viſcera nonnulla. Conſtant enim ferè omnia multiformi figura, quæ ex corpore ſimilari condita habentur. at fieri non poteſt vt ſimilares ex diſſimilaribus conficiantur: ſic enim pars ſimilaris multæ eſſet diſſimilares. A ſcilicet propterea quòd quiuis ſenſus vnius generis certi eſt, ſingulæque ſenſoriæ partes ſingulorum ſenſibilium generum capaces habentur. Afficitur etiam, quod potentia eſt, ab eo quod actu eſt, quòd idem ſunt genere, vnúmque illud & hoc ſunt. Quamobrem manum, aut faciem, aut aliam quamuis eiuſmodi partem, nullus naturæ interpres terram, aut aquam, aut ignem eſſe conatur exponere: partes verò ſenſorias ſingulas elementis ſingulis tribuunt, vt aliam aërem, aliam ignem eſſe confirment. Sed cùm ſenſus in partibus ſimplicibus poſitus ſit, euenit ratione optima, vt tactus ſedem ſimilarem quidem, ſed minimè ſimplicem ſortiatur: quippe qui maximè vim recipiendi plura B genera videatur habere, multáſque præ ſe ferre contrarietates ſui obiecti: verbi gratia, caliditatẽ, rigiditatem, ſiccitatem, humiditatem, alias etiam generis eiuſdem: & quidem caro in quauis earum qualitatum ſentiendarum poſita eſt, aut quod carni proportione reſpondet, corpulentiſſimum omnium partium ſenſibus accommodatarum eſt. Quinetiam cùm fieri non poſſit vt animal ſit carens ſenſu: eo quoque efficitur neceſſariò, vt mẽbra nonnulla ſimilaria in animalibus habeãtur: vis enim ſentiendi ſita in his eſt, actiones autem per diſſimilaria adminiſtrantur. Sed cùm vis ſentiẽdi, vis mouendi, vis nutriendi, eodem in membro cõtineantur, quod alio loco explicatum à nobis eſt, C fit neceſſariò vt membrum, quod primum principia eiuſmodi teneat, id & ſimplex eo debeat eſſe, quà omnium capax ſenſibilium eſt: & diſſimilare eo, quà mouens, & agens eſt. Quamobrem in genere exangui, hoc eſt, experte ſanguinis, animaliũ proportionale eſt: in ſanguineo autem, id eſt, cõpote ſanguinis, cor tale habetur membrum: quippe cùm cor & in partes ſimilares ſecetur, quemadmodum quoduis ex aliis viſceribus: & diſſimilare ſit, propter ſuæ figuræ formam. Cætera etiam omnia viſcera appellata, ſecuta hoc ſunt: quippe quæ ex eadem materia conſtent. Natura enim eorum omnium ſanguinea eſt, quoniam poſita ſunt ad meatus venarum, atque intercapedines. Igitur perinde quaſi fæx aquæ profluentis, cætera viſce-D ra, velvti profuſiones ſanguinis per venas fluentis, conſiſtunt. At verò, cor, quia venarum initium eſt, & vim creandi ſanguinis primam obtinet, idcirco ex tali materia conſtare, quale recipit alimentum, ratio eſt. Sed quam ob cauſam viſcera forma ſanguinea ſint, & partim *ſimilaria, partim diſſimilaria, dictum iam eſt.

CAPVT II.

Partium ſimilarium alias molles & humidas, alias ſiccas & ſolidas eſſe: déque ordinis ſimilarium diſcrepantia. Item de calidi & frigidi acceptationibus, eorúmque exceſſu.

E PArtium autem ſimilarium aliæ molles & humidæ ſunt, aliæ duræ & ſolidæ. Humidæ vel omnino, vel quamdiu in conſtitutione naturę manẽt ſanguis, ſanies, adeps, ſeuum, medulla, genitura, lac, vbi haberi ſolet, caro, & quę iis proportione reſpondẽt: non enim omnia animalia partes has obtinent, ſed ſunt quæ ad proportionem nonnullarum ex iis conſtent. Siccæ ac ſolidæ inter ſimilares ſunt, os, ſpina, neruus, vena. Ordo enim ſimilarium diſcrepat: quippe qui nomen partim commune toti cum parte ſeruet, vt venæ pars, vena rectè appellatur: partim non ſeruet, vt in viſceribus patet: figura enim diuerſa eſt. Primùm igitur

partibus his, tum humidis tum ſiccis, multi cauſæ modi tribuuntur, cùm aliæ tanquam materia membrorum diſſimilarium ſint: ex iis enim mēbra quæque officialia, ſiue inſtrumentaria conſtant, oſſibus, neruis, carnibus, aliiſque generis eiuſdem, quæ partim ad eſſentiam, partim ad actionem conducunt: aliæ nutrimento ſint, vt humidæ ſiccis. (etenim omnia ex humore ſua capiunt alimenta:) aliæ vt excrementa earum ſint, accidit: vt ſedimentum ſicci alimenti, atque etiam humidi in iis quibus veſica data eſt. Earum autem ipſarum partium diſcrimina, quibus inter ſe diſcrepēt, notæ melioris gratia habētur, vt tum aliarum tum ſanguinis ad ſanguinē: alius.n. tenuior, alius craſſior eſt: & alius ſyncerior, alius turbulentior: item alius frigidior, alius calidior, tam in eodem animali quàm in diuerſis. Quantum enim ſanguinis parte corporis continetur ſuperiori, his differentiis diſcrepat cum inferiori. Omnino animalibus aliis ſanguinem dedit natura, aliis vice ſanguinis partem eiuſmodi aliam. Eſt certè roboris efficacior ſanguis, qui craſſior & calidior eſt: vim autem ſentiendi intelligendique obtinet pleniorem, qui tenuior atque frigidior eſt. Hoc idem diſcrimen in iis quoque habetur, quæ ſanguini proportione reſpondent. Quamobrem apes, atque eiuſmodi alia animalia ingenioſiora multis carentibus ſanguine ſunt: nec non inter ea quæ ſanguinem habent, ingenioſiora ſuis contrariis ſunt, quæ ſanguinem habent frigidiorem, & tenuiorem. Sed optimè conſtant quæ calidum, tenuem, & ſyncerum habent: quippe quæ vnà & viribus corporis, & animę ingenio plurimùm valeant. Quapropter pars etiam ſuperior corporis ea ipſa differentia diſſidet cum inferiori, & fœmina cum mare, & dextra pars cum ſiniſtra eiuſdem corporis. Pari modo cæteris quoque tam eiuſmodi partibus, quàm diſſimilaribus, ſtatuere differentiam debemus, partim ad officia & eſſentiam cuiuſuis animalis, partim ad melius deteriúſve. Exempli gratia, inter ea quæ oculos habent, alia duris oculis ſunt, alia humidis: & alia carent palpebris, alia habent, vt viſus ſit exquiſitior. Sanguinem verò haberi, aut quod eandem quam ſanguis, naturam obtineat, quàm neceſſe ſit, atque etiam quænam ſanguinis ſit natura, explicandum ſuis iam cauſis eſt, ſi priùs calidi frigidique rationem diſtinxerimus. natura enim rerum multarum ad ea ipſa principia refertur. Compluréſque ambigunt, quænam animalia, membráve, calida aut frigida ſint. Etenim nonnullis aquatilia terreſtribus eſſe calidiora placet, argumento, quòd naturæ frigiditas calore naturæ eorum compenſetur. Sanguine etiam deſtituta, iis quæ ſanguinem obtinent, eſſe calidiora: & fœminas ampliùs quàm mares calere arbitrantur. Parmenides enim, mulieres eſſe viris calidiores, author eſt: quod idem quibuſdam etiam aliis placuit, argumento copiæ ſanguinis, qua menſtrua fiant. Empedocles contrà opinatur. Sanguinem etiam, & bilem alij inter calida enumerant, alij inter frigida. Quòd ſi calidum atque frigidum tātam recipiunt ambiguitatem, & controuerſiam, quid de cæteris arbitrari debeamus? Hæc enim omnium, quæ ſenſum patiuntur, apertiſſima ſunt. Sed quæſtio hæc orta inde videtur, quòd calidum multifariàm dicitur: quiſque enim, quamuis contraria dicat, tamen aliquid dicere videtur.

δῆλον δὴ μὴ λανθάνειν πῶς δεῖ τῶν φύσει συνεστώτων, τὰ μὲν θερμὰ λέγειν, τὰ δὲ ψυχρά· καὶ τὰ μὲν ξηρά, τὰ δ' ὑγρά· ἐπεί, ὅτι γ' αἴτια ταῦτα σχεδὸν καὶ θανάτου καὶ ζωῆς ἔοικεν εἶναι, φανερόν. ἔτι δ' ὕπνου καὶ ἐγρηγόρσεως, καὶ ἀκμῆς καὶ γήρως, καὶ νόσου καὶ ὑγιείας· ἀλλ' οὐ τραχύτητες καὶ λειότητες, οὐδὲ βαρύτητες καὶ κουφότητες, οὐδ' ἄλλο τῶν τοιούτων οὐδὲν, ὡς εἰπεῖν. καὶ τοῦτ' εὐλόγως συμβέβηκε. καθάπερ γὰρ ἐν ἑτέροις εἴρηται πρότερον, ἀρχαὶ τῶν φυσικῶν στοιχείων αὗταί εἰσι, θερμὸν καὶ ψυχρόν, καὶ ξηρόν, καὶ ὑγρόν. πότερον οὖν ἁπλῶς λέγεται τὸ θερμόν, ἢ πλεοναχῶς, δεῖ δὴ λαβεῖν τί ἔργον τοῦ θερμοτέρου, ἢ πόσα, εἰ πλείω. ἕνα μὲν δὴ τρόπον λέγεται μᾶλλον θερμόν, ὑφ' οὗ μᾶλλον θερμαίνεται τὸ ἁπτόμενον· ἄλλον δέ, τὸ μᾶλλον αἴσθησιν ἐμποιοῦν ἐν τῷ θιγγάνειν, καὶ τοῦτ', ἐὰν μετὰ λύπης. ἔστι δ' ὅτε δοκεῖ τοῦτ' εἶναι ψεῦδος. ἐνίοτε γὰρ ἡ ἕξις αἰτία τοῦ ἀλγεῖν αἰσθανομένοις· ἔτι τὸ τηκτικώτερον τοῦ τηκτοῦ, καὶ τοῦ καυστοῦ καυστικώτερον. ἔτι δέ, ἐὰν ᾖ τὸ μὲν πλέον, τὸ δ' ἔλαττον τὸ αὐτό, τὸ πλέον τοῦ ἐλάττονος θερμότερον. πρὸς δὲ τούτοις, δυοῖν τὸ μὴ ταχέως ψυχόμενον, ἀλλὰ βραδέως θερμότερον· καὶ τὸ θᾶττον θερμαινόμενον τοῦ θερμαινομένου βραδέως θερμότερον τὴν φύσιν εἶναι φαμέν· ὡς τὸ μὲν ἐναντίον, ὅτι πόρρω· τὸ δ' ὅμοιον, ὅτι ἐγγύς. λέγεται μὲν οὖν εἰ μὴ πλεοναχῶς, ἀλλὰ τοσαυταχῶς ἕτερον ἑτέρου θερμότερον. τούτους δὲ τοὺς τρόπους ἀδύνατον ὑπάρχειν τῷ αὐτῷ πάντας. θερμαίνει μὲν γὰρ μᾶλλον τὸ ζέον ὕδωρ τῆς φλογός· καίει δὲ καὶ τήκει τὸ καυστὸν καὶ τηκτὸν ἡ φλόξ. τὸ δ' ὕδωρ, οὐδέν. ἔτι θερμότερον μὲν τὸ ζέον ὕδωρ, ἢ πῦρ ὀλίγον. ψύχεται δὲ καὶ θᾶττον καὶ μᾶλλον τὸ θερμὸν ὕδωρ, μικροῦ πυρός. οὐ γὰρ γίνεται ψυχρὸν πῦρ, ὕδωρ δὲ γίνεται πᾶν. ἔτι θερμότερον μὲν κατὰ τὴν ἁφὴν τὸ ζέον ὕδωρ, ψύχεται δὲ θᾶττον καὶ πήγνυται τοῦ ἐλαίου. ἔτι τὸ αἷμα κατὰ μὲν τὴν ἁφὴν, θερμότερον ὕδατος καὶ ἐλαίου, πήγνυται δὲ θᾶττον. ἔτι λίθος καὶ σίδηρος καὶ τὰ τοιαῦτα, θερμαίνεται μὲν βραδύτερον ὕδατος, καίει δὲ θερμανθέντα μᾶλλον. πρὸς δὲ τούτοις τῶν λεγομένων θερμῶν, τὰ μὲν ἀλλοτρίαν ἔχει τὴν θερμότητα, τὰ δ' οἰκείαν. διαφέρει δὲ τὸ θερμὸν εἶναι οὕτως ἢ ἐκείνως, πλεῖστον. ἐγγὺς γὰρ τοῦ κατὰ συμβεβηκὸς εἶναι θερμόν, ἀλλὰ μὴ καθ' αὑτὸ θάτερον αὐτῶν· ὥσπερ ἂν εἴ τις λέγοι, εἰ συμβεβηκὸς εἴη τῷ πυρέττοντι εἶναι μουσικῷ, τὸν μουσικὸν εἶναι θερμότερον, ἢ τὸν μεθ' ὑγιείας θερμόν. ἐπεὶ δ' ἐστὶ τὸ μὲν καθ' αὑτὸ θερμόν, τὸ δὲ κατὰ συμβεβηκός, ψύχεται μὲν βραδύτερον τὸ καθ' αὑτό· θερμαίνει δὲ πολλάκις τὴν αἴσθησιν μᾶλλον τὸ κατὰ συμβεβηκός. καὶ πάλιν καίει μὲν μᾶλλον τὸ καθ' αὑτὸ θερμόν, οἷον ἡ φλόξ, τοῦ ὕδατος τοῦ ζέοντος· θερμαίνει δὲ κατὰ τὴν ἁφὴν τὸ ζέον μᾶλλον, τὸ κατὰ συμβεβηκὸς θερμόν. ὥστε φανερὸν ὅτι τὸ κρῖναι δυοῖν πότερον θερμότερον, οὐχ ἁπλοῦν· ὡδὶ μὲν γὰρ τόδε ἔσται θερμότερον, ὡδὶ δὲ θάτερον. ἔνια δὲ τῶν τοιούτων οὐδ' ἔστιν ἁπλῶς εἰπεῖν ὅτι θερμόν, ἢ μὴ θερμόν. ὃ μὲν γάρ ποτε τυγχάνει ὂν τὸ ὑποκείμενον, οὐ θερμόν· συνδυαζόμενον δέ, θερμὸν ἐστὶν, εἴ τις θεῖτο ὄνομα ὕδατι ἢ σιδήρῳ. τοῦτον γὰρ τὸν τρόπον τὸ αἷμα θερμόν ἐστι. καὶ ποιεῖ δὲ φανερὸν ἐν τούτοις, ὅτι τὸ ψυχρὸν φύσις τις, ἀλλ' οὐ στέρησίς ἐστιν, ἐν ὅσοις τὸ ὑποκείμενον κατὰ πάθος θερμόν ἐστι.

A Quamobrem noſſe oportet, quem ad[illegible] rerum naturalium conſtitutarum pa[illegible] dæ, partim frigidæ, & aliæ ſiccæ, [illegible] dæ dici debeant. Nam vitæ quoque [illegible] cauſas hæc habere, atque etiam ſom[illegible] liæ, iuuentutis & ſenectutis, & m[illegible] nitatis: non aſperitatem, aut leni[illegible] grauitatem, aut leuitatem, nihil fe[illegible] pertum eſſe videtur. & recte quidem. Sunt enim hæc, vt alio loco expoſuimus, initia elementorum naturalium: calidum dico, frigidum, ſiccum, humidum. Vtrùm igitur ſimplici ratione, an multiplici calidum dicatur? Sed quodnam B officium rei calidioris ſit, aut ſi plura ſint, quot numero ſint, declarandum eſt. Primo igitur modo calidius dicitur id quod ampliorem inuehit ſenſum, cùm tangitur, nec ſine dolore: quod quidem fallere interdum videtur. Nam fieri poteſt vt corporis habitus cauſam dolendi afferat, cùm ſentitur. adhæc, calidius, quod rei liquabilis liquantius, & rei cremabilis cremantius eſt. Item ſi alterum plus, alterum minus ſit, idem, quod plus eſt, hoc altero, quod minus, calidius eſt. Præterea, quod de duobus non citò, ſed lentè frigeſit, id calidius eſt: & quod citiùs caleſit, eo, quod lentiùs, natura eſſe calidiori cenſemus: perinde quaſi alterum ſit aduerſum, vt C remotius: alterum ſimile, vt propinquius. alterum igitur altero calidius eſſe, etſi non pluribus, tamen tot modis dicitur: qui modi omnes eidem ineſſe non poſſunt. aqua enim feruens pleniùs calefacit, quàm flamma: ſed flamma vrit, & liquat rem, vri aut liquari idoneam: quod aqua efficere non poteſt. Item aqua feruens calidior eſt, quàm ignis exiguus: attamen citiùs magíſque refrigeſcit, quàm ignis, quamuis exiguus: quippe qui frigidus nunquam fiat, cùm aqua omnis refrigerari poſſit. *Ad hæc, aqua feruens calidior ſentitur,* ſed celeriùs refrigeſcit & congelaſcit, quàm oleũ. Sanguis præterea tactu calidior quàm aqua, aut oleum eſt, ſed celeriùs gelaſcit. Lapis etiam, ferrum, D & reliqua generis eiuſdem, lentiùs quidem caleſiunt, quàm aqua, ſed vbi calefacta fuerint, vrere vehementiùs poſſunt. Poſtremò ea quæ calida eſſe diximus, calorem aut externũ continent, aut ſuum. Plurimũ autem refert, hoc an illo modo calidum quicquam ſit: alterum enim eorum propè eſt, vt calidum per accidens ſit, non per ſe: perinde quaſi, ſi febrienti muſicum eſſe accidit, dixeris muſicum eſſe calidiorem, quàm eum qui calidus ſanus eſt. Sed cùm aliud per ſe calidum, aliud per accidens ſit, refrigeſcit quidem lentiùs, quod per ſe calidum eſt. Sed ſæpe fit, vt ſenſu vehementiùs calefaciat id quod per accidens calidum eſt. E Item amplius vrit, quod per ſe calidum eſt, vt flamma, quàm aqua feruens: ſed tactu ampliùs calefacit aqua feruens, quæ per accidens calida eſt. Itaque iudicium vtrúmnã ex duobus calidius ſit, non eſſe ſimplex, apertũ eſt: quãdo fieri poteſt, vt hac alterũ, illa alterũ ratione calidius ſit: nonnulla verò ex iis ne dici quidem ſimpliciter calida aut non calida poſſunt. Subiecto enim quod tandem ſint, non calida ſunt: ſed per aſſociationem calida ſunt: velut ſi ferro calido, aut aquæ nomen impones: hoc enim modo ſanguis calidus eſt. Et quidem patet, frigiditatem aliquã [illegible] tura, non priuationem in iis quorum [illegible] calidum per affectionem, ſiue paſſio[illegible] eſt.

Natura etiam ignis tale quid fortaſſe eſt. ſubiectum enim forſitan eſt, vel fumus, vel carbo: quorum alterum ſemper calidum eſt, quippe cùm fumus non niſi exhalatio ſit: carbo autem extinctus frigidum eſt. Oleum, & teda effici frigida poſſunt. Aduſta etiam ferè omnia aliquid habent caliditatis, vt calx, cinis, ſedimenta animalium, & inter excrementa fel, eo quod feruore nimio exaruerint, relictúmque ſibi contineant aliquid caliditatis. Teda, & quoduis pingue alio modo calidum eſt, videlicet quod celeriter in actum ignis mutari poteſt. Calor autem vim tum cogendi, tum liquãdi habere videtur. Quæ igitur aquæ vnius ſunt, ea frigore coguntur: quæ terræ, igne calida etiam indurantur: frigore celeri, atque irreſolubili concreta, quæ terram potiùs præ ſe ferunt: leuiùs autem, quæ aquam. Sed de his planiùs alio loco definitũ à nobis eſt, ſcilicet quænam concreſcere apta ſint, & quibus cauſis ſtringantur. Calidum verò, & calidius, cùm multifariàm dicitur, non eodem modo rebus iungetur omnibus: ſed addere debebis, aliud per ſe eſſe calidum, aliud plerumque per accidẽs. Item aliud potentia, aliud actu: & aliud hoc modo, quod tactum ampliùs calefaciat: aliud, quod flammam excitet, atque igniat. Quòd ſi calidum multiplici ratione dicatur, frigidum quoque pari ratione ſequatur, neceſſe eſt. atque de calido, frigido, exceſſúque eorum, ad hunc modum definiſſe ſatis ſit.

A τάχα δὲ καὶ ἡ τοῦ πυρὸς φύσις, εἰ ἔτυχε, τοιαύτη τίς ἐστ. ἴσως γὰρ τὸ ὑποκείμενον ἐστὶν ἢ καπνός, ἢ ἄνθραξ· ὧν τὸ μὲν ἀεὶ θερμόν· ἀναθυμίασις γὰρ ὁ καπνός· ὁ δ' ἄνθραξ ἀποσβεσθείς, ψυχρός. ἔλαιον δὲ καὶ πεύκη, γένοιτ' ἂν ψυχρά. ἔχει δὲ θερμότητος καὶ τὰ πυρωθέντα πάντα σχεδόν, οἷον κονία, καὶ τέφρα, καὶ τὰ ὑποστήματα τῶν ζῴων, καὶ τῶν περιττωμάτων ἡ χολή, τῷ ἐμπεπυρῶσθαι καὶ ἐγκαταλελεῖφθαί τι ἐν αὐτοῖς θερμόν. ἄλλον δὲ τρόπον θερμὸν πεύκη καὶ τὰ πίονα, τῷ ταχὺ μεταβάλλειν εἰς ἐνέργειαν πυρός. δοκεῖ δὲ τὸ θερμὸν καὶ πηγνύναι καὶ τήκειν. ὅσα μὲν οὖν ὕδατος μόνον, ταῦτα πήγνυσι τὸ ψυχρόν· ὅσα δὲ γῆς, τὸ πῦρ. καὶ τῶν B θερμῶν πήγνυται ὑπὸ ψυχροῦ, ταχὺ μέν, ὅσα γῆς μᾶλλον, καὶ ἀλύτως· λυτῶς δέ, ὅσα ὕδατος. ἀλλὰ περὶ μὲν τούτων ἐν ἑτέροις διώρισται σαφέστερον, ποῖα τὰ πηκτά, καὶ πήγνυται διὰ τίνας αἰτίας. τὸ δὲ τί θερμόν, καὶ ποῖον θερμότερον, ἐπεὶ λέγεται πλεοναχῶς, οὐ τὸν αὐτὸν τρόπον ὑπάρξει πᾶσιν, ἀλλὰ προσδιοριστέον ὅτι καθ' αὑτὸ μὲν τόδε, κατὰ συμβεβηκὸς δὲ πολλάκις θάτερον. ἔτι δὲ δυνάμει μὲν τοδί, τοδὶ δὲ κατ' ἐνέργειαν· καὶ τόνδε μὲν τὸν τρόπον τοδί, τῷ μᾶλλον τὴν ἁφὴν θερμαίνειν, τοδὶ δὲ τῷ φλόγα ποιεῖν καὶ πυροῦν. λεγομένου δὲ τοῦ θερμοῦ πολλαχῶς, ἀκολουθήσει δῆλον ὅτι καὶ τὸ ψυχρὸν κατὰ τὸν αὐτὸν λόγον. καὶ περὶ μὲν C θερμοῦ καὶ ψυχροῦ, καὶ τῆς ὑπεροχῆς αὐτῶν, διωρίσθω τὸν τρόπον τοῦτον.

CAPVT III.

De ſicco & humido diſputatio.

SEquitur vt de ſicco & humido, modò ſuperiorum diſſeramus. Nam ea quoque multifariàm dici ſolent, vt alia ſicca, aut humida potentia ſint, alia actu. Gelu enim, omnémque humorem concretum ſiccum dicimus actu, & per accidens, cùm tamen potentia, & per ſe humidus ſit: contrà terra, cinis, & reliqua generis eiuſdem miſta humori, humida actu, & per accidens redduntur, quanquam per ſe, atque potentia ſicca ſunt. at vbi hæc ſeparata fuerint, quod aqua refertum eſt, id & actu & potentia humidum eſt. Quæ autem terræ propria ſunt, hæc omnia ſicca ſunt. Et quidem quod propriè ac ſimpliciter ſiccum eſt, hoc modo maximè intelligitur: altera etiam, humida dico, hac eadem ratione, qua calida, & frigida, proprij abſolutique nomen recipiant. His ita præfinitis, apertum iam eſt, ſanguinem quodammodo calidum eſſe, videlicet eo, quale eſt ei ſanguini eſſe, perinde quaſi aquam feruentem nomine vno ſignificemus. at verò ſubiecto, & quoũ eandem cùm ſit, ſanguis eſt, non calidus eſt: & quodammodo per ſe calidus, quodammodo nõ per ſe calidus eſt. Caliditas enim in eius ratione ineſt: quemadmodum albedo in albi hominis ratione. at eo, qua ſanguis per affectionem ſiue paſſionem eſt, non per ſe calidus eſt. pari modo de ſicco & humido ſtatuẽdum eſt: quapropter in eiuſmodi rerum natura, partim calida, & humida ſunt: ſed ſeparata congelaſcunt, & frigida eſſe videntur, qualis eſt ſanguis: partim calida craſſioráque ſunt, vt bilis: ſed ſeparata ab eorum, in quibus habentur, natura, contrà afficiũtur: quippe quæ refrigeſcentur, atque humeſcant: ſanguis enim ſiccior redditur, bilis flaua humidior. Magis autem minúſve participari oppoſita,

A velut rem inſitam his, ſtatuere debem[...] catum iam eſt, quonam modo ſang[...] particeps ſit caliditatis, humiditatis[...] tiarum qualitatum. Sed cùm omn[...] getur, capiat alimentum neceſſe ſit[...] autem omnibus ex humido & ſicco ſ[...] quorum concoctio & mutatio non [...] per caloris vim agitur, fit vt tam animalia omnia, quam ſtirpes, etſi non alia de cauſa, tamen ob eam rem principium caloris naturale habeant, neceſſe ſit: idque ipſum partibus ſit pluribus accommodatum, quemadmodum cibi conficiendi adminiſtrationes. Prima enim adminiſtratio perſpicua eſt, cùm per os partéſque ore contentas perficiatur animalibus, B quorum cibus ſectionem deſideret: ſed hæc nullius cauſa eſt concoctionis, ſed facilitatem concoquendi potiùs præſtat. Cibi enim illa minutatim diuiſio facit, vt calor faciliùs conficiendo expediat: at ſuperior, & inferior venter, iam cum calore naturali ſuo concoquendi officio funguntur. Sed vt os animalis cibi inconfecti meatus eſt, atque etiam pars ei annexa, quam gulam appellant, cibum quibus data eſt animalibus vſque ad ventriculum deducit: ſic alia quoque adeſſe principia oportet, quorum opera membra omnia corporis ex ventre, naturáque inteſtinorum, quaſi præſepi, pabulum capiant. Stirpes enim, ſiue C plantæ, ſuis radicibus alimentum iam confectum ex terra hauriunt: quocirca ne excrementum quidem contrahi in ſtirpibus ſolet: terra enim caloréque eius perinde ac ventre, vtuntur. at animalium genus omne ferè, ſed apertè quæ incedunt, quaſi terram intra ſe continent ſinum ventris, ex quo, vt illæ radicibus, ita hæc aliquo intercedente, cibum aſſumere debent, donec finem ſequentis concoctionis faciant. Cibus enim ab oris officio ventri mandatur: *hinc membrum aliud capiat, neceſſe eſt. & quidem ita natura conſtituit. Venæ enim per totas lactes ad ventrem tendunt* vſque, exorſæ inferiùs. Sed hæc ex animalium D conſectione, commentationéque naturali, petenda ſunt. Cùm autem omnis alimenti omniſque excrementi conceptaculum aliquod haberi neceſſe ſit, venæque quaſi vaſa ſint ſanguinis, patet, ſanguinem eſſe animalibus ſanguineis vltimum alimentum: exanguibus verò id eſſe, quod vice ſanguinis habeatur proportionale. Quamobrem quoties cibus non ingeritur, ſanguis deficit: quoties ingeritur, augetur. Et ſi alimenta bona aſſumuntur, ſanguis integer eſt, ſi praua, vitioſus. Igitur ſanguinem alimenti gratia datum eſſe animalibus ſanguine præditis, apertum ex iis cæteriſque eiuſmodi rationibus eſt. CAPVT IV.

De fibris, & quæ animalia iis careant, deque metus cauſa, & ſaniei natura.

QVas autem fibras vocant, non omnis continet ſanguis: ſed ſunt qui non habeant, vt ceruarum ſanguis, & damarum: quamobrem id ſanguinis genus nunquam ſpiſſatur. Sanguis enim, qui dilutior eſt, frigidior eſt: itaque dureſcere non poteſt. Qui autem terrenus eſt, nimirum coit, cùm humor euaporatur. Fibræ autem illæ terræ ſunt opificium. Quoniam etiam euenit vt nõnulla ex iis animalibus, quæ talem obtinent ſanguinem, ſapientiora ſint: verùm non ſanguinis frigiditate, ſed potiùs tenuitate, atque mũditia, quorum neutrum in terreno eſt. Habent enim ſenſum mobiliorem, quorum humor tenuior & ſyncerior eſt: hinc etiam nonnulla ex iis, quæ ſanguine vacant, animalibus, prudentiora nonnullis ſanguinem habentibus ſunt, vt dictum iam eſt. Verbi gratia, apes, formicæ, & ſi quid aliud tale eſt. timidiora, quibus ſanguis dilutus nimium eſt: metus enim refrigerat. Itaque ea quibus eiuſmodi temperamentum in corde habetur, metuendi affectioni ſunt opportuniora: aqua enim frigore congelaſcit. Quamobrem cætera, quæ exanguia, timidiora ſanguineis ſunt animalibus, (quod ſimpliciter dixerim) ac mota ceſſant præ nimio metu, & excrementa emittunt: nonnulla etiam ſuos colores immutant. Quorum autem ſanguis fibris admodum multis craſſiſque refertus eſt, hæc terrena ampliùs conſtant natura, & animoſa, iracunda, proindeque furibunda ſunt: ira enim calorifica eſt. Solida autem firmioraque omnia concalefacta, vehementiùs quàm humida, calefaciunt. Fibræ verò ſolidæ, terrenæque ſunt: itaque quaſi formatæ in ſanguine efficiuntur, feruoremque per iram accendunt. Ex quo fit, vt tauri & apri animoſi, iracundi furibundique ſint: ſanguis enim eorum fibris refertior eſt. Et quidem taurorum ſanguis omnium celerrimè coit, & dureſcit. at ſi fibras detraxeris, ſanguis non cogetur. Vt enim ſi ex luto terrenam portionem remoueris, aqua non concreſcet, ita ſanguis, fibris detractis, incongelabilis manet: fibrarum enim natura terrena eſt. quòd ſi non eximantur, cogitur, vt terra humida, frigore. Cùm enim calor exprimitur, humor vna trahitur, atque euaporatur, vt dictum iam eſt: atque ita cõcreſcit, non à calore ſicceſcens, ſed à frigore. at verò quâdiu in corpore cõtinetur, humidus eſt propter calorem animalibus inditum: & profectò naturam ſanguinis cauſam eſſe, cur permulta animalibus veniant, tum per mores, tum etiam per ſenſum, ratio eſt: materia enim totius corporis eſt. quippe cùm alimentum materia ſit, ſanguis autem vltimum alimentum habeatur. Facit igitur vt plurimum differentiæ exiſtat, ſi calidus aut frigidus ſit, ſi tenuis aut craſſus, ſi turbulentus aut nitidus. Sanies, pars diluta ſiue aquoſa ſanguinis eſt, eo quòd aut nondum concocta aut corrupta eſt. Itaque id vel ſanies neceſſariò eſt, vel ſanguinis gratia eſt.

Eſt enim eorum vtrumque ſangu[…] coctus per bonitatem enutriendi: conſiſtitque, e[…] eo quòd in pulpam quidem animalis non abſumitur, ſed concoctionis alimentique bonitate præditum eſt. Indicat id pinguedo eorum: cùm pingue inter humida, commune ignis & aëris ſit. Quamobrem nullum ex iis quæ ſanguine carent, vel adipem habet, vel ſeuum. quandoquidem ſangui[…] B deeſt. Quorum autem ſanguis corpulentior eſt, hæc ſeuum potiùs habent: ſeuum enim terrenu[…] eſt. Vnde fit, vt modo fibroſi ſanguinis cogatur tam ipſum quàm eiuſmodi ius, cùm parum aquæ, multum terræ contineat. Quamobrem quæ non vtrimque dentata, ſed cornigera ſunt, hæc ſeuum habent. Naturam eorum refertam eſſe huiuſmodi elemento patet, eò quòd cornua gerunt, talóſque obtinent: quæ quidem omnia natura ſunt arida & terrena. at verò genus vtrimque dentatum, & cornuum expers, & multifidum, vice ſeui adipem habet: quæ non cogitur, nec ſiccitate aliqua frangitur, quoniã eius natura minùs terrena eſt. Hæc ſi mediocriter in animalium membris habẽtur, pro- C ſunt: nec. n. ſenſum impediunt, & ad ſanitatem vireſque opitulantur. ſed ſi modum excedunt, nocent, atque interimunt. Nam ſi corpus totum trãſierit in adipem, aut ſeuũ, peribit: animal. n. ea parte eſt, in qua ſenſus habetur. Caro autem, & quod carni proportionetur, vim obtinet ſentiendi. Sanguis, vt dictum iam eſt, & ſenſu caret, & ob eã rẽ, nec adeps, nec ſeuũ ſentit: ſunt enim ſanguis concoctus. Quòd ſi totum corpus tale efficiatur, nullũ præterea ſenſum habere poterit. Hinc & celeriter ea ſeneſcunt, quæ valde pinguerint: quippe quæ parum ſanguinis habeãt, vtpote cùm copia ſit abſumpta ad pinguedinem. Quæ autem parum ſan- D guinis habent, hæc iam inde ad interitum ſunt opportuniora: interitus enim inopia quædã ſanguinis eſt. Quódque parũ eſt, affici tum à frigore quolibet, tum à calore facilè poteſt. Quinetiam obeſa omnia ſteriliora ea de cauſa ſunt: quantũ enim ex ſanguine proficiſci ad geniturã, & ſemen genitale debeat, hoc in adipem, aut ſeuũ ſumptitatur: ſanguis enim cùm concoquitur, ad hæc trãſit: itaque aut nullum omnino excrementum in iis ipſis cõſiſtit, aut parum. atque de ſanguine, ſanie, adipe, ſeuo, quid ſint, & ob quas cauſas habeantur, dictum iam eſt.

CAPVT VI.

Quid medulla, quibúſve animalibus data ſit.

E SEd medulla etiam natura quædam ſanguinis eſt, non, vt quidam volunt, vis genituræ ſeminalis. Patet hoc in iis quæ nuper in lucem prodierint: medulla enim in oſſibus quoque eorum ſanguinea continetur, vtpote cùm omnes corporis partes ex ſanguine conſtent, & partui alimentum præſtetur à ſanguine. Sed per incrementum concoctionémque efficitur, vt quemadmodum cætera mẽbra, ſic viſcera quoque immutentur colore: per copiam enim ſanguinis viſcera, etiam cùm recentia adhuc ſunt, colorem ſibi ſanguineũ trahunt: ſic etiam medulla afficitur, & pinguis in pinguibus animalibus eſt, atque axungiæ ſimilis.

At

A Quibus ſanguis non pinguedini, ſed ſeuo ſimilis per concoctionem euadit, iis medulla ſeuo ſimilis eſt. Quamobrem vt cornigeris animalibus nec vtrinque dentatis medulla ſpeciem gerit ſeui: ſic vtrinque dentatis atque multifidis pinguedinem refert. Verùm ſpinæ dorſi medulla minimè talis eſt, quoniam continuam hanc eſſe oportet, porrectámque per longitudinem ſpinæ totius, quæ ex multis vertebratis orbiculatim oſſibus iungitur. Nam ſi ex pinguedine aut ſeuo eſſet, non æquè perpetua eſſe poſſet, ſed vel fragilis vel humida eſſet. Sunt ex animalibus, quæ nullam commentatione dignam medullam habeant, videlicet ea quib. oſſa robuſta & ſolida ſunt, vt leoni. Eius enim oſſa, quòd exiguam admodum B & perobſcuram medullā continent, carere omnino medulla videntur. Sed cùm oſſium naturam ineſſe animalibus neceſſe ſit, aut quod oſſibus proportionetur, vt in aquatilibus ſpinam, fit neceſſariò vt nonnulla habeant etiam quod pro alimento contineatur, ex quo oſſa conſiſtant: alimentum autem omnibus eſſe ſanguinem, dictum iam eſt. Seuoſas etiam & pingues eſſe medullas, ratio eſt: tepor enim, quem oſſium complexio facit, ſanguinem concoquit. Sanguinis autem per ſe concoctio, ſeuum & adeps eſt, quoniam etiam in iis quæ oſſa ſpiſſa firmáque habent, non temerè partim nulla, partim exigua ineſt medulla: alimentum C enim in oſſa abſumitur. Quæ autem non oſſa habent, ſed ſpinam, iis dorſi tantùm medulla eſt, parum enim continent ſanguinis ſuapte natura: & dorſi ſpina tantummodo caua habetur, quam ob rem in ea medullæ aliquid creari poteſt. Vna enim ipſa capax eſt, ſoláque eget copula propter interceptiones: quam ob rem medulla etiam eius partis differt, vt dictum eſt. Quòd enim vice fibulæ fungitur, idcirco lenta neruoſáque eſt, vt intendi poſſit. Cauſa quamobrem medullam habent animalia, quibus data eſt, declarata iam eſt. Quid etiam medulla ſit, patet: ſcilicet alimenti ſanguinei, quod in oſſa ſpinámve diſtribuatur, contentúmque concoctum excrementum.

CAPVT VII.

De cerebro, & eius natura, déque capitis fluxionibus, & ſomni cauſa.

PRoximum ferè eſt vt de cerebro doceamus. Nam cerebrum quoque medullam eſſe atque originem medullæ, compluribus placuit authoribus, argumento, quòd dorſi medullam iunctā cum cerebro cernerent. Sed res contrà ſe habet omnino, propè dixerim. Cerebrum enim partium omnium corporis frigidiſſimum eſt, cùm medulla calida ſuapte natura ſit. Quod eius pinguedine & axungia perſpicuum eſt: idque facit, vt cerebro iungi continuarique poſſit ipſa dorſi medulla: Solet enim Natura ſemper emoliri contra E cuiuſuis exuperantiam auxilium, per coniunctionem rei aduerſæ, vt exceſſum alterius altero compenſet & moderetur. Sed enim medullam calidam eſſe pluribus ſanè rationibus conſtat: cerebri autem frigiditas & tactu percipi poteſt, & ratione intelligitur, quòd omnium maximè humorum corporis ſanguine caret: quippe quod nihil ſanguinis habeat, ſqualoréque obſitum ſit, atque horridum: nec verò excrementū eſt, nec inter partes continuas enumerandum, ſed ſui generis eſt, & quidem ratione optima naturam eiuſmodi ſortitum eſt. Nullam verò cum partib. quæ vim obtinent ſentiendi, continuitatē habere, cū intuitu pateat,

A tum vel maximè inde conſtat, quòd cùm tangitur, nullum efficit ſenſum, quemadmodum nec ſanguis, neque excrementum animalium vllum: datum autem hoc animalibus eſt ad naturæ totius ſalutem. Quod enim nonnulli ſtatuunt importunè, animam eſſe ignem, aut aliquam eiuſmodi vim, meliùs fortaſſe dixeris, animam in quodam eiuſmodi corpore conſtare. Cuius rei cauſa eſt: quòd ad exequenda animæ officia, calor omnium maximè adminiſtrandi vim obtinet. Cùm enim officium animæ ſit alere & mouere, hæc ea ipſa facultate potiſſimùm efficiuntur. Igitur animam eſſe ignem arbitrari, ſimile eſt, atque ſi ſerram, aut aſciam, fabrum aut artem B fabrilem eſſe ideo arbitreris, quia opus non, niſi iunctis his, efficiatur. Sed quàm genus omne animalium caloris particeps eſſe neceſſe ſit, apertum hinc eſt. Cùm autem omnia momentum requirant contrarium, quo mediocritatem ac medium aſſequantur (in hoc enim eſſentia ratióque conſiſtit, non in alterutro extremo ſeorſum poſito) idcirco aduerſus cordis ſedem, & calorem, cerebrum Natura molita eſt. Et ea de cauſa pars iſta animalibus iuncta eſt, naturam obtinens aquę & terræ communem: atque ob eam rem cerebrum omnia ſanguine prædita habent, ex cæteris nullum ferè, niſi per proportionem, vt polypus. Parum enim caloris obtinet omne id genus C propter ſanguinis priuationem. Cerebrum igitur calorem feruorémque cordis moderatur, & temperiem affert. Sed vt ea quoque pars modico potiatur calore, venæ ad membranam cerebri deueniunt ex vtraque vena, maiorem dico, & eam quæ aorta vocatur. Et ne calor nimius offendat, non paucæ amplæ, ſed frequentes ac tenues venæ ambiunt: nec ſanguis copioſus & craſſus, ſed tenuis ſyncerúſque ſubit eòdem. Fluxiones etiam ob eam rem ex capite oriuntur in iis corporibus, quibus cerebrum frigidius eſt, quàm temperamentum modicum poſtulet. Cùm enim alimentum per venas ſurſum reſpirat, vbi excrementum ob eius loci vim refrigeratum eſt, fluxiones pituitæ D ſanieíque mouet. Quod ſimile generationi imbrium euenire intelligendum eſt, quoad magnum conferre cum paruo licet. Cùm enim ex terra vapor exhalat, effertúrque in ſublime à calore, vbi ſupernum aërem ſubierit frigidum, conſiſtit: denuò in aquam propter refrigerationem, atque in terram defluit. Sed de his, cùm de morborũ cauſis agitur, diſſerere, congruum eſt: videlicet quoad tractare de his naturalis ſcientiæ intereſt. Somnus etiam à cerebro proficiſcitur, iis quæ eam obtinent partem, animalibus: quæ autem carent, iis proportionale ſuppetit. Cùm enim ſanguinis alentis affluentia refrigeretur à cerebro, aut etiam ob alias cauſas ſimiles, caput E aggrauatur. Et quidem ſomno ſopiti, ea corporis parte ſolent tentari: atque efficitur vt calor ad ima cum ſanguine ſubterfugiat, collectáque copia caloris in loco inferiori ſomnum facit, & facultatem erigendi corporis aufert ab iis animalibus quæ erecta incedere Natura voluit: cæteris caput erigi prohibet. Quibus de rebus ſeorſum docuimus, cùm de ſenſu & ſomno ageremus. Cerebrum autem eſſe commune aquæ & terræ conſtat, ex eo quod ei accidit: cùm enim coquitur, indureſcit, atque ſicceſcit, vt humore exacto à calore, terrena portio relinquatur,

quemadmodum in leguminum reliquorumque A fructuum decoctione: quòd enim ex terra magna ex parte conſtant, hinc exacto humore, quem exiguum ſibi admiſtum continent, dura terrenaque admodum ea quoque relinquuntur. Homo inter omnia animalia plurimum cerebri habet, ſcilicet proportione ſui corporis: & inter homines, mares plus quàm fœminæ. Cordis enim pulmoniſque locum calidiſſimum, & ſanguine refertiſſimum homo habet: vnde animalium homo vnus erectus eſt. Caloris enim natura inualeſcens, incrementum de medio agit pro ſuo impetu. Itaque contra multum caliditatis, multum humiditatis frigiditatiſque, opponitur. Qua quidem B copia fit, vt capitis os, quod caluariam nonnulli appellant, ſerò admodum induretur, cùm diu calor euaporetur, quod nulli ex cæteris animalibus ſanguine præditis euenit. Iuncturas etiam plurimas in capite homo habet, & mas plures, quàm fœmina, eadem de cauſa, vt locus ſpirantior ſit: & ampliùs, in quo plus cerebri habetur. Nam ſi cerebrum vel humet, vel ſiccet ſupra modum, ſuo fungi officio non poteſt: ſed aut non refrigerabit, aut coagulabit. Itaque morbos, deliria, mortes afferet. Calor enim cordis, atque principium conſentientiſſimum eſt, ſenſúmque celerrimè facit, cùm ſanguis cerebri, vllo pacto C mutatur, atque afficitur. Sed de cognatis animalium humoribus omnibus dictum ferè eſt. Poſtgeniti excrementa ſunt cibi, id eſt, veſicæ ſedimen, atque alui: prætereà genitura, & lac, ſcilicet in iis quorum natura hæc obtinet. Verùm cibi excrementa quibuſnam animalibus iuncta ſint, & quas ob cauſas, aptiùs in conſideranda differendáque alimẽti ratione explicetur. De ſemine autem genitali, & lacte, tractandum eſt, cùm de generatione: alterum enim eorum principium generationis eſt, alterum generationis gratia habetur.

CAPVT VIII.

D

De carne, ſeu iis quæ vice carnis habeantur.

NVnc de cæteris ſimilaribus partibus dicendum eſt, & primùm de carne, in iis quæ obtinent carnem: in cæteris autem de eo quod vice carnis proportione reſpondeat. Hoc enim principium, & corpus per ſe animalium eſt: quod ratione etiam patet. Animal enim eo definimus, quod ſenſum obtinet, primúmque eum qui primus eſt. Tactum autem primum eſſe, certum eſt. Tactus verò ſenſorium pars eiuſmodi eſt aut prima, vt pupilla viſus: aut coniuncta, per quam agitur, perinde quaſi pupillæ omne diaphanes, hoc eſt, translucidum, coniungas. Cæteris igitur ſen- E ſibus nec tribui hoc poterat, neque operæ pretium erat effici à Natura. At verò tactui dari neceſſe fuit. Sola enim, aut maximè omnium ſenſoriorum, ſedes tangendi corpulenta eſt. Senſui autem patet, cætera omnia eius vnius gratia haberi: oſſa dico, neruos, cutem, venas, pilos etiam, & vnguium genus, & quicquid eiuſmodi iunctum eſt. Natura enim oſſium adhibita eſt, vt ſua duritie rem mollem ſeruaret in iis quæ oſſa habent. Eadémque de cauſa proportionale oſſium habetur in iis quæ oſſibus carent: vt in genere piſcium aliis ſpina, aliis cartilago iuncta eſt. Habent hoc præſidium alia intus, alia foris, vt in genere ſanguinis experte.

Περὶ ὀστῶν καὶ φλεβῶν καὶ χόνδρου.

Hiſtor. anim. li. 3. c. 7.

Ἔχει δὲ ὁμοίως ἥ τε τῶν ὀστῶν καὶ ἡ τῶν φλεβῶν φύσις. ἑκατέρα γὰρ αὐτῶν ἀφ' ἑνὸς ἠργμένη συνεχής ἐστι, καὶ οὔτε ὀστοῦν ἐστιν αὐτὸ καθ' αὑτό, οὐδέν, ἀλλ' ἢ μέρος συνεχές, ἢ ἁπτόμενον καὶ προσδεδεμένον, ἵνα χρῆται ἡ φύσις καὶ ὡς ἑνί, καὶ ὡς συνεχεῖ, καὶ ὡς διῃρημένοις πρὸς τὴν κάμψιν. ὁμοίως δὲ καὶ φλὲψ οὐδεμία αὐτὴ καθ' αὑτήν ἐστιν, ἀλλὰ πᾶσαι μόρια μιᾶς εἰσιν. ὀστοῦν γὰρ εἴπερ ἦν κεχωρισμένον τι, τό,τ' ἔργον οὐκ ἂν ἐποίει, οὗ χάριν ἡ τῶν ὀστῶν ἐστι φύσις (οὔτε γὰρ ἂν κάμψεως ἦν αἴτιον, οὔτ' ὀρθότητος οὐδεμιᾶς, μὴ συνεχὲς ὄν, ἀλλὰ διειλημμένον) ἔτι τ' ἔβλαπτεν ἂν ὥσπερ ἄκανθά τις, ἢ βέλος ἐνὸν ταῖς σαρξίν. εἴ τε φλὲψ ἦν τις κεχωρισμένη καὶ μὴ συνεχὴς πρὸς τὴν ἀρχήν, οὐκ ἂν ἐσῴζετο ἐν αὐτῇ αἷμα. ἡ γὰρ ἀπ' ἐκείνης θερμότης κωλύει πήγνυσθαι. φαίνεται δὲ καὶ σηπόμενον τὸ χωριζόμενον. ἀρχὴ δὲ τῶν μὲν φλεβῶν ἡ καρδία· τῶν δ' ὀστῶν, ἡ καλουμένη ῥάχις, τοῖς ἔχουσιν ὀστᾶ πᾶσιν· ἀφ' ἧς συνεχὴς ἡ τῶν ἄλλων ὀστῶν ἐστι φύσις. ἡ γὰρ τὸ μῆκος καὶ τὴν ὀρθότητα συνέχουσα τῶν ζώων ἡ ῥάχις ἐστίν. ἐπεὶ δ' ἀνάγκη κινουμένου τοῦ ζώου κάμπτεσθαι τὸ σῶμα, μία μὲν διὰ τὴν συνέχειαν ἐστί, πολυμερὴς δὲ τῇ διαιρέσει τῶν σπονδύλων. ἐκ δὲ ταύτης, τοῖς ἔχουσι κῶλα συνεχῆ πρὸς αὐτήν, τὰ τούτων ὀστᾶ,

Cruſtata omnia extra ſe munita ſeruantur: velut cancri, genúſque omne locuſtarum, atque etiam teſtatorum, vt quæ oſtreæ appellantur. His enim omnibus caro intus: terrenum autem illud, quod contineat, & conſeruet, foris eſt. Nam præter ipſum continendi officium, quoniam eorum natura parum caloris obtinet, cùm ſanguine careant, idcirco teſta veluti furnulus quidam amplectens, conſeruat inteſtinum calorem, & tuetur. Quinetiam teſtudo, & lutariæ genus ſimili modo ſe habere videtur, quanquam diuerſum genus ab illis hoc eſt. At verò animalia inſecta, & mollia contrà quàm hæc, & modo inter ſe oppoſita conſtant: nihil enim oſſis, nihil terreni habere diſcretum videntur, quod dignum effatu ſit: ſed mollia ferè tota, carnoſa, & tactui cedentia ſunt. Ne tamen corpus eorum facilè pereat, modo illorum quæ carne laſciuiunt, naturam inter carnem & neruum obtinent. Mollis enim vt caro eſt, ſed intendi poteſt vt neruus. Fiſſilis autem caro eorum non in directum, ſed in anfractum: ita enim ad vires commodior eſſe poteſt. Habent etiam quod piſciū ſpinis proportionetur; vt ſepiæ quod ſepium vocant: lolligines quod gladiolum. Polypi nihil eiuſmodi habent, quòd eorum alueus, quem caput appellant, breuior eſt, illorum procerior. Ideóque vt directus inflexúſque maneret, natura his adminiculis faciendum cenſuit: quemadmodum in genere ſanguineo, aliis os dedit, aliis ſpinam. Inſecta contrà quàm hæc & ſanguine prædita conſtant, vt modo diximus, quippe quæ nihil habeant duri aut mollis diſcretum: ſed dura toto corpore ſint duritie tali, vt oſſe carnoſiora, carne oſſatiora terratioráque conſiſtent, ne facilè corpus eorum diuidi poſſit.

CAPVT IX.

De venis, oſſibus, & cartilagine.

Similis natura eſt oſſibus, & venis: vtraque enim ex vno orſa continua eſt. Et neque os vllum ſeorſum per ſe habetur, ſed aut pars continui eſt, aut tangit, atque annectitur, vt natura & tanquam vnò continuóque, & tanquam duobus diſtinctiſque ad flexum vtatur. Neque vena vlla ſeorſum per ſe eſt, ſed omnes pars ſunt vnius. Nā ſi quod os ſeparatum eſſet, accideret, vt nec officio fungi poſſet, cuius gratia natura oſſium habetur: quippe quod nec flectendi, neque dirigendi cauſam vllam præberet, cùm non continuum eſſet, ſed interceptum: & lędere proculdubio poſſet perinde quaſi vel ſpina, vel ſpiculū carni infixum. Vena etiam ſi qua ſeparata, nec ſuæ origini continua tenderet, ſuum ſanguinem ſeruare nō poſſet. Calor enim profluens ab origine facit ne ſanguis gelet. Putreſcere etiam ſanguis videtur, qui à ſuo fonte remotus eſt. Principium venarum cor eſt: oſſium, quod ſpina dorſi vocatur, videlicet in omnibus iis quæ oſſa habent. Hinc enim cætera oſſa oriuntur, & continuantur. Spina eſt enim, quod longitudinem ac rectitudinem contineat animalium. Sed cùm corpus inflecti per animalis motum neceſſe ſit, ita conſtat, vt & vna ſit propter continuitatem, & multipartita propter vertebrarum diſtinctionem. Hinc femorum brachiorúmque oſſa dependent continua,

eodémque arctiùs adnectuntur, qua flectendum eſt: neruis deligantur, extremáque ſibi cohærent. Alterum cauum, alterum rotundum, aut vtrunque cauum, medio talo quaſi clauo complexo, vt flecti extendique poſſint: aliter enim aut nullo pacto, aut non bene motus eiuſmodi agi poſſet. Nonnulla extremis ſimilibus coniunguntur, neruis deligata. Cartilaginoſæ etiam partes inſeruntur flexuris, velvti lectiſternium, ne attritu mutuo lædantur. Caro circa oſſa conſiſtit, vinculis modo fibrarum tenuibus adhærens, cuius cauſa oſſium genus habetur. Vt enim qui ex limo aut alia maſſa humida animal effingunt, firmo aliquo ſubdito corpore obducunt, atque afformant: ſic natura ex carnibus animal condidit. Cæteris igitur partibus, ſcilicet carnoſis, oſſa omnibus ſubiacent, aut flectendi gratia, ſi mouentur, aut conſeruandi cauſa, ſi immobilia ſunt: vt coſtæ, quæ pectus, ſalutis viſcerum gratia, claudunt. Venter omnium oſſibus vacat, ne tumori impedimento ſint, qui per cibum ingeſtum exurgat, neceſſe eſt, atque etiam ne in fœminis incremento partuum obſtent. Sed enim quæ animal vel intra ſe, vel foris pariunt, hæc ſimiles robuſtáſque oſſium obtinent vires. Multo enim maiora hæc ſunt iis quæ non pariunt animal: videlicet proportione ſolitæ magnitudinis. Nam nonnuſquam complura ex hoc animalium genere creſcunt mirum in modũ, vt in Africa, locíſque aliis calidis, & ſiccis: magnis autem adminiculo opus eſt maiori, validiori, & firmiori: atque inter magna iis potiſſimùm tali opus eſt adiumento, quę violentiora ſunt. Quam ob rem mares oſſibus durioribus conſtent, quàm fœminæ, & quæ carniuora ſunt, quàm quæ alio cibo veſcuntur: iis enim victus per dimicationem acquiritur: velvt leonis oſſa adeo dura ſunt, vt ex iis percuſſis, ignis quaſi ex ſilice excutiatur. Delphinus etiam non ſpinas, ſed oſſa habet: viuiparum enim eſt. Sanguineis autem non viuiparis natura aliquantum degenerat, vt volucribus: quamuis enim habeant oſſa, tamen imbecilliora. Inter piſces ſpinam, qui oua pariunt, habent. Serpentibus etiam natura oſſium ſpinacea eſt, prætérquam magnis: robur enim eorum validiora exigit firmamenta, eadem, qua & viuiparis, ratione. At cartilaginea nomine, ſpinam ex cartilagine habent. Motum enim eorum eſſe molliorem, neceſſe eſt: itaque fulcimenti genus non rigidum, ſed mollius eſſe oportuit. Adde quòd terrenam omnem materiam ad eorum cutem conficiendam Natura abſumpſerit. Pluribus autem locis ſimul tantundem exuperantiæ diſpenſare Natura non poteſt; quoniam etiam in viuiparo genere oſſa cartilaginoſa complura habentur, ſcilicet in iis quibus expedit molle mucoſúmque eſſe quod ſolidum habeatur, ratione carnis obductæ, vt auribus ac naribus eueniſſe apertum eſt: prominentiora enim, ſi rigida ſunt, frangi celeriter poſſunt. Natura vero eadem oſſis & cartilaginis eſt, quãquam pluris minoríſque ratione intereſt: quapropter neutrum præciſum recreſcere poteſt. Vacant medulla cartilagines terreſtrium animaliũ diſcreta. Quod enim in os diſcretum cõtinetur, id miſtum per totum facit, vt cartilago res mollis mucoſáque conſtituatur. At in cartilagineo genere ſpina dorſi, quamuis cartilaginoſa, medullam habet: vicem enim oſſis hæc pars tenet in eo genere.

A Proximas oſſibus eſſe partes oſtendit tactus etiam illas, vngues, vngulas tum ſolidas, tum biſulcas, cornua, roſtra auium, quæ omnia præſidij gratia adiuncta ſunt animalibus. Quæ enim tota ex iis conſtant, nominis conſortium tantummodo habent cum ſuis partibus. Verbi gratia, vngula tota, & cornu totum, ad ſalutem animalis excogitatum eſt. Dentes etiam in hoc eodem genere collocandi ſunt, qui aliis rem vnã tantùm expediunt, id eſt, cibi confectionem: alijs non ſolùm ad hoc vſui ſunt, ſed etiam ad pugnandum, vt iis omnibus, quibus aut ſerrati aut exerti ſunt dentes. Terrenam & validam eſſe naturam eorum quæ modò enumeraui, neceſſe eſt: vis enim armorum ea eſt. B Quam ob rem omnia eiuſmodi adminicula quadrupedibus viuiparis potiùs adiuncta ſunt, quòd terratiora, quàm genus humanum, ea omnia conſtant. Sed de iis, atque ſimilibus, cutem dico, veſicam, membranam, pilos, pennas, & quæ iis proportionentur, & ſi qua huiuſcemodi alia ſunt, poſtea vnà cum diſſimilaribus partibus conſiderandum eſt, ſcilicet quænam eorum cauſa ſit, & cuius gratia data ſint animalibus. Ex officiis enim ea quoque pariter atque illa dignoſci neceſſe eſt. Sed quòd partes eorum idem cum totis nomen ſortiuntur, propterea inter ſimilares in hoc loco enumerata ſunt. Principium autem, & origo eorum omnium, os eſt & caro. Rationem etiam C geniture, & lactis, prætermiſimus, cùm de humidis ac ſimilaribus ageremus, ſunt enim hæc loco de generatione coniunctiora, cùm alterum eorum initium ſit animalium generandorum: alterum alimentum vbi in lucem prodierint.

CAPVT X.

De duabus partibus in quibuſque animantibus neceſſariis, quæ viuunt, qua cibum capiant, & qua excrementa emittant: deque ſenſuum vi, & eorum loco in corpore.

D NVnc quaſi à primis iterum orſi diſſeramus. In omnibus vita præditis, & perfectis, partes maximè neceſſariæ duæ ſunt, altera, qua cibum capiant: altera, qua excrementum emittant. Non enim fieri poteſt vt ſine cibo vel ſeruentur, vel augeantur. Stirpium itaque genus (nam id quoque viuere fatemur) locum ſuperuacui excrementi nullum habet: cibum enim concoctum ex terra haurit, ſed vice excrementi ſemina, & fructus effundit. Tertia pars in omnibus eſt media inter eas, quas modò dixi, in qua vitæ principium continetur. Sed ſtirpium natura, quoniã ſtabilis eſt, non ex multis ac variis partibus diſſimilaribus conſtat: quippe cùm ad paucas actiones paucorum inſtrumentorum vſus requiratur. Quã ob E rem de ſtirpium ſiue plantarum forma ſeorſum agendum eſt. Quæ autem vnà cũ vita ſenſu etiam prædita ſunt, hæc ſpeciem multiformiorem, numeroſioremque varietatem recipiunt: atque inter ea aliis alia magis, & eo amplius, quòd non ſolùm viuendi ſed etiam bene viuendi rationem natura eorum obtinuit: quale hominum genus eſt, quippe quod aut vnum ex omnibus animalibus nobis cognitis diuinitatis particeps ſit, aut omnium maximè. Itaque tum ob eã rem tum etiam quòd exteriorum partium eius forma notiſſima eſt, primùm de homine diſſerendum cẽſemus.

Iam enim partes etiam naturales hominis vnius ſecundùm naturam diſpoſitæ ſunt: quãdoquidem partem ſuperiorem ad vniuerſi ſupremũ erectam obtinet: ſolus enim animalium homo erectus incedit. Caput hominis macilentum, carneque prope omni exutum eſſe, neceſſariũ ex iis quæ de cerebro diximus, euenit. Nec audiendi ſunt, qui, ſi carnoſum eſſet, viuacius hominũ genus futurum cenſeant: ſed vt meliùs ſentiret, carnem ademptam exiſtiment. Vim enim ſentiendi ſitam in cerebro: ſenſum autem per partes nimiùm carnoſas nequaquam admitti poſſe arbitrantur: neutra enim eorum ratio vera eſt. Sed ſi cerebrum à carnis copia circundaretur, contrà efficeret, quàm inſtitutum exigeret, cuius gratia adiunctum eſt animalibus: non enim refrigerare poſſet, cùm valde ipſum teperet. Nec ſenſus vllius cauſam cerebrum obtinet, quod quidem expers omnino ſenſus non aliter quam quoduis excrementum eſt. Verùm cùm intelligere cauſam, quam ob rẽ ſenſus nonnulli in capite habentur, nequeant, quòd eam partem cæteris eſſe peculiatiorẽ animaduerterint, ideo ſenſum cum cerebro coniungendum ratiocinantur. Sed enim principium ſenſuum eſſe cordis locum, definitum iam eſt, cùm de ſenſu ageremus, & quam ob cauſam duo, id eſt, tangendi & guſtandi ſenſus, ex corde apertè dependent: vnus ex reliquis tribus, id eſt, olfaciendi, medium tenet: duo, id eſt, audiendi, & videndi, maximè in capite poſiti ſunt, propter ſenſoriorum naturam, viſúſque omnibus in capite eſt. Nam auditus, olfactúſque piſcium & reliquorũ generis eiuſdem, declarant quod dicimus. Audiunt enim atque olfaciunt, cùm nullum ſenſorium eorum ſenſuum in capite habeant manifeſtum. Viſum autem omnibus, quibus eſt datus, apud cerebrũ eſſe, optima ratio eſt: cerebrum enim humidũ ac frigidum eſt. Viſus aquæ naturam obtinet: hæc enim omniũ perlucidorum facillimè conſeruari poteſt. Senſus etiam exquiſitiores per partes, quæ ſanguinem habeant ſynceriorem, abſolui neceſſe eſt. Sanguinis enim calidioris agitatio officium ſentiendi intercipit, atque reſtringit. His de cauſis ſedes eorum ſenſuum mandatæ ſunt capiti. Nec verò pars prior tantùm capitis carne vacat, ſed etiam poſterior, quod omnib. capite præditis partem hanc erectam maximè conſtare oportet: nihil enim erigi poteſt preſſum onere. Id autem accideret animali, ſi caput carne obtectum haberet. Quo etiam patet, non ideo carnem deeſſe capiti, vt cerebrum ſentiat: pars enim poſterior capitis cerebro caret, & tamen carnis expers nihilo minùs eſt. Auditum etiam nonnulla animalia ſitum in capite habent debita ratione. Quod enim inane vocatur, plenum aëris eſt. Senſorium autem audiendi aëris eſſe fatemur. Vt igitur ab oculis meatus ad venas circa cerebrum ſparſas tendunt, ſic ab auribus meatus in occiput penetrat. Vis autem ſentiendi nec vlli exangui data eſt parti, neque ſanguinis propria eſt, ſed cuidam ex his quæ ſanguine proueniunt, delegata eſt. Quocirca pars nulla exanguis eorum quæ ſanguinem habent, ſentire poteſt, nec ipſe ſanguis ſenſu præditus eſt: quippe qui nulla pars ſit animalium. Cerebrum verò parte priori capitis continent omnia quibus hoc datum eſt: quoniam id quo ſentiunt, in parte priori corporis ſitum eſt: ſenſus enim prouenit à corde, quod parti priori commiſſum eſt.

CAPVT XIII.

Genus hominum, auium, & quadrupedum, contectos palpebra oculos habere, quóve modo ipſorum quodque conniueat.

GEnus hominum, auium, quadrupedum, tam viuiparum quàm ouiparum, oculos viſus cuſtodiendi gratia integunt, ſed variè. Quæ enim animal pariũt, geminã habent palpebrã, & cōniuere vtraq; ſolent: aues tam leuiores quã grauiores,

& quadrupedes ouiparæ palpebra inferiori conniuent. Nictantur aues ab angulis membrana obeunte. Cuius rei cauſa eſt, vt operimentum præſidio ſit oculis eorū humidis, qui ideo humidi ſunt, vt cernere acutiùs poſſint: nam ſi duri eſſent, tutiùs quidem conſtarent contra ea quæ extrinſecus occurſarent, atque inciderent, ſed cernere acutè non poſſent. Itaque eius rei cauſa, cutis prætenuis pupillæ obtenditur. At verò ſalutis gratia palpebræ operiunt, ideóque omnia conniuent, & omnium maximè homo. omnia, inquam, vt quæ incidant, prohibere palpebris poſſint, idque non conſultò, ſed naturæ inſtinctu agitur: homo verò frequentiùs, quoniam cutem tenuiſſimam habet. Palpebra autem cute conſtat, vnde fit, ne aut palpebra, aut præputium vulnere diductum coaleſcere poſſit: ſunt enim cutes ſine carne. Quæ autem inter aues palpebra inferiori conniuent, & quadrupedes ouiparæ: præ duritia cutis caput ambientis, ita conniuent. Volucribus enim grauioribus, quòd nequeant volitare, incrementum* pennarum ad cutis craſſamentum conuertitur: eadémque palpebra inferiori conniuent: columbæ autem, & ſimilia, vtrâque. Quadrupedes ouiparæ cortice integuntur, qui pilo durior eſt: itaque cutis quoque eorum cæteris cutibus durior eſt. Cutis igitur capitis eorum prædura eſt, ideóque palpebram inde habere nequeunt: inferior carnoſa eſt, vt ſatis tenuitatis tenſioniſque habeat. Nictantur volucres grauiores non palpebra, ſed membrana, quòd palpebræ motus lentior eſt, cùm celeritate ſit opus, quam membrana præſtare poteſt: nec niſi ab angulo naribus proximo nictantur, quòd eorum naturam ex vno principio prouenire melius ſit. Principium autem in iis eſt pars naribus adhærens: pars etiam prior principium potiùs quàm latus eſt. At verò quadrupedes, quæ oua pariunt, non eodem nictantur modo, quoniam non lubricum exquiſitúmque viſum eas habere neceſſe eſt, cùm terreſtres ſint. Volucribus certè neceſſarium eſt: iis enim vſus cernendi ex longinquo eſt. Vnde fit vt quæ vnguibus ſunt aduncis, clariſſimè cernant. Cibus enim de ſublimi conſpiciendus iis eſt. Et quidem volare in excelſum omnium maximè auium, genus id ob eam rem aſſolet. Terreſtres autem, parúmque volatiles aues, vt gallinacei, & ſimiles, non acie oculorum valent: nulla enim victus neceſſitate coguntur. Piſces, inſecta, & cruſtata, quanuis diuerſos habeant oculos, tamen nullum ex iis palpebram habet. Quæ enim cruſta integuntur, vſu careant palpebræ, neceſſe eſt, cùm niſi celeri cutis officio præſtari non poſſit. Sed tamen vice eius tutelæ, duritie oculorum hæc omnia muniuntur, quaſi per palpebram obductam quandam trāslucidam cernant. Sed cùm ob eam duritiam hebetiùs contueri neceſſe ſit, moueri oculos inſectorum Natura voluit, atque etiam magis cruſtatorum, vt nonnullorum quadrupedū auriculas, ſcilicet ea cauſa, vt clariùs cernerent, cū ſe ad lucem conuerterēt, atque exciperent ſplendorem. Piſcium oculi lubrici ſunt. Vſus enim cernendi ex longinquo neceſſarius iis eſt quæ longiùs moueantur. Terreſtribus itaque aër tranſpici facilè poteſt: at piſcibus, quoniam aqua vt ad cernendum acutiùs aduerſatur, ſic ad interpellandum viſum non multa offenſacula affert, modo aëris.

A idcirco nec palpebram habent: nihil enim fruſtra natura agit: & oculis lubricis ſunt, propter circumfuſi humoris craſſamentum.

CAPVT XIV.

Quæ animalia cilium habeant, quæve eodem careant: deque cauda, & iubis quorundam animalium, & hominis capillo.

Cilium habent palpebræ adiunctum omnia quæ obtinent pilos: aues & quæ cortice integuntur, carent, vt quæ pilos non habeant. De ſtruthione Africæ, cauſam, quamobrem cilium habeat, poſtea reddemus, & inter ea, quæ pilos habent, homo vnus cilium in vtraque palpebra obti- B net. Quadrupedum enim generi pili non parte ſupina, ſed prona potius habentur. Homo contrà, parte magis ſupina, quàm prona: pili enim operimenti gratia adiuncti ſunt animalibus. Itaque quadrupedibus prona potius egent tegumento. Priora autem, quanquam nobiliora ſunt, tamen per corporis totius flexum fouentur, ac tepent. At homini, quoniam prior pars compar poſteriori eſt, propter corporis erectionem, idcirco Natura parti nobiliori adiumentum cenſuit adhibendum: ſemper enim Natura rei melioris author eſt, quoad eius fieri poteſt. Quamobrem quadrupes nulla eſt, quæ pilos vel in palpebra inferiori habeat (quanquam nonnullæ habent pilos quoſdam ſub- C ea naſcentes) vel in alis, vel in pube, vt homo, ſed vice eorum aliis prona totius corporis hirſuta habentur, vt canibus: aliis criſta adiuncta eſt, vt equis cæteriſque generis eiuſdem: aliis iuba, vt leoni mari. Quinetiam caudas prolixiores pilis Natura ornauit: alias longis, quibus tenor breuis, vt equis: alias breuibus, quibus tenor longus, vt bubus, atque etiam pro reliqui corporis natura: vbique enim Natura quod aliunde dempſerit, reddere ad partem aliam ſolet. Iam quibus corpus admodum piloſum condiderat, caudam iis diminuit: quod in vrſis perſpicuum eſt. Homo animalium maximè omnium piloſo capite eſt, cu- D ius rei cauſa, tum ad neceſſitatem, tum ad præſidij rationem referenda eſt: neceſſarium enim propter cerebri humiditatem, & commiſſuras caluæ. Nam vbi plurimum humoris caloriſque eſt, ibidem ortum pilorum eſſe copioſum neceſſe eſt: adiumenti autem ratio, vt frequentia pili caput operiens defendat à nimio frigore, & calore. Cùm enim cerebrum hominis proportione maximum, & humidiſſimum ſit, maximam etiam tutelam deſiderat. Res nanque humidiſſima quæque, & referueſcere, & refrigeſcere maximè, idonea eſt: quæ autem contra ſe habet, hæc minùs affici poteſt. *Sed nos, vt huc digrederemur, fecit rei* cognatio, cùm rationem ciliorum redderemus: itaque de reliquis mentionem ſuo loco & tem- E pore faciemus.

CAPVT XV.

Quas ob cauſas ſupercilia & cilia in animalibus Natura conſtituit.

Supercilia verò & cilia adiumenti gratia habentur: ſupercilia enim, vt delabētes humores arceant, velut imbricamentū, ſiue grunda homoribus, qui capite emanent, paratum: cilia, vt contra incidentia in oculos, quaſi vallum quoddam

promineant. Supercilia in compage oſſium poſita ſunt: quam ob rem compluribus ſeneſcentibus adeo creſcunt, vt tondendum ſit. Cilia venularum clauſulis ſummis innituntur. Nam vbi cutis finitur, ibidem venulæ etiam deſinunt: itaque propter vaporem, qui inde craſſiuſculus prodeat, pilos iis locis enaſci neceſſe eſt, niſi quid naturalis opificij ad alium vſum impediat.

CAPVT XVI.

Quomodo in hominibus, cæteriſque animantibus nares & labra ſint collocata: déque labrorum & narium officio.

SEnſorium verò olfaciendi non longè quodam modo euariat cæteris quadrupedibus viuiparis. Quibus enim maxillæ oblongæ exeũt in acutum, iis nares in rictu appellato continentur, modo quo fieri poteſt: cæteris explanatiùs ad maxillas conſtant. At elephantus peculiarem hanc partem præ cæteris ſortitus eſt animalibus: nam & magnitudine & viribus habet peculiarem. Naris eſt enim, qua cibum tam ſiccum quàm humidum ille capiat, orique, perinde ac manu, admoueat. Arbores etiam eadem complectendo euellit: denique ea non alio vtitur modo, niſi vt manu. Eſt enim hoc animal ſua natura ſimul terreſtre, & paluſtre. Itaque cùm cibum petere ex humore deberet, & tamen ſpirare neceſſe haberet vt terreſtre, & compos ſanguinis, nec poſſet præ nimia magnitudine celeriter diſcedere ex humore ad aërem, modo nonnullorum, quæ & animal pariunt, & ſanguinem habent, & ſpirant: idcirco vt pariter humore, atque terra vti poſſet, neceſſe fuit. Quale igitur vrinatorum nonnulli inſtrumentum ſibi accipiunt, quo quandiu in profundo manent, aërem extrinſecus trahant, talem Natura elephanti dedit narem illam prælongam. Quamobrem ſi quando iter per aquam faciunt, nare emerſa reſpirant. nam vt modò dixi promuſcis pro nare elephantibus eſt. & cùm fieri non poſſit vt naris ad eiuſmodi vſum accommodetur, niſi mollis ſit aptaque ad flectendum (impedimento enim præ ſua longitudine eſſet, ad cibum capiendum: quomodo aiunt de cornibus boum illorum qui receſſu paſcere ſolent ſua natura. Nam illos quòd progredi demiſſo in terram capite nequeant, recedendo in auerſum paſci ſolitos aiunt.) Cùm itaque naris eiuſmodi adiuncta ſit, Natura, quæ membris eiſdem abuti ad plura officia ſolet, eandem in vſum trahit pedum priorum: hos enim vice manuum habet genus quadrupedum digitatum, non ſolum ponderis cauſa ſuſtinendi. Elephantes autem non biſulcos, non ſolidos pedes habent, ſed digitatos. Sed quoniam corporis magnitudo vaſta, pondúſque ingens eſt, ideo ſuſtinendi tantummodo gratia pedes habent priores: nec ad vllum alium vſum vtiles, propter tarditatem flectendi, atque ineptiam. Narem igitur elephantus habet vt ſpiret, quo modo & cætera animalia, quibus pulmo: eandémque prælongam, atque in anfractum flexibilem, propter moram in humore diuturnam, & retardum inde diſceſſum. Cúmque vſus pedum

* κ. ὑπὲρ α.

A priorum defuerit, ea, vt dictum eſt, parte abutitur Natura ad ſupplendum miniſterium, quod pedes præſtarent. At aues, & ſerpentes, & quæcunque ex quadrupedibus ſanguinis compotes ouiparæ ſunt, foramina quidem narium ante os habent, ſed non ita explanata, vt nares appellari poſſint, niſi ſpirandi officio. Iam autem quis naſum aut nares habere dicet? Quod propterea ita accidit, quia pro maxillis habent quod roſtrum vocatur. Huius autem rei cauſa eſt natura auium, quæ ad hunc modum conſtat: & bipes enim, & volucris eſt. Itaque leue pondus tum capitis tum etiam ceruicum ſuſtinere neceſſe eſt, vt pectus B etiam arctum habere debuit. Roſtrum igitur oſſeum habent vt commodè & cibum capiant, & ad pugnam armentur. Arctum hoc eſt propter capitis exiguitatem: cúmque meatus olfaciendi ſuo roſtro contineant, nares habere non poſſunt. De cæteris animalibus quæ non ſpirant, dictum antea eſt, quam ob cauſam naribus carent: & alia branchiis, alia fiſtula, alia præcinctu, vt inſecta, odores ſentiunt, & omnia natiuo ſpiritu ſui corporis quaſi mouentur, qui ſpiritus in omnibus ex natura inſitus eſt, non aduentitius deforis accedit. Naribus labrorum natura ſubiacet, iis quæ ſimul & dentes habent, & ſanguinem. Auibus enim, vt dictum eſt, cibi armamentique gra- C tia roſtrum oſſeum habetur. Coactum enim pro dentibus, & in idem perinde quaſi detractis hominis labris, ſuperiores inferioréſque dentes ſeorſum confundens, longitudinem vtrinque anguſtam produxeris: iam enim iſtud roſtrum auium fuerit. Sed cæteris animalibus labrorum natura ad ſalutem tutelámque dentium adiuncta eſt. Quamobrem vt quæque exquiſitè beneque dentibus prædita ſunt, ſic eam quoque obtinent partem: homini autem *mollia, carnoſa*, & quæ ſeparari poſſent, *labra adiuncta ſunt*, tum dentium tuendorum gratia, vt cæteris, tum etiam potiori cauſa vt bene eſſet: nam ad vſum ſermonis ea quoque proficiunt. Etenim vt linguam non ſimilem atque aliis animalibus, Na- D tura homini dedit, ſed idoneam, qua ad duplicem actionem vteretur, (quod eam in multis facere diximus: nam & ad percipiendos ſapores, & ad formandum ſermonem) ſic labra tam ſermonis quàm tutelæ dentium gratia adhibuit. Sermo enim, qui voce promatur, ex literis conſtat. Quòd ſi lingua talis, & labra humida, atque agilia non eſſent, maxima literarum pars exprimi non poſſet: quippe cùm literæ partim lingua producantur, partim labris comprimantur. Sed quas, * & quot numero differentias hæc habeant, ex eruditis metrica ratione accipiendum eſt. Has autem partes illico neceſſe fuit acce- E dere idoneas, & natura eiuſmodi præditas ad vſum iam dictum. Itaque carne inſtitutæ ſunt, eáque molliſſima, qualis caro hominis eſt, ſcilicet quòd maximè omnium animalium valeat ſenſu tactus.

CAPVT XVII.

De lingua, eiúſque ſitu & varietate in quibuſque animalibus.

LIngua in ore palato ſubiacet: ſed terreſtribus ferè omnibus modo ſimili, cæteris diſſimili, tum eorundem ipſorum tum terreſtrium cōparatione. Homo igitur linguam abſolutam, molliſſimam, & latam præcipuè habet, vt commoda ad vtrumque officiū ſit: hoc eſt, & ad ſapores percipiendos, & ad literas exprimendas. Eſt enim homo omnium maximè animalium ſenſu facilis. Et lingua, quæ mollis eſt, vim tangendi præcipuè obtinet: guſtus autem, tactus quidam eſt. Ad literarum etiam explanationem, & ad ſermonis expreſſionem, lingua mollis, lata, & abſoluta accommodatior eſt: quippe quæ contrahere, producere, dilatare, denique variè afformare maximè poſſit. Patet hoc in iis quibus non ſatis abſoluta eſt: blæſi enim balbi, & torti ſunt: quod vitium literarum defectus eſt. Diſcrimen in latitudine & anguſtia eſt: quippe cùm ampla anguſtam contineat, anguſta amplam non capiat. Paruum enim in magno continetur, magnum in paruo haberi non poteſt. Quamobrem aues, quæ literas proferre maximè poſſunt, lingua ſunt latiore, quā cæteræ. Quadrupedes autem, quæ & ſanguinem habent, & animal pariunt, vocem parum explanare poſſunt, vt quæ linguam duram, craſſam, & minimè abſolutam habeant: at pleræque auium vocem copioſè emittunt: & quanuis latiorem habeant, quæ vnguibus ſunt aduncis, tamen minores vocaliores ſunt. Ac omnes lingua vtuntur etiā ad ſurſenſus mutuam interpretationem, ſed aliæ aliis amplius, vt in nonnullis vel vſus docendi mutuus eſſe videatur. *Sed de iis diximus ſatis*, cùm hiſtorias animalium ſcriberemus. Terreſtrium autem ouiparorum ſanguineorū pars maior linguam habet inutilem ad vocis officium, & adhærentem, & duram. Quanquam ad ſaporum guſtatum, ſerpentes, & lacerti longam habent, & bifidam: atque ita longam ſerpentes, vt ex paruo longè protrahi poſſit. Bifida, & parte extrema capillamēti tenuitate eſt, propter ſuæ naturæ cupediam: duplex enim voluptas iis capitur, quaſi duplicem ſenſum guſtandi habeant. Omnia tam ſanguinea quàm exanguia, habent eam partem, quæ ſapores ſentire poteſt. Nam & quæ multitudini videntur carere ea parte, vt piſces nonnulli, ea quoque parciori quodam obtinent modo, & ferè ſimili, vt fluuiatiles crocodili: ſed hoc latet in plurimis cauſa quadā iuſta: locus enim oris omnium id genus ſpinoſus eſt. Et quoniam aquatile genus breui tempore ſentit ſapores, hinc fit vt pro ſui vſus breuitate linguam parum diſcretam habeāt: raptim enim ſummáque celeritate cibus ad ventrem ingeritur, quòd immorari ſaporibus perfruendis nequeant, humore interlabente. Itaque niſi os inclinaueris, cerni pars hæc diſcreta non poterit. Horret hic locus ſpinis, quippe qui ex frequenti contactu conſtitutus ſit branchiarum, quarum natura ſpinoſa eſt. Crocodilis nonnihil cauſæ ad eius partis vitiationem affert etiam immobilitas maxillæ inferioris: lingua enim inferiori annectitur maxillæ, quā illi quaſi contrà habēt ſuperiorē: cæteris. n. ſuperior immobilis eſt.

A Itaque vt ad ſuperiorem non habent, quòd cibi aditus tollitur: ſic ad inferiorem carent, quòd ſuperior quaſi tranſlata in locum inferioris eſt. Accedit ad hæc genus vitæ, quam more piſcium agit, cùm tamen ipſe terreſtris ſit. Itaque vel ob eam rem inexplanatam hanc partem habeat, neceſſe eſt. Palatum piſcium etiam complures carnoſum habent: & quidem inter fluuiatiles nonnulli admodum carnoſum, & molle, vt cyprini nomine, adeò vt ſi parum diligenter aduertas, lingua id eſſe videatur. Piſces igitur ob eam, quam diximus, cauſam, etſi lingua non carent, tamen explanatam non habent. Sed cùm cibi gratia ſen- B ſus ſaporis adhibitus ſit, cúmque non quauis parte ſua lingua obtineat, ſed extrema potiſſimùm, ideo piſcibus particula hæc tantummodo diſcreta habetur. Cibum autem quanquam animalia omnia cupiunt, vt quæ voluptatem ex cibo ſentiant, (cupiditas enim rei ſuauis eſt) tamen membrum, quod ad ſentiendum accommodatum eſt, non omnibus ſimile datum eſt: ſed aliis abſolutum, aliis adhærens, videlicet iis quibus vocis defuit vſus: & aliis durum, aliis molle carnoſúmque. Nam & cruſtatis, vt locuſtis marinis, & reliquis generis eiuſdem, tale quid in ore ha- C betur atque etiam mollibus, vt ſepiis, vt polypis. Inſectorum alia membrum hoc intus continent: vt formicæ: quemadmodum multa etiam ex teſtatis: alia foris gerunt, velvt aculeum fungoſum, & cauum, vt eo ſimul & guſtare & cibum trahere poſſint. Patet hoc in muſcarum genere, & apum, & omnium generis eiuſdem, atque etiam in nonnullis teſtatis. Purpuris enim tantam obtinet vim hoc membrum, vt teſtas conchyliorum tranſfigere valeat: velvt turbinum quorum eſca capiuntur. Necnon aſili, & tabani eòdem ſpectant: quorum alteri lingua admisſa cutem hominum ſecant, alteri tergora etiam beſtiarum elacerant. His igitur animalibus lin- D gua talis natura tributa eſt, quaſi reſpondens, & obverſaria nari elephantorum. Naris enim illis adiumento eſt, & lingua his pro aculeo habetur. ARISTOTELIS STARIGITÆ DE PARTIBVS ANIMALIVM & earum cauſis

E LIB. III. CAPVT I.

De ordine, & conſtitutione dentium, oris, & faciei, eorundémque in omnibus animantibus diuerſitate.

PROXIME ab iis natura dentium eſt, & oris, quod ſerie dentium continetur, & conſtat. Sed cùm dentium natura communi quidem officio ad cibum conficiendum adiuncta ſit, tamen generatim ſeorſum aliis roboris gratia, tum ad inuadendum, tum etiam ad defendendum, aliis auxilii tantũ cauſa data eſt. Partim enim ea vtraq; cauſa dentes obtinet, vt nec ab aliis afficiãtur, & ipſa afficiant alia: vt quæ ex feris natura carniuora ſunt:

partim ea cauſa tantùm, ne male ab aliis afficiantur, vt complura tum ſylueſtris generis tum etiam vrbani. Nonnullis cibi conficiendi cauſa tantùm adhibita eſt dentium opera. Homo verò ad vſum communem probè factos obtinet dentes: videlicet primores acutos vt ſecent, maxillares latos vt molant. Diſcriminant eos vtroſque hi, qui canini appellantur, media inter eos natura conditi: nam & medium, particeps vtriuſque extremi eſt. Et canini ipſi partim acuti ſunt, partim lati. Quod idem in cæteris quoque animalibus eſt, quibus non omnes acuti habentur. Sed potiſſimùm locutionis gratia tales, tótque numero dentes homo ſortitus eſt. Ad literas enim exprimendas plurimum conferunt primi dentes. Nonnulla animalia, quod dictum iam eſt, cibi tantū conficiendi gratia dentes obtinent. Quibus autem ſimul & auxilio ſunt, & robori dentes, hæc aut exertos habent, vt ſus: aut acutos pectinatim ſeſe ſtipantes: vnde ſerratis ea dentibus eſſe diximus. Cùm enim vires eorum acumini dentium commiſſæ ſint, rectè qui vtiles ſint ad ferocitatem, pectinatim coeunt, ne occurſu contrario atterantur, & hebeteſcant. Sed nullis ſimul & ſerrati & exerti ſunt dentes: quoniam natura nihil fruſtrà, nihil ſuperuacanei facere ſolet. Auxilium aliis per ictum, aliis per morſum: nam ſues fœminæ mordent, vt quæ careant dente exerto. Cæterùm aliquid accepiſſe in vniuerſum conuenit, quod vtile ſit, tum ad hæc ipſa tum etiam ad multa, quæ poſtea dicemus. Partes enim, quæ ad inuadendum, aut ad defendendum ſpectant, quæque à natura iis tribuuntur, quæ aut ſola aut præ cæteris vti poſſint, & quibus vis vtendi præcipua, hęc præcipuè armis dotata ſunt: vt aculeo, calcari, cornu, dente, & ſi quid eiuſmodi aliud ſit. Cúmque mares robuſtiores magiſque animoſi ſint, ideo aut *ſolis iis* aut *meliùs iis* partes eiuſmodi datæ ſunt. Quas enim in fœminis quoque haberi neceſſe eſt, vt quæ cibo accommodentur, eas habent quidem & fœminæ, ſed minùs, quàm mares: quæ autem ad rem nullam neceſſariam ſpectent, iis carent. Quapropter in ceruorum genere, cùm maribus cornua ſint, fœminis deſunt. Vaccarum etiam cornua & taurorum inter ſe diſtant. Quod idem in pecore etiam cernimus. Calcar etiam cùm mares habeant, fœminæ magna ex parte non habēt. Pari modo de reliquis quoque eiuſmodi partib. intelligendum eſt. Piſces omnes ſerratis dentib. ſunt, vno excepto, qui ſcarus vocatur. Cōplures etiam dentes in lingua habent, & in palato. Cuius rei cauſa eſt, quòd cùm merſi in aqua degant, humorem cum cibo admittant, eúmque expuant quàm primùm neceſſe eſt. Non enim in molendo commorari poſſunt, quando humor in ventrem interrumpit: idcirco omnes acuti & frequentes vndique ſunt, videlicet vt præ multitudine in minuta ſecent, quæ attritu ſubigere nequeant. Adunci præterea ſunt, quoniam robur ferè totum piſcium in dentibus ſitum eſt. Natura etiam oris, tum eorum quæ modò dixi, officiorum cauſa, tum etiam ad ſpirandum adiuncta animalibus eſt, ſcilicet iis quæ ſpirant, atque extrinſecus refrigerantur. Natura enim ipſa per ſe, vt diximus, partibus omnium communibus ad pleraque officia propria abvtitur. Proinde oris quoq; officiū omnib. cōmune, cibus conficiēdus eſt: robur nōnullo rūpeculiare eſt: ſermo aliorū.

Περὶ δὲ κεράτων λεκτέον. καὶ γὰρ ταῦτα πέφυκε τοῖς ἔχουσιν ἐν τῇ κεφαλῇ. ἔχει δ' οὐδὲν μὴ ζῳοτόκον. καθ' ὁμοιότητα δὲ καὶ μεταφορὰν λέγεται καὶ ἑτέρων τινῶν κέρατα· ἀλλ' οὐδενὶ αὐτῶν τὰ ἔργα τοῦ κέρατος ὑπάρχει. βοηθείας γὰρ καὶ ἀλκῆς χάριν ἔχουσι τὰ ζῳοτόκα· ὃ τῶν ἄλλων τῶν λεγομένων ἔχειν κέρας, οὐδενὶ συμβέβηκεν. οὐδὲν γὰρ χρῆται τοῖς κέρασιν, οὔτ' ἀμυνόμενον, οὔτε πρὸς τὸ κρατεῖν ἅπερ ἰσχύος ἐστὶν ἔργα. ὅσα μὲν οὖν πολυσχιδῆ τῶν ζῴων, οὐδὲν ἔχει κέρας. τούτου δ' αἴτιον, ὅτι τὸ μὲν κέρας βοηθείας αἴτιόν ἐστι· τοῖς δὲ πολυσχιδέσιν ὑπάρχουσιν ἕτεραι βοήθειαι. δέδωκε γὰρ ἡ φύσις τοῖς μὲν ὄνυχας, τοῖς δὲ ὀδόντας μαχητικούς, τοῖς δ' ἄλλο τι μόριον ἱκανὸν ἀμύνασθαι. τῶν δὲ διχηλῶν τὰ μὲν πολλὰ κέρατα ἔχει πρὸς ἀλκήν, καὶ τῶν μωνύχων ἔνια· τὰ δὲ καὶ πρὸς βοήθειαν.

A Spirandi etiam vſus non communis omnibus eſt. At verò natura hæc omnia eôdem coniecit, adhibita differentia eius partis pro actionis diſcrimine. Sunt enim alia ore compreſſiori, alia ampliori. Quibus enim cibi conficiendi, & ſpirandi, & loquendi gratia os datum eſt, iis compreſſius eſt: quibus auxilij gratia, iis ſi dentibus ſunt ſerratis, reſciſſum. Cùm enim tota eorum vis in mordendo ſit, hiatum oris ampliorem eſſe neceſſe eſt. Eo nanque pluribus, & pleniùs morſum infigent, quo ampliùs reſciſſum os ſit. Piſcium etiam mordacibus, & carniuoris tale os eſt: non carniuoris in arctum ſe colligit. Tale enim os vtile iis eſt, illud inutile. Auibus os,
B quod roſtrum vocatur: hoc enim pro labris & dentibus habent, ſed variè pro vſu, & auxilio. Quæ enim aduncis vnguibus ſunt, quoniam carne viuunt, & nullo fructu veſcuntur, roſtrum omnia habent aduncum: tale enim tum ad retinendum, tum verò ad vim inferendam commodius atque aptius eſt. Vis autem in hoc, & in vnguibus ſita eſt. Vnde fit vt vngues etiam habeant aduncìores. Cæterarum auium roſtrum vtile ad victum cuiuſque eſt. Verbi gratia, roboriſeci generis, & coruini, robuſtum atque prædurũ os eſt: minuti generis lautum, ad terræ fructus colligendos, & ad beſtiolas capiendas idoneum. Quæ autem herbis viuunt, quæque apud paludes victitãt,
C vt nantes, & palmipedes, partim alio quodam modo roſtri commoditatem obtinent, partim latitudine roſtri ſibi ſufficiunt: quippe quæ roſtro eiuſmodi infodere poſſint: quale inter quadrupedes, etiam ſuis eſt: nam is quoque radicum appetens eſt. Quinetiam aues, quæ lato ſunt roſtro, radiceſque eſitant, & reliquarum victus ſimilis non nullæ, ſerratum roſtri extremum habent: ita enim herbarum carptus, quo viuunt, facilius agitur. Sed cæteras capitis partes omnes ferè expoſuimus. Proſopum autem, id eſt, facies, quod inter caput & collum hominis eſt, nomen à re ipſa accepiſſe videtur. Quòd enim vnus animalium homo erectus eſt, ſolus proſpicit anteuerſus, vocémque anteuerſus mittit.
D

CAPVT II.

De cornuum conſtitutione, & quæ animalia habeant cornua, quæ item iis careant.

De cornibus differendum eſt: hæc enim capiti innituntur, quocunque in genere eſſe poſſunt. Carent iis omnia, quæ non viuipara ſint. Cornua vel aliis quibuſdã ineſſe dicimus, ſed per ſimilitudinem, & tranſlationem, cùm nullum ex iis cornu officio fungatur. Gerunt enim, quæ animal pariunt, cornua ad vim aut inferendam, aut
E depellendam: quod nulli ex cæteris quæ cornua habere dicuntur, contingit. Nullum enim vtitur cornibus, vel ad conuincendum, vel ad defendendum: quę viriũ ſunt officia. Quæ igitur pedes multifidos habẽt, cornu omnia carent: cuius rei cauſa eſt, quòd cornu auxilij gratia habetur. Multifidis autem non deſunt alia auxilia. Dedit enim natura aliis vngues, aliis dentes pugnaces, aliis partem aliam, qua ſeſe tueri atque defendere poſſent. At verò biſulcorum pars maior cornua gerit, & ſolipedum nonnulla, ad vim inferendam: quædam etiam ad defendendum.

Quibus autem cornua natura non dedit, eorum ſaluti præſidiis conſuluit aliis: vt pernicitate cõrporis equis opitulata eſt, magnitudine camelis: magnitudinis enim exuperantia ſufficit ad necem arcendam, quod camelis contingit: atque etiam meliùs elephantis. Quædam etiam dente exerto armantur in genere biſulco, vt ſues. Quibus autem cornua præ nimio exceſſu ſuperuacua ſunt, iis alterum auxilium natura adhibuit: vt ceruis velocitatem. Grandis enim illa, & multifida cornuum magnitudo, potiùs obeſt quàm prodeſt. Bubalis etiam capreiſque interdum cornua inutilia ſunt: nam etſi contra nonnulla reſiſtunt, & cornibus ſe defendunt, tamen feroces pugnaceſque belluas fugiunt. Bonaſis (nam ijs quoque pari aduncitate cornua reflexa inter ſe orbem colligunt) excrementi profuſionem natura pro auxilio dedit: hoc enim cùm metuunt, ſe tuentur. Hac eadem profuſione alia quoque ſeruari certum eſt. Plura autem auxilia ſimul, quorum ſingula ſatis eſſent, nulli natura tribuit. Cornigerorum pars maxima biſulca eſt. Sed ſolipes etiam traditur in eo genere, quem aſinum Indicum vocant. Maxima animalium pars, vt corpus dextro ſiniſtróque, quibus ſe mouent, diſtinguitur: ſic etiam cornua bina eadem illa de cauſa gerit naturæ ingenio. Sed ſunt etiam quæ cornu ſingulari armentur, vt oryx, & quem aſinum Indicum appellari diximus. Oryx biſulcum: aſinus ille ſolipes eſt. Gerunt ſanè medio ſui capitis cornu fixum ea quæ vnum habent. Sic enim maximè pars vtraque cornu obtinebit, cùm medium commune pariter vtrique extremo ſit. Solipes potiùs quàm biſulcum eſſe vnicorne rectè videri poteſt. Vngula enim tam ſolida quàm biſulca eandem naturam habet quam cornu. Itaque eiſdem ſimul & vngulam findi, & cornu congruum eſt. Fiſſio etiam vngulæ & cornu ex defectu naturæ euenit. Itaque cùm exuperantiam vngulæ ſolipedum natura dediſſet, rectè dempſit supernè, fecitque vnicorne. Rectè etiam capiti cornua mandauit, nec, vt Æſopi Momus vitio dat, quòd taurus non in armis cornua gerat, vnde ferire vehementiùs poſſit, ſed capite, parte corporis imbecillima. Non enim ingenio perſpicaci ille Momus hæc deprehendit. Vt enim ſi in alia quauis parte cornua haberentur, fruſtra ponderi eſſent, nulla in re vtilia, multa etiam officia impedirent: ſic armis quoque infixa ſedem omnino ineptam tenerent. Non ſolùm enim vnde ictus fiant vehementiores conſiderandum eſt, ſed etiam vnde remotiores: itaque cùm careant manibus, & nec pedibus imis affixa gerere poſſint, neque genib. (flexus enim impediretur) capite gerant, neceſſe eſt, quemadmodum à natura conſtitutum eſt. Quinetiam ad cæteras corporis motiones, ita maximè geri ſine vllo impedimento poſſunt. Ceruis duntaxat cornua tota ſolida, & decidua, tum vtilitatis cauſa, vt onere leuentur, tum ex neceſſitate præ pondere. Cæteris aliquatenus caua, & mucrone demum concreta ſunt, quoniam ad ictus hoc ſit commodius: ſed ne pars caua debilis ſit, quà cuti annectitur, ſolidum quiddam oſſib. exortum ingreditur eam, impletque totam. Sic enim ſita compactáque, & ad vim inferendam commodiſſima, & ad reliquæ vitæ munera inoffenſiſſima habentur. Sed cuiuſnam gratia natura cornuum ſit, & quam ob cauſam aliis data, aliis negata ſit, expoſitum eſt.

πῶς δὲ τῆς ἀναγκαίας φύσεως ἐχούσης τοῖς ὑπάρχουσιν ἐξ ἀνάγκης, ἡ κατὰ τὸν λόγον φύσις ἕνεκά του καταχρῆται, λέγωμεν. πρῶτον μὲν οὖν τὸ σωματῶδες καὶ γεῶδες πλεῖον ὑπάρχει τοῖς μείζοσι τῶν ζῴων. κερατοφόρον δὲ μικρὸν πάμπαν οὐδὲν ἴσμεν. ἐλάχιστον γάρ ἐστι τῶν γνωριζομένων δορκάς. δεῖ δὲ τὴν φύσιν θεωρεῖν εἰς τὰ πολλὰ βλέποντα. ἢ γὰρ ἐν πᾶσιν, ἢ ὡς ἐπὶ τὸ πολὺ κατὰ φύσιν. τὸ δὲ ὀστῶδες, ἐν τοῖς σώμασι τῶν ζῴων γεῶδες ὑπάρχει· διὸ καὶ πλεῖστον ἐν τοῖς μεγίστοις, ὡς ἐπὶ τὸ πολὺ βλέψαντας εἰπεῖν. τὴν γεώδη τοιούτου σώματος περιττωματικὴν ὑπερβολὴν ἐν τοῖς μείζοσι τῶν ζῴων ὑπαρχοῦσαν, ἐπὶ βοήθειαν καὶ τὸ συμφέρον καταχρῆται ἡ φύσις, καὶ τὴν ῥέουσαν ἐξ ἀνάγκης εἰς τὸν ἄνω τόπον, τοῖς μὲν εἰς ὀδόντας καὶ χαυλιόδοντας ἀπένειμε, τοῖς δ' εἰς κέρατα. διὸ τῶν κερατοφόρων οὐδέν ἐστιν ἀμφώδουν. οὐ γὰρ ἔχει τοὺς προσθίους ὀδόντας. ἀφελοῦσα γὰρ ἡ φύσις ἐντεῦθεν, τοῖς κέρασι προσέθηκε. καὶ ἡ διδομένη τροφὴ εἰς τοὺς ὀδόντας τούτοις, εἰς τὴν τῶν κεράτων αὔξησιν ἀναλίσκεται. τοῦ δὲ τὰς θηλείας ἐλάφους κέρατα μὲν μὴ ἔχειν, περὶ δὲ τοὺς ὀδόντας ὁμοίως τοῖς ἄρρεσιν, αἴτιον τὸ τὴν φύσιν εἶναι ἀμφοῖν κερατοφόρον. ἀφῄρηνται δὲ τὰ κέρατα αἱ θήλειαι, διὰ τὸ χρήσιμα μὲν μὴ εἶναι, μηδὲ τοῖς ἄρρεσιν, ἧττον δὲ βλάπτεσθαι διὰ τὴν ἰσχύν. τῶν δ' ἄλλων ζῴων ὅσοις μὴ εἰς κέρατα ἀποκρίνεται τὸ τοιοῦτον μόριον τοῦ σώματος, ἐνίοις μὲν τῶν ὀδόντων αὐτῶν ἐπηύξησε τὸ μέγεθος κοινῇ πάντων· ἐνίοις δὲ χαυλιόδοντας, ὥσπερ κέρατα, ἐκ τῶν γνάθων ἐποίησε. περὶ μὲν οὖν τῶν ἐν τῇ κεφαλῇ μορίων ταύτῃ διωρίσθω.

A Nunc quemadmodum natura ſe habente neceſſaria rebus ſubiectis, neceſſariò natura ratiocinaria alicuius gratia abutatur, differendum eſt. Primò igitur plus corpulenti terreníque in animalibus grandioribus ineſt. Cornigerum autem nullum admodum paruum eſſe nouimus: omnium enim quæ explorata habemus, minimum caprea eſt. Natura verò contemplanda reſpectu plurium eſt: aut enim omni ex parte aut magna ex parte conſtat, quod ſecundùm naturam ſit. Os autem omne, & quicquid ſpeciem gerit oſſis, terrenum eſt: quam ob rem plurimum id eſſe propè dixerim in maximis, partis maioris contemplatione. Corporis igitur eiuſmodi excrementi exuperantia B in maioribus habita animalibus natura ad auxilium & rem abvtitur commodam: itaque quantum excrementi eius ad locum ſuperiorem efferatur, aliis in dentes, vel continuos, vel exertos diſtribuit, aliis in cornua. Quamobrem cornigerorum nullum vtrinque dentatum eſt. ſupernè enim primores dentes non habent: quippe cùm natura hinc adimendo addiderit cornibus: & alimentum, quod in eos dentes digeratur, in cornuum incrementum abſumitur. Cur ceruæ cornibus careant, cùm dentes ſimiliter habeant, atque mares, cauſa eſt, quòd eadem ſexus vtriuſque natura, & cornigera eſt: ſed fœminis adempta ſunt cornua, quoniam C ne maribus quidem vtilia ſint: ſed virium meliorum beneficio, mares minùs offenduntur. Cæteris animalibus, quibus hæc materia non in cornua ſecedit, aut dentium ipſorum magnitudinem communi omnium incremento natura auxit, aut dentes exertos, velvti cornua, è maxillis produxit. Sed de partibus capitis hactenus.

CAPVT III.

De collo, gula, & arteria, & earum officiis in corpore animantium.

COllum capiti ſubiacet iis quæ id habent, animalibus. Non enim omnia habent, ſed ea tantùm quibus ſunt partes illæ, quarum gratia D collum conditum eſt: hoc eſt, guttur & quæ gula vocatur. Guttur ſpiritus cauſa datum eſt: hoc enim ſpiritum animalia trahunt, & reddunt, reſpirando & expirando. Quam ob rem, quæ carent pulmone, collo etiam carent, vt genus piſcium. Gula eſt, qua cibus & potus deuoratur: itaque ea quæ carent collo, gulam hæc manifeſtam non habent, nec gulam haberi cibi cauſa neceſſe eſt: nihil enim ad cibum parat. Et quidem à ſitu oris continuò venter eſſe poteſt, pulmo non poteſt. Aliquem enim quaſi tractum conuallis adeſſe communem oportet, quo ſpiritum ad fiſtulas per arterias digerat bipartitus: atque ita efficere ſpiritus reciprocatio- E nem maximè poteſt. Cùm igitur inſtrumentum ſpirationi accommodatum, longitudinem habeat neceſſe ſit, gulam inter os & ventrem haberi neceſſe eſt. Conſtat gula ex neruo & carne. Ex neruo, vt extendi poſſit, cùm cibus ingeritur: ex carne, vt mollis ſit, & cedat, nec lædatur aſperitate cibi deſcendentis. Guttur autem, quod & arteria vocatur, corpore conſtat cartilagi-noſo: non ſolùm enim ſpirandi cauſa eſt, ſed etiam vocis: quod autẽ ſonet, leue ac ſolidũ eſſe oportet.

A Ante gulam arteria poſita eſt, quanquam impedimento ſit, cùm cibus ingeritur. Nam ſi quid vel cibi vel potus in arteriam dilabitur, ſtrangulationes, tormina, & tuſſes grauiſſimæ incitantur. Quã ob rem non audiendi ſunt qui hac potum meare dicant. Accidunt enim apertè, quæ modò dixi, omnibus, quoties aliquid cibi dilapſum eſt. Profectò opinionem eorum qui potum hac admitti exiſtimant, irridendam eſſe plura oſtendunt. Meatus enim nullus de pulmone ad ventrem pertinet, ſicut ex ore gulam tendere cernimus: quinetiam per vomitum & nauſeam, vndenã humor remeet, incertum non eſt. Adhæc humorẽ non continuò colligi in veſicam, ſed priùs in vẽtrem, certum eſt. B Excrementa enim alui tingi videntur fæce vini atri: vulnere etiam ventris ſæpe hoc idem patefactum eſt. Sed enim ſtultas opiniones admodum ſcrutari, ſtultum fortaſſe eſt. Arteria verò, quòd exterior, vt diximus, poſita eſt, à cibo infeſtatur. Attamen natura ad hoc molita eſt minorem linguam, ſiue lingulam, quæ arteriam operiret. Non omnia viuipara eam obtinent, ſed ea tantùm quibus pulmo, & cutis pilo intecta, non cortex, non penna opertimento eſt. Corticatis enim pennatíſque, guttur, vice lingulæ operientis ipſum, contrahitur, & diducitur: quemadmodum illis operitur aliunde, & aperitur: videlicet ſpiritui trahen- C do reddendóve apetitur, cibo ingerẽdo operitur, nequid illabatur. Quòd ſi quid erroris in eo motu committitur, vel deerrante cibo in alienum tramitem, vel reſpiratione præueniente, tuſſes ſtrangulationéſque excitantur, vt dictum eſt. Tam verò ſolerti ingenio motus, & lingulæ, & linguæ adhibitus à natura eſt, vt cibus neque in ore, cùm molitur, cadat ſub dentes, neque, cũ per fauces meat, in arteriam labatur. Carent animalia, quæ modò diximus, lingula, quoniam & carne ſicca, & cute conſtant prædura: non enim facilè moueri membrum id poſſet, ſi ex tali genere carnis cutíſque conſtaret, ſed extrema ipſius arteriæ citiùs com- D primerentur, quàm lingula: quam animalia pilo prædita habent ex ſua carne. Hæc dixiſſe ſatis eſt, quam ob cauſam animalium alia lingulam habeant, alia careant: & quemadmodum natura vitio ſitus arteriæ remedium lingulam emolita adhibuerit. Guttur autem ante gulam neceſſariò poſitum eſt. Cor enim in parte priori, atque in medio ſitum eſt: in quo principium vitæ, omníſque motus & ſenſus eſſe cenſemus. Etenim partem verſus, quam priorem appellamus, tum ſenſus tum etiam motus agitur. Hac enim ipſa ratione pars prior & poſterior ſtatuenda eſt. Pulmo eandem quam cor, obtinet ſedem, idque ample- E ctitur. Spiratio tum propter pulmonem tum propter originem cordi inditam agitur. Attrahitur & redditur aër per arteriam. Itaque quum in parte priori cor primùm collocari neceſſe ſit, arteriã quoque & guttur conſtitui ante gulam neceſſe eſt: hæc enim ad pulmonem & cor tendunt, gula ad ventrem. Denique quod melius & nobilius eſt, id ſemper (niſi quid maius impedit) ſuperioris inferioriſque ratione ſuperius collocatur: prioris poſterioriſque, prius: dextri ſiniſtrique, dextrum. Sed de collo, gula, & de arteria dictum iam eſt.

A κεῖται δὲ ἔμπροσθεν τοῦ οἰσοφάγου ἡ ἀρτηρία, καίπερ ἐμποδίζουσα αὐτὸν περὶ τὴν ὑποδοχὴν τῆς τροφῆς. ἐὰν γάρ τι παρεισρυῇ ξηρὸν ἢ ὑγρὸν εἰς τὴν ἀρτηρίαν, πνιγμοὺς καὶ πόνους καὶ βῆχας χαλεπὰς ἐμποιεῖ. * ὃ δὴ καὶ θαυμάσειεν ἄν τις τῶν λεγόντων, ὡς ταύτῃ τὸ ποτὸν δέχεται τὸ ζῷον. συμβαίνει γὰρ φανερῶς τὰ λεχθέντα πᾶσιν, οἷς ἂν παρεισρυῇ τι τῆς τροφῆς. * πολλαχοῦ δὲ γελοῖον φαίνεται τὸ λέγειν ὡς ταύτῃ τὸ ποτὸν εἰσδέχεται τὰ ζῷα. πόρος γὰρ οὐδείς ἐστιν εἰς τὴν κοιλίαν ἀπὸ τοῦ πνεύμονος, ὥσπερ ἐκ τοῦ στόματος ὁρῶμεν τὸν οἰσοφάγον. ἔτι δὲ ἐν τοῖς ἐμέτοις καὶ ναυτίαις, οὐκ ἄδηλον πόθεν τὸ ὑγρὸν φαίνεται πορευόμενον. CAPVT IV.

De corde, & eius qualitate, quámque ob cauſam animalibus iniunctum ſit.

SEquitur vt de viſceribus doceamus, quæ eorum ſanè propria ſunt, quæ ſanguinem habẽt: nulli enim exanguium animali viſcus vllum eſt, cùm ſanguineis omnia ſint. Itaque Democritus rectè de his tractaſſe videtur: ſiquidem incerta hæc eſſe putauit, præ exiguitate exanguium animalium. B Statim enim cum conſiſtunt, quæ ſanguinem habent, exiguáque admodum ſunt, depræhendi cor, & iecur ſine dubio poſſunt: quippe cùm in ouis triduò cubatis, puncti iam magnitudine appareant: necnon in partibus abortitiis perquam exigua cernuntur. Adhæc, vt exteriorum partium non idem vſus omnibus eſt, ſed quæque pro vita motúque vario ſibi peculiarem receperunt: ſic interiorum aliæ aliis accommodantur. Viſcera autem eorum peculiaria ſunt, quæ ſanguinem habent: quamobrem vnumquodque eorum ex materia ſanguinea conſtat: quod in nuper editis patet: ſunt enim cruentiora maioraque C ex ratione, quoniam in prima concretione, ſpecies copiaque materiæ euidentior eſt. Cor igitur omnibus ſanguine præditis ineſt: & quam ob cauſam, dictum & antehac eſt, & nunc dicemus. Sanguis enim neceſſariò ineſt in iis quæ ſanguinea ſunt: qui, cùm humidus ſit, conceptaculum ſibi habeat, neceſſe eſt. Ideóque venas natura emolita videtur, quarum vnum eſſe principium neceſſe eſt. Vbicunque enim fieri poteſt, vnum eſſe quàm plura, melius eſt. Cor autem, [illegible] principium eſt: ex hoc enim venæ, & p[illegible] ſe videntur. Natura etiam eius venoſa [illegible] te generis ſocietate iuncti cum venis, qu[illegible] ſitus eius ſedem obtinet principalem: in medio D enim poſitum eſt, ſed magis ſuperiùs, quàm inferiùs, & parti priori ammotius quàm poſteriori. Natura enim rem nobiliorem conſtituere in locis nobilioribus ſolet, niſi quid maius impediat. Cordis hunc eſſe locum latiſſimè in homine patet, ſed in cæteris quoque animalibus pari ratione tenere ſibi vult medium corporis neceſſarij: cuius ſanè exitus eſt, quà excrementa emittuntur. Crura autem aliis aliter adiuncta ſunt, nec ad vitam neceſſaria habentur: quamobrem iis demptis vita non tollitur, additis etiam, nullum ſequi interitum, certum eſt. Qui capiti venarum E originem tribuunt, non rectè opinantur: plura enim, diſperſáque principia faciunt, idque in loco frigido. Argumentum, quòd frigus hic locus vehementiùs ſentiat: contrà cordis locus calore abundat. Cúmque per cætera viſcera venæ tranſigant, nulla per cor tendit, vt dictum eſt. Itaque partem & principium venarum cor eſſe, apertum eſt, idque optima ratione. Medium enim cordis ſpiſſum cauúmque corpus eſt. Plenum etiam ſanguinis eſt, quaſi hinc venæ oriantur. Cauum eſt, vt contineat ſanguinem: ſpiſſum, vt principium caloris ſeruare poſſit. In hoc enim viſcerum, & partium omnium corporis, ſanguis ſine venis complectitur: cæteræ partes ſanguinem venis habent contentum, idque recta ratione. Sanguis enim ex corde ad venas quoque deriuatur.

At verò ad cor non aliunde deuenit: id enim origo prima, & fons ſanguinis eſt, aut cōceptaculum primum. Hæc ex conſectione animalium perſpici poſſunt, atque etiā ex generatione. Cor enim ſtatim omnium partium primum cōſiſtens, ſanguinolentum eſt. Motus etiam lætitiæ ac triſtitiæ, denique omnium ſenſuum hinc oriri, eodémque deſinere vidētur. Ratione quoque ita eſſe probatur. Principium enim vnum eſſe oportet, vbicunque fieri poteſt. Aptiſſimus autem omnium locorum medius eſt. Medium enim vnum eſt, & tale, vt vndique attingi, vel æquè vel proximè poſſit. Adhæc, cùm nec pars alia ſanguinea vlla, neque ſanguis ipſe vim habeat ſentiendi, quod primum ſanguinem habeat, id eſſe quod ſentiat, certum eſt. Habeat autem perinde ac vas, quod principium eſt, neceſſe eſt. Nec ratione tantùm ita eſſe probatur, verùm etiam ſenſu percipitur. Nam in partuum prima generatione, ſtatim cor palpitare cernitur, quaſi animal ſit, vt quod principium ſit naturæ eorum quæ ſanguinem habent. Argumentum vel inde deduci poteſt, quòd nullum animal ſanguinis compos careat corde: principium enim ſanguinis habeat, neceſſe eſt. Iecur etiam omnibus ſanguine præditis ineſt: ſed nemo id cenſuerit eſſe principium vel corporis totius, vel ſanguinis: ſitum enim nequaquam obtinet principalem: lienem verò ſibi habet aduerſum in iis quæ exquiſitiùs conſtent: nec verò ſanguinis conceptaculum modo cordis intra ſe continet: ſed vt reliquæ partes ſanguinem venis incluſum habet. Adhæc, vena per iecur tendit, nec vlla ex eo prouenit. Venæ enim omnes ex corde ſua initia trahunt. Itaque cùm alterutrum iſtorum principium eſſe neceſſe ſit, iecur autem non ſit, cor ſanguinis quoque principium eſſe, neceſſe eſt. Animal enim ſenſu definitur. Vis autem ſentiendi *primò illi tribuitur*, quod *primum* ſanguine præditum eſt. Tale autem cor eſt, quippe quod & origo ſanguinis ſit, & primum ſanguinem habeat. Extremum eius turbinatur in muctonem firmiſſimum. Situm in pectore eſt, & omnino parti priori corporis cōmiſſum, ne refrigeretur. Omnib. enim pectus minùs carnoſum, quàm tergum, eſt: quam ob rem à tergo perquam tutè calor opertus eſt. Cor cæteris animalibus in medio pectore eſt: homini tantùm paulò vergit ad læuam, vt eius partis refrigerationem moderetur, & compenſet. Omnium enim animalium maximè homo refrigeratam habet partem ſiniſtram. In piſcibus etiam cor ſimilem ſitum tenere, & cur diſſimilis videatur, dictum iam eſt. Solis his cordis mucro ad caput ſpectat, cùm ea pars prior ſit: eôdem enim agitur motus. Copia quoque neruorum in corde eſt, idque recta ratione: hinc enim motus oriuntur, qui intendendo remittendóque efficiũtur: itaque miniſterio tali, & robore opus eſt. Cor autem, vt ſuprà diximus, veluti alterum animal ineſt iis quæ corde vitalem originem continent. Cor ſine oſſe eſt omnium quæ nos nouerimus, præterquam equi, & generis boum cuiuſdam, quibus præ magnitudine, quaſi adminiculum ſubditum eſt: quo modo totum etiam corpus oſſibus ſuſtentatur, & continetur. Ventriculum triplicem cor magnorũ animalium habet, duplicem minorum, vnum ad poſtremum: nullũq; eſt, quod ſine vllo ventriculo conſtet: & quam ob cauſam, dictum eſt. Locum enim & conceptaculum quoddam ſanguinis primi in corde haberi conuenit.

A εἰς δὲ τὴν καρδίαν οὐκ ἄλλοθεν. αὕτη γάρ ἐστιν ἀρχὴ καὶ πηγὴ τοῦ αἵματος, ἢ ὑποδοχὴ πρώτη. ἐκ τῶν ἀνατομῶν δὲ κατάδηλα ταῦτα, καὶ ἐκ τῶν γενέσεων. εὐθέως γάρ ἐστιν ἔναιμος πρώτη γινομένη τῶν μορίων ἁπάντων. ἔτι δ᾽ αἱ κινήσεις τῶν ἡδέων καὶ τῶν λυπηρῶν, καὶ ὅλως πάσης αἰσθήσεως, ἐντεῦθεν ἀρχόμεναι φαίνονται, καὶ πρὸς ταύτην περαίνουσαι. οὕτω δ᾽ ἔχει καὶ κατὰ τὸν λόγον. ἀρχὴν γὰρ εἶναι δεῖ μίαν, ὅπου ἐνδέχεται. βέλτιστον δὲ τῶν τόπων ὁ μέσος. ἓν γὰρ τὸ μέσον, καὶ ἐπὶ πᾶν ἐφικτὸν ὁμοίως, ἢ παραπλησίως. ἔτι δ᾽ ἐπεὶ οὔτε τῶν ἀναίμων οὐδὲν αἰσθητικόν, οὔτε τὸ αἷμα, δῆλον ὡς τὸ πρῶτον ἔχον ὡς ἐν ἀγγείῳ δὲ ἔχον, ἀναγκαῖον εἶναι τὴν ἀρχήν. B οὐ μόνον δὲ κατὰ τὸν λόγον οὕτως ἔχον φαίνεται, ἀλλὰ καὶ κατὰ τὴν αἴσθησιν. ἐν γὰρ τοῖς ἐμβρύοις εὐθέως ἡ καρδία φαίνεται κινουμένη τῶν μορίων, *καθάπερ εἰ ζῶον, ὡς ἀρχὴ τῆς φύσεως τοῖς ἐναίμοις οὖσα. μαρτύριον δὲ τῶν εἰρημένων, καὶ τὸ πᾶσι τοῖς ἐναίμοις ὑπάρχειν αὐτήν. ἀναγκαῖον γὰρ αὐτοῖς ἔχειν τὴν ἀρχὴν τοῦ αἵματος. ὑπάρχει δὲ καὶ τὸ ἧπαρ πᾶσι τοῖς ἐναίμοις· ἀλλ᾽ οὐθεὶς ἂν ἀξιώσειεν αὐτὸ τὴν ἀρχὴν εἶναι, οὔτε τοῦ ὅλου σώματος, οὔτε τοῦ αἵματος. κεῖται γὰρ οὐδαμῶς πρὸς ἀρχοειδῆ θέσιν. ἔχει δ᾽ ὥσπερ ἀντίζυγον ἐν τοῖς μάλιστ᾽ ἀπηκριβωμένοις τὸν σπλῆνα. ἔτι δ᾽ C ὑποδοχὴν αἵματος οὐκ ἔχει ἐν ἑαυτῷ, καθάπερ ἡ καρδία, ἀλλ᾽ ὥσπερ τὰ λοιπά, ἐν φλεβί. ἔτι δὲ τείνει δι᾽ αὐτοῦ φλέψ· ἐξ ἐκείνης δὲ οὐδεμία. πασῶν γὰρ τῶν φλεβῶν ἐκ τῆς καρδίας αἱ ἀρχαί. ἐπεὶ οὖν ἀνάγκη θάτερον μὲν τούτων ἀρχὴν εἶναι, μή ἐστι δὲ τὸ ἧπαρ, ἀνάγκη τὴν καρδίαν *εἶναι καὶ τοῦ αἵματος ἀρχήν. τὸ μὲν γὰρ ζῶον αἰσθήσει ὥρισται. αἰσθητικὸν δὲ πρῶτον, τὸ πρῶτον ἔναιμον. τοιοῦτον δὲ ἡ καρδία. καὶ γὰρ ἀρχὴ τοῦ αἵματος, καὶ ἔναιμον πρῶτον. ἔστι δὲ τὸ ἄκρον αὐτῆς ὀξὺ καὶ στερεώτερον. κεῖται δὲ πρὸς τῷ στήθει, καὶ ὅλως ἐν τοῖς ἔμπροσθεν τοῦ σώματος, πρὸς τὸ μὴ καταψύχεσθαι αὐτό. πᾶσι γὰρ ἀσαρκότερον D τὸ στῆθος· τὰ δ᾽ ὄπισθεν σαρκωδέστερα. διὸ πολλὴν ἔχει σκέπην τὸ θερμὸν κατὰ τὸν νῶτον. ἔστι δὲ ἡ καρδία τοῖς μὲν ἄλλοις ζῴοις κατὰ μέσον τοῦ στηθικοῦ τόπου· τοῖς δὲ ἀνθρώποις εἰς τὰ εὐώνυμα μικρὸν παρεγκλίνουσα, πρὸς τὸ ἀνισοῦν τὴν κατάψυξιν τῶν ἀριστερῶν. μάλιστα γὰρ τῶν ἄλλων ζῴων ὁ ἄνθρωπος ἔχει κατεψυγμένα τὰ ἀριστερά. ὅτι δὲ καὶ ἐν τοῖς ἰχθύσιν ὁμοίως ἡ καρδία κεῖται, πρότερον εἴρηται, καὶ διότι φαίνεται ἀνομοίως. ἔχει δὲ πρὸς τὴν κεφαλὴν τὸ ὀξύ. ἔστι δ᾽ αὕτη τὸ πρόσθεν· ἐπὶ ταύτην γὰρ ἡ κίνησις. ἔχει δὲ καὶ νεύρων πλῆθος ἡ καρδία· καὶ τοῦτ᾽ εὐλόγως. ἀπὸ ταύτης γὰρ αἱ κινήσεις. περαίνονται E δὲ διὰ τοῦ ἕλκειν καὶ ἀνιέναι. δεῖ οὖν τοιαύτης ὑπηρεσίας καὶ ἰσχύος. ἡ δὲ καρδία, καθάπερ εἴπομεν καὶ πρότερον, οἷον ζῶόν τι πέφυκεν ἐν τοῖς ἔχουσιν. ἔστι δὲ ἀνόστεος πάντων, *ὅσα καὶ ἡμεῖς τεθεάμεθα,* πλὴν τῶν ἵππων, καὶ γένους τινὸς βοῶν. τούτοις δὲ διὰ τὸ μέγεθος, οἷον ἐρείσματος χάριν ὀστοῦν ὑπέστη, καθάπερ καὶ τοῖς ὅλοις σώμασι. κοιλίας δ᾽ ἔχουσιν αἱ μὲν τῶν μεγάλων ζῴων, τρεῖς· αἱ δὲ τῶν ἐλαττόνων, δύο· μίαν δὲ πᾶσαι· δι᾽ ἣν δ᾽ αἰτίαν, εἴρηται. δεῖ γὰρ εἶναι τόπον τινὰ τῆς καρδίας καὶ ὑποδοχὴν τοῦ πρώτου αἵματος.

A Sanguinem autem primò effici in corde, ſæpe iam diximus. Sed cùm duæ venæ ſint principales, altera maior, altera minor, aortáque appellata, quæ ſparſa ramorum ſerie cæteras minores venas producant, atque inter ſe differant, vt poſthac exponemus: melius ſanè eſt, initia quoque earum eſſe diſtincta. Quod fieri poteſt, ſi ſanguis diuerſus diſtinctuſque ſit: quam ob rem vbi fieri poteſt, ſanguinis conceptacula duo habentur. Fieri autem id poteſt in magnis: ſunt enim corda eorum ampliora. Sed melius tres eſſe ventriculos, vt vnum commune principium ſit: medium autem & impar principium eſt. Itaque magnitudo amplior B ſubinde deſideratur. Vnde fit vt quæ maxima ſint, triplicem ventriculum habeāt. Dexter plurimum ſanguinis, & calidiſſimum continet: quamobrem pars corporis dextra calidior: ſiniſter parum, idque frigidiſſimum: medius mediocrem, tum copia, tum calore, ſed puriorem. Principium enim quàm maximè quieſcere debet: tale autem erit, ſi ſanguis purus & mediocris, tum copia tum calore ſit. Quinetiam articulationem quandam rimis ſuturiſve capitis ſimilem habere viſuntur, quanquam non ita conſtant, vt quod ex pluribus ſit compactum, ſed (vt modò dixi) articulationem potiùs oſtendunt. Sunt articulatiora corda C eorum quæ ſenſu meliùs valent: inarticulatiora, eorum quæ ſenſu hebetiori ſunt, vt ſuum. Diſcrimina cordis, quæ amplitudine, exiguitate, duritia, mollitia exiſtant, vel ad mores pertineant aliquatenus. Quæ enim ſenſu hebeti ſunt, cor habent durum & ſpiſſum: quæ autem ſenſu valent, molliùs. Pauida etiam ſunt, quibus cor grandius: audentiora fidentioráque, quibus minus aut mediocre. Affectus enim, qui accidit ex metu, iam in iis præeſt, quoniam calorem proportione cordis non habeant, ſed *parum caloris in magno conceptaculo exoleſcat: itaque ſanguis frigidior* ſit. Cor magnum proportione, lepori, ceruo, muri, hyænæ, aſino, pantheræ, muſtelæ, & reliquis fe- D rè omnibus, quæ apertè timida ſunt, aut propter metum malefica. Simile in venis atque in ventriculis cordis euenit: ſunt enim frigidiores, & venæ ampliores, & ventriculi ampliores. Nam vt *in paruo & in magno domicilio tantundem ignis* nō æquè calefacit: ſed minùs in magno: ſic in his calor non pariter agit. Vas enim tam vena quàm vētriculus eſt. Itē motus alieni calidum quodque refrigerant. Plus autem ſpiritus in amplioribus eſt, magiſque valet: quamobrem nullum ex iis quæ venis aut ventriculis ſunt amplioribus, obeſum per carnem opimúmque eſt: ſed quæ ita pingueſcant, aut omnia, aut maxima parte venis in- E certis, paruóque ventriculo eſſe cernuntur. Cor ſolum viſcerum, atque omnino partium corporis nullum vitium patitur graue, idque rectà ratione. Cùm enim principium corrumpitur, nihil eſt quod cæteris, quæ inde pendeant, præbere auxilium poſſit. Indicium, vt nullum affectum cor patiatur, quod in nulla hoſtia cor ita affectum viſum adhuc eſt, vt in cæteris viſceribus cernitur. Renes enim ſæpenumero calculis, & pannis, & papulis referti videntur, atque etiam iecur, & pulmo, ac potiſſimùm lien. Multa etiam alia vitiorum genera euenire in iis videmus. Sed tamen circa arteriam pulmonis, & qua iecur annectitur venæ maiori, perexiguè ita accidit, idque ratione rectà: hac enim maximè cordi aſſociantur.

At verò quæ morbo vitiiſque eiuſmodi pereunt animalia, iis diſſectis, affectus morboſi in corde cõſpiciuntur. Sed de corde qualenam ſit, & cuius gratia, & quam ob cauſam innctum animalibus ſit, hæc dixiſſe ſatis eſt.

CAPVT V.

De venis, & earum loco in corporibus eorum animantium, quæ ſanguine prædita ſunt.

SEquitur, vt de venis diſſeramus, videlicet de maiori, & de aorta. Hæ nanque ex corde primæ recipiunt ſanguinem: reliquæ earum ſoboles ſunt. Igitur ſanguinis gratia eas eſſe, dictum iam eſt. Humor enim conceptaculum quiſque deſiderat: venarum autem genus, conceptaculum, & vas eſt. Itaque ſanguis in iis, quaſi in vaſe, eſt. Sed quamobrem duæ ſint, & de eadem origine in omnes corporis partes diſcurrant, explicandum nunc eſt. Cauſa, vt principium vnum, & ab vno melius ſit, quòd animam ſentiẽtem vnam actu habeant omnia. Hinc enim pars etiam quæ eam animam primò contineat, vna eſt, tum potentia: tum actu, in iis quæ ſanguinem habent. At in nonnullis eorum quæ ſanguinẽ carent, actu duntaxat: quamobrem caloris quoque originem in eodem tantiſper eſſe neceſſe eſt. Hæc eadem cauſa eſt etiam, vt ſanguis humidus ſit, & calidus. Cùm igitur vna in parte ſit principium ſenſus & caloris, ſanguis etiam ex vno ſuam originem ducit: vnitate autem ſanguinis fit, vt venarum etiam capita ex vno eodémque oriantur. Duæ autem numero ſunt, quoniam corpora animalium, quæ ſanguinem habent, & gradiuntur, bipartita ſint. Hæc enim omnia parte priori & poſteriori, dextra & ſiniſtra, ſuperiori & inferiori diſtinguuntur. Quanto autem nobilior ac principalior pars prior, quàm poſterior eſt, tanto vena maior præſtantior eſt altera, quam aortam vocari diximus. Altera enim in priora, altera in poſteriora diſcurrit: & altera in omnibus ſanguine præditis habetur apertè, altera in nonnullis aut obſcurè, aut incertè. Cauſa verò vt venæ in omnes corporis partes digerantur, quòd ſanguis, aut quod vicem ſanguinis tenet, totius corporis materia eſt, quæ in vena aut in vicario venæ continetur. Sed quonam modo & ex quo animalia nutriantur, & quomodo ex ventre capiant alimentum, cùm de generatione agitur, aptiùs & ſpectari & explicari poteſt. Cùm autem partes ex ſanguine omnes conſiſtant, vt diximus, venarum riui in omnes corporis partes ratione rectà expanduntur. Sanguinem enim fundi per omnia adeſſeque omnibus oportet: ſiquidem partes quæque ex eo conſiſtunt. Et vt in hortis rigandis de vna origine fontéque vno aqua riuis permultis diducitur, aliique ab aliis ductus ſubinde excipiunt, quovſque humor in omnes partes deueniat: atque etiam vt in fabricis per totam fundamentorum deſcriptionem lapides apponuntur: videlicet ea ratione, quòd ſata hortorum humoris beneficio naſcantur, fundamenta ex lapidibus condantur: ſic Natura ſanguinem per totum corpus cenſuit deriuandum, cùm is omnium materia ſit. Patet hoc in iis quæ maximè extenuentur: nihil enim niſi venæ apparent: vt in vitineis, & ficulnis, & reliquis generis eiuſdem frondibus:

ὅσα δὲ διὰ νόσους καὶ τοιαῦτα πάθη φαίνεται τελευτῶντα τῶν ζῴων, τούτοις ἀνατεμνομένοις φαίνεται περὶ τὴν καρδίαν νοσώδη πάθη. καὶ περὶ μὲν τῆς καρδίας ποία τις, καὶ τίνος ἕνεκεν, καὶ διὰ τὴν αἰτίαν τοῖς ἔχουσιν ὑπάρχει, τοσαῦτ' εἰρήσθω.

Περὶ πνεύμονος.

Histor. anim. li. 2. c. 16. & 17.

ΠΝεύμονα μὲν οὖν ἔχει διὰ τὸ πεζὸν εἶναί τι γένος τῶν ζῴων. ἀναγκαῖον μὲν γὰρ γίνεσθαι τῷ θερμῷ κατάψυξιν. ταύτης δὲ δεῖται θύραθεν τὰ ἔναιμα τῶν ζῴων· θερμότερα γάρ. τὰ δὲ μὴ ἔναιμα, καὶ τῷ συμφύτῳ πνεύματι δύναται καταψύχειν. ἀνάγκη δὲ καταψύχειν ἔξωθεν, ἢ ὕδατι, ἢ ἀέρι.

A iis enim areſcentibus, venæ tantummodo relinquuntur. Cuius rei cauſa eſt, quòd ſanguis, & quod ſanguini proportionetur, potentia ſit corpus, & caro, quod iis proportione reſpondeat. Igitur vt in adaquatione ſulci altiores amplioréſque durant, minimi autem primi, ac celeriter limo obducto aboleſcunt, rurſúſque deducto apparent: ſic venæ ampliſſimæ durant, minimæ autem primæ actu carnes efficiuntur, quanquam potentia nihilo minùs venæ ſint: quam ob rem etſi caro extat, ſanguis tamen inducto vulnere vndique effluit. Atqui ſine vena ſanguis eſſe non poteſt. Vena autem nulla manifeſta eſt, quo modo neque riuorum foſſeolæ patent priùs quàm limus eximatur. B Procedunt venæ in minores ſubinde ex amplioribus, quouſque arctiores reddantur, quàm vt ſanguinem tranſmittere poſſint: quamobrem exitus ſanguini nullus patet: quanquam excremento vaporis humidi, quem ſudorem vocamus, ſatis pateat: ſed ne illi quidem niſi corpore calefacto, & venularum clauſulis patefactis. Iam nonnullis accidit vt cruentum quoddam excrementum ſudarent propter vitiatum corporis habitum, ſcilicet cùm corpus laxum fluxúmque eſſet, ſanguíſque præ cruditate humeſceret imbecillitate caloris, qui exiguus venulis incluſus concoquere non poſſet. Omne enim quod aquę & terræ commune eſt, craſſeſcere, cùm concoquitur, dictum iam eſt. C Alimentum autem & ſanguis miſtum ex iis eſt: calor verò concoquere non poteſt, non modò quia exiguus eſt, verumetiam præ nimia cibi aſſumpti copia. Fit enim exiguus comparatione tanti cibarij. Duplex autem exuperantia cibi eſt: aut enim quantitate, aut qualitate, id eſt, modo, & genere: quippe cùm cibus non æquè concoctu facilis quiſque ſit. Fluit autem ſanguis potiſſimùm per ampliores venarum foramina. Quamobrem è naribus, gingiuis, & ſede, interdum etiam ex ore profluuium ſanguinis fit ſine vllo dolore: non per vim, vt ex arteria. Diſtant ſpatio inter ſe ſupernè vena maior, & aorta: infrà mutatis vicibus tendunt, atque ita continetur corpus. Progredientes enim D ſcinduntur iuxta bifidam crurum partitionem: atque altera, ex parte priori in poſteriorem ſe porrigit, altera, ex poſteriori in priorem, eodémque concurrunt. Vt enim ea quæ implexa ſunt, continentiora conſtant: ſic vicibus venarum mutatis, partes priores corporibus cum poſterioribus copulantur. Simile etiam à corde locis ſuperioribus fit. Sed qui diligentiùs noſſe velit, quemadmodum venæ inter ſe habeant, ſpectare id tum per diſſectionem tum etiam per commentationem, hoc eſt, hiſtoriam animalium, debet. Atque de venis & corde hactenus. De reliquis etiam viſceribus hac eadem via & ratione conſiderandum eſt. E

CAPVT VI.

De pulmone, & eius forma: quibus item inſeritur, quibus non.

PVlmo ideo habetur, quia genus animalium quoddam pedeſtre eſt. Calorem enim refrigerari neceſſe eſt: quem extrinſecus ea quæ habent ſanguinem, deſiderant, ſunt enim calidiora: at quæ ſanguine carent, vel ſuo natiuo ſpiritu ſatis refrigerari poſſunt. Extrinſecus autem vel aëre, vel aqua refrigerare neceſſe eſt.

Quam

Quamobrem piſcium nullus habet pulmonem, ſed pro eo branchias obtinent, vt cùm de ſpiratione ageremus, retulimus. Aqua enim refrigerantur, vt aëre, quæ ſpirant. Quamobrem omnia, quæ ſpirant, habent pulmonem. Spirant pedeſtria omnia, & aquatilium nonnulla: vt balæna, & delphinus, atque etiam cete omnia, quæ reſlant. Compluta enim natura ancipiti ſunt, tum ex terreſtrium tum ex aquatilium numero: nam & eorum quæ terra ſuſtentantur, aëremque arripiunt, quædam in humore maximam temporis partem conſumunt, propter ſui corporis temperamentum: & eorum, quæ in humore degunt, nonnulla tantum terreſtris naturæ ſibi mutuantur, vt niſi interdum ſpirent, viuere nequeant. Pulmo igitur ſpirandi officio delegatus eſt, qui originé quidem ſui motus accipit ex corde, ſed ſua tum amplitudine tum inanitate, aditum ſpiritui patefacit: cùm enim attollitur, influit ſpiritus: cùm contrahitur, effluit. Ad cordis palpitationem pulmonem ſpectare, malè opinatum eſt: cor enim homini (propè dixerim) animalium vni palpitat, quia homo ſolùm ſpe rei futuræ expectatioñeque moueatur. In pluribus etiam cor laxo interuallo diſtat à pulmone, ſitúmque ſuperiùs tenet, vt nihil ad cordis palpitationem conferat pulmo. Differentia pulmonis varia eſt. Aliis enim ſanguineus, magnúſque: aliis minor, fungoſus, exanguis. Quæ viuipara ſunt, maiorem & copia refertum ſanguinis habent, propter calorem ſuæ naturæ ampliorem. Quæ contrà ouipara ſunt, exiguum, & ſiccum, ſed aptum ampliari ac extumeſcere, cùm inflatur: qualis eorum eſt quæ ex terreſtribus quadrupedes ouiparę ſunt, vt lacertorum, & teſtudinum, & cæterorum generis eiuſdem. Volucrum etiam natura, quas aues appellamus, eòdem pertinet. Omnium enim earum pulmo fungoſus, & *ſpumæ ſimilis* eſt. *Spuma* enim facta diffuſáque, ex amplo tumore in exiguum, reſidet, & pulmo earum exiguus, membranæque ſimilis eſt: quamobrem hæc omnia parum ſitiunt, & parum bibunt: diu etiam aquam demerſa tolerant. Satis enim ab ipſo pulmonis motu ſpiritali inanique refrigerantur diutiùs, vt quæ parum caloris habeant. Accedit ad hæc, vt magnitudo corporis eorum propè omnium minor viuiparis ſit. Calor enim eſt, quod vim obtineat augendi. Sanguinis autem copia caloris indicium eſt: corpora etiam meliùs erigit. Quamobrem homo cæteris erectior omnibus eſt, & viuipara reliquis quadrupedibus erectiora incedunt. Nullum enim viuiparum vel expes, vel ambulans, æquè latibula petit. Pulmo igitur ſpirandi gratia datus omnino eſt, ſed exanguis: taliſque cuiuſdam animalium generis cauſa eſt: verùm communi eorum nomine vacat, nec, vt auium genus, nomen obtinuit. Itaque vt auem eſſe, ex aliquo eſt: ſic in eſſentia illorum ineſt vt habeant pulmonem.

* Fort. εὐφύλακτον,) ὥσπερ ἀ. οὖσα τ. σώματος,

A pro ſimplici duo ſimili prædita natura eſſe vtrumque videtur. Sunt tamen omnia bipartita: cuius rei cauſa eſt, corporis diſpoſitio, quæ bipartita quidem ſit, ſed in vnum initium coeat, conſummetúrque. Aut enim ſuperiore & inferiore, aut priore & poſteriore, aut dextra & ſiniſtra parte diſtinguitur. Quamobrem cerebrum quoque omnium bipartitum eſſe ſibi vult, atque etiam ſenſorium vnumquodque. Eademque ratione cor ventriculis ſuis diſtinguitur. Pulmo verò in ouiparis adeò dirimitur, vt ea binos habere pulmones videantur. Renes bipartitos eſſe nulli dubium eſt. De iecore & liene iure ambiges. Cuius rei cauſa eſt, quod in iis quæ lienem B habere neceſſe eſt, lien ipſe quaſi iecur adulteratum eſſe videtur: in iis autem quæ lienem habere non neceſſe eſt, vt exiguus admodum lien, velvti notæ gratia habetur, ſic hepar bipartitum apertè eſt, & pars altera ad dextram, altera, quæ minor eſt, ad ſiniſtram ſitum tenere expetit. Quinetiam in ouiparis quamuis minùs quàm in viuiparis, apertum ſit, tamen in nonnullis æquè diuiſum patet, vt locis quibuſdam lepores bina iecinora habere videntur: quemadmodum in genere piſcium, tum alij quidam tum cartilaginei iecur duplicatum habere videntur. Sed quoniam iecur parte dextra potiùs ſitum eſt, ideo natura lienis adhibita eſt. Itaque quanquam C neceſſariò quodammodo eſt, tamen non admodum omnibus animalibus. Cauſa igitur vt viſcerum natura bipartita ſit, quemadmodum diximus, dextrum ſiniſtrúmque eſt: vtrunque enim ſibi ſimile expoſcit, quomodo ea quoque ſimilem geminámque habere naturam expetunt. Vt enim illa, quanuis gemina eôdem coeunt, ſic viſcerum ſingula, quanuis gemina, nexu eodem continentur. *Sunt viſcerum quædam ſupra ſeptum, quædam infra: ſed omnium vſus communis* venarum gratia eſt, videlicet quo venæ, vt pote penſiles, ſuſtineri, & copula viſcerum ſtabiliri ad corpus poſſint: quaſi enim anchoræ per partes deductas iaciuntur ad corpus: verbi gratia, de vena maiore ad iecur & lienem deuenitur. Et D enim viſcerum eorum natura, quaſi clauus corpori eam affigit, ſcilicet iecur, & lien, in latera corporis venam maiorem affirmant: ad hæc enim ſola rami ab illa mittuntur. Renes autem in partem poſteriorem eandem continent, quanquam ad renem vtrumque non modò de vena maiori, ſed etiam de aorta pertendit vena. Hæc viſcerum beneficio inſtitutioni animalium præſtantur. Atque etiam iecur & lien iuuant ad cibi concoctionem: quòd enim ſanguinea ſunt, calidam habent naturam. Renes ad excrementum, quod in veſicam ſecedit, opitulantur. Sed enim cor & iecur omnibus animalibus neceſſaria ſunt: E alterum propter caloris originem, (locum enim adeſſe aliquē, quaſi lares focúmque oportet, quo naturæ fomites, & primordia ignis natiui contineantur, & ſeruentur, eundémque tutum eſſe, velvti arcem corporis totius, neceſſe eſt) alterum, iecur dico, cibi concoquendi gratia adeſt. Et quidem nullum ſanguine preditum iis duobus carere poteſt: quamobrem omnia, quibus ſanguis, duo hæc viſcera habent. Quæ autem ſpirant, tertium etiam habent pulmonem. Lien per accidens neceſſarius eſt, quomodo excremēta tū alui tū veſicæ. Ex quo fit vt in nōnullis deficiat magnitudine:

vt volucrum quibuſdam, quæ ventriculum habēt A feruentiorem, velvt columbo, accipitri, miluo. Quinetiam in ouiparis quadrupedibus pari modo hoc percipi poteſt: habent enim perquam exiguum. Multis etiam ſquamatis exiguus, quæ veſica etiam carent, quoniam excrementum per carnem laxiorem in pinnas & ſquamas tranſeat. Lien enim vapores vacantes diuertit, & attrahit ex ventriculo, & concoquere eos poteſt, vt qui ſanguineus ſit. Quòd ſi plus excrementi ſit, parúmque caloris habeat lien, corpus præ alimento immodico langueſcit. Et propter confluuium huc humoris, ſæpe accidit, vt lienoſis ventres præduri efficiantur, quo modo iis qui ſupra modum min- B gunt, ex diuerticulo humoris. At quibus parum excrementi conſiſtit, vt auibus, atque piſcibus, iis aut non magnus, aut notæ gratia duntaxat habetur. Quadrupedibus etiam ouiparis lien exiguus, rigidus, & reni ſimilis eſt, ſcilicet ob eam rē, quòd pulmo eorum fungoſus eſt, parúmque potus deſiderant: & quantum excrementi conſtiterit, in corpus, & corticem vertitur, vt auibus in pennas. Sed in iis quæ veſicam habent, & pulmonem ſanguineum, humidus eſt, tum ob eam quam modò diximus, cauſam, tum quia partis ſiniſtræ natura humidior & frigidior eſt. Contrarium enim quodque ad ſibi cognatum ordinem diſpoſitum C eſt: verbi gratia, dextrum ſiniſtro contrarium eſt, & calidum contrārium frigido: itaque modo, quem diximus, ſociantur. Renes nulla neceſſitate habentur, ſed vt meliùs & locupletiùs ſit. Humoris enim excrementitij gratia, qui confluit in veſicam, adiuncti ſunt ex ſua natura: in quibus plus huiuſcemodi ſedimenti fieri ſolet, vt veſica meliùs ſuo munere fungeretur. Sed cùm vſus eiuſdem cauſa renes atque veſica habeantur, diſſerendum nunc de veſica eſt, prætermiſſa ſequente partium enumeratione. *De præcordiis enim* nondum docuimus, quæ pars viſcerum rationi coniuncta eſt.

CAPVT VIII.

Quibus animalibus data ſit veſica, déque eius officio & ſita in corpore animantium.

VEſica non omnibus animalibus data eſt, ſed iis tantùm tribuere voluiſſe Natura videtur, quæ pulmonem haberent ſanguineum: ídque recta ratione. Caloris enim exceſſu, qui in eo ipſo membro continetur, ſitibunda hæc omnium præcipuè animalium ſunt, cibique indigent, non modò ſicci, verùmetiam humidi copioſioris. Itaque excrementum etiam copioſiùs contrahi neceſſe E eſt: nec ſolùm tantum quantum à ventre concoqui excernique cum eius excremento poſſit. Ergo huius quoque excrementi conceptaculum quoddam haberi neceſſe eſt: quamobrem omnia, quæ talem habent pulmonem, veſicam obtinent: quæ autem tali carent pulmone, & vel parum bibunt, quoniam fungoſum pulmonē habeant, vel omnino potum aſſumunt, non potus, ſed cibi gratia, vt inſecta, & piſces, vel etiam quæ penna, aut ſquama, aut cortice teguntur, hæc tum propter humoris aſſumpti exiguitatem, tum quia quantum excrementi cōtrahitur, in ea ipſa abſumatur, veſica omnia carēt, excepta teſtudine inter corticata: in hac enim tantummodo natura caſtrata non eſt.

Περὶ νεφρῶν.

Hiſtor. lib. 1. c. vlt. & 2. 16.

Ὁμοίως δ' ἔχει καὶ περὶ νεφρῶν. οὐδὲν γὰρ νεφροὺς οὔτε τῶν πτερωτῶν καὶ λεπιδωτῶν ἔχει, οὔτε τῶν φολιδωτῶν, πλὴν αἱ θαλάττιαι καὶ αἱ χερσαῖαι χελῶναι· ἀλλ' ὡς τῆς εἰς τοὺς νεφροὺς* τεταγμένης σαρκὸς οὐκ ἐχούσης χώραν, ἀλλὰ διεσπαρμένης εἰς πολλά, πλατέα νεφροειδῆ ἐν ἐνίοις τῶν ὀρνίθων ἐστίν. ἡ δ' ἀμμύς, οὔτε κύστιν, οὔτε νεφροὺς ἔχει. διὰ μαλακότητα γὰρ τοῦ χελωνίου, εὐδιάπνοον γίνεται τὸ ὑγρόν. ἡ μὲν οὖν ἀμμὺς διὰ ταύτην τὴν αἰτίαν οὐκ ἔχει τῶν μορίων οὐδέτερον. C τοῖς δ' ἄλλοις ζῴοις, τοῖς πνεύμονα τοῖς ἔχουσιν ἔναιμον, ὥσπερ εἴρηται, συμβέβηκε πᾶσιν ἔχειν νεφρούς. καταχρῆται γὰρ ἡ φύσις ἅμα τῶν φλεβῶν χάριν, καὶ πρὸς τὴν τοῦ ὑγροῦ περιττώματος ἔκκρισιν. φέρει γὰρ εἰς αὐτοὺς πόρος ἐκ τῆς μεγάλης φλεβός. ἔχουσι δ' οἱ νεφροὶ πάντες κοῖλον, ἢ πλέον, ἢ ἔλαττον· πλὴν οἱ τῆς φώκης. οὗτοι δ' ὅμοιοι τοῖς βοείοις ὄντες, στερεώτατοι πάντων εἰσίν. ὅμοιοι δὲ καὶ οἱ τοῦ ἀνθρώπου τοῖς βοείοις. εἰσὶ γὰρ ὥσπερ συγκείμενοι ἐκ πολλῶν νεφρῶν μικρῶν καὶ οὐχ ὁμαλεῖς, ὥσπερ οἱ τῶν προβάτων καὶ τῶν ἄλλων τῶν τετραπόδων. διὸ καὶ τὸ ἀρρώστημα τοῖς ἀνθρώποις δυσαπάλλακτον αὐτῶν ἐστιν, ἂν D ἅπαξ νοσήσωσι. συμβαίνει γὰρ ὥσπερ πολλοὺς νεφροὺς νοσούντων, χαλεπωτέραν εἶναι τὴν ἴασιν, ἢ τῶν ἕνα νοσούντων. ὁ δ' ἀπὸ τῆς φλεβὸς τείνων πόρος, οὐκ ἀποτελευτᾷ πρὸς τὸ κοῖλον τῶν νεφρῶν, ἀλλ' εἰς τὸ σῶμα τῶν νεφρῶν καταναλίσκεται. διόπερ ἐν τοῖς κοίλοις αὐτῶν οὐκ ἐγγίνεται αἷμα, οὐδὲ πήγνυται τελευτώντων. ἐκ δὲ τοῦ κοίλου τῶν νεφρῶν, φέρουσι πόροι ἄναιμοι εἰς τὴν κύστιν δύο νεανικοί, ἐξ ἑκατέρου εἷς, καὶ ἄλλοι ἐκ τῆς ἀορτῆς ἰσχυροὶ καὶ συνεχεῖς. ταῦτα δ' ἔχει τὸν τρόπον τοῦτον, ὅπως ἐκ μὲν τῆς φλεβὸς τὸ περίττωμα τῆς ὑγρότητος βαδίζῃ εἰς τοὺς νεφρούς· ἐκ δὲ τῶν νεφρῶν ἡ γινομένη ὑπόστασις, διηθου- E μένων τῶν ὑγρῶν, διὰ τοῦ σώματος τῶν νεφρῶν, εἰς τὸ μέσον συρρέῃ, οὗ τὸ κοῖλον οἱ πλεῖστοι ἔχουσιν αὐτῶν. διὸ καὶ δυσωδέστατον τοῦτο τῶν σπλάγχνων ἐστίν. ἐκ δὲ τοῦ μέσου, διὰ τούτων τῶν πόρων ἤδη μᾶλλον εἰς τὴν κύστιν ὡς περίττωμα ἀποκρίνεται. καθώρμισται δ' ἡ κύστις ἐκ τῶν νεφρῶν· τείνουσι γάρ, ὥσπερ εἴρηται, πόροι ἰσχυροὶ πρὸς αὐτήν. οἱ μὲν οὖν νεφροί, διὰ ταύτας τὰς αἰτίας εἰσί, καὶ δυνάμεις ἔχουσι τὰς εἰρημένας. ἐν πᾶσι δὲ τοῖς ἔχουσι νεφρούς, ὁ δεξιὸς ἀνώτερος τοῦ ἀριστεροῦ ἐστι. διὰ γὰρ τὸ τὴν κίνησιν εἶναι ἐκ τῶν δεξιῶν, καὶ ἰσχυροτέραν διὰ ταῦτ' εἶναι τὴν φύσιν τῶν δεξιῶν,

CAPVT IX.

De renibus, & eorum officio, quibúſque animalibus dati ſint.

RENum etiam ratio ſimilis eſt. Nullum enim pennatum, nullum ſquamatum, nullum corticatum, excepta teſtudine, renes habet, quanquam in nonnullis auibus carunculæ quędam ſint latiuſculæ, ſpeciem renum oſtendentes, quaſi ea caro, quæ renibus delegata eſt, locum non habeat, ſed in plura diſperſa ſit. Genus tamen teſtudinis, quam lutariam vocant, & veſica, & renibus caret. Fit enim propter eius mollitudinem tegminis, vt humor facilè diffletur. Lutaria igitur propter eam cauſam neutram earum partium habet. Cæteris animalibus, quæ ſanguineum, vt dictum eſt, habent pulmonē, renes omnibus natura tribuerat: quippe quæ ſimul & ad venas continendas iis vteretur, & ad humorem ſuperuacuum excernendum abuteretur: meatus enim de vena maiore ad renes vſque perfertur. Cauum in omnibus ineſt renibus, aut amplius, aut arctius, præterquam in vitulo marino: eius enim renes bubulis ſimiles, omnium firmiſſimi ac ſolidiſſimi ſunt. Hominum etiam renes bubulis ſimiles ſunt, quippe qui tanquam compoſiti ex multis renibus exiguis conſtent. Neque æquabiles ſunt, quomodo renes ouium cæterarúmque quadrupedum habentur. Quo fit vt morbus eorum difficilè curari hominibus poſſit, etiam ſi nuper ægrotare incœperint. Accidit enim vt quaſi multis renibus laborent, difficiliùs remedium adhibeatur, quàm ſi vno infeſtarentur. Meatus, qui ex vena pertendit, non cauum ſubit renum, ſed in eorum corpus abſumitur: quamobrem in cauis eorum nihil ſanguinis* continetur, neque concreſcit mortuis. Meatus verò de cauis renum exangues duo inſignes ad veſicam feruntur, ſinguli ex ſingulis: atque etiam alij ex vena aorta validi frequentéſque eòdem deueniunt. Quæ ita natura inſtituit, vt ex vena humoris excrementum ad renes veniret: in renibus autem ſedimen, humoribus per corpus renum colatis, in medium conflueret, vbi plurimi cauum continent. Quo fit vt renes omnium maximè viſcerum fœdum reddant odorem. Tum deinde ex medio per eos meatus in veſicam iam magis magiſque tanquam excrementum ſecernitur atque reiicitur. Veſica ipſa ex renibus dependet: tendunt enim in eā, vt dictum eſt, validi meatus. Renes his de cauſis habentur, & virtutes, quas diximus, obtinent. Omnibus autem, quæ renes habent, dexter ſuperior ſiniſtro eſt. Quòd enim motus ex parte dextra proueniat, naturáque dextræ proinde validior ſit,

ideo partes omnes mouendi cauſa vergant ad ſitum potiùs ſuperiorem oportet. Nam & ſupercilium dextrum magis attollitur, & arcuatum magis quàm ſiniſtrum, habetur. Tangitur in omnibus à iecore dexter, quòd elatior eſt. Iecur enim parte dextra poſitum eſt. Pingue pleniùs renes ambit, quàm reliqua viſcera. Quod & neceſſariò fit, cùm excrementum per renes tranſmiſſum coletur. Quantum enim relinquitur ſanguinis puri, facilè concoqui poteſt. Finis autem probæ concoctionis ſanguineæ, adeps, & ſeuum eſt. Vt enim in combuſtis ſiccis, velut cinere, aliquid ignis relinquitur: ſic in concoctis humidis nonnihil caloris, qui effecerit, relinquitur. Quo fit vt pingue leue ſit, & humoribus reſideat, atque fluitet. Fit non intra ipſos renes, quoniam denſum hoc viſcus ſit, ſed circum renes eſt, videlicet aut adeps in iis quæ pingueſcere adipe ſolent, aut ſeuum in iis quæ ſeuo opimantur. Quorum differentia alio loco explicata eſt. Neceſſariò igitur ea de cauſa pingueſcunt, ſcilicet ex iis quæ neceſſariò eueniunt animalibus, quæ renes habere debuerunt: ſalutis autem cauſa, vt renum natura calida ſit. Cùm enim poſiti loco vltimo ſint, teporem deſiderant ampliorem. Tergum enim carnoſum eſt, vt cor, & reliqua partis ſuperioris viſcera protegat. At lumbi carne vacant, vt flecti poſſint: omnium enim flexus excarnes ſunt. Itaque vice carnis adipe renes obſepti muniuntur. Quinetiam humorem meliùs diſcernunt, & concoquunt ſua pinguedine. Pingue enim omne calidum eſt: calor autem concoquit. Renes his de cauſis pingui operiuntur. Dexter omnibus minùs pinguis. Cuius rei cauſa eſt, quòd natura dextræ partis ſiccior eſt, & mobilior. Motus autem contrarius eſt: liquat enim pinguedinem, & conſumit. Sed cùm cæteris animalibus renes habere pingues proficiat, & plerunque totos obeſos habeant, ouibus hoc lethale eſt. Quo fit vt quanquam pingues admodum ſint, tamen aliquid deſit, & ſi non vtrique, dextro quidem. Cauſa cur hoc ſolis, aut maximè ouibus accidat, quòd iis quæ adipe pingueſcere ſolent, pingue humidum eſt. Itaque nõ ęquè flatus intercluſi dolorem faciunt, quod cauſa ſyderationis eſt. Quamobrem hominibus etiam, qui vitio renum laborant, quanquam pingueſcere iuuat, tamen ſi pingues admodum efficiantur, dolores profectò accidunt lethales. Cæteris autem etſi ſeuo pingueſcunt, tamen ſeuum minùs denſum quàm ouibus, fit. Copia etiam ſeui, genus ouium longè excedit. Omnium enim animalium oues celeri renum obeſitate opplentur. Itaque humore flatúque intercluſo, celeriter præ ſyderatione intereunt. Nanque per venam aortam, & maiorem, ſtatim vitium ad cordis ſedem transvehitur. Meatus enim ex iis venis ad renes continui pertendunt. Sed de pulmone, de corde, de iecore, de liene, & de renibus, dictum iam eſt.

A vt modò dixi, vocatur. Habent hoc omnia, quæ ſanguinem obtinent, æquè, vt cor & iecur: cuius rei cauſa eſt, quòd ideo habetur, vt ſedem cordis à ventre dirimat, videlicet vt animæ ſentientis origo inoffenſa ſeruetur, nec facilè occupetur exhalatione cibi, & caloris aduentitij copia. Hac enim cauſa natura intercipit præcordiorum quaſi parietis ſepiſque interuentu, diſtinxitque partem nobiliorem ab ignobiliori: in quibus ſuperioris inferioriſque ratio poſſet haberi. Superius eſt enim, cuius gratia reliqua ſint, quódque melius ſit: inferius autem, quod eius gratia ſit, & conceptaculum cibi neceſſarium. Anne- B ctitur hoc ſeptum ſiue cinctus coſtis parte ſui carnoſiore validioréque: media autem conſtat membrana exiliori. Ita enim & ad robur & ad prætentum commodius eſt. Contra calorem ſe efferentem hoc velvti ſobolem eſſe, argumentum ex iis quæ plerumque accidunt, ducitur: vbi enim propter vicinitatem attraxerint humorem calidum, atque excrementitium, continuò mentem ſenſúmque planè perturbant. Quamobrem phrenes appellantur, quaſi participes prudentiæ ſint. Atqui nullatenus participes ſunt, ſed quia propinquæ ſunt iis quæ vim obtinent illam (cordi enim prætenduntur) hinc mentis mutationem C aperiunt. Quamobrem tenues parte ſui media ſunt, non modò de neceſſitate, quòd cùm carnoſæ ſint, parte ſui coſtis admota, carnoſiores eſſe neceſſe ſit: verùm etiam vt minus vaporis excipiant. Nam ſi carne pleniore conſtarent, copiam vaporis & haberent, & traherent. Partem hanc calefactam celeriter ſenſum aperire indicat vel id quod titillatu euenit. Rident enim celeriter, qui titillantur, quia motus celeriter ad eum locum perueniat: qui quanquam leniter calefaciat, tamen aperit, & mentem mouet præter voluntatem. Cauſæ autem cur homo animalium vnus titilletur, & cutis tenuitas eſt, & quòd ſolus omnium animalium rideat. Eſt enim D titillatio riſus cauſa per eiuſmodi motum partis, quæ alam complet. Ictu etiam traiecta præcordia in prælijs riſum attuliſſe proditum eſt, ſcilicet calore, quem moueat vulnus. Hoc enim veriſimilius credi poteſt, quàm quod de capite referunt, vt abſciſſum loqui potuerit. Sunt enim qui hoc dicant, Homerúmque teſtem adhibeant, quaſi ob eam rem illud dixerit,

Ipſeque dum loquitur, miſcetur puluere vertex.

Non enim dum ipſe homo, ſed dum ipſe vertex, intelligi volunt. In terra Caria, res adeo pro vera habita eſt, vt reum quendam ex incolis egerint. Cùm enim Iouis Hoploſmij ſacer- E dos eſſet occiſus, & à quo non conſtaret, nonnulli ſeſe audiuiſſe retulerunt, capite præciſo dicente ſæpius,

Virum ſuper viro Cercidas occidit.

Itaque hominem, cui nomen Cercidas, in prouincia quæſierunt, compertúmque in iudicium duxerunt. Sed fieri non poteſt vt caput præciſa arteria, & ſine motu pulmonis loquatur. Nec apud barbaros, qui capita ſumma cum celeritate abſcindunt, tale quid vnquam eueniſſe accepimus. Adhæc, in cæteris animalibus cur id non aliquando fiat? Riſum enim iis nunquam præcordiis traiectis moueri conſentaneum eſt, cùm ridendi vi careant: at capite abſciſſo, ne ſuam vocem aliquando emittant, quidnam prohibeat?

A Corpus tamẽ detracto capite, progredi quoquam non temere credi poteſt. Nam ea quidem, quæ ſanguine carent, vel viuere diutius poſſunt truncata capite. Cuius rei cauſam alio loco docuimus. Sed cuiuſnam gratia ſingula viſcerum habeãtur, explicatum iam eſt. Extremis autem venarum interioribus hæc neceſſariò adiunguntur. Vaporem enim prodire, eúmque ſanguineum, neceſſe eſt: ex quo conſiſtente, concreſcentéque, viſcerum corpus contrahatur, & coagmentetur. Quapropter ſanguinea hæc ſunt omnia, & naturam ſibi conſimilem, cæteris diſſimilem habent.

προϊέναι δέ ποι τὸ σῶμα τῆς κεφαλῆς ἀφῃρημένης, οὐδὲν ἄλογον· ἐπεὶ τά γ' ἄναιμα, καὶ παράδοξον ζῆν πολὺν χρόνον. δεδήλωται δὲ περὶ τῆς αἰτίας ἐν ἑτέροις. τίνος μὲν οὖν ἕνεκεν ἐστιν ἕκαστον τῶν σπλάγχνων, εἴρηται. γέγονε δ' ἐξ ἀνάγκης ἐπὶ τοῖς ἐντὸς πέρασι τῶν φλεβῶν. ἐξιέναι τε γὰρ ἰκμάδα ἀναγκαῖον, καὶ ταύτην αἱματικὴν· ἐξ ἧς συνισταμένης, γίνεσθαι τὸ σῶμα τῶν σπλάγχνων. διόπερ αἱματικὰ καὶ αὐτοῖς μὲν ὁμοίαν ἔχουσι τὴν τοῦ σώματος φύσιν, τοῖς δ' ἄλλοις ἀνομοίαν.

CAPVT XI.

B *De membranis, & eorum officio.*

Membranis omnia viſcera includuntur. Pro tegmine enim opus eſt, quo illæſa ſeruentur, eóque leuiori. Membrana autem talis ſuapte natura eſt, quippe quæ & denſa ſit, vt arcere poſſit: & carne vacet, vt vaporem nec trahat, nec habeat: & tenuis prætendatur, vt leuis ſit, & nihil ponderis afferat. Maximæ inter membranas & robuſtiſſimæ ſunt, quæ cor aut cerebrum ambiunt. Idque optima ratione: hæc enim præcipuam tutelam deſiderant. Tutela enim partibus adhibenda principalibus eſt. Hæc autem principatum maximè vitæ obtinent.

CAPVT XII.

Non omnia viſcera omnibus animalibus ineſſe.

Habent animalium quædam omnem viſcerum numerum, quædam non omnem. Quæ ſint hæc, & quam ob cauſam, dictum iam eſt. Et variè verò hæc habentur: neque enim cor ſimile habent ea quæ corde prædita ſunt, neque aliud, propè dixerim, vllum. Iam enim iecur aliis multifidum eſt, aliis ſimplicius in eorum genere, quæ ſanguinem habent, & viuipara ſunt: ſed longè D magis piſcium iecinora, & quadrupedum, & ouiparorum, tum inter ſe ipſa, tum ab iis quæ modò diximus, diſſident. Auium iecur maximè ſimile eſt iecori viuiparorum: puro enim & ſanguineo colore exhilaratur, vt illud. Cuius rei cauſa eſt, quòd auium corpora difflari euaporatique optimè poſſint, nec multum habeant excrementi vitioſi. Quo etiam fit vt nonnulla ex viuiparis felle careant. Iecur enim ad temperiem ſanitatémque corporis multum confert: finis namque eorum in ſanguine potiſſimùm ſitus eſt: iecur autem omnium viſcerum excepto corde, ſanguine refertiſſimum eſt. At verò quadrupedum ouiparorum & piſcium iecinora, maxima parte pallidiuſcula ſunt, nonnullorum etiam vitiata omnino, vt corpora quoque eorundem prauum temperamentum ſortiuntur, velut rubetæ, teſtudinis, & ſimilium. Lienem biſulca inter cornigera habent rotundum, vt capra, ouis, & reliqua omnia: niſi aliqua pro ſua magnitudine auctiorem in longitudinem habeant, vt boues. At multifidis prolixus omnibus eſt, vt homini, cani: ſolipedibus autem medium tenet, & promiſcuus eſt. Partem enim alteram habet latam, alteram anguſtam, vt equo, mulo, aſino.

CAPVT XIV.

De inteſtino, & ventre, eorúmque officio, & locis concoctionis.

SVbeſt præcordiis venter, quà gula deſinit, ſi habetur: ſin minùs, ori adiungitur. Ventri inteſtinum annexum eſt. Sed quam ob cauſam partes has animalia habeant omnia, nulli dubium eſt. Cibum enim & ingeſtum recipere, & euaporatum eiicere, neque eundem locum eſſe ſibi concocti & excrementi, neceſſe eſt. Conceptaculum etiam adeſſe, in quo cibus mutetur, oportet. Pars enim alia cibum ingeſtum complecti, alia excrementum, materiámque ſuperuacuam capere debet: quarum actionum vt tempus diuerſum eſt,
C ſic loca etiam diuerſa haberi neceſſe eſt. Sed de iis aptiùs diſſeremus, cùm de generatione & alimento agetur. Nunc de differentia ventris, & partium eòdem pertinentium, conſiderandum eſt. Ventres enim nec magnitudine neque ſpecie ſimiles inter ſe ſunt: ſed quæ in ſanguineo genere vtrinque dentata & viuipara ſunt, hæc ſimplicem habent ventrem, vt homo, canis, leo, & reliqua, quorum pedes in plures digitos finduntur: & quæ aut ſolipeda ſunt, vt equus, mulus, aſinus: aut biſulca quidem, ſed vtraque parte dentata, vt ſus: niſi aliqua præ ſui corporis magnitudine, aut difficultate cibi non ad concoctionem idonei, ſed
D ſpinoſi, & lignei, multiplicem habeant, vt camelus: quemadmodum cornigera habent: quippe quæ non vtraque parte dentata ſint. Et camelus quidem (quanquam cornibus caret) ideo non supernè dentata eſt, quòd ei magis neceſſarium eſt, ventrem talem habere, quàm dentes priores. Cùm itaque ventrem ſimilem non vtrinque dentatis habeat, dentes etiam ſimili modo ſortitur, vtpote parum neceſſarios. Quinetiam cùm cibus durus ſpinoſúſque ſit, & tamen linguam eſſe carnoſam neceſſe ſit, natura dentium portione terrena ad palati callum atque duritiam abvſa eſt. Ruminat etiam camelus more cornigerorum, quoniam ventres ſimiles cornigeris habeat. Habent hæc ſingula plures ventres: vt ouis, capra, ceruus, & ſimilia, vt cùm officium oris non ſatis in molendo cibo adhibetur propter
E inopiam dentium, munus ventrium expleat, dum alius ab alio cibum recipit, ſcilicet primus inconfectum, ſecundus aliquantulum confectum, tertius pleniùs, quartus perquam plenè confectum. Ita fit vt genus hoc animalium receptacula cibi habeat plura, quibus nomina hæc aut indita ſunt, aut indere licet, venter, araneum, ſiue reticulum, omaſum, abomaſum. Quonam modo hæc ſe habeant, tum ſitu tum etiam ſpecie, ex hiſtoria diſſectionéque animalium petendum eſt.

Hęc eadem cauſa eſt vt auiũ quoque gęnus partẽ, qua cibum recipit, variè habeat. Cùm enim id oris officio, quod cibo conficiendo tribuitur, omnino careat, vt quod nullos habeat dentes, & neque quo dirimat, neque quo molat cibum, obtineat, idcirco aut ante ventrem ſinum habent, qui ingluuies appellatur, pro oris officio, aut gulam patentiorem, aut ante ventrem partem aliquam gulæ ipſius ſinuoſam, in qua cibum recentem & inconfectum recondant, aut ventris ipſius partem aliquam prominentem, aut etiam ventrem ipſum validum, & carnoſum, vt cibum immolitum diu continere & concoquere poſſint. Bonis enim viribus ventris & calore, Natura defectum oris rependit, & compenſat. Sunt quæ nihil ex iis habeant, ſed ingluuie prolixa vtantur, ſcilicet ea quibus crura prælonga & læuia ſunt, propter cibi humiditatem. Cauſa igitur eſt, quòd cibus iis omnibus moli & confici facilè poſſit, vt eorum ventres per facilem cibi concoctionem humeſcant. Piſcium generi dati ſunt dentes, ſed ſerrati, propè dixerim, omnes. Genus enim quoddam exiguum eſt, quod non ſerratos habeat dentes: vt qui ſcarus vocatur, qui vnus & ruminare merito ob eam rem creditur. Quæ enim non vtrinque dentata cornigera ſunt, ruminant. Habent omnes acutos, quibus etſi cibum ſecare poſſunt: tamen malè ſecant, quòd diutius immorari nequeant. Quamobrem nec planos habent dentes. Non enim fieri poteſt vt deterant cibum: itaque fruſtra haberent. Item ſtomachum alij nullum omnino habent, alij breuem. Sed enim ad concoctionem iuuandam alij modo auium ventriculos habent carnoſos, vt mugilis. Maior autem numerus appendices iuxta ventrem frequentes obtinet, vt in iis, quaſi lacunis, cibum conditum macerent, atque concoquant. *Sed piſces* contrà, quàm aues, eas appendices ſitas habent: quippe qui supernè habeant ad ventrem, cùm aues, quibus datum hoc eſt, infrà parte inteſtini extrema diſſumant. Viuiparorum etiam nonnullis appendices inteſtinales infrà eadem de cauſa habentur. Genus piſcium omne, quoniam cibum minùs conficere poſſit, crudáque egerat, & vorax, & guloſum eſt: cætera etiam omnia, quibus inteſtina ſunt recta, ciborum auida ſunt. Cùm enim cibus celeriter egeratur, proindéque breuis vſus fruendi ſit, breui repetant cibum auida, neceſſe eſt. Quæ vtrinque dentata ſunt, paruum habere ventrem, dictum iam eſt. Differentiam autem duplicem ferè omnia recipiunt. Alia enim canino ſimilem habent, alia ſuillo. Amplior venter ſuillus eſt, flexuoſúſque, vt diutiùs concoquat: caninus paruus eſt, nec multò amplior inteſtino, læuiſque intus. A ventre natura inteſtinorum poſita eſt in omnibus animalibus. Habet & ea differentiam, vt venter, numeroſiorem. Aliis enim ſimplex inteſtinum, ſibique ſimile reſoluitur, aliis diſſimile. Quibuſdam enim parte, qua ventri iungitur, laxius eſt: qua deſinit, arctius. Quamobrem canes, vehementi nixu, nec ſine cruciatu eam partem leuant excremento. Sed tamen maiori animalium numero arctius parte ſuperiori eſt, latius inferiori. Maiora multiplicabilioráque ſunt inteſtina cornigerorum. Ventris etiam ſinus eorum amplior, quòd auctiora ſint.

* Vide Mercurialem Variar. 5.11.

A Cornigerorum enim, propè dixerim, omnia ampliora ſunt pabuli ratione, vt conficiant, quod cibi ingerunt, inconfectum. Quibus autem inteſtinum non directum, iis omnibus amplius tendit, quà & quod colum vocatur, habent, & cæcum ac tumidum quiddam mox arctatur, & complicatur: ab hoc rectum ad exitum vſque excrementi pertendit, quæ quidem pars, quam podicem vocant, aliis pinguis, aliis ſine pingui eſt. Quæ omnia natura ſolers molita eſt, ad congruam cibi confectionem, & excrementi vſum, & transmiſſionem. Procedenti enim deſcendentique excremento, aut ſubſiſtenti, vt immutetur in animalibus, quæ præ magnitudine, aut locoB rum calore vegetiora, cibique plenioris indigentiora ſint, via ampliatur. Tum, vt ventrem inteſtinum anguſtius excipit, ſic à colo, quod laxum inteſtinum vocatur, & alui amplitudine, rurſus ſemitam anguſtiorem, clauiculam à flexuoſis orbibus dictam, ſubit excrementum iam penitus euaporatum, vt natura ſeruetur, nec vniuerſim exitus fiat excrementi. Quæ igitur animalia continentiora eſſe ad cibi deſiderium conuenit, hæc ſua in aluo laxiores ſinus non habent, ſed anfractus orbéſque plures continent, nec recto inteſtino vtuntur. Laxitas enim inteſtini, auiditatem auget cibi: rectitudo accelerat auiditatem. Quamobrem, animalia, quæ vel ſimplex habent C inteſtinum, vel conceptacula ampla, cibum aut copioſum capiunt, aut celeriùs repetunt. Sed cùm in ventre ſuperiore cibum ingeſtum recentem eſſe neceſſe ſit: in imum autem delapſum fæculentum, euaporatúmque, locum etiam aliquem interpoſitum eſſe, in quo immutetur, & nec recens adhuc, neque iam exactus in ſtercus ſit, neceſſe eſt. Itaque genus id animalium omne habet eam partem, quæ ieiunum vocatur, poſitam in eo quod à ventre tenue tendit, inteſtino. Hoc enim medium eſt inter ventrem ſuperiorem, in quo cibus crudus adhuc ſit, & inferiorem, in quo iam ſuperuacuum excrementum continetur. Hoc cùm in omnibus ita ſit, tum in iis patet, quæ & maiora D ſint, & ieiunarint: ita enim interſtitium loci vtriuſque conſpicitur. Nam ſi ederint, mutationi parum temporis ſuppetit. Sed fœminis pars nulla certa ſuperioris inteſtini ieiuna eſt. Alia enim aliis, vt fors tulerit. Maribus autem proximè ante cæcum aluúmque omnibus eſt.

CAPVT XV.

Quæ coagulum habeant, quæ non, & de eius loco.

HAbent, quod coagulum vocatur, omnia, quæ plures continent ventres: carent, quæ vnum habent, excepto lepore. Habent, quibus hoc datum eſt, non in magno ventre, nec in reticulo, neE que in vltimo, quod abomaſum appellauimus: ſed in eo, qui inter vltimum & duos primos poſitus eſt; quod omaſum vocatur. Habent hæc omnia coagulum, propter lactis craſſamentum: carent, quibus ſinguli ventres, quòd eorum lac tenue ſit. Quamobrem cornigerorum lac ſpiſſatur, mutilorum nequaquam. Lepori coagulum fit, quoniam herbam ſucci lactei paſcatur: talis enim humor lac in ventriculo infantium ſtringit, facitque coloſtrum. Cur coagulum in omaſo multiuentrium conſiſtat, explicatum in problematibus eſt.

ARISTOTELIS STAGIRITÆ DE PARTIBVS ANIMALIVM & earum cauſis,

LIBER QVARTVS.

CAPVT I.

Viſcera, & ventrem, cæteráque ſuperiùs expoſita, in quadrupedibus ouiparis, & iis quæ pedibus carent, eodem modo haberi, at in nonnullis aliis differre.

B

VISCERA, venter, & reliquæ, quas expoſuimus, partes, modo eodem in quadrupedibus ouiparis, & in iis quæ pedibus carent, vt ſerpentibus, habentur. Natura enim ſerpentum cognata iis eſt: quippe quæ ſimilis ſit lacertæ prælongæ, ac expedi. His verò, & piſcibus omnia ſimilia ſunt, nisi quòd pulmo ſerpentibus datus eſt, quoniam terra vtantur: piſces eo carent, & branchias vice pulmonis ſortiuntur. Veſica nec piſcibus, neque eorum vlli, quæ modò dixi, adiuncta eſt, niſi teſtudini. Humor enim iis in corticem tegentem, vt auibus in pennas, abſumitur, cùm exiguo potu C contenta ſint, propter exanguem pulmonis naturam. Et quidem excrementum alui iis quoque omnibus albicat, quemadmodum auibus. Itaque iis quæ veſicam habent, exempta vrina, ſalſugo quædam terrena in vaſis ſubſidet. Quantum enim dulce & potulentum ſit, in carnem præ ſua leuitate abſumitur. Viperæ inter ſerpentes eadem à cæteris ſui generis differentia diſcrepant, qua inter piſces cartilaginea à cæteris ſui generis. Nam & cartilaginea, & viperæ, animal edunt in lucem, vbi primùm intra ſe oua pepererint. Ventres ſingulos hæc quoque omnia habent, vt cætera, quæ vtrinque dentata ſunt: lienem etiam admodum paruum, vt cætera quæ carent veſica. Ser- D pentes propter corporis formam, quæ longa eſt, & anguſta, ſpeciem quoque viſcerum habent prolixam, & cæteris animalibus diſſimilem, vt quam ad ſui corporis opificium, quaſi formulam effigiatam, ſortiantur. Omentum, lactes, & inteſtinorum naturam, atque etiam ſeptum, & cor, omnia animalia ſanguine prædita obtinent. Pulmonem atque arteriam omnia, præter piſces. Situm etiam arteriæ, gulæque, omnia, quibus hæc data ſunt, ſimilem tenent, propter cauſas ſuprà dictas.

CAPVT II.

Quam ob cauſam animalium alia fel habeant, alia non.

E

FEl etiam habet maior pars animalium, quibus ſanguis: idque aut in iecore aut inteſtinis ſepoſitum, vt quod ſuam naturam non minùs aluo familiarem habeat. Hoc ita eſſe maximè in piſcibus conſtat. Cùm enim piſces fel habeant omnes, tum magna ex parte ſuis inteſtinis annexum continent: nonnulli etiam toto inteſtino prætextum, vt amia. Necnon ſerpentum pars maxima eodem modo habere cernitur. Quamobrem qui fellis naturam ſenſus alicuius gratià eſſe opinâtur,

Περὶ τῆς χολῆς.

E

ΕΧει δὲ καὶ χολὴν τὰ πολλὰ τῶν ἐναίμων ζῴων, τὰ μὲν ἐπὶ τῷ ἥπατι, τὰ δ' ἀπηρτημένην ἐπὶ τοῖς ἐντέροις, ὡς οὖσαν οὐχ ἧττον ἐκ τῆς κάτω κοιλίας τὴν φύσιν αὐτῆς. δῆλον δὲ μάλιστα ἐπὶ τῶν ἰχθύων. οὗτοι γὰρ ἔχουσί τε πάντες, καὶ οἱ πολλοὶ πρὸς ἐντέροις. ἔνιοι δὲ παρ' ὅλον τὸ ἔντερον παρυφασμένην, οἷον ἡ ἀμία· καὶ τῶν ὄφεων οἱ πλεῖστοι τὸν αὐτὸν τρόπον. διόπερ οἱ λέγοντες τὴν φύσιν τῆς χολῆς αἰσθήσεώς τινος εἶναι χάριν,

* Scrib. ὅτι αἴτ. vel αἴτιον εἶναι.

A non rectè ſentiunt. Volunt enim ideo fel adeſſe, vt partem animæ ſitam in iecore mordendo excitet, laxando exhilaret. Quædam felle omnino carent, vt equus, mulus, aſinus, ceruus, dama. Camelus, non diſcretum ſed venulis quibuſdam confuſum habet.* Vitulus etiam marinus caret, & inter piſces marinos delphinus. Sunt & quæ partim habeant, partim non habeant eodem in genere, vt mures. quod idem homini etiam accidit. Aliqui enim fel in iecore habere viſuntur, aliqui carent: itaque de toto genere ambigitur. Qui enim alterutrum compererint, idem omnibus tribuunt, quaſi omnes eodem habeant modo, quo aliqui. Hoc idem ouibus etiam capriſque B euenit: pars enim earum maxima habet fel: & quidem terris quibuſdam adeò largè, vt exuperantia prodigij loco habeatur, vt in Naxo: ſed aliis quibuſdam locis omnino careat, vt apud Chalcidem Euboicam, parte quadam agri. Ad hæc, piſcium fel (vt dictum eſt) longè remotum à iecore eſt. Anaxagoras errore opinari videtur, fel eſſe morborum cauſam acutorum: cùm enim abundat, aſpergi in pulmonem, & venas, & coſtas, aſſeuerat. Iis namque ferè accidunt ea vitia animalibus, quæ felle carent; diſſectis etiam id pateret, ſi ita eſſet. Adhæc, copia humoris, quæ per abſceſſus decumbit, conferri non poteſt cum eo quod ex fellis conceptaculo aſpergatur. Sed enim C vt bilis, quę qualibet alia corporis parte gignitur, excrementum quoddam liquamentúmque eſt: ſic fel iecori adiunctum, non rei cuiquã delegatum, ſed excrementum eſſe videtur, quomodo & alui inteſtinorúmque ſedimen. Attamen natura commodè vel excrementis ſuis interdum abvtitur: ſed non propterea quærere omnia alicuius cauſa debemus. Cùm enim aliqua eiuſmodi ſint, fit vt alia complura neceſſariò cauſa eorum proueniant. Quibus igitur iecoris conſtitutio ſalubris eſt, & ſanguinis natura, quæ iecur ſubeat, dulcis accedit, hæc aut nullum fel ſuo in iecore habent, aut venulis quibuſdam incluſum continent, aut par- D tim habent, partim non habent. Quamobrem iecinora eorum, quæ felle vacant, dulcia ſunt, probéque colorata, propè dixerim, omnium. Particula etiam iecoris, quæ felli ſubdita eſt, dulciſſima eſt. At verò quæ ſanguine minus puro conſiſtunt, hæc excrementum id quod fel appellamus, ſemouent: excrementum enim contrarium alimento eſſe vult, & amarum dulci: & ſanguis integer dulcis eſt. Fel igitur non alicuius gratia, ſed purgamentum atque inutilem eſſe materiem, conſtat. Quamobrem pulchrè à veteribus dicitur illis, qui cauſam cur diutius viuatur, fellis vacuitatem eſſe aiunt, argumento ex ſolipedum ceruorúmque genere deducto: hęc enim & E felle vacant, & diu viuunt. Quinetiam ea quæ illi non viderint felle carere, (vt delphinus, vt camelus,) longæua ſunt: iecoris enim naturam, vt opportunam, ac neceſſariam omnibus ſanguineis animalibus cauſam pro ſua qualitate afferre viuendi plus minúſve temporis ratio eſt. Excrementum etiam tale huius viſceris eſſe, cæterorum autem nullum, ratio exigit. Cordi enim nullus eiuſmodi humor appropinquare poteſt: quoniam illud affectum nullum patitur violentum. Cæterorum autem viſcerum nullum neceſſarium animalibus eſt, niſi iecur. Abſurdum autem ſit, niſi vbicunque pituitam, aut alui

aut alui ſedimen videris, excrementum id eſſe putes: parique modo de bile fellève cenſeas: ſed locis diſcrimen elicere velis. At de felle quam ob cauſam alia habeant, alia non habeant, ſatis dictum eſt.

CAPVT III.

De omento, & eius ortu, & officio.

RESTAT vt de lactibus & omento diſſeramus: hæc enim hoc loco, & cum inteſtinis continentur. Omentum membrana eſt aut ſeuoſa, aut adipoſa, ſcilicet vtro modo pingueſcere animal ſolet. Quænam differentia inter hæc ſit, dictum iam eſt. Oritur id de medio ventre, tam vniventri quàm multiventri generi, qua velvti ſutura deſcribitur: ineſt enim & in ventre, vt in corde, ſuturæ veſtigium quoddam, vnde omentum exorſum reliquam ventris partem, cunctáque inteſtina complectitur in omnibus ſanguine præditis, tum terreſtribus tum aquaticis animalibus. Ortus omenti talis, neceſſariò euenit: cùm enim ſicca aut humida miſcella caleſcit, vltimum ſemper cutis membranæve ſpeciem recipit. Hic autem locus plenus alimenti eiuſmodi eſt. Item propter membranæ denſitatem, quod ſanguinei alimenti tranſmiſſum colatúmque eſt, id pingue eſſe neceſſe eſt: tenuiſſimum enim hoc eſt, & calore loci iſtius concoctum, pro carnoſa & ſanguinea coagmentatione in ſeuum aut adipem euadere neceſſe eſt. Omentum ratione hac gignitur. Sed natura eo abvtitur ad cibi meliorem concoctionem, vt faciliùs celeriúſque cibus concoquatur. Calor enim vim habet concoquendi, pingue autem calidum eſt, & omentum pingue eſt. Itaque de medio ventre oritur, quoniam reliquam ventriculi partem iecur incidens fouet. Hæc de omento.

CAPVT IV.

De lactibus, & eorum ortu, & quam ob cauſam animalibus ſanguine præditis data ſint.

QVod autem lactes vocant, membrana & ipſum eſt, pertendens continua de inteſtinorum tenore ad venam vſque maiorem, & aortam, plena venarum multarum, atque frequentium, quæ ab inteſtinis ad venam maiorem aortámque permeant. Ortum eius ſimiliter atque cæterarum partium neceſſariò eſſe comperimus. Sed quam ob cauſam data ſit animalibus ſanguine præditis, conſiderandum eſt. Cùm enim neceſſe ſit vt animalia cibum extrinſecus capiant, rurſúſque ex hoc alimentum fiat: quod in omnes corporis partes digeratur (quod in exanguibus nomine vacat, in ſanguineis ſanguis appellatur) ideo aliquid adeſſe oportet, quo, tanquam radice, cibus de ventre ad venas deferatur. Itaque vt ſtirpes radicibus terræ innixæ cibum inde hauriunt: ſic animalibus venter, & inteſtinorum vires pro terra ſint, à quibus capiant alimentum: quamobrem lactes ſunt, venas ſibi inditas habentes quaſi radices. Sed cuius rei gratia lactes habeantur, dictum iam eſt. Quemadmodum autem capiant alimentum, & quonam pacto per venas ex alimento ingeſto ſubeat eas partes, quod in venas digeritur, explicabitur, cùm de generatione

A alimentóque animalium agemus. Sed enim vt animalia ſanguine prædita conſtant partibus, quæ declaratæ adhuc ſunt, & quas ob cauſas, dictum iam eſt: ſequitur, quod & reliquum eſt, vt quæ ad generationem pertinent, quibus fœmina differat à mare, exponamus. Sed quoniam de generatione tractandum eſt, de iis quoque tunc diſſerere, cùm de illis tractamus, congruum eſt.

CAPVT V.

Mollia, cruſtacea, teſtata, & inſectorum genus, omnibus ſupra dictis membris carere: déque iis quæ vice eorum fungantur.

B

QVæ autem mollia, quæque cruſtata vocantur, plurimum ab iis quæ explicauimus, differunt. Iam enim omnem viſcerum naturam ea non habent, nec vlla ex reliquis, quæ ſanguine carent. Quæ duo genera ſunt, alterum, quod teſta contegitur: alterum, quod inſectum vocatur. Sanguinem enim, ex quo viſcerum natura conſtat, nullum ex iis obtinet, quoniam affectus eiuſmodi quidam eorum eſſentiæ proprius eſt. Etenim ſanguinem alia habere, alia non habere, in ratione recipitur, quæ eſſentiam eorum definiat. Nihil etiam ex iis quorum gratia viſcera habent animalia ſan-
C guine prædita, datum eiuſmodi animalibus eſt. Non enim venas hæc habent, non veſicam, non vſum ſpirandi: ſed vnum quod cordi proportionetur, id habeant neceſſe eſt. Vis enim animæ ſentiendi, vitæque cauſa, parte aliqua corporis principium animalibus omnibus eſt. At verò partes ad victum pertinentes ea quoque omnia neceſſariò habent, quanquam variè, propter loca quibus cibum recipiant. Habet mollium genus parte quod os vocatur, binos dentes: atque in ore pro lingua carnoſum quiddam, quo voluptatem eſculentorum diſcernat. Cruſtata etiam pari modo binos dentes habent primores, & carnoſum illud, quod
D linguæ proportionetur. Necnon teſtata omnia partem eiuſmodi habent eadem cauſa, qua ſanguinea, videlicet ad cibum ſentiendum: quoniam etiam inſecta ſimili ratione aut promuſcidem habent ore prodeuntem, vt apum muſcarúmque genus, vt dictum iam eſt: aut in ore conditam partem eiuſmodi poſſident, vt formicæ, & ſi qua alia ſint generis eiuſdem. Dentes quædam ex iis habent, quanquam diuerſos, vt apum muſcarúmque genus: quædam non habent, quæ cibo vtantur humido. Inſectorum enim complura, non victus ſed armorum gratia dentes obtinent. Teſtatorum autem quædam, vt principio diximus, linguam appellatam habent robuſtam. Conchæ dentibus etiam binis fulciuntur, vt cruſtata. Stomachus, ſiue
E gula ab ore prælonga mollibus eſt, quam ingluuies excipit, quomodo auibus: tum venter coniungitur, & inteſtinum ventri annexum, ſimplex vſque ad exitum tendit. Sepiis igitur & polypis venter ſimilis tum figura tum tactu eſt. At iis quas lolligines appellamus, bina quidem conceptacula ventris ſpeciem gerunt: ſed alterum minus ingluuiē imitatur, & tactu diſcrepat: quoniam corpus etiam totum carne molliore conſtat. Habent hæc ita eas partes eadem cauſa, qua aues.

Neque enim eorum vllum poteſt commolere cibum: itaque ingluuies ventri præiacet. Habent etiam præſidij ſalutiſque gratia, quod atramentum vocatur, tunica contentum membranea, exitum finémque habens, qua alui excrementa emittunt parte, quæ fiſtula vocatur, quæ in ſupinis poſita eſt. Sed cùm atramentum hoc mollia habeant omnia, tum præcipuè plurimúmque ſepia continet. Quoties enim metu perterrentur, hoc effuſo humore aquam infuſcant, ſibique nigrorem, ſeptum proponunt, & turbulentiam, quaſi quo ſe abſcondant. Habent hoc atramentum lolligines, & polypi ſuprà apud mutim potiùs poſitum, ſepiæ infrà ad aluum: copioſius enim habent, quoniam magis vtantur. Quod his propterea euenit, quia vitam litoralem traducunt, & tamen nihil, quo ſibi auxilientur, aliud habent: quomodo polypi & brachiis ſibi ſufficiunt, & coloris mutatione, quæ & ipſa accidit eis per metum, vt effuſio atramenti. Lolligo ſola ex iis gaudet alto, vitámque pelagicam agit. Sepia igitur plus continet atramenti, & infrà, quoniam copioſiùs. Faciliùs enim & longiùs profundere maiori ex copia poterit. Fit in hoc genere atramentum vt in auibus, quod per excrementum album terrenum ſubſidat. Nam id quoque caret veſica: quantúmque terrenum maximè ſit, in atramentum ſecernitur: & plurimum ſepiæ conſiſtit, quoniam plurimum terrenæ materiæ habeat: argumento ſepium eſt, quod tale tantúmque ſit. Hoc enim polypus caret, lolligo cartilaginoſum ac tenue gerit. Quam ob cauſam hoc alia habeant, alia careant, qualéque in vtroque habeatur genere, dictum iam eſt. Sed cùm exanguia ſint, & ob eam rem refrigerata, & pauida, hinc, vt hominum nonnullis per metum funditur aluus, aut excrementum veſicæ profluit, ſic iis accidit quidem neceſſariò, vt metu perculſa effundantur: ſed natura hoc excremento ad præſidium & tutelam eorum abvtitur. Cruſtata etiam, tum locuſtacea, tum cancri, binos dentes habent primores, & inter dentes carunculam linguæ effigie illam, vt dictum iam eſt: tum ſtomachum ori continuo iunctum, exiguum, proportione ſuorum corporum magnitudinis. Hunc excipit venter, in quo locuſtæ, & cancrorum nonnulli dentes alios habent, quoniam ſuperiores illi ſecare non ſatis queant. Hinc inteſtinum ſimplex vſque ad exitum excrementi dirigitur. Quinetiam ſingula teſtatorum genera has eaſdem obtinent partes: ſed alia explanatiùs alia obſcuriùs: quanquam maiora conſpectum earum præbeant euidentiorem. Cochleæ igitur & dentes præduros acutóſque habent, vt dictum iam eſt: & quod interiacet dentibus, carnoſum ſimiliter, vt mollia, & cruſtata. Promuſcidem etiam, vt dictum eſt, inter aculeum & linguam. Ori autem iungitur, quaſi ingluuies auium, à qua ſtomachus eſt, quem excipit venter, in quo ſitum eſt, quod papauer vocatur: mox inteſtinum continuum tendit ſimplex, originem à papauere illo ducens. In omnibus enim teſtaceis ineſt hoc excrementum, quod vel eſculentum eſſe præcipuè ſentitur. Cætera etiam turbinata, vt purpuræ, buccina ſimiliter vt cochleæ conſtant. Sunt teſtatorum genera plura: alia enim turbinata ſunt, vt ea quæ modò dixi: alia biualuia, alia vniualuia.

A οὐδὲ γὰρ τούτων οὐδὲν ἐνδέχεται λεαίνειν τὴν τροφήν. διὰ τοῦτο ὁ πρόλοβός ἐστι πρὸ τῆς κοιλίας. πρὸς βοήθειαν δὲ καὶ σωτηρίαν ἔχει ταῦτα τὸν καλούμενον θολόν, ἐν χιτῶνι ὑμενώδει προσπεφυκότα, τὴν ἔξοδον ἔχοντι καὶ τὸ πέρας, ᾗ περ ἀφιᾶσι τὸ περίττωμα τῆς κοιλίας κατὰ τὸν καλούμενον αὐλόν. οὗτος δ' ἐστὶν ἐν τοῖς ὑπτίοις. ἔχει μὲν οὖν πάντα τὰ μαλάκια τοῦτο τὸ μόριον ἴδιον· μάλιστα δ' ἡ σηπία, καὶ πλεῖστον. ὅταν γὰρ φοβηθῶσι καὶ δείσωσιν, οἷον φράγμα πρὸ τοῦ σώματος ποιοῦνται τὴν τοῦ ὑγροῦ μελανίαν καὶ θόλωσιν. αἱ μὲν τευθίδες καὶ πολύποδες ἔχουσιν ἄνωθεν τὸν θολὸν ἐπὶ B τῇ μύτιδι μᾶλλον· ἡ δὲ σηπία, πρὸς τῇ κοιλίᾳ κάτω. πλείω γὰρ ἔχει, διὰ τὸ χρῆσθαι μᾶλλον. τοῦτο δ' αὐτῇ συμβαίνει, διὰ τὸ πρόσγειον μὲν εἶναι τὸν βίον αὐτῆς, μὴ ἔχειν δὲ ἄλλην βοήθειαν, ὥσπερ ὁ πολύπους ἔχει τὰς πλεκτάνας χρησίμους, καὶ τὴν τοῦ χρώματος μεταβολήν, ἣ συμβαίνει αὐτῷ, ὥσπερ καὶ ἡ τοῦ θολοῦ πρόεσις, διὰ δειλίαν. ἡ δὲ τευθὶς πελάγιον ἐστὶ μόνον τούτων. πλείω μὲν οὖν ἔχει ἡ σηπία παρὰ τοῦτο τὸν θολόν. κάτω δὲ διὰ τὸ πλείω· ῥᾴδιον γάρ ἐστι προΐεσθαι καὶ πόρρωθεν ἀπὸ τοῦ πλείονος. γίνεται δὲ ὁ θολός, καθάπερ τοῖς ὄρνισιν τὸ ὑπόστημα τὸ λευκὸν ἐπὶ τοῦ περιττώματος γεῶδες, οὕτω καὶ τούτοις ὁ θολός, διὰ τὸ μηδὲ C ταῦτα ἔχειν τὴν κύστιν. ἐκκρίνεται γὰρ τὸ γεωδέστατον εἰς αὐτόν· καὶ τῇ σηπίᾳ πλεῖστον, διὰ τὸ πλεῖστον ἔχειν γεῶδες. σημεῖον δὲ τὸ σήπιον, τοιοῦτον ὄν. τοῦτο γὰρ ὁ μὲν πολύπους οὐκ ἔχει, αἱ δὲ τευθίδες, χονδρώδες καὶ λεπτόν. δι' ἣν δ' αἰτίαν τὰ μὲν ἔχει, τὰ δ' οὐκ ἔχει, καὶ ποῖον τούτων ἑκάτερον ἔχει, εἴρηται. ἀναίμων δ' ὄντων, καὶ τούτων κατεψυγμένων, καὶ φοβητικῶν, ὥσπερ ἐνίοις ὅταν δείσωσιν, ἡ κοιλία ταράττεται· τοῖς δ' ἐκ τῆς κύστεως ῥεῖ περίττωσις. καὶ τούτοις τοῦτο συμβαίνει μὲν ἐξ ἀνάγκης ἀφίεσθαι διὰ δειλίαν, ὥσπερ ἐκ κύστεως τοῖς ἐπουροῦσιν· ἡ δὲ φύσις ἅμα τῷ τοιούτῳ περιττώματι καταχρῆται πρὸς βοήθειαν καὶ σωτηρίαν αὐτῶν. A Sed turbinata quoque biualuibus quodammodo aſſimilantur: quippe quæ omnia operculo quodam congenito, carni patulæ appoſito, clauduntur, vt purpuræ, buccina, natices, & reliqua generis eiuſdem: idque præſidij cauſa. Qua enim teſta non protegit, facilè offendi poſſet ab iis quæ extrinſecus inciderent. Cæterùm vniualue genus, quod ſaxis teſta in dorſum datâ adhæret, ſeruari poteſt: fitque alieno ſepto quodam modo biualue, vt quæ patellæ vocantur. Biualue ſe concludendo tuetur: vt pectines, vt mituli. Turbinatum cruſta illa prætenui, quæ à fronte integitur, quaſi biualue ex vniualui efficitur. Echinus omnium maximè à natura munitus eſt: quippe qui teſta vndique ſpinis frequen- B tibus circumuallata celetur. quam rem peculiarem hunc in genere teſtato ſortiri diximus. Natura autem cruſtatorum contrà quàm mollium, conſtat. Altera enim carnis mollitiam extra habent, altera intra. Hinc foris terrenam duritiam obtinent: quanquam echinus nihil habeat carnis. Igitur cætera quoque teſtata omnia, vt dictum eſt, habent & os, & linguæ effigiem, & ventrem, & oſtium excrementi: ſed intereſt ſitu & magnitudine. Quæ ſingula quemadmodum ſe habeant, ex commentatione diſſectionéque animalium petendum eſt. Quædam enim ratione, quædam conſpectu ipſorum potiùs declaranda ſunt. Echi- C ni, & eorum quæ vertibula ſiue tubera appellant, genus, peculiari modo pre cæteris conſtant teſtatis. Habent echini dentes quinos, & carunculam interpoſitam dentibus illam, quæ in omnibus ſuprà dictis eſt, cui ſtomachus iungitur. Ab hoc venter in plura diductus perinde ac ſi plures numero ventres hoc animal habeat: ſunt enim omnes diſtincti, plenique vacantis materiæ. Ex ſtomacho vno dependent, *in vnúmque* oſtium excrementi finiunt. *Caro, vt dictum eſt*, nulla eſt circa ventrem: ſed quæ oua appellantur, numeroſiora teſtæ adhærent, membranulis ſingula obuoluta, & paribus diſtincta interuallis. Ni- D gra etiam quædam circùm ab ore fuſim ſparguntur, nomine adhuc nullo appellata. Sed cùm non vnum *ſed plura genera echinorum* ſint, omnium partes *quidem* eas omnes ſortiuntur. Sed oua appellata, nec omnes *cibo* idonea, & parua admodum continent, exceptis iis qui vada incolunt. Omnino id ipſum cæteris quoque teſtatis euenit: caro enim non æquè omnium eſculenta eſt. Et excrementum, quod papauer vocatur, quibuſdam cibo idoneum, quibuſdam non idoneum eſt. Continent hoc turbinata omnia ſua claticula: vniualuia ſuo fundo, vt patellæ: biualuia, quà nodo ligantur. Quod autem ouum vocatur, latere dextro biualuia habent, altero latere oſtium E excrementi continent. Sed errore ouum id vocitatur, quippe quod tale ſit, quale eſt pingue in ſanguineo genere, cùm viget. Quamobrem fieri ſolet per id tempus anni, quo vigent, ſcilicet vere, & autumno. Laborant enim teſtata omnia per frigus, & æſtum, atque exuperantiam temporis pati nequeunt. Argumento eſt, quod echinis euenit: habent enim id iam inde ab ortu naturæ, & pleniluniis vberiùs, non quia per id tempus copioſiùs paſcuntur, vt quidam putant, ſed quòd noctes tepidiores ſint propter lucem pleniorem. Calorem enim deſiderant, quoniam frigori patent, vtpote quæ ſanguine careant.

Ex quo fit vt æſtate potiùs vbique vigeant, præterquam in Pyrenſi Euripo. nam ibi non minùs tempore hyberno probantur. cuius rei cauſa eſt, quòd tunc vberiùs pabulentur, cùm piſces per id tempus ea loca relinquant. Habent echini omnes oua eodem numero, atque impari omnes, quina enim: dentes etiam ventreſque totidem. Ratio, quòd non ouum eſt, quod ouum vocatur, vt modò dixi: ſed quod bona animalis enutritione alimoniâque proueniat. Fit oſtreis quidem in altero tantùmmodò latere, id, quod oui nomine appellatur: idemque eſt quod echinos habere dicimus. Sed cùm teſta echini non modò cæterorũ oſtreorum orbem colligat vnum, ſed in globum circumagatur, vt non partim talis partim non talis formetur, ſed vſquequaque ſimilis ſit (vndique enim in ſe nutrib. ſuis conglobatur) idcirco ouum quoque ſimili modo habeat neceſſe eſt. Non enim ambitu, vt cætera, diſſimili conſtat echinus. Nãque iis omnibus caput in medio ſitum eſt. quam quidem corporis partem ſitum tenere ſuperiorem certum eſt. Nec vero ouum habere continuum poteſt, quando neque cætera generis eiuſdem ſic habent, ſed altero latere tantùm ſui orbis. Ergo cùm id commune omnium ſit, proprium autem illius vt globi ſpeciem gerat, oua numero impari ſint neceſſe eſt: nam ſi pari eſſent, per diametrum diſpoſita haberentur, cùm ſimilem hinc atque inde ſeruari rationem interualli conueniat. Sic autem diſpoſitis vtroque latere orbis ouum haberetur, quod in cæteris oſtreis non eſt. Altero enim latere ſuæ oræ id habent, & oſtreæ, & pectines. Itaque terna, aut quina, aut quolibet alio numero impari eſſe neceſſe eſt. At ſi terna eſſent, diducta inter ſe laxo admodum interuallo haberentur: ſi plura, quàm quina, continuum propè ouum redderetur. Quorum alterum non melius eſt, alterum fieri non poteſt. Quina igitur oua echinos habere neceſſe eſt: quam ob cauſam venter quoque quinquepartitus eſt, & dentes totidem habentur. Singula enim oua, cùm quaſi corpora quædam animalis ſint, modum quoque viuendi ſimilem habeant, neceſſe eſt. Hinc enim capitur incrementum. Nam ſi venter vnus tantummodo eſſet, oua aut longè diſtarent, aut totum alueum occuparent, vt echinus & difficilè moueretur, & cibis minùs impleretur. Cùm autẽ quinque numero interualla ſint, ventrem ſingulis adiunctum quinquepartitum eſſe neceſſe eſt. Eademque de cauſa dentes etiam totidem habẽtur. Ita enim natura ſimilem rationem prędictis membris reddiderit. Sed quam ob cauſam oua numero impari, tótque numero echinus habeat, dictum eſt. Cur autem alij parua admodum, alij magna, cauſa eſt, quòd natura conſtant alij alius calidiore. Calor enim cibum concoquere plenius poteſt: quamobrem qui cibo inutiles ſunt, in iis excrementi plus eſt. Mobiliores etiam facit natura caloris, vt paſcantur, nec ſtabiles maneant. Cuius rei indicium eſt, quòd eorum ſpinis aliquid ſemper adhæreat, tanquam crebrò moueantur: ſpinis enim vt pedibus vtuntur. Vertibula autem parum ſua natura à plantis differunt: ſunt tamen ſpongiis viuaciora, quippe cùm ſpongiæ vires habeãt plantæ. Natura enim continuè ab inanimatis ad animalia tranſit per ea quæ viuant quidẽ, ſed non ſint animalia, ita vt parum admodum differre alterum ab altero videatur, propter ſuam propinquitatem.

A Spongia igitur, vt dictum eſt, cùm adhærendo tantum viuere poſſit, abſoluta autem nequeat viuere, ſimilis plantis omnino eſt. Quæ autem tubera vocant, & pulmones, atque etiam plura eiuſmodi alia in mari, parum ab iis differunt ſua ipſa abſolutione. Viuunt enim ſine vllo ſenſu perinde ac plantæ abſolutæ. Nam & in terreſtribus plantis ſunt nonnulla eiuſmodi, quæ & viuant & gignantur, aut in aliis plantis, aut abſoluta. Quale etiam eſt, quod modò Parnaſus fert, vocatum à quibuſdam epipetrum: hoc enim diu viuere poteſt ſuſpenſum. Et vertibulum igitur, & quicquid generis eiuſdem, ſimile plantæ eſt, quia adhærendo tantummodo viuit: ſed cùm aliquid B habeat carnis, ſenſum aliquem habere videri poteſt. Itaque vtrónam modo ſtatuendum ſit, incertum eſt. Habet hoc animalis genus duo foramina, rimámque vnam, qua recipiat humorem cibo accommodatum, & qua rurſus emittat quantum humoris remaneat. Nihil enim excrementi, vt cætera cruſtata, hoc ſe habere oſtendit. Ex quo fit potiſſimùm, vt & hoc & quicquid ſimile in animalium genere eſt, planta iure appellari poſſit: nec enim planta vlla habet excrementum. Præcingi verò per medium tenui quadam membrana, in qua vitæ principatus ſit, ratio congrua eſt. Quas autem vrticas appellant, non teſta operiuntur, ſed excluſæ omnino ſunt iis quæ C in genere diuiſimus. Ancipiti natura hoc genus eſt, ambigens & plantæ & animali. Abſolui enim, & eſcam petere nonnullas, & ſentire occurrentia poſſe, atque etiam aſperitate corporis vti ad ſe tuendum, animalis eſt: at verò quod imperfectum ſit, & ſaxis celeriter adhæreat, nec aliquid excrementi emittat, manifeſtè, quanquam os habeat, plantarum generi ſimile eſt. Stellarum etiam genus ſimile eſt: quippe quod concharum complures aggrediens exugat. Ratio eorum, quę inter exanguia abſoluta viuant, vt mollium, cruſtatorúmque, eadem atque teſtatorum eſt. Partes igitur ad cibum accommodatas, quas omnibus ineſſe neceſſe eſt, eo quo explicauimus, modo ſe- D ſe habent. Sed habeant certè illud quoque oportet, quod ei parti proportionetur, cui ſentiendi principatus in ſanguineo genere mandatus eſt: hoc enim in omnibus animalibus ineſſe neceſſe eſt. Ergo mollibus id membrana continetur humidum, per quod gula in ventrem pertendit, admota potiùs tergo: mutis id à nonnullis vocatur. Cruſtatis etiam tale quid alterum adiunctum eſt, quod & ipſum mutis nomine appellatur. Humida corpulentáque ea pars eſt. Tendit per eam mediam, vt modò diximus, ſtomachus, ſiue gula. Nā ſi inter eam & tergum poſitus eſſet, diſtendi æquè non poſſet cibo ingrediente, propter dorſi duritiam. Inteſtinum à mute natura ſemouit, extrá- E que poſuit, & atramentum inteſtino annexuit, vt quamplurimum diſtaret ab aditu, & pars ſordida à nobili & principe procul haberetur. Partem hanc cordi proportionari & ſitus ipſe oſtendit, cùm idem ſit, & dulcedo humoris, tanquam concocta & ſanguinea quædam. In cruſtatis etiam eodem modo ſentiendi principatus habetur, ſed minùs patet. Attamen in medio ſemper quærendum hoc principium eſt, aut ſcilicet inter partes, quà cibum recipiunt, & quà excrementum emittunt, ſi fixa degunt: aut inter dextram partem & ſiniſtram, ſi inceſſilia ſunt.

Inſectis principij eiuſmodi pars, vt antè diximus, inter caput & alueum eſt. Quæ etſi magna ex parte ſimplex eſt, tamen nonnullis multiplex eſt: vt iulis, & ſimilibus prælongis. Quo fit vt præciſa viuere poſſint. Natura enim partem hanc ſimplicem, vnamque tantùm facere in omnibus vult. Itaque vbi poteſt, ſimplicem facit: vbi non poteſt, multiplicem: idque in aliis minùs, in aliis magis apertum eſt. Partes autem quæ cibum adminiſtrant, non pari ratione datæ omnibus ſunt, ſed plurimùm differunt. Quibuſdam enim in ore eſt, quod aculeus appellatur, quaſi compoſitum & vna linguæ ac labiorum obtinens poteſtatem. Quibus autem aculeus non parte priore habetur, iis intra dentes tale ſenſorium continetur, idque excipit inteſtinum rectum, ſimplex ad oſtium vſque excrementi porrectum: quibuſdam hoc retortum in anfractum eſt. Sunt etiam quæ ventrem ori adiunctum, inteſtinúmque à ventre reuolutum habeant, vt quæ edaciora maioráque ſunt, conceptaculum cibi obtineant copioſioris. Genus cicadarum maximè peculiarem omnium iſtorum naturam ſortitum eſt: quippe quod partem eandem in vſum tum oris tum linguæ conſtitutam aptiſſimè habeat, qua veluti radice cibum ex humoribus trahat: nempe omne inſectorum genus minimo alimento contentum eſt, & propè ſibi ipſa ſufficiunt, non tam corporis exiguitate quàm frigiditate. Quod enim calidum eſt, cibum & deſiderat, & concoquit citò: contrà, quod frigidum eſt, cibo carere facilè patitur. Sed omniũ maximè cicadarum genus ieiunum eſt: ſatis enim iis alimento eſt humor, qui in corpore remanet. Sicut animalibus Ponticis, quæ non diutiùs quàm diem vnum, viuere queunt. Quanquam illis vita die vno perquam breui temporis ſpatio deſcribitur: *his plus temporis datur*, tamen id quoque breue eſt. *Sed cùm de partibus animalium* interioribus dictum iam ſit, ad reliquas exteriores redeundum eſt, incipiendúmque non vnde digreſſi ſumus, ſed ab iis ipſis quæ modò expoſui, vt iis expeditis quæ moram exigunt breuiorem, amplius in genere animalium perfecto & ſanguine prædito immoremur.

CAPVT VI.

De partibus exterioribus generis inſecti, earúmque inter ſe diſſidentia.

ERgo inſecta animalia quanquam non partibus numeroſis conſtant, tamen ipſa inter ſe diſſident: quippe quæ, cùm omnia multos habeãt pedes, quoniam contra tarditatem frigiditatémque naturæ eorum numerus exauctus, pedum motionem efficiat faciliorem, tamen variè numerum hunc ſortiantur. Quæ enim plurimum pro ſui corporis longitudine frigent, numero præcipuè ſuperant: vt iulorum genus. Quinetiam quòd principia plura habeant, hinc & inſectiones ſunt, & numerus pedum proinde augetur. Quibus autem pedes pauciores: hæc volucres ſunt, vt pedum inopia adiumento pennarum compenſetur. Ipſarum autem volucrum, quæ paſcuis viuant, & pabuli cauſa neceſſe habeant euagari, hæ quadripennes ſunt, & corpulentiam habent leuiorem: vt apes, & reliqua generis eiuſdem. Binas vtroque ſui corporis latere pennas gerunt,

A At verò quæ corpore exiguo ſunt, bipennes conſtant: vt genus muſcarum. Quæ autē parua ſunt, & vitam ſtabilem agunt, multis fulciuntur pennis, vt apes: & cruſta pennas obtectas gerunt, vel vt galerucæ, & cætera id genus inſecta, ſcilicet vt pennarum vires integras tueantur. Cùm enim ſtabilia ſint, corrumpi faciliùs poſſunt, quàm quæ motu citantur agiliori. Itaque ſepto propoſito muniuntur. Quinetiam penna eorum caret, & fiſſura, & caule: non enim penna ſed membrana cutis æmula eſt, quæ pre ſiccitate neceſſario abſoluatur corpore eorum, cùm carnis portio frigeat. Inſecta autem ſunt, tum ob cauſas prædictas, tum etiam vt ſeſe tuto inflexu ſeruare poſſint. Con-
B glomerantur enim quæcunque ex iis prolixo corpore ſunt, quod effici niſi inſectis non poſſet. Quæ autem glomerari nequeant, contrahunt ſe in inciſuras. Quod patet, cùm tanguntur, velut ea, quæ canthari vocantur. Vbi enim metuerint, motu ceſſant, totoque corpore indureſcunt. Inſecta verò hæc eſſe neceſſarium propterea eſt, quòd in eorum eſſentia ineſt, vt multa principia habeant: eaque ratione ferè plantis aſſimilantur. Vt enim plantæ, ipſa quoque præciſa viuere poſſunt, ſed hæc aliquandiu, illæ vel perfici poſſunt, ac duæ ex vna, atque etiam plures numero procreantur. Aculeis etiam armantur nonnulla inſecta contra animalia noxia. Geritur aculeus aliis parte prio-
C re, aliis poſteriore: aut enim ore, aut aluo extrema. Nam vt elephantis pars delegata odoribus commoda etiam tum ad pugnandum tum ad cibi vſum habetur, ſic inſectorum quibuſdam lingua pluribus officiis fungitur: quippe quæ & cibum ſentiat, ſuſcipiat, admoueatque, & defendat contra aliorum iniurias. Quibus autem non in ore aculeus, hæc dentes habent, cibi ſcilicet aut conficiendi, aut capiendi admouendique gratia: vt formicæ, vt apes. At verò quæ aculeo in aluo armata ſunt, hæc vt animoſa aculeum pro armis obtinuêre, qui intra aluum conditus eſt: vt in apibus, & veſpis, quoniam volucres ſunt: nam ſi prætenuis fragiliſque aculeus extra pateret, facilè corrumperetur: ſed ſi, vt in ſcorpione, diſta-
D ret, onus ita afferret. *Scorpio* profectò quod non volatu ſed greſſu ſe moueat, caudámque ſortitus ſit, aculeum caudæ adiunctum gerat, vel inutilem ad pugnam habeat, neceſſe eſt. Nulli aculeus in aluo, cui pennæ binæ. Quòd enim imbecillia paruáque ſunt, ideo binas habent: quippe cùm vel à paucioribus efferri poſſint, quæ parua ſunt. Quod idem cauſæ eſt etiam cur aculeus parte priore geratur. Cùm enim imbecilla ſint, vix parte priore ferire poſſunt. At verò quæ pluribus pennis prędita ſunt, quia auctiora ſunt, meritò pennas plures obtinuêre, parteque poſteriore valent. Inſtrumentum autem
E non idem ad vſus diſſimiles haberi, ſi fieri poteſt: ſed ad defendendum acutiſſimum, ad guſtandum fungoſum, & cibi attrahens, melius eſt. Vbi enim licet duobus vti ad duo opera, nec aliud impeditur, nihil tale natura facere ſolet, quale per inopiam ars excuſoria obeliſcolychnium ex veru lucernáque componit: attamen ſi id fieri non poteſt, eodem ad plura opera abvtitur. Pedes priores nonnulla ex iis longiores ideo habent, vt quoniam propter oculorum duritiam non exquiſitè cernant, cruribus iis longiorib. abſtergant incidentem moleſtiam, atque arceant.

Quod & facere muſcas videmus, & apes, & reliqua generis eiuſdem. Semper enim prioribus cruribus vallant, & protegunt. Poſteriora mediis longiora ſunt, vt ambulent meliùs, & attollantur faciliùs de terra, cùm auolare libet. Quod planiùs ea oſtendunt, quæ ſaliunt: vt locuſtæ, vt culices. Cùm enim inflexa ruſus connixa extendunt, attolli de terra neceſſe eſt. Locuſtæ non parte priore ſed poſteriore habent crura illa ad gubernaculorum effigiem condita. Suffraginem enim intus flecti neceſſe eſt. quod nulli crurum priorum datum eſt. Omnibus his ſeni pedes, iis etiam, quorum enixu ſaliunt, connumeratis.

De partibus teſtatorum exterioribus.

TEſtatorum corpus non multiplex eſt. Cuius rei cauſa eſt, quòd eorum natura ſtabilis eſt. Quæ enim mobiliora ſunt, hæc plures habeant partes neceſſe eſt: quoniam actiones eorum ſint, & officia. Plura enim deſiderant inſtrumenta ea quæ plures motiones exercent. Adhæc, aut omnino immobiliora ſunt, aut parum motus adipiſcuntur. Verùm natura conſulens eorum ſaluti, duritiam teſtæ obduxit. Sunt alia vniualuia, alia biualuia, alia turbinata, vt dictum iam eſt. Turbinati etiam generis alia in anfractum intorta ſunt, vt buccina: alia in globum tantùm circumacta, vt echinorum genus, nec non biualuium: alia reſeratilia ſunt, vt pectines, & mituli. Ab altero enim latere nodo ligantur, quædam vtroque latere connexa ſunt, vt vnguium genus. Habent omnia teſtata caput infra, plantarum modo. Cuius rei cauſa eſt, quòd cibum de imo capiant, vt plantæ radicibus ſuis hauriunt. Itaque iis vſu euenit vt inferiora habeant ſupra, ſuperiora infra. Membrana obducit, quà portio potulenta humoris tranſmiſſa liquatáque cibo aſſumitur. Nullum ex iis eſt quod capite careat. Cæteræ corporis partes nomine vacant, præter eam quæ cibum recipit.

De exterioribus partibus cruſta intectorum.

CRuſtata omnia ingredi poſſunt: itaque pedes complures obtinuerunt. Summa eorum genera quatuor numero ſunt: locuſtæ, gammari, ſquillæ, cancri. Quæ ſingula in plures ſpecies diſtinguuntur, quæ non modò forma, verùm magnitudine etiam multum interſe differant: alia enim magna, alia parua admodum ſunt. Genus igitur cancrarium & locuſtarium ſimilia interſe ſunt, eo quòd vtrunque brachia forcipibus denticulatis habeat. διὰ τοῦτο πολὺ [καὶ] ἀργοτέρους ἔχουσι τοὺς πόδας αὐτῶν πρὸς τὴν πορείαν. διὸ αἵ τε μαῖαι, καὶ οἱ Ἡρακλεωτικοὶ καλούμενοι καρκίνοι· ὅτι ὀλίγῃ χρῶνται κινήσει, ἀλλ' ἡ σωτηρία αὐτοῖς τῷ ὀστρακώδεις εἶναι γίνεται. διὸ αἱ μὲν μαῖαι, λεπτοσκελεῖς. οἱ δὲ Ἡρακλεωτικοί, μικροσκελεῖς εἰσιν. οἱ δὲ μικροὶ καρκίνοι, οἱ ἁλισκόμενοι ἐν τοῖς μικροῖς ἰχθυδίοις, ἔχουσι τοὺς τελευταίους πλατεῖς πόδας, ἵνα πρὸς τὸ νεῖν αὐτοῖς χρήσιμοι ὦσιν, ὥσπερ πτερύγια ἢ πλάτας ἔχοντες τοὺς πόδας. αἱ δὲ καρίδες τῶν μὲν καρκινοειδῶν διαφέρουσι, τῷ ἔχειν κέρκον. τῶν δὲ καραβοειδῶν, διὰ τὸ μὴ ἔχειν χηλάς· αὗται οὐκ ἔχουσι, διὰ τὸ πλείους ἔχειν πόδας. ἐνταῦθα γὰρ ἡ ἐκεῖθεν ἀνήλωται αὔξησις. πλείους δ' ἔχουσι πόδας, ὅτι νευστικώτεραί εἰσιν, ἢ πορευτικώτεραι. τὰ δ' ἐν τοῖς ὑπτίοις μόρια καὶ περὶ τὴν κεφαλήν, τὰ μὲν εἰς τὸ δέξασθαι τὸ ὕδωρ καὶ ἀφεῖναι, ἔχουσι βραγχιοειδῆ· πλακωδέστερα δὲ τὰ κάτω αἱ θήλειαι τῶν ἀρρένων καράβων ἔχουσι. καὶ τὰ ἐν τῷ ἐπιπτύγματι δασύτερα αἱ θήλειαι καρκίνοι τῶν ἀρρένων, διὰ τὸ ἐκτείνειν τὰ ᾠὰ πρὸς αὐτά, ἀλλὰ μὴ ἀπωθεῖν, ὥσπερ οἱ ἰχθύες καὶ τἆλλα τὰ τίκτοντα. εὐρυχωρέστερα γὰρ ὄντα, καὶ μείζω χώραν ἔχει τοῖς ᾠοῖς μᾶλλον. οἱ μὲν οὖν κάραβοι καὶ οἱ καρκίνοι πάντες, τὴν δεξιὰν ἔχουσι χηλὴν μείζω καὶ ἰσχυροτέραν. τοῖς γὰρ δεξιοῖς πάντα πέφυκε τὰ ζῷα ἀδρὰ μᾶλλον. ἡ δὲ φύσις ἀποδίδωσιν ἀεὶ τοῖς χρῆσθαι δυναμένοις ἕκαστον, ἢ μᾶλλον, ἢ μόνοις, οἷον χαυλιόδοντας, καὶ κέρατα, καὶ πλῆκτρα, καὶ πάντα τὰ τοιαῦτα μόρια, ἃ εἰς βοήθειαν, καὶ ἀλκήν ἐστιν. οἱ δ' ἀστακοὶ μόνοι, ὁποτέραν ἂν τύχωσιν, ἔχουσι μείζω τῶν χηλῶν, καὶ αἱ θήλειαι καὶ οἱ ἄρρενες. αἴτιον δὲ τοῦ μὲν ἔχειν χηλάς, ὅτι ἐν τῷ γένει εἰσὶ τῷ ἔχοντι χηλάς. τοῦτο δ' ἀτάκτως ἔχουσιν, ὅτι πεπήρωνται, καὶ οὐ χρῶνται ἐφ' ἃ πεφύκασιν, ἀλλὰ πορείας χάριν. καθ' ἕκαστον δὲ τῶν μορίων τίς ἡ θέσις αὐτῶν, καὶ τίνες διαφοραὶ πρὸς ἄλληλα, τῶν τ' ἄλλων, καὶ τίνι διαφέρει τὰ ἄρρενα τῶν θηλειῶν, ἔκ τε τῶν ἀνατομῶν θεωρείσθω, καὶ ἐκ τῶν ἱστοριῶν τῶν περὶ τὰ ζῷα.

A ij pedes habent longè retardiores ad ambulandum. Sunt enim cæteris ipſi nantiores, vt maiæ, & qui heracleotici appellantur. Crura iis breuia, quia parum mouentur: ſed ſalus eorum beneficio cruſtæ firmioris contingit. Itaque magis crura tenuiora, heracleoticis breuiora. Cancelli autem, qui perquam exigui in piſciculis reperiuntur, pedes nouiſſimos latiuſculos habent, vt ad nandum vtiles ſint, quaſi pro pinnulis aut remis pedes haberentur. Squillæ à cancrario genere differunt, eo quòd caudam habeant: à cruſtario verò, quòd forcipe careant. Idque, quoniam plures habeant pedes: eo namque redundantia illa abſumitur. Pedes obtinent plures, quòd non magis ad nan-B dum quàm ad ingrediendum ſint ſuapte natura propenſiores. Partes ſupinas, & capitis ita habent, vt alteræ ad accipiendam reddendámque aquam branchiarum ſpecie conditæ ſint: alteræ planiores tabellatioréſque in fœminis cruſtati generis omnibus, quàm in maribus, conſtent: & interiora verò operculi applicati hirtiora amplioráque fœminæ cancri habent, quàm mares, quoniam oua in ea edunt non procul vt piſces, & cætera, quæ parere ſolent. Quo enim ampliora ſint, eo locum ouis præſtare poterunt capaciorem. Locuſtæ cancrique omnes forcipem dextrum grandiorem valentiorémque habent. Parte enim dextra efficaciora ſuapte natura ſunt animalia C omnia. CAPVT IX.

De partibus exterioribus mollium animalium, & ſanguine carentium.

Mollium partes interiores antè, cùm cæterorum, expoſui: nunc exteriorum ordinem perſequemur. Habent hæc foris alueum corporis indiſcretum, & pedes parti priori iunctos circum caput, infra oculos, circa os, & dentes. Sed cùm E cætera animalia, quibus pedes, aut parte priore poſterioréque eos habeant, aut latere, vt ea quæ multis pedibus innituntur, & ſanguine carent, hoc vnum genus pedes parte quam priorem in eo capimus, omnes continet. Cuius rei cauſa eſt, quòd pars eius poſterior ad priorem adducta eſt, extremáque coeunt, & confunduntur, quomodo turbinatis inter teſtata accidit. Genus enim teſtatum omnino partim cruſtatis partim mollibus ſimile eſt. Qua enim foris terrenam portionem, intus carneam habent, cruſtatis aſſimilantur: qua autem forma eiuſmodi corporis cõſtat,

cum mollibus conuenit omne quodam modo, ſed præcipuè quæ ex turbinatis cuniculo in anfractū contorquentur. Natura enim eorum vtrorumque perinde ſe habet, quaſi quis directa linea (vt in quadrupedum & hominum genere eſt) primùm extrema lineæ parte ſuperiore os ſitum intelligat, qua a, mox ſtomachum, qua, b, tum ventrem, qua, c: deinde inteſtinum vſque in oſtium excrementi, qua, d: hæc ita in ſanguineo genere diſpoſita ſunt: & caput pectúſque locum obtinent primum. Reliqua eorum ipſorum gratia, aut motus cauſa à natura adiecta ſunt, vt priora poſterioráque crura. In cruſtatis etiam inſectiſque ordo interiorum eodem modo conſtare vult, ſed officiis exteriorum motionum differt à ſanguineo genere. At verò mollia & turbinata inter ſe quidem proximè conſtant, ſed iis econuerſo: finis enim ad principium flectitur, quaſi quis lineam efflectendo addducat d, ad a. Cùm enim ita partes interiores iis collocentur, ambit alueus, qui in polypis tantùm caput vocatur, qualis in teſtato genere turbo eſt. Nec aliud intereſt, niſi quòd alteris molle, quod ambit, eſt: alteris duro tegmine carnem natura complexa eſt, vt ſeruentur, cùm difficulter moueantur. Hinc fit vt excrementum tam mollibus quàm turbinatis, meatu ori vicino emittatur: quanquam mollibus infrà, turbinatis à latere. Hac de cauſa pedes mollium ita poſiti ſunt, & contrà, quàm cæterorum. Sepiæ atque lolligines non ſimili vt polypi modo conſtant: quoniam vim nandi tantummodo habent, cùm polypi vel ingredi poſſint: habent enim ſepiæ & lolligines pedes ſupra dentes ſenos exiguos, eorúmque nouiſſimos duos maiores: reliquos autem octonorum duos infrà omnium maximos. Vt enim quadrupedibus crura poſteriora firmiora validioráque ſunt, ita iis quoque maximi, qui infrà habentur. *His enim onus ſuſtinetur*, motúſque potiſſimùm agitur. Duo etiam illi nouiſſimi maiores ſuis mediis ſunt, quia illis miniſtrent. Polypus medios quatuor habet maximos. Omnibus igitur his pedes octoni. Sed ſepiis & lolliginibus breues, polypis magni. Alueum enim corporis ſepiæ & lolligines habent magnum, polypi paruum. Itaque quod natura polypis ex corpore dempſerat, id in pedum longitudinem addidit: quod ſepiis & lolliginibus de pedibus abſtulerat, eo corporis magnitudinem auxit. Quamobrem polypis pedes non ſolùm ad nandum vtiles ſunt, ſed etiam ad ambulandum: ſepiis autem & lolliginibus inutiles ſunt. Parui ſunt enim, cùm alueum habeant magnum. Cùm itaque pedes habeant breues, atque inutiles, ne æſtu maris tempeſtatéque exturbentur ſaxis, vtque de longinquo admoueant, ideo promuſcides binas prælongas habent, quibus, velvti anchoris, innitantur, ſéque ſtabiliant modo nauigij, tempeſtate vrgente: venentur etiam procul, oríque è longinquo admoueant. Polypi promuſcide carent, quoniam pedes ad vſum eundem commodos habeant. Quorum autem pedibus acetabula cirramentáque adſunt, hæc vim contextúmque talem habent, qualem implicamenta illa, quibus digitos antiqui medici indere ſolebant.

D ὥσπερ γὰρ τοῖς τετράποσι τὰ ὀπίσθια ἰσχυρότερα κῶλα, καὶ ταύταις μέγιστοι οἱ κάτωθεν. τὸ γὰρ φορτίον οὗτοι ἔχουσι καὶ κινοῦσι μάλιστα, καὶ οἱ ἔσχατοι δύο μείζους τῶν μέσων, ὅτι τούτοις συνυπηρετοῦσιν. ὁ δὲ πολύπους τοὺς ἐν μέσῳ τέτταρας μεγίστους. πόδας μὲν οὖν ἔχουσι ταῦτα πάντα ὀκτώ· ἀλλ᾽ αἱ μὲν σηπίαι καὶ τευθίδες, βραχεῖς· τὰ δὲ πολυποδώδη, μεγάλους. τὸ γὰρ κύτος τοῦ σώματος αἱ μὲν μέγα ἔχουσιν, οἱ δὲ μικρόν· ὥστε τοῖς μὲν ἀφεῖλεν ἀπὸ τοῦ σώματος, καὶ πρὸς τὸ μῆκος τῶν ποδῶν προσέθηκεν ἡ φύσις· ταῖς δ᾽ ἀπὸ τῶν ποδῶν λαβοῦσα, τὸ σῶμα ηὔξησε. διόπερ τοῖς μὲν οὐ μόνον εἰς τὸ νεῖν χρήσιμοι οἱ πόδες, ἀλλὰ καὶ εἰς τὸ βαδίζειν· ταῖς E δ᾽, ἄχρηστοι· μικροὶ γάρ. τὸ δὲ κύτος μέγα ἔχουσιν. ἐπεὶ δὲ βραχεῖς ἔχουσι τοὺς πόδας, καὶ ἀχρήστους εἰς τὸ ἀντιλαμβάνεσθαι, καὶ μὴ ἀποσπᾶσθαι ἀπὸ τῶν πετρῶν, ὅταν κλύδων ᾖ καὶ χειμὼν, καὶ εἰς τὸ τὰ ἄποθεν προσάγεσθαι, διὰ ταῦτα προβοσκίδας ἔχουσι δύο μακρὰς, αἷς ὁρμοῦσι καὶ ἀποσαλεύουσιν, ὡς πλοῖον ὅταν χειμὼν ᾖ, καὶ τὰ ἄποθεν θηρεύουσι, καὶ προσάγονται ταύταις αἵ τε σηπίαι καὶ τευθίδες. οἱ δὲ πολύποδες οὐκ ἔχουσι τὰς προβοσκίδας, διὰ τὸ τοὺς πόδας εἶναι αὐτοῖς εἰς ταῦτα χρησίμους. ὅσοις δὲ κοτυληδόνες ἐν τοῖς ποσὶ καὶ πλεκτάναι πρόσεισι, δύναμιν ἔχουσι καὶ σύνθεσιν τοιαύτην, οἵανπερ τὰ πλεγμάτια, οἷς οἱ ἰατροὶ οἱ ἀρχαῖοι τοὺς δακτύλους ἐνέβαλλον.

* κ. ἐντοσθίων: vnde quidam ἐντοσθίας, ſed inſectis illa vox parum connenit.

οὕτως ἐκ τῶν ἰνῶν πεπλεγμέναι εἰσὶν, αἷς ἕλκουσι τὰ σαρκία καὶ τὰ ἐνδιδόντα. περιλαμβάνει μὲν γὰρ χαλαρὰ ὄντα· ὅταν δὲ συντείνῃ, πιέζει καὶ ἔχεται τοῦ ἐντὸς θιγόντος παντός. ὥστ' ἐπεὶ ἄλλο οὐκ ἔστιν ᾧ προσάξονται, ἀλλ' ἢ τὰ μὲν τοῖς ποσὶ, τὰ δὲ ταῖς προβοσκίσι, ταύτας ἔχουσιν εἰς ἀλκὴν καὶ τὴν ἄλλην βοήθειαν ἀντὶ χειρῶν. τὰ μὲν οὖν ἄλλα, δικότυλά εἰσι· γένος δέ τι πολυπόδων μονοκότυλον. αἴτιον δὲ, τὸ μῆκος καὶ ἡ λεπτότης τῆς φύσεως αὐτῶν. μονοκότυλον γὰρ ἀναγκαῖον εἶναι τὸ στενόν. οὐκ οὖν ὡς βέλτιστον ἔχουσιν, ἀλλ' ὡς ἀναγκαῖον, διὰ τὸν ἴδιον λόγον τῆς οὐσίας. πτερύγιον δ' ἔχουσι πάντα ταῦτα κύκλῳ περὶ τὸ κύτος. τοῦτο δ' ἐπὶ μὲν τῶν ἄλλων συναπτόμενον καὶ συνεχές ἐστι, καὶ ἐπὶ τῶν μεγάλων τευθῶν· αἱ δ' ἐλάττους καὶ καλούμεναι τευθίδες, πλατύτερόν τι τοῦτο ἔχουσι καὶ οὐ στενὸν, ὥσπερ αἱ σηπίαι καὶ οἱ πολύποδες· καὶ τοῦτ' ἀπὸ μέσου ἠργμένον, καὶ οὐ κύκλῳ διὰ παντός. τοῦτο δ' ἔχουσιν ὅπως νέωσι, καὶ εἰς τὸ διορθοῦν, ὥσπερ τοῖς μὲν πτηνοῖς τὸ ὀρροπύγιον, τοῖς δ' ἰχθύσι τὸ οὐραῖον. ἐλάχιστον δὲ τοῦτο καὶ ἥκιστα ἐπίδηλον τοῖς πολύποσίν ἐστι, διὰ τὸ μικρὸν ἔχειν τὸ κύτος, καὶ διορθοῦσθαι τοῖς ποσὶν ἱκανῶς. περὶ μὲν οὖν τῶν ἐντόμων, καὶ μαλακοστράκων, καὶ ὀστρακοδέρμων, καὶ μαλακίων, εἴρηται, καὶ περὶ τῶν ἐντὸς μορίων καὶ τῶν ἐκτός.

ΚΕΦΑΛ. ι.

Περὶ τῶν ἐκτὸς μορίων τῶν ζωοτόκων καὶ ἐναίμων, καὶ τῆς τούτων πρὸς ἄνθρωπον διαφορᾶς.

Πάλιν δ' ἐξ ὑπαρχῆς περὶ τῶν ἐναίμων καὶ ζωοτόκων ἐπισκεπτέον, ἀρξαμένοις ἀπὸ τῶν ὑπολοίπων καὶ πρότερον εἰρημένων μορίων. τούτων δὲ διορισθέντων, περὶ τῶν ἐναίμων καὶ ᾠοτόκων τὸν αὐτὸν τρόπον ἐροῦμεν. τὰ μὲν οὖν μόρια τὰ περὶ τὴν κεφαλὴν τῶν ζῴων, εἴρηται πρότερον, καὶ τὰ περὶ τὸν καλούμενον αὐχένα καὶ τράχηλον. ἔχει δὲ κεφαλὴν πάντα τὰ ἔναιμα ζῷα. τῶν δ' ἀναίμων ἐνίοις ἀδιόριστον τοῦτο τὸ μόριον, οἷον τοῖς καρκίνοις. αὐχένα οὖν τὰ μὲν ζωοτόκα πάντα ἔχει· τῶν δ' ᾠοτόκων, τὰ μὲν ἔχει, τὰ δ' οὐκ ἔχει. ὅσα μὲν γὰρ πνεύμονα ἔχει, καὶ αὐχένα ἔχει. τὰ δὲ μὴ ἀναπνέοντα θύραθεν, οὐκ ἔχει τοῦτο τὸ μόριον. ἔστι δὲ ἡ μὲν κεφαλὴ, μάλιστα τοῦ ἐγκεφάλου χάριν. ἀνάγκη γὰρ τοῦτο τὸ μόριον ἔχειν, τοῖς ἐναίμοις, καὶ ἐν ἀντικειμένῳ τόπῳ τῆς καρδίας, διὰ τὰς εἰρημένας πρότερον αἰτίας. ἐξέθετο δ' ἡ φύσις ἐν αὐτῇ καὶ τῶν αἰσθήσεων ἐνίας, διὰ τὸ σύμμετρον εἶναι τὴν τοῦ αἵματος κρᾶσιν, καὶ ἐπιτηδείαν πρός τε τὴν τοῦ ἐγκεφάλου ἀλέαν, καὶ πρὸς τὴν τῶν αἰσθήσεων ἡσυχίαν καὶ ἀκρίβειαν. ἔτι δὲ τρίτον μόριον ὑπέθηκε, τὸ τὴν τῆς τροφῆς εἴσοδον δημιουργοῦν. ἐνταῦθα γὰρ ὑπέκειτο συμμέτρως μάλιστα. οὔτε γὰρ ἄνωθεν κεῖσθαι τῆς καρδίας καὶ τῆς ἀρχῆς ἐνεδέχετο τὴν κοιλίαν, οὔτε κάτω οὔσης ὃν τρόπον ἐνεδέχετο, τὴν εἴσοδον ἐπὶ κάτω εἶναι τῆς καρδίας. πολὺ γὰρ τὸ μῆκος ἦν τοῦ σώματος, καὶ πόρρω ἂν τῆς κινούσης ἀρχῆς καὶ πεττούσης. ἡ μὲν οὖν κεφαλὴ, τούτων χάριν ἐστίν· ὁ δ' αὐχὴν, τῆς ἀρτηρίας χάριν. πρόβλημα γάρ ἐστι, καὶ σώζει ταύτην καὶ τὸν οἰσοφάγον, κύκλῳ περιέχων.

A Ita enim fibris implexa ſunt, quibus caruncula ſ cæteráque cedentia trahant: quippe quæ laxa prehendant, intenta premant, & retineant, cùm pars interior tota contingat, atque amplectatur. Itaque cùm aliud non habeant, quo capere admouereque poſſint, niſi aut pedes, aut promuſcides, hæc pro manibus obtinent ad vim tum inferendam tum propulſandam, atque etiam ad cætera vitæ munera neceſſaria. Sed cùm cætera omnia geminis acetabulis ſeriem à capite in extremos vſque cirros habeant ordinatam, genus vnum polypi quoddam ſimplici inſpergitur acetabulo: cuius rei cauſa ad longitudinem tenuitatémque brachij referenda eſt. Cùm enim anguſtum ſit, B ſimplicis acetabuli ordinem tantùm capiat neceſſe eſt. Non igitur ita conſtant, quia id optimum, ſed quia neceſſe ſit propria ſubſtantiæ ratione. Pinnulam hæc omnia habent circumdantem alueum. Quæ cùm in cæteris tum in grandium lolliginum genere iuncta perpetuáque geſtatur. Minores verò, quas lolligines vocant, latiorem hanc habent, nec anguſtam, vt polypi & ſepiæ, neque circumactam per totum alueum, ſed de medio orſam. Cauſa cur eam habeant, eſt, vt natent, & ſe dirigant, vt volucres cauda pennis condita, piſces penè cartilaginata teguntur. Polypis hoc minimum eſt, miniméque conſpicuum, quoniam paruum habeant alueum, quem ſatis C ſuis pedibus dirigere poſſint. Atque de inſectis, de teſtatis, de mollibus dictum iam eſt, tam de interioribus quàm de exterioribus partibus.

CAPVT X.

De exterioribus animantium viuiparorum ſanguinéque præditorum partibus, & eorum cum homine in ijs differentia.

De genere ſanguineo viuiparo denuo diſſerendum eſt, initio repetito à reliquis partium earum quæ antè expoſitæ ſunt: quas vbi definierimus, continuò de ſanguineis ouiparis pari modo dicemus. Partes, quibus caput animalium conſtat, & ceruix, & collum, explicatæ iam ſunt. Habent autem caput animalia omnia ſanguine D prædita. Exanguium nonnullis indiſcretum hoc eſt, vt cancris. Collum omnibus viuiparis eſt: ouiparorum aliis eſt, aliis deeſt. Quæ enim pulmonem habent, collum etiam obtinent: quæ autem ſpiritum extrinſecus non accipiunt, carent hac parte. Caput cerebri gratia potiſſimùm eſt: hanc enim partem genus omne ſanguineum habeat neceſſe eſt. Et quidem loco obiecto cordi, ob eas, quas expoſuimus, cauſas. Sed natura ſenſuum etiam nonnullos in eo collocauit, quoniam ſanguis eius membri temperatus modicè ſit, & idoneus tum ad cerebrum tepefaciendum, tum ad ſenſuum tranquillitatem, atque integritatem. Tertiam item partem ſubiecit eam, quæ aditum E cibo præberet: hîc enim commodè collocaretur: quippe cùm neque ſupra cor, & vitale principium, venter conſtitui poſſet: neque ſi inferiùs, quàm nunc eſt, poneretur, fieri poſſet vt æquè aditus cibo patêret: corporis enim prolixior longitudo faceret, vt longè à principio mouendi & concoquendi diſtaret. Sed enim caput ea cauſa conditum eſt. Collum autem arteriæ gratia habetur: quippe quod eam atque etiam gulam protegat, amplexúque ſuo tueatur.

Hoc

Hoc cæteris animalibus flexibile, & vertebris compactum eſt: at lupo & leoni oſſe perpetuo riget. Commodius enim ad robur quàm ad cæteros vſus collum iis eſſe natura voluit. A collo & capite crura priora pectúſque habentur: ſed homo vice pedum priorum, brachia, & quas manus dicimus, habet. Solus enim animalium omnium erectus eſt, quoniam eius natura atque ſubſtantia diuina eſt. Officium autem diuini eſt, intelligere, atque ſapere. Quod non facile eſſet, ſi vaſta corporis moles aſſideret: pondus enim tardiorem reddit & mentem, & ſenſum communem. Quamobrem, concretione, & pondere grauiore opprimente, corpora vergere in terram neceſſe eſt. Itaque natura tute conſulens, pro brachiis & manibus crura priora quadrupedibus ſubdidit: nam poſteriora bina omnibus greſſilibus eſſe, neceſſe eſt. Quorum igitur anima pondus ſuſtinere non poſſet, hæc quadrupeda facta ſunt. Animalia namque omnia, excepto homine, formam gerunt pomilionis. Eſt enim pomilio, cuius pars ſuperior magna eſt, inferior, quæ ſuſtinet pondus, motúmque exercet, parua miniméque reſpondens ſuperiori. Superiorem intelligi eam volo, quæ à capite vſque ad excrementi oſtium pertendit, qua pectus etiam continetur. Hominibus igitur hæc pars modicè ad inferiorem condita eſt, multóque minor adultis iam perfectíſque euadit. Infantibus enim è diuerſo eſt: ſuperior magna, inferior minor eſt. Quamobrem ſerpunt infantes, nec ambulare poſſunt: iam principiò, ne ſerpere quidem poſſunt, ſed immobiles iacent. Omnes enim infantes pomiliones ſunt: tum profectu ætatis, hominibus pars inferior augetur. Quadrupedibus contrà, inferior primum maxima eſt, tum proceſſu temporis ſuperior creſcit, quæ ſcilicet ea eſt, quæ ab ano ad caput porrecta eſt. Vnde fit vt pulli equini paulò ſuis parentibus ſint ſummiſſiores, atque adulti crure poſteriore caput attingere nequeunt, quod nouelli facilè attingunt. Solipeda & biſulca ita ſe habent. Digitata autem, cornúque vacua, forma quidem & ipſa pomilionis ſunt, ſed minùs. Quamobrem pars eorum inferior ad ſuperiorem defectus ratione incrementum capeſſit. Auium etiam & piſcium genus, omnéque ſanguine præditum, forma pomilionis eſt, vt dixi. Quamobrem bruta hominibus ſunt dementiora: etenim inter homines pueri viris, & inter viros pomiliones mente deficiunt, quanquam aliis viribus fortè valeant. Cuius rei cauſa, quam diximus, eſt, quòd principium animi admodum difficile motu, corpulentúmque in iis eſt. Addo etiam, quòd cùm minus remaneat caloris, qui efferat, plus autem terrenæ portionis ſuperſit, efficitur vt corpus animalis tum minus tum etiam multipes formetur, demúmque expes proſtratúmque in terram præ inopia caloris proueniat, ſenſimque procedendo ita degeneret, vt principium vitale, capútque infrà habeat: ad poſtremum immobile fit, & ſenſu vacuum, plantáque eſt, vice mutata, vt ſuperiora infrà, inferiora ſuprà habeat. Radix enim plantarum, vim obtinet oris, & capitis: ſemen contrà, ſupra, extremíſque ramis conſiſtit. Sed quam ob cauſam animalium aliud bipes, aliud multipes, aliud omnino expes: & cur alia plantæ, alia animantes conſtiterint, explicatum iam eſt:

* G. τὸ μέσον,

A atque etiam qua de cauſa homo animalium vnus erectus eſt, vtque erectus ſuapte natura, non deſiderat crura priora, ſed pro iis brachia & manus à Natura recepit. Anaxagoras igitur hominem prudentiſſimum omnium animalium eſſe ait, quoniam vnus omnium manus obtinet. Sed recta ratio exigit, vt quoniam prudentiſſimus omnium eſt, ideo manus receperit. Manus enim inſtrumentum ſunt. Natura autem, vt homo prudens, ita tribuere ſolet cuique rem qua vti poſſit. Rectius enim tibia dabitur perito tibiæ, quàm tibiam habenti peritia tibiæ addetur. rem enim minorem maiori potiorique Natura addidit, non maiorem nobiliorémque minori. Quod B ſi ita melius eſt, natura autem ex iis quæ fieri poſſunt, facere ſolet quod melius ſit, homo non propter manus prudentiſſimus eſt: ſed quia prudentiſſimus omnium animalium eſt, ideo manus obtinet. Qui enim prudentiſſimus eſt, recte plurimis vti inſtrumentis poteſt. Manus autem eſſe videtur, non vnum inſtrumentum, ſed multa. Eſt enim, vt ita loquar, inſtrumentum ante inſtrumenta. Natura igitur ei qui artes plurimas recipere poteſt, manum reddidit, quæ ad plura inſtrumenta vtilis eſt. Qui autem hominem non bene ſed deterrimè omnium animalium conſtare aiunt (nudum enim atque inermem creatum referunt) non rectè ij ſentiunt. Cæ-C tera enim animalia vnum auxilium habent, idque nullo pacto poſſunt permutare, ſed quaſi calceata ſemper dormire, ac omnia agere, nec veſtitum vnquam deponere pleniorem, neque arma mutare, quæ ſemel acceperint, neceſſe eſt: at homini multa habere auxilia licet, eáque ſubinde mutare. arma etiam quæ velit, & vbi velit, capere poteſt. Manus enim & vnguis eſt, & vngula, & cornu, & haſta, & enſis, & quoduis aliud genus armorum, aut *inſtrumentorum*: quippe quæ omnia hæc ſit, quoniam omnia & ſumere poteſt, & tenere. Cui manus, naturæ forma etiam adhibita eſt congrua: diuiſa enim, & multifida eſt. Nam in eius diuiſione, componen-D di facultas eſt: in compoſitione vis diuidendi eſſe non poſſet. Vti etiam eadem modò ſimplici, modò duplici, & omnino multifariàm licet. Quin & flexus digitorum, ad capiendum premendúmque commodiſſimè habent. Vnus à latere adiunctus eſt digitus, iſque breuis, & craſſus, ſed non longus. Vt enim ſi manus omnino deeſſet, poteſtas capiendi non fieret, ſic niſi digitus hic à latere adeſſet, non eadem illa facultas probè daretur. Hic enim à parte inferiori surſum premit, vt cæteri à ſuperiore deorſum: quod fieri ita oportet, ſi validè quaſi copula forti colligandum ſit. Pollet hic plurimùm, vt vnus multos æquiparet. Breuis etiam eſt, vt robuſtus ſit, & quo-E niam nullam præſtaret commoditatem, ſi longus eſſet. Rectè etiam nouiſſimus digitus paruus eſt, & medius longus, tanquam remus nauigij medius. Quod enim officio capitur, circum per medium digitum complecti potiſſimùm neceſſe eſt. Sed enim pollex, & magnus, qui à latere iunctus eſt, ideo appellatur, quamuis paruus ſit, quia cæteri ſine eo inutiles ferè ſunt. Vngues etiam rectè Natura molita eſt: *quippe quæ* cæteris animalibus eos vel ad vſum alium dederit, homini operimenti tantum gratia excogitarit: digitos enim extremos integunt, & tuentur.

Flexus brachiorum homini tum ad cibum admouendum, tum ad cæteros vſus, contrà quàm quadrupedum generi, aguntur: illis namque introrſus poplites flecti neceſſe eſt, vt ad greſſum vtiles ſint. Vſum enim pedum præſtant artus priores. Quanquam illius etiam generis ea quæ digitata ſunt, non modò ad greſſum vtuntur prioribus cruribus, verumetiam ad manus officia vti nituntur: quippe quæ & capiant prioribus cruribus, & repugnent: quod ſolipedes poſterioribus faciunt. Non enim crura eorum priora, cubitis manibúſque proportione reſpondent, vt nonnullorum ex iis quorum pedes in digitos finduntur. Ob id pedes priores quinis diſtinctos digitis habent, poſteriores quaternis: vt leones, & canes, atque etiam lupi, & pantheræ: quintus enim eorum quinto magnóque manus reſpondet. Sed quæ parua inter digitata ſunt, poſteriores etiam quinque digitos obtinent, quoniam ſerpere ſolent, ſcilicet vt vnguibus numeroſioribus apprehendendo faciliùs obrepãt ad ſublimiora. Pectus inter lacertos homini conſtitutum eſt, cæteris inter crura priora. Latum id eſſe in homine ratione permittitur, cùm nihil lacerti adiuncti lateribus impediant: at quadrupedibus, quòd ante ſe crura, cùm ambulant, locúmque mutant, protendunt, pars hæc coarctata eſt. Vnde fit, ne quadrupedes eo loco habeant mammas. Nam homini, quòd & ſpatij laxitas permittit, & carnoſa ea pars eſt, cùm operiri ſedem cordis conueniat, mammæ pectori aſformatæ ſunt carnulentæ: maribus quidem ob eam, quam diximus, cauſam: ſed fœminis ad alterum quoque opus natura mammis abvtitur, quod eam ſæpe facere dicimus. Cibum enim in iis recondit ſuis paruulis. Binæ homini mammæ, quoniam binæ ſunt partes, dextra & ſiniſtra, duriuſculæ, ſpatio interpoſito diſterminantur: quòd & coſtæ eodem loco ſibi coeant, ſine vlla moleſtia. Cæteris animalibus mammæ in pectore haberi inter crura non poſſunt: ita enim greſſum impedirent. Pluribus autem locis aliis habentur ſine vllo impedimento. Quibus enim ſolida vngula, aut cornua, & partus numero parciori, hæc mammas inter femora habent, eáſque binas: quæ autem numeroſo partu, & pede multifido ſunt, hæc aut plures per ventrem duplici ordine vtroque de latere gerunt, vt ſues, vt canes: aut binas tantùm medio ventre, vt leo. Cuius rei cauſa eſt, non quia parciſſimè generat, (nam plures quàm duos interdum edit) ſed quòd minùs lacte abundat. Cibum enim, quem rarò aſſumit, quoniam carniuorum eſt, in corpus abſumit. Elephas duas tantùm habet, eáſque ſub armis. Cauſa cur duas habeat, quòd vniprolis eſt. Cur non inter femora? quòd multifidum eſt. Nullum enim inter femora habet, cui pedes diſcreti in digitos ſunt. Cur ſuprà ſub armis? quòd in iis quæ plures obtinent mammas & primæ ſunt, & plurimum lactis hauriunt, quæ ea parte continentur. Argumento eſt, quod ſcrofæ facere aſſolent: porcis enim editis primis, mammas præbent primas. Ergo cui vnum eſt, quod primum in lucem prodit, id primas habeat mammas neceſſe eſt. Primæ autem, quæ ſub armis habẽtur.

A Elephas hac de cauſa duas, eóque loco, mammas habet. Quæ autem multiprola ſunt, hæc toto ventre exuberant. Cuius rei cauſa eſt, quòd ea quæ prolem numeroſiorem educatura ſint, mammas deſiderant numeroſiores: quas cùm per latitudinem non niſi duas habere poſſint, videlicet ratione bipartiti corporis, in dextrum ſiniſtrúmque per longitudinem habeant, neceſſe eſt. Locus autem vnus, qui inter priora & poſteriora crura interiacet, porrectus per longitudinem eſt. Quæ autem non multifida, ſed deprola ſunt, aut cornuta, hæc inter femora mammas habent: vt equa, aſina, camelus. Hæc enim ſingulos pariunt.
B Et pes equo, & aſino ſolidus, camelo biſulcus. Ceruа etiam, capra, vacca, & reliqua generis eiuſdem mammas parte eadem gerunt. Cuius rei cauſa eſt, quòd hæc ſurſum versùs capiant ſui corporis incrementa. Itaque vbi confluuium, & copia excrementi ſanguinis, qui locus ſanè infrà eſt, & circa effluentis materiæ oſtia, ibi mammæ à natura poſitæ ſunt. Qua enim parte motus agitur alimenti, inde etiam capi alimentum poteſt. Sed enim homo, & fœmina, & mas habet mammas. In cæteris mares nonnulli carent, vt equi. Non enim omnes, ſed tantùm qui matri ſimiles prodiere, habent. De mammis dictum
C iam eſt. A pectore venter ſubiacet coſtis non cluſilis, ob eam, quam antè reddidimus, cauſam, ſcilicet ne aut cibi tumorem qui per calorem neceſſariò euenit, aut vteros plenos impediat. Finem autem thoracis appellati faciunt partes, quæ oſtium excrementi, tum ſicci tum humidi continent. Natura verò parte eadem, tum ad humidi excrementi exitum, tum ad rem Veneream vtitur in ſexu tum fœminino, tum etiam maſculino omni ſanguineo, (exceptis paucis) in omnique viuiparo genere, nullo excepto. Cuius rei cauſa eſt, quòd genitura humor quidam excrementitius eſt. Sed hoc ita eſſe nunc ſubiiciatur,
D pòſt demonſtrabitur. Fœminæ etiam pari modo menſtrua parte eadem emittunt: ſed de iis quoque poſtea definiemus. Nunc illud ſubiacet, menſtrua etiam fœminarum excrementum eſſe, & vacantem materiam. Humida autem ſuapte natura ſunt menſtrua, & genitura: itaque eorum profuſionem ſimilibus eiſdémque tribui partibus, ratio eſt. Intus autem quemadmodum ſe habeant, & qua differant ratione, ſemen genitale, & geſtatio vteri, ex animalium hiſtoria commentationéque apertum eſt: & cùm de generatione agemus, dicetur. Formas etiam harum partium tales neceſſariò ad officium propoſitum eſſe debere, quales iam ſunt, obſcurum non eſt. Sed
E maris inſtrumentum alterum ab altero differt pro diſcrimine corporum. Non enim æquè neruoſa natura omnia conſtant. Augetur etiam & minuitur hoc vnum membrum, ſine vlla morbi mutatione. Horum enim alterum vtile ad coitum, alterum ad cæteros corporis vſus commodum eſt. Nam ſi ſemper ſimili modo ſe haberet, impedimento nimirum eſſet. conſtat hoc membrum ex eiuſmodi partibus, vt eorum, quæ modò dixi, vtrumque poſſit euenire. Partim enim neruum, partim cartilaginem habet. Itaque & contrahi poteſt & extendi: atque etiam flatus capax eſt. Sed quadrupedes fœminæ omnes in auerſum mingunt: quippe quæ genitale non alibi commodius habere poſſint ad coitum.

Mares verò perpauci in auerſum mingũt: vt lynx, leo, camelus, lepus. Solipes nullum ſic mingit. Hominis partes poſteriores, & crura, peculiari modo præ quadrupedibus habentur. Caudam omnia ferè non ſolùm viuipara, ſed etiã ouipara habent. Nam etſi pleriſque magnitudine membrum id caret, tamen aliquid prominet, quod caudam deſcribere poſſit. Homo vnus cauda vacat, nates habet: quod nulli quadrupedum datum eſt. Crura etiam homini femore ſuráque carnulenta ſunt, cùm cætera animalia omnia non modò viuipara, verumetiam quæcunque cruribus conſtant, vacua carne hæc habeant: neruoſa enim, oſſulenta, ſpinoſa, rigida. Quorum cauſa vna eſt, propè dixerim, omnium, quòd homo ſolus animalium erectus eſt. Vt igitur facilè ſuſtinere ſuperiora poſſet, Natura corpulentiam parti ſuperiori dempſit, inferiori addidit. Itaque nates carnoſas fecit, & femora, & ſuras. ſed nates vel ad corporis requiem vtiles reddidit. Quadrupedes enim ſtare diu infatigatis viribus poſſunt, vt quæ quaſi iaceant, cùm quaternis fulcris innitantur. At verò homines non facilè erecto corpore ſtando durant, ſed requiem ſediléque deſiderant. Homo igitur nates & crura carnoſa habet, ob eam, quam diximus, cauſam: & cauda ob eam rem vacat. Alimentum enim, quod caudam adit, in hæc ipſa abſumitur. Vſúſque caudæ neceſſarius defuit, quoniam nates ſua corpulentia ſatis operiũt. At quadrupedes & reliqua animalia, è contrario. Cùm enim forma pomilionis degenerent, parte ſui ſuperiore pondus omnemque corpulentiam ſuſtinent, ſcilicet demptam parti inferiori: itaque crura habent rigidiora, & natibus vacua. Sed vt pars, quæ exitum excremento miniſtrat, protegeretur, & cuſtodiretur, caudam iis natura reddidit, ſublato, quod ad crura deferretur, alimento. Simia, quòd forma ambigua ſit, vt & in neutro, & in vtroque genere ſit conſtituenda, ideo nec caudam habet, neque nates: videlicet vt bipes, cauda vacat: vt quadrupes, natibus. Caudarum autem plures differentiæ ſunt: & natura iis quoque abvtitur, cùm non modo ad integendam tuendámque ſedem vtatur, verum etiam ad reliqui corporis vſum atque vtilitatem. Pedes quadrupedum inter ſe differunt: aliis enim ſolidi, aliis bifidi, aliis multifidi. Solidi ſunt eorum quibus præ corporis magnitudine, copiáque terrenæ portionis, pro cornu, aut dente, materia ad vnguis naturam ſeceſſerit. Sed enim ex ea copia pro pluribus vnguibus vnus vnguis, ſcilicet vngula, coaleſcit. Talo etiam ob eam rem carent (quod magna ex parte dixerim) atque etiam quòd ſi talus adeſſet, crura poſteriora difficiliùs flecterentur. Celeriùs enim & aperiuntur, & clauduntur, quæ ſingulis angulis conſtant, quàm quæ pluribus. Talus autem, vt qui clauus eſt, tanquam alienus artus duobus hiſce inſeritur, pondus quidem afferens, ſed gradum efficiens tutiorem. Hinc enim & ea quæ talum habent, non in prioribus ſed poſterioribus tantùm cruribus eum continent, quoniam leuiorà flexibilioráque eſſe debent, quæ præcedant: firmiora autem contentioráque eſſe poſteriora congruit. Ad repugnandum etiam inferendúmque ictum vehementiorem, commodiùs ita conſtant. Genus autem hoc animalium cruribus ita vti poſterioribus ſolet. Biſulca talum habere certum eſt: iis enim poſteriora ſunt planiora.

A Et quoniam talum habeant, ſolipeda eſſe non poſſunt, quaſi os, quod pedi deeſt, maneat in ſuffragine. Digitatis talus non eſt. Nam ſi eſſet, digitata non eſſent: ſed tantum latitudinis finderetur, quantum talus occuparet. Quamobrem ea quæ talum habēt, magna ex parte biſulca ſunt. Homini pedes omnium maximi proportione magnitudinis, meritò: ſolus enim erectus eſt. Itaqui duo pondus corporis totum ſuſceptur eſſent, longitudinem latitudinemque obtinere debuerunt. Digitorum etiam manus magnitudo cōtra quàm pedis eſt, ratione. Manus enim officium eſt capere, atque premere. (Itaque longos habeat digitos oportet. Manus enim parte, qua ſe flectit, comprehendit.) B Pedis autem officium eſt, tutè conſtare. Quod ea parte pedis effici putandum eſt, quæ infiſſa eſt. Extremum autem fiſſum, quàm infiſſum eſſe, meliùs eſt. Nam ſi pes totus infiſſus eſſet, totus conſentiret, parte aliqua laborantē: quod fiſſo in digitos æquè accidere non poteſt. Breues etiam minùs offendi lædique poſſunt. Quamobrem hominis pedes multifidi & breuidigiti ſunt. Vnguium genus eadem cauſa pedes, qua manus, obtinent. Extrema enim operienda muniendáque potiſſimùm ſunt, propter imbecillitatem. De animalibus ſanguineis, viuiparis, terreſtribus ferè omnibus, dictum iam C eſt.

CAPVT XI.

De partibus animalium ouiparorum: tum quadrupedum, tum expedum: & quam ob cauſam ſic à natura digeſtæ ſint.

SAnguinea verò ouipara, partim quadrupeda ſunt, partim expeda, quale vnum tantummodo genus ſerpentum eſt. Cauſam, quamobrem id pedibus vacet, reddidimus, cùm de greſſu animalium ageremus. Cætera eius forma ſimili quadrupedibus ouiparis ſunt. Habent hæc animalia D caput, partéſque capitis eiſdem de cauſis, quibus cætera ſanguinea genera. Linguam etiam in ore continent omnia, excepto vno crocodilo fluuiatili. Hunc enim non niſi locum tantummodo linguæ habere putaueris. Cuius rei cauſa eſt, quòd idem & terreſtris & aquatilis quodam modo eſt. Ergo vt terreſtris, locum obtinet linguæ, vt aquaticus, elinguis eſt. Piſces enim, vt dictum eſt, aut nullam habere linguam videntur, niſi valde reſupinentur: aut inexplanatam habent. Cauſa eſt, quòd iis linguæ vſus perquam exiguus eſt: quoniam mandere præguſtaréque non poſſint, ſed in deuorando ſenſum voluptatémque cibi capiant. E Lingua enim ſenſum mouet ſaporum. Eſculentorum autem omnium voluptas in deſcendendo contingit. Dum enim deglutimus, pinguia ſentimus, & ſalſa, & dulcia, & reliqua generis eiuſdem. Senſum igitur hunc animalia etiam ouipara habent. Et omnium ferè condimentorum eſculentorúmque, in deuorando gulæ tactione ſuauitas exiſtit, & gratia. Quamobrem, non qui potionum ſaporúmque incontinentes ſunt, iidem etiam condimentis ac cibo luxuriant: ſed cùm cæteris animalibus ſenſus quoque guſtandi adiunctus ſit, illis quidem alter quaſi vnus tributus eſt. Lacertis ex quadrupedibus ouiparis lingua bifida, vt ſerpentibus:

parteque extrema piloſa admodum, vt dictum iam eſt. Quinetiam vitulis marinis lingua biſulca eſt. Quamobrem hæc animalia omnia tenuia ſunt. Serratis etiam dentibus quadrupedes ouiparæ ſunt, modo piſcium. Senſoria autem omnia ſimili modo atque cætera animalia habent. Verbi gratia, nares, olfaciendi; oculos, videndi; aures, audiendi ſenſorium. Non tamen hæc eminent, quomodo ne auibus quidem, ſed foramina tantùm habentur. Cauſa vtriſque duritia cutis eſt. Altera enim penna, altera cortice integuntur. Cortex loco ſquamæ, & ſimile eſt, ſed ſua natura rigidior atque durior. Quod in teſtudine atque ſerpentibus magnis, & crocodilo fluuiatili, palàm fit. Firmior enim oſſe euadit, vt qui talem naturam ſortiatur. Palpebram ſuperiorem hæc animalia non mouent, vt ne aues quidem, ſed inferiore conniuent: ea de cauſa, quam, cùm de illis ageremus, reddidimus. Sed cùm auium nonnullæ ab angulis membrana obeunte nictentur, hæc non nictantur: ſunt enim oculis durioribus, quàm aues. Cauſa eſt, quòd illis, vtpote volucribus, acumen cernendi commodius ad vitæ munera ſit. Hæc autem, quoniam cauernas ſubire omnia ſolent, minùs cernendi vſum exquiſitum requirunt. Sed cùm caput in partes duas diuidatur, ſcilicet ſuperiorem & inferiorem maxillam, homo & viuiparæ quadrupedes maxillam ſurſum, deorſum, atque in latera agitant: piſces verò, & aues, & ouiparæ quadrupedes ſurſum deorſúmque tantùm mouent. Cauſa eſt, quòd eiuſmodi motus vtilis ad mordendum ſecandúmque eſt. Qui autem in latus agitur, ad cibum molendum conficiendúmque accommodatur. Quæ igitur dentes habent maxillares, iis motus commodè agitur in latus. Quæ autem maxillaribus carent, *iis nullo pacto vtilis motus hic eſt*: quamobrem ſublatus iis omnibus eſt. Nihil enim natura ſuperuacuum facit. Cætera omnia maxillam mouent inferiorem: crocodilus fluuiatilis vnus ſuperiorem. Cuius rei cauſa eſt, quod pedes ad capiendum retinendúmque inutiles habet: parui enim admodum ſunt. Itaque ad hunc vſum natura os ei pro pedibus vtile condidit: ad retinendum verò, vnde ictus inferri vehementiùs poteſt, inde motus commodiùs agitur. Infertur autem vehementius deſuper, quam de parte inferiore. Ergo cùm vtriuſque tum capiendi tum mordendi vſus ore adminiſtretur, magis autem neceſſarium retinendi officium ſit, cui nec manus ſint, neque pedes idonei, commodius huic eſt mouere ſuperiorem maxillam, quàm inferiorem. Quod idem cauſæ eſt, cur etiam cancri ſuperiorem ſui forcipis partem moueant, non inferiorem: habet enim pro manu forcipem. Illum itaque vtilem ad capiendum, non ad mordendũ, forcipem eſſe oportet. Mordendi autem ſecandique officium dentis eſt. Cancris igitur, cæteriſque, quibus licet otioſis cibum capere, quoniam in humore non ſint, oris vſus partitus eſt, vt manibus aut pedibus capiant, ore ſecent, & mordeant: at crocodilis os in vtrumque vſum vtile factum eſt à natura, cùm ita maxillæ moueantur. Collum etiam omnia huiuſcemodi animalia obtinent propter pulmonem: quippe quæ aërem per arteriæ fiſtulam productiorem & accipiant & reddant. Collum enim id appellamus, quod inter caput, & armos humeróſve, interiacet. Serpens inter hæc collum minimè,

A ſed proportionale colli habere videri poteſt. Siquidem extremis, quæ modò dixi, pars hæc deſcribenda eſt. Proprium ſerpentibus præ cæteris eiuſdem generis animalibus eſt, vt caput vertere in auerſum, reliquo quieſcente corpore, valeant. Cuius rei cauſa eſt, quòd modo inſectorum ſtructura volubili conſtant, vt vertebras cartilaginoſas & flexibiles habeant. Euenit igitur id ſerpentibus neceſſariò hac de cauſa: ad melius verò, vt ita vitare poſſint quæ ab auerſo noceant. Cùm enim prælongo ſint corpore, & pedibus careant, inepti ſunt ad ſe conuertendum, tuendúmque contra eà quæ à tergo incurrant. Nihil enim vtilitatis eſſet, ſi caput erigere quidem poſſent, ſed circumagere B nequirent. Habent hæc & eam quæ pectori proportionetur, partem: mammas nec ea parte nec vſpiam ſui corporis continent. Aues etiam mammis carent. Cuius rei cauſa eſt, quòd nullum ex iis habeat lac: mamma enim, conceptaculũ, & tanquam vas lactis eſt. Nec ſolùm hæc, ſed etiam quæcunque non viuipara inter ſe ſunt, lacte vacant, quoniam oua pariunt. In ouo autem lacteus ille cibus ingenitus ouiparis continetur. Sed de iis planiùs dicetur, cùm de generatione agemus. De inflexu curuatum partium conſideratum iam eſt, cùm de communi animalium greſſu ageremus. Caudam etiam genus id animalium habet, partim prolixiorem, partim breuiorem. Cuius rei cauſam antè in C vniuerſum reddidimus. Omnium verò ouiparorum pedeſtrium tenuiſſimus chamæleo eſt: quippe qui omnium maximè inopia ſanguinis rigeat. Cauſa ad mores animæ eius referenda eſt: præ nimio namque metu multiformis efficitur. Metus enim refrigeratio, per inopiam ſanguinis caloriſque eſt. De partibus animalium ſanguinei generis, tum expedium, tum quadrupedum, aut bipedum, quænam ſint extrà, & qua de cauſa, dictum ferè eſt.

CAPVT XII.

De partibus auium exterioribus, & earum differentiis, quáſque ob cauſas ſic à natura poſitæ ſint.

D AVes autem diſcrimine inter ſe diſcrepant eo, quod in exceſſu defectúve partium, & in pluris minoriſque ratione verſari percipimus. Sunt enim earum aliæ longo crure, aliæ breui. Linguam etiam aliæ latiuſculam habẽt, aliæ anguſtam. Eodémque modo reliquis partibus differunt. At priuatim inter ſe paulò ratione partium differunt: quanquam à cæteris forma etiam partium diſcrepent. Pennatum enim genus omnium auium eſt, idque proprium habet ad cætera animalia. Cùm enim alia pilo, aut ſquama, aut cortice tegantur, aues penna opertæ ſunt, pennámque habent E fiſſam, nec ſimili ſpecie atque ea quæ totipennia à pennæ continuitate appello: his enim fiſſa, illis infiſſa eſt penna; & altera excaulis, altera caulata eſt. Quinetiam capite roſtri naturam ſingularem ac propriam præ cæteris gerunt. Elephantis enim naris pro manibus eſt, Inſectis quibuſdam lingua oris officio fungitur: at his vice dentium manúſque, roſtrum oſſeum datum eſt. De ſenſuum locis dictum iam eſt. Collum auibus quoque porrectum, eadémque de cauſa qua cæteris eſt. Hoc aliis breue, aliis longum, & ferè pro crurum modo, magna ex parte deſcriptum eſt.

Quibus enim longa ſunt crura, iis collum lõgum: contrà, quibus breuia crura, iis collum breue, præterquam palmipedibus. Collum enim nec breue cum cruribus longis, nec longum cum breuibus, paſtum adminiſtrare ex terra poteſt. Carniuoris etiam volucribus lõgitudo colli incommoda eſt: imbecille enim quod prolixum eſt. Is autem victus beneficio virium comparatur: quamobrem nulli collum longum, cui vngues adunci. Palmipedes, & quæ diuiſis quidem ſed parum diductis digitis ſunt, vt quæ eodem genere cum palmipedibus contineantur, collum longius habent: tale enim ad cibum ex humore petẽdum commodius eſt: ſed crura iis breuia, vt meliùs natare poſſint. Roſtra etiam inter ſe differunt victus ratione: aliis enim rectum, aliis vncum roſtrum eſt. Rectum iis quæ cibi capiendi gratia tantùm id habent: vncum carniuoris. Tale enim vtile eſt ad retinendum iis quæ raptu viuant, & cibum ex animalibus petere neceſſe habeant. Quibus autem victus ratio placida, herbiſque comparanda eſt, iis roſtrum latum: hoc enim & ad effodiendum pabulum, & ad euellendum, & ad tondendum commodius eſt. Nonnullis longum, vt & collum, quoniam cibum ex alto capere ſoleant. Et quidem bona pars tum earum tum etiam palmipedum, aut ſimpliciter aut parte eadem captura beſtiolarum quarundam aquatilium viuit. Itaque fit vt collo quaſi arũdine piſcatoria, roſtro autem velvti linea & hamo vtantur. Partes verò pronæ, ſupinæque, & thorax appellatus quadrupedum, confuſiùs in genere auium habentur: alæ enim pro branchiis & prioribus pedibus dependent, membrum peculiare auium: quamobrem pro ſcapulis extrema alarum dorſo adhærent. Crura vt in homine, bina, ſed intro flectenda, vt quadrupedum ſuffragines, *non vt hominis poplites* foras. Alas autem, quas vicem crurum *priorum* complere modò diximus, in orbem agunt. Bipes neceſſariò eſt genus auium, inter ea quæ ſanguinem habent, atque etiam aligerum. Cùm enim ſanguinea quæque non pluribus quàm quaternis notis moueantur, membra pendẽtia quaterna auibus quoque ſunt, vt cæteris greſſilibus, & pedeſtribus, quanquam illis brachia, aut crura quaterna, auibus vice crurum priorum, brachiorúmve, ala commune datum eſt membrum: hac enim volatiles ſunt. Quæ quidem volandi vis in auis eſſentia continetur. Itaque neceſſariò reſtat vt bipedes ſint. Ita enim notis, ſiue ſignis quaternis, alis ſcilicet additis, moueantur. Pectus acutum carnoſumque omnibus eſt. Acutum, vt meliùs volent. Lata enim, quia multum aëris propellunt, difficiliùs mouentur. Carnoſum, quia quod acutum eſt, niſi plenè opertum ſit, imbecillum eſt. Pectori vẽter ſubiacet, ad oſtium vſque excrementi, & ſuffraginem trudens non aliter quàm in quadrupedum atque hominum genere. Igitur inter alas, & crura, partes hæ poſitæ ſunt. Vmbilicum omnia habent, quæ vel vtero viuiparis eduntur, vel ouo ouiparis excluduntur: ſed auibus iam adultis hic deliteſcit, incertúſque eſt, vt patet per generationem eorum. Inteſtini namque coalitu vmbilicus auium conſiſtit, & non venarum pars vlla eſt, vt in viuiparo genere. Item auium aliæ volaces, aliſque grandibus atque validis ſunt: vt quæ vngues habent aduncos, & carne veſcuntur. Volaces enim tota vita eſſe neceſſe eſt.

ὧν δ' ἕνεκα τούτου πλῆθος ἔχουσι πτερύγων, καὶ τὰς πτέρυγας μεγάλας. ἔστι δὲ οὐ μόνον τὰ γαμψώνυχα, ἀλλὰ καὶ ἄλλα γένη ὀρνίθων πτητικά, ὅσοις ἡ σωτηρία ἐν τῇ ταχυτῆτι τῆς πτήσεως, ἢ ἐκτοπιστικὸς ὁ βίος. ἔνια δὲ οὐ πτητικά, ἀλλὰ βαρέα τῶν ὀρνίθων ἐστίν· οἷς ὁ βίος ἐπίγειος, καὶ ἔστι καρποφάγα· ἢ πλωτά, καὶ περὶ ὕδωρ βιοτεύουσιν. ἔστι δὲ τὰ μὲν τῶν γαμψωνύχων σώματα μικρὰ ἄνευ τῶν πτερύγων, διὰ τὸ εἰς ταύτας ἀναλίσκεσθαι τὴν τροφήν, εἰς τὰ ὅπλα καὶ τὴν βοήθειαν· τοῖς δὲ μὴ πτητικοῖς τοὐναντίον, τὰ σώματα ὀγκώδη· διὸ βαρέα εἰσίν. ἔχουσι δ' ἔνιοι τῶν βαρέων βοήθειαν ἀντὶ τῶν πτερύγων τὰ πλῆκτρα καλούμενα ἐπὶ τοῖς σκέλεσιν. ἅμα δὲ οἱ αὐτοὶ οὐ γίνονται πλῆκτρα ἔχοντες καὶ γαμψώνυχοι· αἴτιον δ', ὅτι οὐδὲν ἡ φύσις ποιεῖ περίεργον, οὐδὲ μάταιον. ἔστι δὲ τοῖς μὲν γαμψωνύχοις καὶ πτητικοῖς ἄχρηστα τὰ πλῆκτρα· χρήσιμα γάρ ἐστιν ἐν ταῖς πεζαῖς μάχαις. διὸ ὑπάρχει ἐν τοῖς τῶν βαρέων. τούτοις δ' οὐ μόνον ἄχρηστον, ἀλλὰ καὶ βλαβερὸν οἱ γαμψοὶ ὄνυχες, τῷ ἐμπήγνυσθαι ὑπεναντίοι πρὸς τὴν πορείαν ὄντες. διὸ καὶ γαμψώνυχα πάντα φαύλως πορεύεται, καὶ ἐπὶ πέτραις οὐ καθίζανει. ὑπεναντία γὰρ αὐτοῖς πρὸς ἀμφότερα ἡ τῶν ὀνύχων φύσις. ἐξ ἀνάγκης δὲ τοῦτο περὶ τὴν γένεσιν συμβέβηκε. τὸ γὰρ γεῶδες ἐν τῷ σώματι καὶ ἐξορμοῦν, χρήσιμα μόρια γίνεται πρὸς τὴν ἀλκήν· ἄνω μὲν ῥυὲν, ῥύγχεσιν ἐποίησε σκληρότητα, ἢ μέγεθος· ἂν δὲ κάτω ῥυῇ, πλῆκτρα ἰσχυρὰ ἐν τοῖς σκέλεσιν· ἢ ἐπὶ τῶν ποδῶν, ὀνύχων μέγεθος καὶ ἰσχύν. ἅμα δ' ἄλλό τι τούτων ἕκαστα οὐ ποιεῖ. διασπωμένη γάρ, ἀσθενὴς γίνεται ἡ φύσις τούτου τοῦ περιττώματος, τοῖς δὲ σκελῶν κατασκευάζει μῆκος. ἐνίοις δ' ἀντὶ τούτων, συμπληροῖ μεταξὺ τῶν ποδῶν. καὶ διὰ τοῦτ' ἀναγκαίως οἱ πλωτοὶ τῶν ὀρνίθων, οἱ μὲν ἁπλῶς εἰσι στεγανόποδες, οἱ δὲ διῃρημένην μὲν ἔχουσι τὴν καθέκαστα τῶν δακτύλων φύσιν. πρὸς ἑκάστῳ δ' αὐτῶν συμπέφυκεν οἷον πλάτη καθόλου συνεχής. ἐξ ἀνάγκης μὲν οὖν ταῦτα συμβαίνει διὰ ταύτας τὰς αἰτίας. ὡς δὲ διὰ τὸ βέλτιον ἔχουσι τοιούτους τοὺς πόδας, τοῦ βίου χάριν, ἵνα ζῶντες ἐν ὑγρῷ, καὶ τῶν πτερῶν ἀχρείων ὄντων, τοὺς πόδας ἔχωσι πρὸς τὴν νεῦσιν. γίνονται γὰρ ὥσπερ κωπῆρες πλέουσι, καὶ πτερύγια τοῖς ἰχθύσι. διὸ καὶ ἐὰν τῶν μὲν τὰ πτερύγια σφαλῇ, τῶν δὲ τὸ μεταξὺ τῶν ποδῶν, οὐκέτι νέουσι. ἔνιοι δὲ μακροσκελεῖς τῶν ὀρνίθων εἰσίν. αἴτιον δ', ὅτι ὁ βίος τῶν τοιούτων ἑλώδης. τὰ γὰρ ὄργανα πρὸς τὸ ἔργον ἡ φύσις ποιεῖ, ἀλλ' οὐ τὸ ἔργον πρὸς τὰ ὄργανα. διὰ μὲν οὖν τὸ μὴ πλωτὰ εἶναι, οὐ στεγανόποδά ἐστι· διὰ δὲ τὸ ἐν ὑπείκοντι εἶναι τὸν βίον, μακροσκελῆ καὶ μακροδάκτυλα. καὶ τὰς καμπὰς ἔχουσι πλείους ἐν τοῖς δακτύλοις οἱ πολλοὶ αὐτῶν. ἐπεὶ δὲ οὐ πτητικὰ μέν, ἐκ τῆς αὐτῆς δὲ ὕλης ἐστὶ πάντα, ἡ εἰς τὸ ὀρροπύγιον αὐτοῖς τροφή, εἰς τὰ σκέλη καταναλισκομένη ταῦτα ηὔξησε· διὸ καὶ ἐν τῇ πτήσει ἀντ' ὀρροπυγίου χρῶνται αὐτοῖς. πέτονται γὰρ ἀποτείνοντες εἰς τὸ ὄπισθεν. οὕτω γὰρ αὐτοῖς χρήσιμα τὰ σκέλη· ἄλλως δὲ ἐμποδίζοιεν ἄν. ἔνια δὲ βραχέα σκέλη πρὸς τῇ γαστρὶ ἔχοντα, πρὸς τὸ πέτεσθαι. τοῖς μὲν γὰρ αὐτῶν οὐκ ἐμποδίζουσιν οἱ πόδες οὕτω· τοῖς δὲ γαμψώνυξι, καὶ πρὸ ἔργου εἰσὶ πρὸς τὴν ἁρπαγήν.

A Itaque pennis abundant, & alarum magnitudine præſtant. Sed non modò quæ vncis ſunt vnguibus, verùm alia quoque genera volucrum volatu ſuperant: videlicet ea quæ vel pernicitate volandi ſeſe tueantur, vel loca mutare ſoleant. Sunt quæ non volaces ſed graues ſint, quibus vita terrena, & aut fruge viuunt, aut nant, & apud aquas immorantur. Corpora vncunguium exigua ſunt, exceptis alis, quoniam alimenti copia in alas, & arma præſidiumque abſumitur: contrà, quæ volaces non ſunt, iis corpora in molem euadunt grandiorem, atque ita efficitur vt ſint grauiores. Sed grauium nonnullis præſidio calcar eſt, quod vice alarum ſuis cruribus gerunt. Eadem B verò, & quæ calcar habeat, & vngues aduncos, nulla eſt. Cauſa eſt, quòd Natura nihil ſuperuacuum facit. Volaci autem vncungui generi calcar vſui eſſe non poteſt: vtile enim tantùm in pedeſtri certamine eſt. Quamobrem grauium nonnullis adiunctum eſt, quibus vngues adunci non ſolùm inutiles, ſed etiam nocui eſſent, cùm ad ſolum hærerent, & contra ingreſſum infixi reniterentur. Quamobrem vncungues omnes difficulter ambulant, nec in ſaxis conſiſtunt: natura enim eiuſmodi vnguium contraria in vtrumque eſt. Euenit id per generationem neceſſariò, cùm quod terrenum & procax in corpore eſt, formam partium commodarum ad pugnam recipiat. Ita- C que vbi ſurſum proruerit, roſtri duritiam aut magnitudinem facit: vbi deorſum lapſum eſt, calcaria cruribus valida effingit, aut pedibus vnguium magnitudinem, & robur. Simul autem hæc ſingula locis diuerſis efficere non poteſt: diſtracta enim excrementi eius natura inualida redditur. Item aliis crurum longitudinem condidit, aliis pedum interualla complet, digitóſque in palmæ effigiem contexit. Quo fit neceſſariò, vt aues aptæ ad nandum, aut omnino palmipedes ſint, aut diſcretos quidem habeant digitos: ſed ſingulis annexa latitudine cutis, velvti ſpadiculas ductu perpetuo gerant. Hæc neceſſariò his de cauſis eueniunt. Quod autem ad notæ melio- D ris rationem attinet, pedes huiuſmodi habent vitæ, quam degunt, gratia, vt cùm in humore viuant, nec pennis vtantur, pedes ad nandum vtiles habeant: iis enim perinde vtuntur, vt remis nautæ, & pinnulis ſuis piſces. Quamobrem ſi vel piſcium pinnula, vel auium pedibus interiecta cutis deſtruetur, nare non poterunt. Sunt in genere auium, quæ longis cruribus innitantur. Cuius rei cauſa eſt, quòd vita earum paluſtris eſt. Natura enim inſtrumenta ad officium, non officium ad inſtrumenta accommodat. Quoniam igitur nantes non ſint, ideo non palmipedes ſunt, quòd in ſolo premolli & lubrico degant: hinc longa iis crura & digiti productiores, flexus etiam E plures in digitis magna ex parte. Sed cùm volaces non ſint, & tamen ex eadem materia omnes conſtent, efficitur vt alimentum, quod cæteris ad caudam tranſmittatur, iis in crura id abſumptum reddat eam partem auctiorem: quapropter in volatu pro cauda iis vtuntur: porrectis enim cruribus in auerſum volant. Ita enim fit vt inter volandum non impediat pedum prolixitas, ſed iuuet. At quibus crura breuia ſunt, hæc ad ventrem contractis cruribus volant. Cùm enim nullis earum impedimento ſint pedes ita poſiti, vncunguibus vel ad raptum habentur expeditiores.

Quæ longo ſunt collo, ſi id craſſius habent, volant collo porrecto: ſi tenue, curuato feruntur. Cùm enim tenue præ longitudine quatitur, facilè frangi poteſt. Clunis auibus omnibus eſt: quanquam non clunem ſed femora bina habere, propter longitudinem clunis, videantur: quippe cùm ad medium vſque ventrem porrigatur. Cauſa eſt, quòd genus hoc animalium bipes eſt, non erectū. Nam ſi modo hominum, aut quadrupedum, clunem breuem à ſede, crúſque deinde directa ſtrue ſubditum haberet, omnino ſtare non poſſet. Homo enim, quia erectus eſt, ſtare poteſt. Quadrupedibus crura priora ad corporis pondus ſuſtinendum ſubdita ſunt. At aues nec erectæ ſunt, quoniam ſua natura in pomilionem degenerant: neque crura habent priora, quoniam alas vice eorum ſortiuntur. Itaque natura pro iis clunem longiorem emolita duxit ad medium, corpúſque pronum fulciuit, & crura ſubdidit ea parte qua pondere æquilibrāte, & ambulare æquilibrio poſſent, & conſtare. Sed quam ob cauſam genus auium bipes non erectum ſit, explicatum iam eſt. Cur autem crura carnoſa non habeat, eadem cauſa eſt, quam de quadrupedum cruribus reddidimus. Sūt auibus digiti quaterni æquè omnibus, tam multifido quàm palmipedi generi: nam de ſtruthione terræ Africæ incola poſtea definiemus, vt biſulcus eſt, vnà cum reliquis quæ ad auium genus habet contrariis. Sed cùm omnibus quaterni digiti ſint, tres parte priore habentur: vnus poſteriore pro calce, vt tutè ſit, qui minutus ineſt in iis quæ longa habent crura, vt in crece euenit: nec eſt quòd plures habeat digitos. Sed cùm talis digitorum poſitio in cæteris ſit, in iynge vna, quam turbinem appellatam dixi, vtrinque bini. Cauſa eſt, quòd eius corpus minùs quàm cæterarum, propenſum eſt in aduerſum. Teſtes omnibus auibus eſſe certum eſt, ſed intus lumbis adhærent. Cuius rei cauſam in generationis ratione animalium explicabimus. Partes auium ita ſe habent.

CAPVT XIII.

De partibus exterioribus piſcium, & cauſis quare ſic à natura inſtitutæ ſint.

PIſcium genus mutilatius item, ac imperfectius, quàm auium, partibus exterioribus eſt. Non enim crura, non manus, non alas hoc habet. Cur ita, cauſa iam expoſita eſt: ſed continuò ſimplici corpore à capite in caudam vſque porrigitur. Cauda verò ipſa non omnibus ſimilis eſt, ſed cùm cæteris non euariet, planorum nonnullis ſpina conſtat, & longa eſt. Incrementum enim eius partis ad piſcis latitudinem tranſit: vt in torpedine, paſtinaca, & ſi quid aliud eiuſmodi cartilagineum eſt. Horum igitur cauda ſpinoſa, & longa eſt. Quorundam carnoſa quidem, ſed breuis, eadem cauſa qua & torpedini: nihil enim refert, breuis carnoſáque ſit, an longa atque rigidior. Contrà accidit ranis: quòd enim latitudo earum parte priore minùs carnoſa eſt, ideo natura quantū corpulentiæ priori ademerat, tantū poſteriori, & caudæ addidit. Piſcibus nulla membra dependent, quoniam eorum natura natilis eſt, ratione ſuæ ſubſtantiæ. Nihil enim ſuperuacaneum, nihil fruſtra natura agit. Sed cùm ſua ſubſtātia ſanguinem habeant, & tamen natiles non greſſiles ſint,

A pinnulas habent, vt nantes: pedibus carent, vt non pedeſtres, ſed aquatiles. Pedum enim additio vtilis ad motum, qui in pedo, hoc eſt, ſolo, agatur: vnde & nomen inditũ pedibus eſt. Ad hæc, fieri non poteſt vt ſimul & quaternas habeant pinnulas, & pedes, aut aliud eiuſmodi membrum, cùm ſanguinem habeant. Corduli, quamuis branchiis præditi, pedes habent, quoniam penna carent, caudam etiam habent laxam & latam. Piſces, qui non lati ſunt modo raiæ, aut paſtinacæ, quaternas pinnulas habent, binas parte prona, & binas ſupina, neque eſt qui habeat plures, ſanguine enim careret. Binas, quæ parte prona lateribus geruntur, omnes ferè habent: reliquis, quæ ſubditæ ſunt, carẽt nonB nulli ex longis & corpulentis, vt anguilla, vt conger, & mugilum genus, quod in lacu Sipharum naſcitur. Nullæ omnino pinnæ prælongis & ſerpentis ſpeciem referentibus, vt murænæ: ſed flexuoſo impulſu corporum ita humore vtuntur, vt terra ſerpẽtes: modo namque eodem ſerpentes natãt, quo in ſicco repunt. Cauſa, cur id genus piſcium pinnis careat, eadem eſt, qua ſerpentes pedibus vacent. Cuius rei cauſam explicauimus, cùm de inceſſu & motu animalium ageremus. Aut enim malè mouerentur, aut nullo pacto moueri poſſent, ſi quaternas mouendi notas haberent: vix enim mouerentur, ſiue propinquas inter ſe haberent, ſiue remotas, propter longius interuallum. C Sed ſi plures mouendi notas, ſanguinis vacua eſſent. Hæc eadem cauſa bipennibus quoque piſcibus reddenda eſt. Serpentis enim ea quoque faciem referunt, & ſui corporis flexu pro duabus pinnis vtuntur. Vndè fit vt in ſicco & repere poſſint, & diutiùs viuere. Itaque alteri non protinus, alteri cùm pedeſtris naturæ familiares ſint, minùs exanimantur. Qui autem binis tantùm modò pinnis natant, eas habent, quæ parti pronę adhærent, niſi latitudo prohibeat: eaſque iuxta caput poſitas gerunt, qui habent, quoniam eo loco longitudine careant, qua vice pennarum moueantur: corpus enim eius generis piſcium exporrectum in caudam eſt. Raia, & ſimiles, pro pinnis D extrema ſui corporis latitudine natant. Squatina & rana pinnas lateribus accommodatas infrà gerunt, propter amplitudinem partis ſuperioris: quæ autem parti ſupinæ commiſſæ ſunt, eas iuxta caput adiunctas habent: nihil enim latitudo impedit quominus moueantur, ſed pro ſuperis illis has gerunt minores iis quæ ad latera applicantur. Torpedo duas iuxta caudam pinnas habet, pro reliquis latitudine vtitur, & vtroque ſui corporis ſemicirculo, quaſi geminis pinnis natat. De partibus capitis, & ſenſoriis antea dictum eſt. Piſcium autem genus præ cæteris, quæ ſanguinem habent, animalibus, propriam ſibi branchiarum naturam ſortitum eſt. Cuius, cauſam, cùm de ſpiratione ageremus, reddidimus. Quæ autem branchias habent, aut intectas geE runt, aut detectas: vt genus omne cartilagineum. Cauſa eſt, quòd cartilagine tum branchiæ tum earum tegmenta conſtant. Genus autem hoc omne cartilagineam habet ſpinam. Motus etiam cartilaginei generis lentus pigérque eſt, quoniam non ſpina aut neruo corroboratur: contrà, genus ſpinatum celeriter fertur. Tegmentum autem, quod branchias operiat, celeriter moueri oportet, cùm branchiarum natura quaſi ad ſpirandi vſum piſcibus data ſit: quamobrem in ſpinatis non modò tegmentum, verùm etiam ipſi branchiarum meatus contrahuntur, vt celeriùs agatur.

Habent.

Habent branchias alij multas, alij paucas, & alij A duplices, alij ſimplices: ſed nouiſſimam ſimplicem magna ex parte. Verùm cognitio diligentior ex conſectionibus commentationéque animaliũ petenda eſt. Cauſa copiæ, & inopiæ branchiarum, caloris cordi inſiti copia aut inopia eſt. In quibus enim plus ineſt caloris, hæc celeriùs moueri oportet, & vehementius. Geminæ autem branchiæ, atque duplices, talem naturam potiùs quàm ſimplices, paucioréſque obtinent. Vnde fit vt nonnulli ex iis qui branchias habent pauciores, minúſque continentes, diu extra aquam viuere poſſint: vt anguilla, & quicunque ſerpentis ſpeciem referunt: non enim multum refrigerationis deſiderant. Sũt & oris diſcrimina. Aliis enim os antè, & pronum B eſt: aliis infrà parte ſupina, vt delphinis, & cartilagineo generi. Quamobrem hæc, niſi conuerſa reſupinentur, cibum corripere nequeunt: quod natura non modò ſalutis gratia cæterorum piſcium feciſſe videtur, (dum enim ſeſe iſta conuertunt, mora intercedit, qua piſcis, quem inſectantur, euadere poſſit: nã omnia id genus rapina piſcium viuunt) verumetiam ne nimis ſuam deuorandi auiditatem explerent. Cùm enim faciliùs caperent, breui per immodicam ſatietatem perirent. Quoniam etiam cùm roſtrum eorum ſtructura tereti, ac tenui ſit, facilè ſcindi in oris habitum non poteſt. At hæc differentia exiſtit, quòd aliis os reſciſſum, aliis ſubinde in acutius compreſſum. Car- C ne veſcentibus, reſciſſum, vt iis quibus ſe pectinatim ſtipat dentium ſeries: iis enim vires ore continentur. Compreſſum, &, vt modò dixi, coarctatũ iis quæ non carne veſcantur. Cutis aliis ſquamata, (etenim ſquama præ rigiditate tenuitatéque deſiſtens ſumma corporis occupat) aliis aſpera, vt ſquatinæ, raiæ, & reliquis generis eiuſdem: aliis *læuis*, ſed pauciſſimis. Cartilaginea ſquamis carent, ſed aſpera cute *muniuntur*, *quoniam* ſpina cartilaginea conſtant. Terrenam enim portionem natura inde ad cutem tranſtulit, inque eius aſperitatem abſumpſit. Teſtes piſcium nullus, nec intus nec foris habet. Nec ſerpentes, aut ex iis aliquod, quæ pedibus carẽt, partem eã habere compertum eſt: ſed eius vice meatum excremento & D generationis vſui accõmodatum habent eundem, quem cætera quoque ouipara, eadémque quadrupeda omnia continent, quoniam nec veſicam habent, neque excrementum humidum ſecernunt. Piſciũ genus his à cæteris animalibus differentiis diſcrepat. Delphini, balænæ, & reliquũ cetarium genus, branchiis carent, ſed fiſtulam ſui pulmonis cauſa continent, qua humorem, quem in ore acceperint, reſpuant: nam & humorem admitti neceſſe eſt, cũ cibum in aqua ſubmerſum capiant, & admiſſum emitti neceſſe eſt. Branchiæ igitur iis quæ ſpirant, incommodè habentur. Cauſam verò, cùm de ſpiratione ageremus, reddidimus. Haud E enim fieri poteſt, vt idem & branchias habeat, & ſpiret. Sed enim iis ad reſpuendam aquam fiſtula data eſt, quæ ante cerebrum ſita eſt, ne poſtpoſita id interciperet à ſpina. Cauſa verò, cur pulmonem hæc habeant, & ſpirent, quòd maiora animalia plus caloris ſibi requirunt, vt poſſint moueri: quapropter pulmo iis inditus eſt, plenus caloris ſanguinei. Sunt hęc quodam modo & terreſtria, & aquatilia: vt enim aërem, terreſtrium more trahunt, ſic pedibus vacant, & cibum in humore, modo aquatilium, capiunt. Vituli etiam marini, & veſpertiliones, quoniam ambigant, alteri cum aquatilibus, & terreſtribus, alteri cum volucribus, & pedeſtribus, ideo participes & vtrorumque, & neutrorum ſunt.

CAPVT XIV.

De Struthione Africo, & eius natura, & forma.

Struthio etiam Africus eodem modo partim auem partim quadrupedem refert, quippe qui, vt non quadrupes, pennas habeat: vt non auis, ſublimis non volet: nec pennas ad volandum commodas gerit, ſed pilis ſimiles. Item C quaſi quadrupes ſit, pilos habet palpebræ ſuperioris, & glaber capite, & parte colli ſuperiore eſt. Itaque cilia habet piloſiora: ſed quaſi auis ſit, infrà pennis integitur. Bipes etiam, tanquam auis: biſulcus, tanquam quadrupes, eſt. Non enim digitos habet, ſed vngulam bipartitam. Quarum rerum cauſa eſt, quòd magnitudine non auis, ſed quadrupedis eſt. Magnitudinem enim auium minimam eſſe, propè dixerim, neceſſe eſt: corporis enim molem ſublimem moueri nequaquam facile eſt. Sed de partibus animalium, quam ob cauſam quæque ſint, dictum iam eſt per omnia animalium genera: quæ cùm explicata ſint, ſequitur vt de generationibus animalium diſſeramus.

CAPVT I. A

Vniuerſalis generationis partitio.

CVM de cæteris animalium partibus, tum ſummatim tum ſingulatim ſeorſum de propriis generis cuiuſque dictum iam ſit, quemadmodum, & qua de cauſa vnumquodque eſſet: (eam cauſam dico, cuius gratia quippiam ſit. Ponimus enim cauſarum genera quatuor numero. Primum, cuius gratia, vt finem. Secundum, ſubſtantiæ rationem, quæ quaſi vnum quoddam ferè exiſtimanda ſunt. B Tertium verò, quartúmque, materiam, & id vnde principium motus.) Sed cùm de cæteris dictum iam ſit, (ratio enim, & id cuius gratia, vt finis, idem eſt: materia verò animalibus partes ſunt totis diſſimilares, diſſimilaribus ſimilares, iiſque ea quæ elementa corporum appellantur) reſtat vt de partibus quæ ad generationem pertinent, diſſeramus, de quibus nihil adhuc definitum eſt: atque etiam de cauſa mouente quænam ſit. Sed de ea ipſa cauſa conſiderare idem quodam modo eſt atque de generatione cuiuſque agere. Quamobrem noſtra hęc diſputatio in idem ea coniecit, cùm & partes quæ ad generationem accommodantur, vltimas diſpoſuiſſet, & generationis principium ab iis proximum collocaſſet. C Animalium alia per coitum fœminæ & maris gignuntur, ſcilicet in quibus generibus ſexus vterque eſt. Non enim in omnibus ſed in præditis ſanguine, paucis quibuſdam exceptis, alterum mas alterum fœmina perfectum euadit. Exāguium verò quædam marem & fœminam habent, vt ſobolem eiuſdem generis procreent: alia procreant quidē, ſed non ſui generis prolem, ſcilicet quæ non ex coitu animalium prodeunt, ſed ex terra putri, aut excrementis. Quod autem in vniuerſum dixerim eorum quæ locum mutare ſolent, aut nando, aut volando, aut gradiendo, videlicet provt quodque actum ſuo corpore eſt, nonnulla toto genere ſuo, ſexum vtrumque obtinent, non modò ſanguine prædita, verùm etiam exāguia quædam.

A Nam eorum quoque aliis toto genere ſexus vterque eſt, vt mollibus, vt cruſtatis: aliis maxima parte, vt generi inſectorum. Eorum autem ipſorum quæ ex coitu cognatorum animalium gignũtur, ipſa quoque ſibi cognata progenerant. At verò quæ non ex coitu, ſed putri materia oriuntur, ea generant quidem, ſed genus diuerſum, quódque prodiit, nec mas eſt, neque fœmina. Talia ſunt nonnulla in genere inſectorum. Quod iuſta euenit ratione: nam ſi ex coitu eorum quæ non ex animalibus orta ſunt, animalia orirentur, hæc ſi eiuſdem generis eſſent, primum quoque ortum parentum talem eſſe oporteret. Quod rectè ita cenſemus, quando ſic euenire in cæteris B animalibus patet. Sed ſi diſſimilia quidem, ſed quæ coire inter ſe poſſent, gignerentur, rurſus ex iis alia quædam natura procrearetur, & alia ex ea: idque in infinitum procederet. At natura infinitum vitare ſolet. Infinitum enim fine caret: natura autem ſemper finem quærit. Quæ autem non greſſilia ſunt, vt teſtatum animalium genus, & quæ ſaxis adhærentia viuunt, quoniam natura ſimili plantis conſtant, hinc vt in illis, ſic in iis mas deeſt & fœmina: ſed ſimilitudine proportióneque nomen ſexus accipiunt: habent enim parum eiuſmodi differentiæ. Quodam etenim in ſtirpium genere, ſunt eodem in genere arbores, quæ fructum ferant, & quæ ipſæ quidem non ferant, C ſed ferentes adiuuant illas ad maturandum: vt inter ficum & caprificum euenit. Generationis etiam ratio eadem in ſtirpib. quoque eſt, cùm aliæ ſemine prodeant, aliæ ſponte naturę. Oriuntur enim à putreſcente vel humo, vel parte aliqua plantæ. Sunt enim quæ ipſa per ſe nunquam ſeorſum conſiſtant, ſed in aliis, arboribus dico, ſoleant generari, vt viſcum. Sed de ſtirpibus, ſiue plantis ſeorſum opere per ſe ipſis dicato agendum eſt.

CAPVT II.

Principium generationis eſſe marem, & fœminam.

D Nunc de animalium generatione differendum eſt, prout cuique ratio competit, deducenda ex iis quæ dicta iam ſunt. Generationis enim principia, vt retulimus, illa potiſſimùm quis ſtatuerit, marem & fœminam. Marem, vt quod motus, & generationis originem teneat: fœminam, vt quod materiæ. Quam rem ita eſſe potiſſimùm credes, ſi quemadmodum, vndéque ſemen genitale fiat, intellexeris. Ex hoc enim, quæ natura oriuntur, conſiſtunt. Id autem quemadmodum ex mare ac fœmina prodeat, nequaquam latêre oportet. Quòd enim ea pars de fœmina maréque ſecernitur, & in iis atque ex iis hæc ſecretio fit, ideo mas & fœmina principium conferunt generationis. Marem namque id animal dicimus, quod in alio gignit: fœminam, quod E in ſe ipſo. Quamobrem in vniuerſo quoque naturam terræ, quaſi fœminam matrémque ſtatuunt: cœlum autem, & ſolem, & reliqua generis eiuſdem, nomine genitoris patriſque appellant. Mas autem & fœmina inter ſe differunt ratione, quòd facultas vtriuſque diuerſa eſt: ſenſu autem partibus quibuſdam diſcrepãt. Rationis diſcrimen ita exultat vt mas ſit, quod in altero generare poteſt, vt eſt: fœmina, quod in ſe ipſo,

& ex quo ſit, quod generatur, contentum in eo quod generat. Sed quum facultate & munere quodam hæc diſtinguantur, ad omnem autem officij functionem inſtrumento opus ſit, inſtrumentáque facultatibus partes corporis accommodentur, ad procreationem quoque & coitum partes aliquas eſſe accommodatas neceſſe eſt, eáſque inter ſe diuerſas, quibus mas à fœmina differat. Nam etſi de toto animali mas aut fœmina dicitur, tamen non quauis ſui parte potentiáque idem mas aut fœmina eſt, ſed certa quadam virtute, ſiue potentia, & parte, ſicut & vim cernendi gradiendique obtinet, vt ſenſu patet. Partes verò eiuſmodi ſunt fœminæ vteri, & vuluæ: maris, teſtes, & coles, in omnibus ſanguine præditis. Eorum enim aliis teſtes, aliis meatus eiuſmodi quidam ſunt. In genere etiam exangui diſcrimen maris & fœminæ eſt, quibus hæc ſexus contrarietas data eſt. Differunt forma inter ſe partes ad coitum delegatæ in ſanguineo genere. Sed intelligendum ſic eſt, vt principio vel exiguo immutato, multa ex iis quæ à principio ſunt, immutari ſoleāt. Patet hoc in exectis, quibus parte genitali tantùm corrupta, tota ferè forma vſque eò commutatur, vt aut fœminæ eſſe videantur, aut parum abſint, tanquam non qualibet ſui corporis parte, aut potentia, animal ſit fœmina, aut mas. Conſtat igitur, principium quoddam eſſe marem ac fœminam: itaque meritò fit vt multa commutentur, cùm animal, qua fœmina, aut mas eſt, immutatur, quaſi principium dimoueatur.

CAPVT III.

Genitalia membra non eadem omnibus eſſe animalibus.

TEſtes, & vteri, aut vuluæ, non pari ratione in omnibus ſanguine præditis animalibus ſunt. Iam enim, vt primùm de teſtibus dicā, alia omnino teſtibus carent in eo genere, vt piſces, vt ſerpentes, meatúſque tantùm geminos ſemini genitali præſcriptos obtinent: alia habent quidem teſtes, ſed intus lumbis adhærentes, qua renes continentur, meatúſque ab eorum vtroque foras tendunt, vt in iis quæ teſtibus carent, qui in idem coniunguntur, quomodo in illis conſtitutum eſt. Ita aues omnes habent, & quadrupedes, quæ oua pariunt, inter eas quæ aërem accipiunt, pulmonémque obtinent: his enim omnibus teſtes lumbis intus adhærent, meatúſque gemini ab his ſimiliter, atque ſerpentibus, tendunt: vt lacerto, teſtudini, atque omnibus cortice intectis. Quæ autem animal gignunt, omnia teſtes in aduerſo habent, ſed nonnulla intus vltima conditos aluo, vt delphinus: nec meatus, ſed penem pertendentem habent, vt boues. Alia foris gerunt, eorum alia pendentes, vt homines: alia annexos ad ſedem ſeſſiles, vt ſues. Sed de his diligentiùs diſtinctum eſt in libris quos de hiſtoria animalium ſcripſimus. Vteri omnium bipartiti ſunt, vt teſtes gemini omnibus maribus habentur: ſed aliis iuxta genitale, vt mulieribus, & omnibus quæ animal non ſolùm foras, ſed etiam intra ſe generant, & piſcibus, qui oua edunt: aliis iuxta ſeptum tranſuerſum, ſiue cinctum, vt auibus omnibus, & piſcibus qui animal pariunt. Cruſtatis etiam vuluæ bifidæ ſunt, atque etiam mollibus. Quæ enim oua eorum vocantur,

Διὰ τί ἔνια τὸ πρὸς συνουσίαν ὄργανον οὐκ ἔχει.

ΕΤι δὲ τὸ ὄργανον τὸ πρὸς τὸν συνδυασμὸν, τὰ μὲν τετράποδα ἔχει· ἐνδέχεται γὰρ αὐτοῖς ἔχειν·

A pro vulua habent membranas, quibus continentur. Sed hoc maxime indiſcretum eſt in polypis, vt ſimplex eſſe videatur. Cuius rei cauſa eſt, forma corporis, quæ ſimilis vndique eſt. Inſectis etiam, quibus aliquid magnitudinis, bifidæ ſunt: minoribus incertæ, propter corporis exiguitatem. Partes, quas explicandas propoſui, ita ſe habent.

CAPVT IV.

Quam ob cauſam natura teſticulos animalibus indidit: quæ item animalia citiùs, & quæ tardiùs coeant. & quòd taurus cùm ſtatim à caſtratione iniſſet, impleuerit.

DE differentia inſtrumentorum genitalium, quæ in maribus ſunt, qui, quas ob cauſas ſint, B conſideret, accipiat primùm neceſſe eſt, cuiuſnam rei gratia teſtium conſtitutio habeatur. Ergo ſi natura rem quamcunque facit, aut quia neceſſaria eſt, aut quia meliùs ita eſt, hoc etiam membrum ob eorum alterutrum eſſe debet. Sed non neceſſarium id eſſe ad generationem patet. Omnibus enim, quæ generant, adiunctum eſſet, ſi neceſſitatis ratio haberetur. Nunc verò nec ſerpentibus teſtes ſunt, neque piſcibus. Viſi ſunt enim coire, plenóſque ſeminis genitalis habere ſuos meatus. Reſtat igitur vt melioris cuiuſpiam notæ gratia teſtes habeantur. Sed enim maximæ animalium parti munus nullum ferè aliud eſt, niſi quod plantarum ſemen, & fructus. Vtque in ratione cibi C voraciora auidioráque ſunt, quibus inteſtinum rectum: ſic ea quæ teſtibus carent, meatúſque tantùm habent; aut non carent, ſed intus habent, omnia propenſiora celerioráque ad Venerem ſunt. At verò quæ caſtiora eſſe conuenit, iis vt in cibi vſu inteſtino opus eſt non recto, ſic meatus illi reuolutionem, infractúſque habent, ne libido vehemens crebráque citetur. Teſtes autem ad hanc rem emolita natura eſt. Motum enim excrementi genitalis ſtabiliorem faciunt in viuiparis, vt equis, cæteriſque eiuſmodi, atque etiam hominibus, cùm replicationem ſeruēt. Sed quemadmodum ſe habeant, petendum ex animalium D hiſtoriis eſt. Nullam enim partem meatuum teſtes complent, ſed adiecti pendent eo modo, quo pondera textrices telis annectunt. His enim detractis meatus intrò ſe trahunt. Quo fit, vt execta poſſint generare: nam niſi ita retraherentur, poſſent generare. Etiam taurus quidam, cùm ſtatim à caſtratione iniiſſet, impleuit, quoniam nondum retracti eſſent meatus. Auium verò & quadrupedum ouiparorum teſtes excrementum recipiunt genitale. Itaque tardiùs iis quàm piſcibus, ſemen prodit. Patet hoc in auium genere, cùm tempore coitus teſtes multo habeant grandiores, quæ certo tempore coeant. At vbi id tempus præterierit, E adeò exiguos habent, vt incertum ſore, an habeant, ſit, cùm tamen eo tempore, quo coeunt, gerant prægrandes. Celeriùs itaque ea coeunt, quæ teſtes intra ſe continent: quæ enim extra habent, non priùs ſemen emittunt, quàm retrahant teſtes.

CAPVT V.

Quæ animalia membrum ad coitum accommodatum obtineant, & quæ non.

INſtrumentum etiam accōmodatum ad coitum quadrupedes obtinent: habere enim id poſſunt.

A Aues, & quæ pedibus vacant, habere nequeunt: quoniam alteris crura ſub media aluo poſita ſunt: alteris nulla ſunt crura. Natura autem penis hinc pendet, & ſitum hunc tenet. Et quidem ob eam rem euenit vt in coeundo crura contendantur. Nam & inſtrumentum hoc neruo conſtat, & crurum natura neruoſa eſt. Itaque cùm habere id nequeant, teſtes quoque aut non habere, aut non eo loco habere, neceſſe eſt. Idem enim ſitus penis & teſtium eſt in iis quæ habent vtrumque. Quinetiam ea quorum teſtes ſunt extrà, cùm penis per motum caleſcit, ſemen genitale proinde collectum emittunt: non parato iam ſemine contre-

Cauſa, quamobrem teſtes habent, quæ membrum hoc obtinent, & cur alia intus, alia extrà, declaratum iam eſt.

CAPVT VI.

C *Quam ob cauſam nonnulla animalia membro genitali careant.*

QVæ autem carent eo membro, non quia melius ſit carere, ideo carent: ſed tantùm quia neceſſarium, vt dictum eſt, quoniam celeriter peragatur eorum coitus neceſſe eſt: qualis natura piſcium, & ſerpentum eſt. Piſces enim incurrentes attingunt, abſoluuntúrque ocyſſimè. Nam vt in hominum, & eiuſmodi omnium genere, ſemen genitale ſpiritu retento emitti neceſſe eſt: ſic in piſcibus, mari non in branchiis accepto, emittitur. Facilè autem pereunt, niſi id aſſiduè faciant.

B CAPVT VIII.

De ſitu vterorum, aut vuluarum, in quibuſque animantibus.

De vteris, aut vuluis, quemadmodum ſe habeant, ambiges: magna eſt enim eius partis diuerſitas. Nam neque viuipara omnia habent ſimili ſitu. Sed cùm homines, omnéque genus terreſtre infrà ad genitale habeant, cartilaginea ſuprà continent iuxta ſeptum. Neque ouipara ſibi conueniunt, ſed piſces infrà, vt homines, & quadrupedes viuiparæ, habent: aues & quadrupedes ouiparæ ſuprà. Attamen ipſi quoque ſitus contra- C rij non ſunt a ratione remoti. Iam enim quæ oua pariunt, diuersè pariunt. Etenim alia imperfecta emittunt oua, vt piſces: foris enim piſcium oua perficiuntur, & augentur. Cuius rei cauſa eſt, quòd magna fœcunditas eſt, idque munus eorum, vt ſtirpium eſt. Quòd ſi intra ſe fœtum perficerent, pauciora neceſſariò ederent: nunc verò & tot continent, vt vulua vnum eſſe ouum in paruis quidem piſciculis videatur: ſunt enim hi fœcundiſſimi, vt in cæteris quoque tum plantis tum animalibus euenit, quorum natura his proportionetur. In iis enim magnitudinis incrementum vertitur in ſeminis copiam. Aues, & quadrupedes ouiparæ oua edunt perfecta: quæ vt D ſeruari poſſint, duro iam conſtent putamine oportet: ſunt enim, quamdiu increſcunt, molliora. Teſta autem efficitur calore externo euaporante humorem. Itaque calidum eſſe locum, in quo id fiat, neceſſe eſt. Talis autem locus ſepti tranſuerſi eſt: quippe qui cibum concoquendo perficiat. Quòd ſi oua cõtineri in vulua neceſſe eſt, vuluam eorum, quæ oua edunt perfecta, ſitam eſſe ad ſeptum neceſſe eſt: eorum autem, quæ imperfecta, infra. ita enim in promptu erit. Et ſua verò natura vulua propenſior ad ſitum inferiorem, quàm ad ſuperiorem, eſt: niſi quid aliud opus naturæ impedit. infrà eſt enim exitus eius officium.

E CAPVT IX.

De generatione viuiparorum, & eius inter ea, differentia.

Viuipara etiam inter ſe differunt. Alia enim non modò foras, verumetiam intra ſe animal generant, vt homines, vt equi, vt canes, denique omnia, quæ pilis teguntur: & inter aquatilia delphini, balænæ, & reliqua cetarij generis.

A

CAPVT X.

De genere cartilagineorum, & viperæ.

CArtilaginea verò & viperæ, cùm intra ſe oua generent, mox animal foras pariunt, perfectum generant ouum. Ita enim ex ouo animal gignitur, ex imperfecto nullum. Non extrà hæc pariunt oua, quia natura frigida ſunt, non quia calida, vt quidam volunt.

CAPVT XI.

B

De generatione mollium animantium.

CVte molli intecta generant oua: quòd enim caloris exigui ſunt, vltimum ſiccare natura eorum non poteſt. Quia igitur frigida ſunt, molle generant: quia molle, non extrà: periret enim propter ſuam mollitiem. Cùm autem ex ouo animal gignitur, eodem, quo in auibus, modo, parte plurima generatur. Deſcendunt oua in imum, efficiunturque animalia infrà ad genitale: quomodo in iis fit quæ iam inde à primo ortu animal generant. Quamobrem vulua quoque eorum diſſimilis tum viuiparis, tum ouiparis eſt, quoniam vtriuſque conſortium generis habent.
C
Nam & ſuprà ad ſeptum, & infrà porrectum genus omne cartilagineum habet. Sed tam de ea quàm de cæteris vuluæ aut vteri generibus, quemadmodum ſe habeant, per hiſtorias diſſectionéſque animalium indagandum percipiendúmque eſt. Itaque hoc genus & ſuprà continet vuluam, quia ouiparum perfectorum ouorum eſt: & infrà, quia viuiparum eſt, atque particeps vtriuſque euadit. At verò ea quæ protinus animal generant, omnia infrà habent: nullo enim naturæ opere impediuntur, neç partum geminant. Adhæc fieri non poteſt vt animalia iuxta ſeptum gignantur: fœtum enim pondus & motum habere neceſſe eſt. Is autem locus, cùm vitalis ſit, hæc pati non poteſt. Difficultatem etiam pariendi ita accidere
D
neceſſe eſt, propter delationem longiorem: nam & nunc mulieres ſi in partu vel oſcitando, vel aliqua eiuſmodi cauſa retrahunt, difficiliùs pariunt. Inanes etiam vteri, aut vuluæ ſurſum adiunctæ ſtrangulant. Necnon validiores eſſe eas quæ animal contineant, neceſſe eſt: quamobrem omnes eæ carnoſæ ſunt. Quæ autem ad ſeptum iunguntur, membrana conſtant: tum etiam in iis ipſis animalibus, quæ geminant partum, planum hoc idem fit: oua enim ſuprà, atque ad latus continent, animalia verò parte infera vuluæ gerunt. Sed quam ob cauſam ſitu contrario vuluas nonnulla animalia habent, & omnino quamobrem
E
aliis infrà, aliis ſuprà ad ſeptum continentur, dictum iam eſt.

CAPVT XII.

Quam ob cauſam vteros intus animalia habeant, teſtes verò alia intus, alia extrà.

CVr autem vteros aut vuluas omnia intus habeant, teſtes alia extrà, alia intus, cauſa eſt, quòd cū vtero contineatur quod gignitur, idque cuſtodiā, operimentū, & concoctionem deſideret, hinc vteri, aut vuluç omnium intus ſunt. Locus.n.

A exterior corporis & frigidus eſt, & offenſioni ex-
poſitus. Teſtes aliis intus, aliis extra : propte-
quòd iis quoque operimento & velamine op-
eſt, tum vt ſeruentur, tum vt ſemen genitale pe-
ficere poſſint. Haud enim fieri poteſt vt frigentes
& gelidi poſſint retrahi, atque emittere genitu-
ram. Quamobrem quibus teſtes in propatulo
ſunt, habent operimentum cuteum, quod ſcro-
tum vocatur. Sed quibus natura cutis præ ſua
duritia obſtat, ne mollis, cutea, & ad comple-
ctendum habilis ſit, vt iis, quæ aut piſcea cute,
aut cortice teguntur, iis intus habeantur neceſſe
B eſt. Quapropter delphini, & quæcunque ceta-
rij generis habent teſtes, intus continent : atque
etiam ouiparæ quadrupedes corticati generis.
Cutis etiam auium dura eſt, vt magnitudini debi-
tæ inhabilis ſit ad comprehendendum. Cauſam
his omnibus deſignari neceſſe eſt, vnà cum iis
quas antea diximus, ex iis quæ per initum, & tem
Veneream accidunt. Hæc eadem cauſa eſt vt &
elephantus ac herinaceus teſtes habeant intus:
cutis enim iis quoque inepta ad habendam parti-
culam, quæ operiat. Situs etiam vterorum con-
trarius in iis quæ animal intra ſe generant, ad ea
quæ oua edunt : atque etiam eius ouipari generis
C in iis quæ vterum infrà habent, ad ea quæ ſuprà
ad ſeptum: verbi gratia, piſcibus ad aues quadru-
pedeſque ouiparas, atque etiam iis quæ modo
vtroque generant, vt oua intra ſe pariant, ani-
mal edant in lucem. Quæ enim intra ſe & foris
animal generant, vterum habent in aluo : vt ho-
mo, bos, canis, & reliqua generis eiuſdem. Nam
ad fœtus tum ſalutem, tum incrementum, expe-
dit nihil ponderis inſidere vteris.

CAPVT XIII.

*Meatus excrementi ſicci, & humidi, in omnibus
animalibus eſſe diuerſos.*

D MEatus etiam diuerſus iis omnibus eſt, quo
excrementum ſiccum & quo humidum
exit. Quamobrem omnia id genus, tam fœ-
minæ quàm mares, genitale habent, quo excre-
mentum ſiccum, & quo humidum ſecernatur,
quoque maribus genitura, fœminis partus emit-
tatur. Parte priore ſuperioreque meatus is con-
tinetur. Quæ autem pariunt quidem oua, ſed
imperfecta, vt piſces ouipari, iis non ſub aluo
ſed lumbis adhęrens vulua continetur. Nec
enim incrementum oui impedimento eſt, quo-
niam inchoatum prodiens ouum foris perficitur:
E & meatus idem excrementarius alimenti ſicci,
& intus eſt omnibus, quæ genitali carent : oui-
paris etiam iis quæ habent veſicam, vt teſtu-
dinibus. Generationis enim cauſa, non excre-
menti emittendi, duplex meatus eſt : ſed quia
ſeminis natura humida eſt, ideo meatus is
communis cum excremento humidi alimen-
ti habetur. Conſtat hoc ita eſſe eo quòd cùm
genitale ſemen omnia animalia ferant, excre-
mentum tamen humidum illud non omnia red-
dunt : ſed cùm & maris ſeminales meatus,
& fœminæ vterum firmari, nec oberrare opor-
teat, idque aut in parte priore corporis, aut in
poſteriore ad prona effici neceſſe ſit : idcirco vi-
uiparis propter fœtum vterus in parte priore
poſitus eſt, ouiparis ad lumbos, & prona.

Quæ autem animal edunt in lucem, cùm intra ſe oua generarint, iis ſitus vterque, quoniam vtrunque referunt genus: & eadem tum viuipara tum ouipara ſunt. Partem enim vuluæ ſuperiorem, in qua oua gignuntur, ſub ſepto ad lumbos & prona habent, inferiorem ad aluum: hac enim iam procreant animal. Meatus idem iis quoque ſicci alimenti, & coitus eſt. Nulli enim ex iis genitale pendet, vt antea dictum eſt. Meatus etiam genitales marium, tum eorum quorum proprij ſunt, tum verò eorum qui teſtes habent, ſimili modo atque vuluæ ouiparorum, habentur. Omnibus enim ad prona & ſpinæ locum adhærent. Non enim vagari ſed ſtabiles eſſe oportet: talis autem locus poſterior eſt: is enim eſt qui continentiam præbeat, & ſtabilitatem. Quibus itaque teſtes intus continentur, iis protinus cum meatibus firmantur. Nec ſecus iis eſt, quibus extrà: tum eôdem deueniunt, ſcilicet in locum genitalis, communique excipiuntur meatu. Similis & delphino meatuum modus eſt, ſed teſtes ſub aluo occulti. Sed quemnam ſitum partes ad generationem accommodatæ, & quas ob cauſas tenuerint in his generibus, dictum iam eſt.

CAPVT XIV.

Cruſtacea, mollia, teſtacea, & inſecta animalia tum inter ſe, tum cum ſanguineis in generatione differre.

CÆteris, quæ ſanguine vacant, animalibus, non idem membrorum ad generationem pertinentium modus: ſed tum inter ipſa tū etiam cum ſanguineis diſſident. Sunt hæc reliqua genera quatuor numero: vnum cruſtatum, ſecundum molle, tertium inſectum, quartum teſtatum. An quarti generis vlla coëant, incertum eſt: plurima tamen non coire apertum eſt. Quemadmodum conſiſtant, poſtea dicemus. Cruſtata coëunt modo eorum quæ in auerſum mingunt, cùm alterum ſupinum, alterum pronum, applicauerint caudas. Etenim ne parte ſupina ſuperueniant pronam, impediunt caudæ præ ſuarum pinnarum prolixa appendice. Habent in hoc genere mares tenues genitales meatus: fœminæ vuluas membraneas ad inteſtinum fiſſas, hinc atque inde, in quibus gignitur ouum.

CAPVT XV.

De coitu & generatione mollium animalium.

MOllia ore coëunt, renixu complexúque mutuo brachiorum. Sic enim coniungi neceſſe eſt, quoniam natura exitum excrementi in os in lectendo adduxerit, vt antea dictum eſt, cùm de partibus ageremus. Habere fœminas omnes in hoc genere membrum vuluale, apertum eſt. Continent enim ouum primò indiſcretum, mox diſcretum in plura, & pariunt omnia imperfecta, modo ouiparorum piſcium. Meatus ille interior idem excrementi & vuluæ eſt, tum in iis tum etiam in cruſtatis. Eſt enim qua ſemen genitale per meatum emittant, idque parte corporis ſupina, qua putamen diſtat,

ΚΕΦΑΛ. ιδ'.

C Ὅτι τῶν ἀναίμων γένη τέτταρα· καὶ πρῶτον περὶ τῆς τῶν ἐστρακοδέρμων καὶ τῶν μαλακοστράκων γενέσεως.

ΤΩν δ' ἄλλων ζῴων τῶν ἀναίμων, οὐχ ὁ αὐτὸς τρόπος τῶν μορίων τῶν πρὸς τὴν γένεσιν συντελούντων, οὔτε τοῖς ἐναίμοις, οὔθ' ἑαυτοῖς. ἔστι δὲ γένη τέτταρα τὰ λοιπά· ἓν μὲν, τὸ τῶν μαλακοστράκων· δεύτερον δὲ, τὸ τῶν μαλακίων· τρίτον δὲ, τὸ τῶν ἐντόμων· καὶ τέταρτον, τὸ τῶν ὀστρακοδέρμων. τούτων δὲ περὶ μὲν πάντων ἄδηλον· τὰ γὰρ πλεῖστα ὅτι οὐ συνδυάζεται, φανερόν· τίνα δὲ συνίσταται τρόπον, ὕστερον λεκτέον. τὰ δὲ μαλακόστρακα συνδυάζεται μὲν, ὥσπερ τὰ ὀπισθουρητικά, ὅταν τὸ μὲν ὕπτιον, τὸ δὲ πρη- D νὲς, ἐπαλλάξῃ τὰ οὐραῖα. τοῖς γὰρ ὑπτίοις πρὸς τὰ πρανῆ ἐπιβαίνειν ἐμποδίζει τὰ οὐραῖα μακρὰν ἔχοντα τὴν ἀπάρτησιν τῶν πτερυγίων. ἔχουσι δὲ οἱ μὲν ἄρρενες λεπτοὺς πόρους θορικούς· αἱ δὲ θήλειαι, ὑστέρας ὑμενώδεις παρὰ τὸ ἔντερον, ἔνθεν καὶ ἔνθεν ἐσχισμένας· ἐν αἷς ἐγγίνεται τὸ ᾠόν.

ΚΕΦΑΛ. ιε'.

Περὶ τῶν μαλακίων συνδυασμοῦ καὶ γενέσεως.

ΤΑ δὲ μαλάκια συμπλέκεται μὲν κατὰ τὸ στόμα, ἀντερείδοντα καὶ διαπλέκοντα τὰς πλεκτάνας. συμ- E πλέκεται δὲ τὸν τρόπον τοῦτον διὰ ἀνάγκης. ἡ γὰρ φύσις περὶ τὸ στόμα τὴν τελευτὴν τοῦ περιττώματος συνήγαγε κάμψασα, καθάπερ εἴρηται πρότερον ἐν τοῖς περὶ τῶν μορίων λόγοις. ἔχει δ' ἡ θήλεια μὲν, ὑστερικὸν μόριον φανερῶς ἐν ἑκάστῳ τούτων τῶν ζῴων· ᾠὸν γὰρ ἔχει, τὸ μὲν πρῶτον, ἀδιαίρετον· ἔπειτα διακρινόμενον, γίνεται πολλά, καὶ ἀποτίκτει ἕκαστον τούτων ἀτελές, καθάπερ καὶ οἱ ᾠοτοκοῦντες τῶν ἰχθύων. ὁ δὲ πόρος ὁ αὐτὸς τοῦ περιττώματος καὶ τοῦ ὑστερικοῦ μορίου, καὶ τοῖς μαλακοστράκοις, καὶ τούτοις. ἔστι γὰρ ᾗ τὸν θορὸν ἀφιᾶσι διὰ τοῦ πόρου. ταῦτα δ' ἐστὶν ἐν τοῖς ὑπτίοις τοῦ σώματος, ᾗ τὸ κέλυφος ἀφέστηκε,

καὶ θύραζε εἰσέρχεται· διὸ ὁ συνδυασμὸς κατὰ τοῦτο γίγνεται τῷ ἄρρενι πρὸς τὴν θήλειαν. ἀναγκαῖον γὰρ ὅταν ἀφίησιν ὁ ἄρρην, εἴτε σπέρμα, εἴτε μόριον, εἴτε ἄλλην τινὰ δύναμιν, κατὰ τὸν ὑστερικὸν πόρον πλησιάζειν. ἡ δὲ τῆς πλεκτάνης τοῦ ἄρρενος, διὰ τοῦ αὐλοῦ δίεσις ἐπὶ τῶν πολυπόδων, ᾗ φασιν ὀχεύειν πλεκτάνῃ οἱ ἁλιεῖς, συμπλοκῆς χάριν ἐστὶν, ἀλλ' οὐχ ὡς ὀργάνου χρησίμου πρὸς τὴν γένεσιν· ἔξω γάρ ἐστι τοῦ πόρου καὶ τοῦ σώματος. ἐνίοτε δὲ συνδυάζονται καὶ ἐπὶ τὰ πρανῆ τὰ μαλάκια. πότερον δὲ γενέσεως χάριν, ἢ δι' ἄλλην αἰτίαν, οὐδὲν ὦπται πω.

ΚΕΦΑΛ. ιϛ'.

Περὶ τῶν ἐντόμων συνδυασμοῦ καὶ γενέσεως. Πῶς ἡ θήλεια ἄρρενος διαφέρει ἐν τῷ τῶν ἐντόμων γένει, καὶ ἰχθύων, καὶ τετραπόδων τῶν ᾠοτόκων.

Τῶν δὲ ἐντόμων τὰ μὲν, συνδυάζονται, καὶ ἡ γένεσις αὐτῶν ἐστιν ἐκ ζῴων συνωνύμων, καθάπερ ἐπὶ τῶν ἐναίμων· οἷον αἵ τε ἀκρίδες καὶ οἱ τέττιγες, καὶ τὰ φαλάγγια, καὶ οἱ σφῆκες, καὶ οἱ μύρμηκες. τὰ δὲ, συνδυάζεται μὲν καὶ γεννῶσιν, οὐχ ὁμογενῆ δ' αὐτοῖς, ἀλλὰ σκώληκας μόνον· οὐδὲ γίγνονται ἐκ ζῴων, ἀλλ' ἐκ σηπομένων ὑγρῶν τὰ δὲ, ξηρῶν, οἷον αἵ τε ψύλλαι, καὶ αἱ μυῖαι, καὶ αἱ κανθαρίδες. τὰ δὲ, οὔτ' ἐκ ζῴων γίνονται, οὔτε συνδυάζονται, καθάπερ ἐμπίδες τε καὶ σκώληκες, καὶ πολλὰ τοιαῦτα γένη. τῶν δὲ συνδυαζομένων, ἐν τοῖς πλείστοις τὰ θήλεα μείζω τῶν ἀρρένων ἐστί. πόρους δὲ τὰ ἄρρενα θορικοὺς οὐ φαίνεται ἔχοντα. ἀφίησι δὲ (ὡς ἐπὶ τὸ πλεῖστον εἰπεῖν) τὸ ἄρρεν ἐπὶ τὸ θῆλυ, οὐδὲν μόριον, ἀλλὰ τὸ θῆλυ ἐπὶ τὸ ἄρρεν κάτωθεν ἄνω. τεθεώρηται δὲ τοῦτο ἐπὶ πολλῶν, καὶ περὶ τῆς ἀναβάσεως ὡσαύτως· τοὐναντίον δ' ἐπ' ὀλίγων· ὥστε δὲ καὶ γένει διελεῖν, οὔπω συνεώραται). σχεδὸν δὲ τοῦτο καὶ ἐπὶ τῶν ᾠοτόκων ἰχθύων τῶν πλείστων ἐστὶ, καὶ ἐπὶ τῶν τετραπόδων καὶ ᾠοτόκων. τὰ γὰρ θήλεα μείζω τῶν ἀρρένων ἐστὶ, διὰ τὸ συμφέρειν πρὸς τὸν γινόμενον αὖθις ὑπὸ τῶν ᾠῶν ὄγκον ἐν τῇ κυήσει. τοῖς δὲ θήλεσιν αὐτῶν τὸ ταῖς ὑστέραις ἀνάλογον μόριον, ἐσχισμένον ἐστὶ περὶ τὸ ἔντερον, ὥσπερ καὶ τοῖς ἄλλοις· ἐν ᾧ ἐγγίγνεται τὰ κυήματα. δῆλον δὲ τοῦτο ἐπί τε τῶν ἀκρίδων, καὶ ὅσα μέγεθος αὐτῶν ἔχει, συνδυάζεσθαι πεφυκότων. τὰ γὰρ πλεῖστα μικρὰ λίαν ἐστὶ τῶν ἐντόμων. τὰ μὲν οὖν περὶ τὴν γένεσιν ὄργανα τοῖς ζῴοις, περὶ ὧν οὐκ ἐλέχθη πρότερον, τοῦτον ἔχει τὸν τρόπον. τῶν δὲ ὁμοιομερῶν ἀπελείφθη περὶ γονῆς καὶ γάλακτος. περὶ ὧν καιρός ἐστιν εἰπεῖν περὶ μὲν γονῆς ἤδη, περὶ δὲ γάλακτος ἐν τοῖς ἐχομένοις.

ΚΕΦΑΛ. ιζ'.

Τίνα τῶν ζῴων σπέρμα προΐεται, τίνα δ' οὔ. Ζητήματα διάφορα περὶ σπέρματος.

Τὰ μὲν γὰρ προΐεται φανερῶς τῶν ζῴων, οἷον ὅσα αὐτῶν ἔναιμα τὴν φύσιν ἐστί. τὰ δὲ ἔντομα καὶ μαλάκια πότερον, ἄδηλον. ὥστε τοῦτο θεωρητέον, πότερον πάντα προΐεται σπέρμα τὰ ἄρρενα, ἢ οὐ πάντα· καὶ εἰ μὴ πάντα, διὰ τίνα αἰτίαν τὰ μὲν, τὰ δ' οὔ· καὶ τὰ θήλεα δὲ πότερον συμβάλλεται σπέρμα τι, ἢ οὔ· καὶ εἰ μὴ σπέρμα, πότερον οὐδ' ἄλλο οὐθὲν, ἢ συμβάλλεται μέν τι, οὐ σπέρμα δέ. ἔτι δὲ καὶ τὰ προϊέμενα σπέρμα, τί συμβάλλεται διὰ τοῦ σπέρματος πρὸς τὴν γένεσιν,

A & mare illabitur, faciunt. Quamobrem ea parte mas cum fœmina copulatur. Nam ſi ma[illegible], ſiue ſemen, ſiue membrum, aut aliquam [illegible]tem, ſiue vim aliam mittat, admoueri ad meatum vulualem neceſſe eſt. Crinis verò inſertio maris polypi per fiſtulam, qua piſcatores crine coire polypos aiunt, complexus gratia fit, non quaſi inſtrumentum id ſit vtile ad generationem: etenim extra meatum corpúſque eſt. Interdum tergis quoque mollia copulantur: ſed generationiſne gratia, an alia cauſa, nondum exploratum habetur.

CAPVT XVI.

B *De coitu, & generatione inſectorum.*

INſectorum aliqua coeunt, atque ex animalibus eiuſdem generis oriuntur, modo eorum quibus eſt ſanguis: vt locuſtæ, cicadæ, phalangia, veſpæ, formicæ: aliqua coëunt quidem, & generant, ſed non ſui generis animal, ſed vermiculos tantùm, neque ex animalibus procreantur, ſed ex putreſcente humido aut ſicco: vt pulices, muſcæ, ſcarabei. Quædam nec ex animalibus naſcuntur, neque coeunt: vt culices, & vermiculi, & plura eiuſmodi genera. Inter ea verò quæ coëunt, fœminæ maxima ex parte maiores maribus

C ſunt: nec meatus vlli ſeminales in maribus eſſe videntur. Nullum, parte plurima dixerim, membrum fœminæ à mare inſeritur, ſed mari à fœmina ſurſum de parte inferiore: quod conſpectum in pluribus eſt. Nec de ſuperuentu ambigitur: ſed contrà, vt mas fœminæ inſerat, viſum in paucis eſt. Neque adhuc ita exploratum habetur, vt genere poſſimus diſtinguere. Hoc idem ferè in piſcibus quoque ouiparis maxima ex parte, & in quadrupedibus ouiparis eſt, vt fœminæ maiores ſint maribus: quoniam id commodum eſt ad vterum magna ouorum copia extumeſcentem. Fœminis in eo genere membrum, quod pro vulua habetur, fiſſum iuxta inteſtinum, vt cæteris, po-

D ſitum eſt, in quo fœtus generatur. Patet hoc in locuſtis, & reliquis, quorum magnitudo aliqua ſit, & natura coitum recipiat. Maxima enim pars generis inſecti perexigua eſt. Inſtrumenta generationi accommodata, de quibus non antea diſſeruimus, ita ſe habent. Similarium partium ſemen genitale, & lac reliquimus, de quibus nunc opportunè dicemus: & primùm in ſemine, pòſt in ſequentibus, de lacte.

CAPVT XVII.

Quæ animalia ſemen emittant, quæ non: & quorundam opinio, qui ſemen ex vnaquaque corporis parte prouenire affirmant.

SEmen alia apertè emittunt, vt ea quæ ſunt

E natura ſanguinea: alia, id eſt, inſecta, & mollia, emittant néćne incertum eſt. Itaque conſiderandum hoc eſt, vtrùm mares omnes ſemen emittant, an non omnes: & ſi non omnes, cur alij emittant, alij non. Tum etiam, vtrùm fœminæ ſemen aliquod conferãt ad procreationem, an non: & ſi nõ ſemen, vtrùm nec aliud quicquam adhibeant: an quamuis non ſemen, tamen aliquid conferant. Adhæc, quidnam conducant ea quæ ſemen emittunt ſuo ſemine ad generationem,

quærendum

quærendum eſt: atque omnino quæ natura ſit ſeminis, & eorum quæ menſtrua vocantur, ſcilicet in iis animalibus quæ id humoris genus emittunt. Omnia ex ſemine gigni, ſemen autem ipſum proficiſci à generantibus videtur. Quamobrem eiuſdem ſtudij eſt quæſtio, vtrùm ambo, mas & fœmina, emittant, an alter tantùm: & vtrùm ex toto corpore ſecernitur, an nō ex toto. Nā ſi non ex toto, nec ex ambobus quidē parentibus prodire probabile eſt. Quapropter primùm de hoc, quemadmodum ſe habeat, inquirendum eſt. Sunt enim qui dicant id ex toto corpore prouenire. Quibus autem argumentis probent, vt ſemen ex vnaquaque corporis parte ſecernatur, quatuor ferè numero ſunt. Primùm vehementia voluptatis. magis enim ſuaue eſt quod idē amplioris ſit affectus: amplius autem eſt, quod omnibus membris, quàm quod paucis accidat. Secundum, quòd ex mancis manca procreentur, ſemen enim ab ea, quæ deeſt, parte proficiſci negant. Vnde autem non acceſſerit, id ne procreetur, accidit. Tertium, ſimilitudo parentum: ſimiles enim gignuntur, vt toto corpore toti, ſic particulatim ſingulis partibus. Quòd ſi cauſa eſt vt totum ſimile ſit, quòd ex tali toto ſemen genitale prodierit, partibus quoque cauſa ſimilitudinis erit, quòd ex vnaquaque parte aliquid venerit. Quartum, quòd ratio eſſe videtur vt quemadmodum totius aliquid eſt, ex quo primum generetur, ſi partis quoque cuiuſque ſit ſemen aliquod proprium. Fidem etiam illa faciunt huic opinioni veriſimilem: non ſolùm enim rebus naturæ inſitis & natiuis, liberi ſimiles parentibus prodeunt: ſed etiam aduentitias atque externas præſentant. Iam enim cùm parentes cicatrices haberent, filij quidam parte eadem ſui corporis idem habuerunt. Et Chalcedone, cùm pater brachio eſſet compuncto, filius idem retulit, confuſa tamen nota, minùſque explanata. His ferè rationibus quidam potiſſimùm crediderunt, ſemen à toto corpore proficiſci.

CAPVT XVIII.

Improbatio in eos qui dicunt ſemen ex omnibus corporis partibus prouenire, ſeménque eſſe excrementum.

SEd, cùm ſcrutamur, & diligentiùs rem diſcutimus, contrà potiùs eſſe videtur. Nec ſuprà dicta quatuor illa ſoluere difficile eſt, & quædam alia ſequuntur impoſſibilia ex ea ipſa opinione. Primùm igitur ſimilitudo nullum indicium affert, vt ſemen genitale ex toto corpore ſecedat: quandoquidem & voce, & vnguibus, & pilis, & motu ſimiles procreantur, ex quibus nihil prouenit. Nonnulla etiam nondum habent cùm generant, vt canos, aut barbam. Maioribus item ſuis plerumque ſimiles ſunt, ex quibus nihil ſeceſſit. Redditur enim poſt plura genera ſimilitudo: vt in Helide, quæ cum Æthiope concubuerat, non filiam forma Æthiops peperit, ſed natus ex filia erat Æthiops. In ſtirpibus etiam eadem ratio eſt: nam ſi hoc ita eſſet, in iis quoque ab omnibus partibus ſemen proculdubio proficiſceretur. At pleraſque partes, aut illæ non habent, aut quiſque abſcindere poteſt, aut poſtgenitas habent. Quin etiam ex fructibus nihil ſecedit, & tamen ij quoque forma eadem proueniunt.

ΦΑίνεται δ' ἐξετάζουσι τὸν λόγον τοὐναντίον μᾶλλον· τὰ τέτταρα δὲ τὰ εἰρημένα λύειν, οὐ χαλεπόν. καὶ πρὸς τούτοις ἄλλα συμβαίνει λέγειν ἀδύνατα. πρῶτον μὲν οὖν ὅτι οὐδὲν σημεῖον ἡ ὁμοιότης, τοῦ ἀπιέναι ἀπὸ παντὸς, ὅτι καὶ φωνὴν καὶ ὄνυχας καὶ τρίχας ὅμοιοι γίγνονται, καὶ τὴν κίνησιν, ἀφ' ὧν οὐδὲν ἀπέρχεται. ἔνια δὲ οὐκ ἔχουσί πω ὅταν γεννῶσιν, οἷον τρίχωσιν πολιῶν, E ἢ γενείου. ἔτι τοῖς ἄνωθεν γονεῦσιν, ἐοίκασιν, ἀφ' ὧν οὐδὲν ἀπῆλθεν. ἀποδιδόασι γὰρ διὰ πολλῶν γενῶν αἱ ὁμοιότητες, οἷον καὶ ἐν Ἤλιδι ἡ τῷ Αἰθίοπι συγγενομένη. οὐ γὰρ ἡ θυγάτηρ ἐγένετο, ἀλλ' ὁ ἐκ ταύτης, Αἰθίοψ. καὶ ἐπὶ τῶν φυτῶν δὲ ὁ αὐτὸς λόγος. δῆλον γὰρ ὅτι καὶ τούτοις ἀπὸ πάντων ἂν τῶν μερῶν τὸ σπέρμα γίγνοιτο. πολλὰ δὲ, τὰ μὲν, οὐκ ἔχει· τὰ δὲ, ἀφέλοι τις ἄν· τὰ δὲ προσφύεται. ἔτι οὐδ' ἀπὸ τῶν περικαρπίων ἀπέρχεται. καίτοι καὶ ταῦτα γίνεται τὴν αὐτὴν ἔχοντα μορφήν. Hiſt.li.7.c.6.

ἔτι δὲ πότερον ἀπὸ τῶν ὁμοιομερῶν μόνον ἀπέρχεται, ἀφ' ἑκάστου, οἷον ἀπὸ σαρκὸς, καὶ ὀστοῦ, καὶ νεύρου· ἢ καὶ ἀπὸ τῶν ἀνομοιομερῶν, οἷον προσώπου καὶ χειρός; εἰ μὲν γὰρ ἀπ' ἐκείνων μόνον, ἐοίκασι δὲ κατὰ ταῦτα μᾶλλον τοῖς γονεῦσι, τὰ ἀνομοιομερῆ, οἷον πρόσωπα, καὶ χεῖρας, καὶ πόδας· εἴπερ οὖν μηδὲ ταῦτα τῷ ἀπὸ παντὸς ἀπελθεῖν, τί κωλύει μηδ' ἐκεῖνα τῷ ἀπὸ παντὸς ἀπελθεῖν ὅμοια εἶναι; ἀλλὰ δι' ἄλλην αἰτίαν. εἰ δ' ἀπὸ τῶν ἀνομοιομερῶν μόνον, οὐκ ἂν ἀπὸ πάντων. προσήκει δὲ μᾶλλον ἀπ' ἐκείνων. πρότερα γὰρ ἐκεῖνα, καὶ σύγκειται τὰ ἀνομοιομερῆ ἐξ ἐκείνων. καὶ ὥσπερ πρόσωπα καὶ χεῖρας γίγνονται ἐοικότα, οὕτω καὶ σάρκας καὶ ὄνυχας. εἰ δ' ἀπ' ἀμφοτέρων, τίς ὁ τρόπος ἂν εἴη τῆς γενέσεως; σύγκειται γὰρ ἐκ τῶν ὁμοιομερῶν τὰ ἀνομοιομερῆ, ὥστε τὸ ἀπὸ τούτων ἀπιέναι, τὸ ἀπ' ἐκείνων ἂν εἴη ἀπιέναι, καὶ τῆς συνθέσεως, ὥσπερ κἂν εἰ ἀπὸ τοῦ γεγραμμένου ὀνόματος· εἰ μὲν ἀπὸ παντὸς, κἂν ἀπὸ τῶν συλλαβῶν ἑκάστης· εἰ δ' ἀπὸ τούτων, ἀπὸ τῶν στοιχείων καὶ τῆς συνθέσεως. ὥστ' εἴπερ ἐκ πυρὸς καὶ τῶν τοιούτων σάρκες καὶ ὀστᾶ συνεστᾶσιν, ἀπὸ τῶν στοιχείων ἂν εἴη μᾶλλον. ἀπὸ γὰρ τῆς συνθέσεως πῶς ἐνδέχεται; ἀλλὰ μὴν ἄνευ γε ταύτης οὐκ ἂν εἴη ὅμοια. ταύτην δ' εἴ τι δημιουργεῖ ὕστερον, τοῦτ' ἂν εἴη τῆς ὁμοιότητος αἴτιον, ἀλλ' οὐ τὸ ἀπελθεῖν ἀπὸ παντός. ἔτι εἰ μὲν διεσπασμένα τὰ μέρη ἐν τῷ σπέρματι, πῶς ζῇ; εἰ δὲ συνεχῆ, ζῷον ἂν εἴη μικρόν. καὶ τὰ τῶν αἰδοίων πῶς; οὐ γὰρ ὅμοιον τὸ ἀπιὸν ἀπὸ τοῦ ἄρρενος καὶ τοῦ θήλεος. ἔτι εἰ ἀπ' ἀμφοτέρων ὁμοίως ἀπὸ πάντων ἔρχεται, δύο γίγνεται ζῷα. * ἑκατέρων γὰρ ἅπαντα ἕξει. διὸ καὶ Ἐμπεδοκλῆς ἔοικεν, εἴπερ οὕτω λεκτέον, μάλιστα λέγειν ὁμολογουμένως τούτῳ τῷ λόγῳ, τό γε τοσοῦτον. ἀλλ' εἴπερ ἑτέρᾳ πῃ, οὐ καλῶς. φησὶ γὰρ ἐν τῷ ἄρρενι καὶ ἐν τῷ θήλει οἷον σύμβολον εἶναι, ὅλον δ' ἀπ' οὐδετέρου ἀπιέναι.

* γ. διεσπᾶσθαι

A Ad hæc, vtrùm ex vnaquaque ſimilari parte tantùm prodit, verbi gratia, carne, oſſe, neruo: an etiam ex diſſimilaribus, vt facie, & manu? Nam ſi ex illis tantùm, ſimiles autem parentibus ſunt, partium potiùs diſſimilarium forma, vt faciei, manuum, pedum, quidnam obſtet, ne illæ quoque ſimiles ſint ſeceſſu ex toto? Sed alia cauſa, quando nec in ipſis quidem ſimilitudo propterea ſit, quia ex toto corpore ſemen genitale ſeceſſerit. Sed ſi ex diſſimilaribus tantùm, ergo non ex toto, & partibus omnibus. At ex ſimilaribus magis conueniat: ſunt enim priores, & diſſimilares ex ſimilaribus conſtant. Et vt facie ac manibus ſimiles procreantur, ſic & carne, & vnguibus. At verò ſi ex vtriſque quiſnam modus ſit generationis?
B Conſtant enim partes diſſimilares ex ſimilaribus. Itaque quod ex iis ſecedit, ex illis quoque ſeceſſerit, atque ex ipſa compoſitione perinde quaſi à nomine ſcripto, quippiam proficiſcatur, ſi à toto vel à quauis ſyllaba proficiſcitur. Quòd ſi à ſyllabis, ab elementis compoſitionéque prodierit. Itaque ſi ex igne, & reliquis eiuſmodi, carnes oſſave conſtant, ex elementis potiùs fuerint. nam ex compoſitione quonam pacto poſſint? Atqui ſine ea ſimile eſſe nihil poterit. Quòd ſi quid eam poſtea creat, id cauſa ſimilitudinis fuerit, non ſeceſſio ex toto. Item ſi partes diſtractæ in ſemine ſint, quonam pacto viuat? Sed ſi coniunctæ,
C paruum quoddam animal fuerit. Genitales etiam partes quonam pacto conſiſtant? Non enim ſimile eſt, quod à mare & fœmina ſecedit. Item ſi vtriuſque ſemen æquè ex toto venit, duo animalia generabuntur: vtrumque enim omnia habebit. *Quamobrem Empedocles maximè (ſi ita dicendum eſt) conſentanea huic rationi ſcripſiſſe videtur hoc quidem loco: nam ſi alibi diuerſa, non bene. Dicit enim, maris ac fœminæ quaſi ſymbolum eſſe, totum verò à neutro proficiſci:

Sed diſcerpta gerunt mas ipſe & fœmina membra.

Cur enim fœmina non ex ſe ipſa generet, ſi quidem ſemen ex toto ſecedit, & conceptaculum
D obtinet? Sed, vt videtur, aut non ex toto ſecedit, aut ita, vt ille ait, non ex vtroque eadem ſecedunt: quapropter alterum alterius coitum deſiderat. Sed impoſſibile illud quoque occurrit: nec enim maiora poſſunt diſtracta ſeruari, animataque eſſe: quomodo Empedocles generat amore, cùm dicit:

Multáque ponuntur capita abſque ſua ceruice.

mox enim coaleſcere coagmentarique ait. Quod fieri non poſſe, apertum eſt, quando nec anima vitaque omni vacua ſeruari poſſent, neque velvti plura animalia coaleſcere in vnum. Et iis qui ex toto ſecedere aiunt, accidit, vt eodem modo quo ille, dicant. Nam vt tum amore in
E terra, ſic iis in corpore agitur. Non enim fieri poteſt vt partes coniungantur, commeandóque eòdem deueniant. Tum etiam quonam pacto dirimantur ſuperiora, inferiora, dextra, ſiniſtra, priora, poſteriora? Hæc enim omnia carent ratione. Item cùm partium aliæ facultate, aliæ affectibus diſtinguantur, videlicet diſſimilares eo quòd efficere aliquid poſſint, vt lingua, vt manus: ſimilares, duritia, mollitia, & reliquis eiuſmodi affectionibus, (non enim vtcumque ſe habet, ſanguis eſt, aut caro) conſtat ob eam rem fieri non poſſe, vt quod ſeceſſerit, vniuocum ſit cum partibus corporis: verbi gratia,

vt ſanguis à ſanguine, caro à carne proueniat. At ſi ex diuerſo quodam ſanguis fiat, non ea cauſa ſimilitudinis fuerit, quòd ex omnibus partibus deceſſerit: vt aiunt, qui ita opinantur. Satis eſt enim ex vna tantum ſecedere, quandoquidem non ſanguis ex ſanguine gignitur. Cur enim non omnia vel ex vno gignantur? Hæc enim ſententia eadem eſſe videtur, atque illa Anaxagoræ, vt nullum ſimilare gignatur: niſi quòd ille commune id de omnibus aſſerit, hi verò generationi tantùm animalium tribuunt. Adhæc, quonam pacto iſta augeantur, cùm ex toto ſeceſſerint? Anaxagoras enim probè ait, carnes ex alimento carni accedere: ſed iis qui eadem non dicunt, & tamen ſecedere ex toto pronuntiant, quonam pacto alio accedente magis quicquam efficietur, ſi, quod acceſſerit, maneat? At ſi mutari, quod acceſſerit, poteſt, cur non iam inde ab initio ſemen ſit tale, vt gigni ex eo poſſit ſanguis & caro, non ipſum ſit ſanguis & caro? Nec verò dici poteſt, temperatione poſt augeri perinde, vt vinum aqua adiecta. Ita enim principio maximè ſyncerum meracúmque eſſet vnumquodque. Nunc verò & caro, & os, & quæuis alia pars, quod dicitur, id poſtmodum magis eſt. Seminis autem partem aliquam dici neruum eſſe, aut os, longè plus eſt quàm vt noſter ſenſus aſſequi poſſit. Ad hæc, ſi fœmina & mas differunt inter ſe vteri ratione, vt Empedocles ait:

Funditur in puris mas, fœmina frigore miſſo:

mutari videmus tam viros quã mulieres, vt quemadmodum ex infœcũdis fœcundi, ſic ex habilibus fœminæ procreãdæ, ad maris procreationem propenſi euadant, quaſi non ſit cauſa in ſecedendo ex toto, necne, ſed in moderatione immoderatione ve eius, quod ex muliere viróque ſecedat, aut ob aliquam eiuſmodi cauſam. Si hoc, inquam, ita eſſe ponamus, conſtat non propterea eſſe fœminam, quia ex quodam ſeceſſerit. Itaque nec partem quidem, quam propriam habet mas, aut fœmina, ſeceſſu conſiſtere. Siquidem ſemen idem & mas effici poteſt, & fœmina, tanquam non alterutra pars in ſemine ſit. Quid igitur referat, de hac parte ita dicatur, an de cæteris? Nam ſi ſemen ab vtero non prouenit: eadem cæteris quoque partibus ratio ſeruanda eſt. Item nonnulla animalia oriuntur ex nullis, vel eiuſdem, vel diuerſi generis animalibus: vt muſcæ, & genera papilionum, ex quibus gignuntur quidem animalia, ſed non ſimilis naturæ, ſed genus quoddam vermiculi. Patet igitur, non ſemine, quod ex cunctis partibus ſeceſſerit, generari quæcunque diuerſi generis ſunt: nam ſimilia eſſent. Siquidem ſimilitudo indicio eſſet, quòd ex cunctis ſeceſſerit. Quædam etiam animalia vno coitu plura generant: plantas verò omnino motu eodem omnem annuum fructum afferre, certum eſt. Quod fieri non poſſet, ſi ex cunctis partibus ſemen ſecerneretur. Singulas enim è ſingulis vel coitibus, vel ſeceſſibus, fieri ſecretiones neceſſe eſt: nec verò fieri poteſt vt in vtero diuidatur: iam enim tanquam à planta nouella, aut animali nuper edito, non ſemine ſepararetur. Item quæ auulſione ſeruntur, ſemen afferunt. Ergo & priùs quàm auulſa ſererentur, ex eadem ſui magnitudine fructificaſſe, non ex tota planta deſtrictum ſemen tuliſſe certum eſt. Omnium verò maximum argumentum in genere inſectorum, animaduertimus ſatis, quòd etſi non omnium,

*Rhetor. lib. 1. ca. 7. meminit eius Epicharmei dicti. Phil. variis locis, vt Metaph. lib. 5. cap. 1. & 24. & alibi.

A tamen plurimorum fœmina per coitum particulam quandam ſuam inſerit in marem. Eodem coitum ita agunt: quod antea dictum eſt. Subiecta enim in ſuperaſcendere viſuntur, quanquam non omnia, ſed plurima ex iis quæ explorata habemus. Itaque in iis etiam maribus qui ſemen emittunt, non cauſa generationis eſt, quod ex toto receſſerit, ſed alio quodam modo, de quo poſtea videbimus. Nam ſi cauſa eſſet receſſus, vt putant, non ex cunctis recedere partibus cenſendum eſſet, ſed ab agente efficriceque tantùm virtute, velvt à fabro, non à materia. Sed hi ſimile aiunt, vt ſi vel à calceis proficiſci dicant. Filius enim qui patri ſimilis eſt, ſi- B mili ferè cultu corporis vtitur. Cauſa autem vt voluptas rei Venereæ vehementior ſit, non quod ex toto receſſerit, eſt, ſed quia prurigo vehemens accidit. Quamobrem ſi quis frequenter ea re vtitur, minùs afficitur voluptate. Item voluptas Veneris in fine coitus potiſſimùm eſt. At ſi ex toto ſecerneretur, non ſimul, ſed ſingulis partibus, aliis priùs, aliis pòſt exultaret. Cauſa verò quamobrem ex mancis manca proueniunt, eadem eſt, & cur filij ſimiles parentibus prodeunt. Sed non manca etiam ex mancis gignuntur, vt & diſſimiles ſuis parentibus: quorum cauſam poſtea conſiderabimus: eadem enim quæſtio eſt. Item ſi ſemen non à fœmina emit- C titur, eadem ratione profectò, nec ex toto ſecedere probari poteſt. Et ſi non ex toto ſecedit, nihil rationi repugnat, ſi à fœmina quoque non ſecedere, ſed alio quodam modo cauſam generationis præſtari à fœmina ſtatuemus. Qua de re vt diſſeramus, proximum eſt, cùm ſemen non ex cũctis ſecerni partibus apertum iam ſit. Initium verò tum eius ipſius propoſiti tum etiam ſequentis totius diſputationis, vt primùm de ſemine quidnam ſit, accipiamus. Ita enim & officia ipſa, & quæ officiis accidunt, faciliùs conſiderare poterimus. Tale autem ſua natura ſemen eſſe requirit, vt ex eo primo oriantur ea quæ ſecundùm naturam conſtituuntur: non quòd ex illo (verbi gra- D tia) homine aliquid ſit, quod agat. Fit enim aliquid ex hoc, quia ſemen eius eſt. Sed cùm multifariam aliud ex alio fiat (alio enim modo, cùm ex die noctem fieri dicimus, aut ex puero virum, quoniam hoc poſt hoc: alio cùm ex ære ſtatuam, aut ex ligno lectum, & quæcunque ex materia fieri dicimus, vt ex aliquo, quod inſit, & formetur, totum ſit: alio, cùm ex muſico immuſicum, aut ex ſano ægrum, & omnino contrarium ex contrario. Preterea, vt Epicharmus facit ſuam exaggerationem, ex calumniis maledicta, ex maledictis pugna. Quæ omnia eò referuntur vnde principium motus. Quale id quoque, quod modò diximus, eſt. Pars enim quædam totius diſcordiæ calumnia eſt: ſed aliquorum extra, quod mouerit, eſt: vt ars extra ſuum opus eſt, & lucerna E extra domus incendium.) Cùm itaque tot modis aliud ex alio fiat, ſemen in altero de duobus his eſſe, apertum eſt. Aut enim ex eo vt materia, aut vt ex primo, quod mouerit, eſt quod gignitur. Non enim vt hoc poſt hoc, quomodo ex Panathenæis nauigatio, neque vt ex contrario cõtrarium. Gignitur enim contrarium ex contrario, quod corrumpitur: & aliud quippiam ſubiici oportet, ex quo primo in manente ſit. Igitur in vtronam de duobus illis conſtituẽdum ſit ſemen,

conſiderandum eſt: vtrùm vt materia & patiens, an vt forma & agens, an etiam vt vtrumque. Vnà enim cum iis fortaſſe declarabitur, & quonam pacto ex contrariis generatio ſit omnibus iis quæ ex ſemine oriuntur. Nam ea quoque generatio, quæ ex contrariis ſit, naturalis eſt. Alia enim ex contrariis oriuntur, mare dico & fœmina: alia ex vno tantum, vt plantæ omnes, & animalium nonnulla, in quibus non diſtinctus ſeorſúmque conſtitutus eſt ſexus maris & fœminæ. Genitura igitur id vocatur quod à generante proueniens cauſa eſt, quæ prima obtineat principium generationis: videlicet in iis quæ coire Natura voluit. Semen autem eſt, quod ex ambobus coeuntibus illis originem trahit: quale ſemen plantarum omnium eſt, & animalium nonnullorum, in quibus ſexus diſtinctus non eſt: velvt id quod ex mare ac fœmina primum miſcetur quaſi conceptus promiſcuus quidam, aut animal. Hæc enim iam habent, quod ex ambobus requiritur. Semen & fructus inter ſe differunt, prioris poſteriorìſque ratione: fructus enim, quod ex alio eſt: ſemen, ex quo aliud: nam aliàs ambo idem ſunt. Natura autem prima eius, quod ſemen vocatur, quænam ſit, exponenda latiùs eſt. Quodcumque in corpore accipimus, aut partem eſſe ſecundum naturam, vel diſſimilarem, vel ſimilarem, neceſſe eſt: aut præter naturam, vt vel papulam, vel excrementum, vel colliquamentum, vel alimentum. Excrementum appello reliquias alimenti: colliquamentum, quod ex incremento ſecernitur reſolutione præter naturam. ſed nullam id eſſe partem vel ſimilarem, vel diſſimilarem, apertum eſt. Nihil enim ex eo, quamuis ſimilari, conſtituitur, vt ex neruo, aut carne. Quoniam etiam cùm cæteræ omnes partes ſeparatæ ſint, ipſum ſeparatum non eſt. Nec verò præter naturam eſt, neque naturæ oblæſæ vitium, cùm in omnibus inſit, & natura ex eo ipſo oriatur: alimentum planè res aduentitia eſt. Itaque aut colliquamentum, aut excrementum eſſe, neceſſe eſt. Veteres quidem authores opinari videntur id eſſe colliquamentum. Quod enim ex toto ſecedere propter motus calorem dicunt, vim habet colliquamenti. Colliquamenta autem præter naturam ſunt, nec quicquam ſecundùm naturam oriri poteſt ex iis quæ præter naturam ſunt. Excrementum igitur eſſe neceſſe eſt. At omne excrementũ, aut alimenti inutilis eſt, aut vtilis. Inutile dico, à quo nihil præterea naturæ ſuppeditetur, ſed quo plus abſumitur, eo magis natura vitiatur: vtile contra. Sed enim non tale excrementum id eſſe conſtat, eo quòd iis qui vel ætate, vel morbo peſſimè ſe habent, genus hoc excrementi plurimum ineſt, ſemen minimè. Aut enim nullum omnino, aut non prolificum, propter inutilis ac morbidi excrementi permiſtionem. Ergo vtilis excrementi pars aliqua ſemen eſt. Vtiliſſimum autem, quod vltimum eſt, & ex quo iam vnumquodque gignitur membrum: eſt enim tum prius tum poſterius. Primi igitur alimenti excrementum pituita eſt, & ſi quid aliud eiuſmodi eſt. Pituita enim alimenti vtilis excrementum eſt. Cuius rei indicium, quod permiſtum cum cibo puro alere poteſt, & labore abſumitur. Vltimũ autem paruũ admodum ex plurimo relinquitur alimẽto, ſed intelligendum perexiguo augeri quotidie animalia & plantas: nam niſi ita eſſet, additione pluris eadem vel minima modũ excederent magnitudinis.

Hiſtor. lib. 1. cap.14,

A Igitur contra quàm veteres putarunt, dicendum eſt. Cùm enim illi quod ex toto ſecedat, ſemen eſſe fateãtur, nos quod ad totum ſuapte natura feratur, ſemen eſſe fatebimur: cumque illi colliquamentum dicant, nos excrementum potiùs eſſe ſtatuimus. Quod enim vltimum accedat, & excrementum vltimi ſit, id ſimile eſſe probabilius eſt. Perinde vt pictoribus ſæpenumero aliquid andriceli, id eſt, purpuriſſi, remanet, ſimile eius quod conſumpſerint: tabeſcens autem quodque & colliqueſcẽs corrumpitur, & degenerat. Argumentum, nõ colliquamentum, ſed excrementum potius eſſe, illud eſt, quòd animalia magni incrementi minùs fœcunda,
B parua fœcundiſſima ſunt. Plus enim colliquamenti eſſe in magnis, neceſſe eſt, ſed minus excrementi: quippe cùm in corpus magnum copia abſumitur alimenti: itaque parum fit excrementi. Item locus ſecundùm naturam nullus colliquamento datus eſt, ſed fluit quocunque faciliùs ferri poteſt: at naturalibus excrementis omnibus locus præſcriptus eſt: verbi gratia, alimenti ſicci excrementis aluus, humidi veſica, vtilis ventriculus, ſeminalis vterus, genitale, mammæ. In ea enim loca ſe colligunt, atque confluunt. Teſtimonium etiam faciunt ea quæ eueniunt, vt ſemen, quod diximus, id ſit: quæ ideo
C accidunt, quia talis excrementi natura eſt. Diſſolutio enim & imbecillitas manifeſta conſequitur, vbi vel minimum id ſeceſſerit, vt quaſi corpus eo fine priuetur, qui demum ab alimento afferatur. Pauci vero quidam, & breui tempore per ætatem leuantur, cùm id ſecedit: videlicet vbi copia ſuperarit. Quomodo alimentum primum ſi, vbi modum exceſſerit, emittitur, meliùs corpori cedit. Leuat etiam cùm ſecum alia trahit excrementa. Non enim ſolùm ſemen eſt, quod exit, ſed etiam aliæ permiſtæ facultates cum eo ſecedunt, quæ inſalubres ſunt. Quamobrem nonnullis improle aliquando eſt, quod emittitur, quia parum ſeminis habet. Sed enim
D plurimis & magna ex parte ita accidit, vt Venere exoluantur debilitentúrque, ob eam, quam diximus, cauſam. Adhæc, ſemen nec in prima ætate, neque in ſenectute, neque in morbis eſt. Caret hoc ægri propter imbecillitatem: ſenes, quia non ſatis eorum natura poteſt concoquere: pueri, propter incrementum. Abſumitur enim totum alimentum in corporis deſiderium priùs quàm aliquid excrementi remaneat. Quinquennio namque ferè corpus in homine quidem dimidium capere videtur omnis magnitudinis, quæ reliquo toto tempore comparetur. Multis autem & animalibus & plantis euenit differentia in iis
E ipſis, tum generi cum genere, tum etiam in eodem genere conſortibus ſpeciei inter ſe, vt homini cum homine, & viti cum vite. Alia enim multum ſeminis edunt, alia parum, alia nihil omnino: idque non præ imbecillitate, ſed contrà nonnullis euenit. Abſumitur enim in corpus, vt hominum nonnullis, qui vbi per habitum corporis bonum carnulenti, aut pinguiores euaſerint, minus ſemen emittunt, minúſque rem Veneream expetunt. Similis & vitibus affectio incidit, quæ nimia alimenti copia luxuriant, & hircire tantiſper dicuntur: nam & hirci pingueſcentes minus ſeminis habent. Quamobrem eos ſolent antè extenuare. Et vites hircire ab ea ipſa hircorum affectione dixerunt.

Viri etiam mulieréſque pingues minùs fœcundæ eſſe quàm non pingues videntur: quoniam in vegetioribus excrementum concoctum tranſit in pingue: nam & pinguedo excrementum eſt bonitate ſubſtantiæ ſalubre. Sunt quæ nullum afferant ſemen, vt ſalix, vt populus. Itaque aliæ quoque eius affectionis cauſæ reddi poſſunt. Nam & per imbecillitatem non concoquunt, & per virium bonitatem abſumunt, vt dictum eſt. Simili modo fœcundiſſima quoque & fertiliſſima ſunt, alia propter vires, alia propter imbecillitatem. Multum enim atque inutile excrementum permiſcetur, vt vel morbi nonnullis contrahantur, cùm non bene purgatio ceſſit, & alij euadunt, alij obeunt mortem. Tabeſcunt enim eo modo quo per vrinæ profluuium: nam id quoque vitium iam aliquibus accidiſſe certum eſt. Item meatus idem excrementi & ſeminis eſt: quibúſque excrementum amborum tam ſicci quàm humidi alimenti, iis quò humidi, eodem ſeminis quoque ſecretio agitur: humidi enim excrementum eſt. Namque omnium alimentum humidum potiùs eſt. At verò quibus hoc deeſt, iis ea parte qua cibi ſicci ſedimentum tendit, ſemen quoque ſecernitur. Addo etiam quòd colliquatio & tabes ſemper morboſa eſt: excrementi emiſſio ſemper vtilis eſt: ſeminis ſeceſſio in ancipiti verſatur, quoniam aliquid alimenti inutilis aſſumit. At ſi colliquatio eſſet, ſemper noceret: quod non facit. Semen igitur excrementum eſſe alimenti vtilis, atque vltimi, ſiue omnia ſemen emittunt, ſiue non. In iis tamen quæ emittunt, ita eſſe apertum iam eſt.

A καὶ οἱ πίονες δὲ ἀγονώτεροι φαίνονται τῶν μὴ πιόνων, καὶ γυναῖκες καὶ ἄνδρες, διὰ τὸ τοῖς εὐτραφέσι πεττόμενον τὸ περίττωμα γίνεσθαι πιμελήν. ἔστι γὰρ καὶ ἡ πιμελὴ περίττωμα, δι' εὐβοσίαν ὑγιεινόν. ἔνια δ' οὐ φέρει σπέρμα, οἷον ἰτέα καὶ αἴγειρος. εἰσὶ μὲν οὖν καὶ ἕτεραι αἰτίαι τοῦ πάθους τούτου. καὶ γὰρ δι' ἀδυναμίαν οὐ πέττουσι, καὶ διὰ δύναμιν ἀναλίσκουσιν, ὥσπερ εἴρηται. Ὁμοίως δὲ καὶ * πολύγονα ἐστὶ καὶ πολύσπερμα, τὰ μὲν, διὰ δύναμιν τὰ δὲ, δι' ἀδυναμίαν· πολὺ γὰρ καὶ ἄχρηστον περίττωμα συμμίγνυται· ὥστ' ἐνίοις γίνεσθαι καὶ ἀρρώστημα, ὅταν αὐτῶν μὴ εὐοδώσῃ ἡ B ἀποκάθαρσις. καὶ ἔνιοι μὲν ὑγιάζονται, οἱ δὲ καὶ ἀναιροῦνται. συντήκονται γὰρ αὐτῇ ὥσπερ ἐπὶ τὸ οὖρον. ἤδη γὰρ καὶ τοῦτο τὸ ἀρρώστημα συνέβη τισίν. Ἔτι ὁ πόρος ὁ αὐτὸς τῷ περιττώματι καὶ τῷ σπέρματι· καὶ ὅσοις μὲν ἀμφοῖν γίνεται περίττωμα, καὶ τῆς ὑγρᾶς καὶ τῆς ξηρᾶς τροφῆς, ᾗπερ ἡ τοῦ ὑγροῦ, ταύτῃ καὶ ἡ τῆς γονῆς γίνεται ἀπόκρισις (ὑγροῦ γὰρ περίττωμά ἐστιν· ἡ γὰρ τροφὴ πάντων, ὑγρὰ μᾶλλον) οἷς δὲ μή ἐστιν αὕτη, κατὰ τὴν τῆς ξηρᾶς ὑποστάσεως ὑποχώρησιν. ἔτι ἡ μὲν σύντηξις, ἀεὶ νοσώδης· ἡ δὲ τοῦ περιττώματος ἀφαίρεσις, ὠφέλιμος· ἡ δὲ τοῦ σπέρματος C ἀποχώρησις, ἐπαμφοτερίζει, διὰ τὸ προσλαμβάνειν τῆς μὴ χρησίμης τροφῆς. εἰ δέ γε ἦν σύντηξις, ἀεὶ ἐπέβλαπτεν ἄν· νῦν δ' οὐ ποιεῖ τοῦτο. ὅτι μὲν οὖν περίττωμά ἐστι τὸ σπέρμα χρησίμης τροφῆς καὶ τῆς ἐσχάτης, εἴτε πάντα προΐεται σπέρμα, εἴτε μὴ [πάντα,] ἐν τοῖς προειρημένοις φανερόν.

CAPVT XIX.

Menſtrua eſſe excrementa, omniáque ſanguinea ea ipſa emittere.

POſt hæc, cuiuſnam alimenti ſit excrementum, & de menſtruis differendum eſt. Fiunt enim in nonnullis viuiparis menſtrua: nam his declaratis apertum erit, & vtrùm fœmina ſemen emittat, vt mas, fiátque vnum ex ambobus ſeminibus miſtum, an nullum ſemen à fœmina ſecernatur: & ſi nullum, vtrùm aliud quippiam non conferat fœmina ad generationem, ſed locum tantummodo præbeat: an aliquid conferat, idque quonam pacto, & quomodo. Sed enim ſanguinem eſſe vltimum alimentum in ſanguinario genere animalium, proportionale autem in exangui, dictum antea eſt. Verùm cùm ſemen quoque excrementum ſit alimenti, eiúſque vltimi, aut ſanguis, proportionaléve eſt, aut ex iis aliquid. Sed cùm ex ſanguine concocto, digeſtóque modo quodam pars quæque gignatur, ſemen autem concoctum diuerſum à ſanguine ſecernatur, (nam inconcoctum, aut per vim emiſſum, videlicet cùm vltra modum quis re Venerea vtitur, cruentum iam aliquibus prodiit) conſtat ſemen eſſe excrementum alimenti ſanguinei, quod vltimum in membra digeritur. Et quidem vim magnam ob eam rem obtinet. Sanguinis enim ſynceri ſalubriſque ſeceſſio reſoluere poteſt. vtque filij ſimiles parentibus ſint, ratio exigit. Simile eſt enim quod ad partes acceſſerit, ei quod remanet. Itaque ſemen manus aut faciei, aut totius animalis, eſt manus indefinita,

* κ. περὶ αὐτά.

A aut facies, aut animal totum indefinitum: ſed quale quodcunque illorum eſt actu, tale ſemen potentia eſt, aut corpulentia ſua, aut facultate, aut virtute, quam in ſeipſo contineat. Id enim nondum ex iis quæ expoſuimus, patet, vtrum ſemen corpus cauſa ſit generationis, an habitum aliquem & principium motus genitale obtineat: neque enim manus, neque aliud quoduis membrum, ſine anima aut alia facultate eſt manus, aut quodlibet membrum, ſed æquiuocè tantùm. Conſtat etiam, colliquationem quoque ſeminariam, vbi accidit, excrementum eſſe. Quod vitium euenit, cùm reſoluitur in quod acceſſerit: quomodo cùm protinus decidit, quod tectorij operis modo illitum fuerit. Idem enim vltimum excre- B mentum cum primo excremento eſt. Atque de his ad hunc modum diſſeruiſſe ſatis ſit. Sed cùm infirmioris plus excrementi minúſque concoctum fieri, idque copiam cruenti humoris eſſe neceſſe ſit, infirmius autem ſecundùm naturam eſt, quod minus caloris adipiſcitur, taléque fœmina ſit, vt antea dictum eſt, hinc ſecretionem quoque illam ſanguineam fœminæ excrementum eſſe neceſſe eſt. Talis autem eiectio eſt eorum quæ menſtrua appellantur. Menſtrua igitur excrementum eſſe, & proportione, vt maribus genituram, ſic fœminis menſtrua prouenire, apertum C eſt. Rectè autem ita dici indicant ea quæ in iis ipſis eueniunt: eadem enim ætate maribus genitura fieri incipit, & ſecerni: fœminis autem menſtrua erumpunt: vox etiam mutatur, & mammæ intumeſcunt. Necnon deſinente ætate aboletur maribus generandi facultas: fœminis menſtruorum conſluuium. Adhæc, indicium illa faciunt: vt excrementum ſit hæc ſecretio fœminarum, quòd non mariſcæ, non profluuium è naribus ſanguinis, non varices, non tale quid mulieribus magna ex parte accidere ſolet, quandiu menſtrua profluunt: & ſi quid tale accidit, deteriores ſiunt purgationes, quaſi hæc materia menſtrua conſumpta in ea fuerit. Minus etiam D venoſæ ſunt fœminæ, quàm mares: & lautiores læuioréſque ſunt, quoniam excrementum, quod eò tendat, confluere in menſtrua ſolet. Hanc eandem cauſam eſſe putandum, & vt corpora minora ſint fœminarum, quàm marium, in viuiparo genere. In hoc enim vno menſtrua profluunt, & omnium apertiſſimè in muliere. Plurimum namque menſtrui excrementi mulier emittit: ex quo ſit vt euidentiſſimè palleat, & obſcuriores habeat venas, & corpore planè ad marem deficiat. Sed cùm menſtrua ſint quod fœminis ſiat perinde vt maribus genitura, nec fieri poſſit vt duæ ſimul ſecretiones ſeminales agantur, ideo ſemen à fœmina non conferri ad generationem E apertum eſt. Nam ſi ſemen eſſet, menſtrua non eſſent: nunc ideo illud deeſt, quia hæc ſunt. Sed menſtrua eſſe excrementum, vt ſemen, explicatum iam eſt. Teſtimonio autem eodem accipi poſſunt aliqua ex iis quæ animalibus accidunt. Pinguia enim minus ſeminis habent, quàm macilenta, vt antea dictum eſt. Cuius rei cauſa eſt, quòd & pinguedo excrementum, vt ſemen, & ſanguis concoctus eſt: quanquam non eodem modo quo ſemen. Itaque ratione optima ſit vt cùm materia ſuperuacua conſumpta in pinguedinem ſit, deficiat genitura. Generis etiam exanguis mollia & cruſtata optima ſunt, cùm vtero gerunt.

A Quòd enim ſanguine carent, nec pinguedo in iis conſiſtit, hinc proportionale pinguedinis ſecernitur in ſeminale decrementum. Indicio autem eſt non tale ſemen à fœmina emitti, quale à mare, nec amb[illegible]um miſtura generari, vt aliqui volunt, quòd ſæpenumero fœminæ concipiant ſine ea quæ per coitum fit, voluptate. Ruſſuſque cum ea ipſa voluptate, parique concurſu profuſionis vtriuſque nihilo magis concipitur, niſi menſtruorum humor ſit modicè temperatus. Quamobrem nec nullis omnino vicibus menſtruorum fœmina generat, neque cùm effluunt, magna ex parte, ſed à purgatione. Vis enim quæ in maris genitura continetur, aut caret alimento, & materia, ex qua inſtituat animal: aut nimia co- B pia ſemen cum humore eluitur, ſed vbi effluxerint ſatis, quod remanet, conſiſtit. Quæ autem nullis menſtruorum vicibus concipiunt, aut interea dum agitantur, & effluunt, non pòſt, earum alterius cauſa eſt, quòd tantum humoris continent, quantum prolificis remanet à purgatione: quamquam non ita ſuperat, vt effluere poſſit: alteris quòd à purgatione os vteri comprimatur. Cùm igitur multum quidem effluxit, ſed adhuc effluit, tamen non tantum vt ſemen elabatur, tunc concipiunt. Nec verò abſurdum quicquam, ſi à conceptu item effluunt menſtrua: nam vel pòſt aliquandiu prodeunt, quanquam parcè, nec ſemper: ſed id morbidum eſt: quam C obrem paucis & raro accidit. Quæ autem magna ex parte fiunt, ea maximè ſecundùm naturam ſunt. A fœmina igitur conferri ad generationem materiam, quæ in menſtruorum conſtitutione fit, menſtrua autem ipſa eſſe excrementum, apertum iam eſt.

CAPVT XX.

Contra eos qui credunt, fœminas, vt mares, ſemen genitale emittere, argumento quod pari ferè voluptate afficiantur.

D QVod autem ſemen conferri à fœmina per coitum nõnulli exiſtimant, propterea quòd interdum ſimili voluptate afficiatur, vt mas, ſimúlque aliquid humoris ſecernat: id non humor ſeminalis eſt, ſed loci proprius. Vteri enim excretio eſt, quæ aliis euenit, aliis non. Euenit (quod plurimum dixerim) iis quæ nitidæ fœminaléſque ſunt: non euenit iis quæ fuſcæ atque viragines. Copia verò quibus euenit, non pro ſeminis emiſſione interdum eſt, ſed multo excedit: tum etiam ciborum diuerſa ratio plurimum facit, vt plus minúſve huius humoris excernatur: vt quædam acris ſaporis augent planè excernendi modum. Voluptas autem quæ per coitum ſentitur, non ſolùm ſemine exeunte accidit, ſed E etiam ſpiritu, ex quo conſiſtente ſemen emittitur. Quod patet tum in adoleſcentulis, qui nondum emittere queunt, propéque ætate ſunt: tum in viris genituræ expertibus. Voluptas enim iis omnibus ſcalpendo excitatur, & quorum deprauata eſt generatio: aluus interdum ſoluitur, propterea quòd excrementum eò ſecedit, quòd concoqui atque effici ſemen non poſſit. Forma etiam ſimilis mulieris, & adoleſcentuli eſt, & mulier quaſi mas inſeminis eſt. Impotentia enim quadam fœmina eſt,

A eo quòd ſemen ex vltimo alimento concoquere nequeat: quod alimentum aut ſanguis eſt, aut ſanguini proportionale in iis quæ ſanguine carent, propter naturæ frigiditatem. [illegible] in aluo profluuium accidit cruditate, [illegible] tum cætera profluuia ſanguinis, [illegible] veniunt: nam ea quoque ſanguinis [illegible] ſunt. ſed illa morbo [illegible], hoc [illegible] Sunt enim menſtrua ſemen non purum, [illegible] gens confectionis: quomodo in fructuum generatione adhuc imperfecta ineſt quidem alimentum, ſed confectionem ad puritatem deſiderat. B Quamobrem vt menſtrua genituræ admiſſa generant, ſic alimentum in fructibus gignendis mistum alimento ſyncero alit. Indicio etiam eſt ſemen non emitti à fœmina, quod cùm per coitum fœminis voluptas contrectatione loci eiuſdem atque maribus veniat, tamen humor ille non hic emittitur. Item non omnibus fœminis id excernitur, ſed ſanguineis tantùm: iiſque non omnibus, ſed quibus vterus non ad ſeptum tranſuerſum eſt, nec partus ex ouo. Adhæc, iis quæ non ſanguinem, ſed proportionale ſanguini habent, non emittitur ille humor. Vt enim in aliis ſanguis, ſic in his alia ineſt miſcella. C Cauſa autem ne aut his aut ſupra dictis ſanguineis fiat purgatio, ſiccitas corporis eſt, quæ parum excrementi relinquit, quantumque ſatis duntaxat ad generationem ſit, non vt etiam aliquid foras mittatur. At verò quæ viuipara ſunt ſine oui partione, vt homo, & quadrupedum, quæ ſuffragines intus flectunt, (hæc enim omnia animal procreant ſine ouo) iis omnibus ea purgatio fit, niſi quid læſum per generationem ſit, vt mula. Tamen nullis tam purgationes redundant, quam homini. Sed quemadmodum cuique animali hæc eueniant, in libris de hiſtoriis animalium ſcriptum eſt. *Plurima ex omnibus animalibus purgatio mulieribus fit.* D Maribus etiam plurimum emittitur ſeminis, magnitudinis ratione. Cuius rei cauſa eſt, conſtitutio corporis, quæ humida & calida eſt. Plurimum enim excrementi fieri in eiuſmodi corpore neceſſe eſt. Carent etiam partibus iis in quas vertitur excrementum in *cæteris animalibus.* Non enim pilorum copiam gerunt per corpus, non oſſium, aut cornuum, aut dentium excretiones. Indicium, ſemen eſſe in menſtruis, quòd ſimul vt antè dixi, maribus ſemen fieri incipit, & fœminis menſtrua innoteſcunt eadem ætate, tanquam ſimul ea loca diſtendantur, quæ vtrumque recipiant excrementum. E Cùmque tempus diſtendendi inſtat, loca intumeſcunt à ſpiritu. Quod marium teſtes apertius oſtendunt, quanquam & mammæ: ſed fœminarum mammæ potius indicant. Cùm enim bino digito extolluntur, tunc plurimis incipiunt menſtrua. Igitur in quibus vita præditis ſexus maris ac fœminæ diſtinctus non eſt, in iis ſemen velut conceptus iam eſt. Conceptum appello primam ex mare ac fœmina miſturam. Quamobrem ex vno ſemine vnum gignitur corpus: verbi gratia, ex vno tritici grano vnus fundus, vt ex vno ouo vnũ animal: geminum enim ouum, duo eſt oua. *At in* quibus generibus mas & fœmina diſtinguitur,

in iis plura animalia ex eodem ſemine gigni poſ-ſunt, quaſi natura differat ſemen in plantarum & animalium genere: indicium eſt, quòd vno initu plura gignuntur in iis quæ plura, quàm vnũ, poſſunt ge[illegible]re. Quo argumentó cõſtat etiam, non omni ex parte corporis geniturам prouenire. Neque enim diſtincta ſtatim inde ex eadem parte ſecernerentur, neque poſtquam ſimul ad vterum deueniſſent, ibi diſtinguerentur. Sed euenit porrò quod ex recta ratione eſt, vt cùm mas formam & principium motus præbeat, fœmina corpus atque materiam, (quemadmodum in lactis concretione corpus lac ipſum eſt, ſuccus, aut coagulum principium ſpiſſandi cogendique obtinet) ſic quod à mare in fœmina diſtinguitur, intelligi debeat. Cur in plura pauciorave partiatur, aut ſingulare inſtituat, alia ratio eſt. Sed quia non differat forma quod diuiditur, ſi modò ſe habeat modicè ad materiam, vt neque minus ſit, vt concoquere, denſaréque nequeat, neque amplius, vt exiccare poſſit, fit ob eam rem vt plura generentur. Cæterùm ex eo quod primum conſtitit, ex vno iam vnum tantùm procreatur. Sed geniturам à fœmina non conferri ad generandum, tamen aliquid conferri, idque eſſe menſtruorum conſtitutionem, aut proportionale in genere exangui, tum ex ſuprà dictis, tum etiam ratione, vniuerſalique indagatione conſtat. Eſſe enim quod generet, & ex quo generet, neceſſe eſt. Idque quamuis vnum, forma quidem differre, & rationis diuerſitate oportet. At verò in iis quæ diſtinctas eas potentias obtinent, corpus etiam, & naturam diuerſam eſſe agentis & patientis. Quòd ſi mas eſt vt mouens & agens; fœmina, quà fœmina, vt patiens, ſequitur vt ad maris geniturам fœmina non geniturам, ſed materiam conferat. Quod & fieri ita videtur: natura enim menſtruorum pro prima materia eſt.

A ſi quid accedit, idcirco ex eo vt inſito eſſe quod gignitur, ſed vt ex eo quod mouerit, & forma, vtque à medicina qui ſanatus eſt. Facta etiam rationi conſentiunt: hinc enim mares nonnulli per coitum nec membrum quidem vllum in fœminam emittere viſuntur, ſed contra fœmina in marem, vt in quibuſdam inſectis fit. Quod enim in iis qui [illegible] dunt, efficitur ſemine in fœmina, idem in mare ipſo vapor virtúſque efficit, fœmina admouente ſuam particulam, quæ ſeminis capax eſt. Vnde fit, vt genus id animalium diu coeat, abſolutúmque breui generet. Coniuncta igitur manent, quouſque conſtituant perinde vt genitura conſtituit: ſed abiuncta citò edunt conceptum, quoniam &
B imperfectum, quod pariunt, eſt: quippe quę vermiculum omnia id genus progenerent. Maximo ſanè indicio eſt, quod auibus & piſcibus ouiparis euenit, ſemen nec omni ex parte corporis venire, neque tale quid emitti à mare, quod inſit in eo quod genitum eſt: ſed virtute tantùm contenta in genitura viuificari, vt modò diximus de inſectis, quorum fœmina tranſigit in marem. Nam ſiue accidit vt auis hypenemia, id eſt, ſubuentanea, oua ferat, ſi poſtea coit nondum mutato ouo ex luteo in album, fœcunda ex ſubuentitiis redduntur: ſiue concepta ex coitu, ſi adhuc luteis, cum alio mare coiuit, ſimile eius quo cum poſtea coiuit, prouenit omne genus pullorum. Quapropter nonnulli ex
C iis qui vt gallinæ generoſæ procreentur, operam dant, ita mutatis admiſſariis faciunt, tãquam non miſceatur conſtitutionemque ſubeat ſemen, neque omni ex parte venerit, ex ambobus enim veniſſet: itaque bis partes eaſdem haberet: ſed ſua facultate ſemen maris materiam contentam in fœmina, & cibum qualitate quadam afficiat. Id enim efficere poteſt, vbi ſecundum præuenerit tepefaciendo & concoquendo. Cibus enim ab ouo abſumitur, quandiu creſcit. Hoc idem in generatione quoque ouiparorum piſcium euenit. Vbi enim fœmina oua ediderit, mas ſemen aſpergit: & quæcunque attigit, fœcunda efficiuntur: quæ non attigit, remanent infœcunda, quaſi non ad quan-
D titatem mas conferat, ſed ad qualitatem. Patet igitur ex iis, nec omni ex parte ſemen ſecedere, neque fœminam ita vt marem conferre ad generationem, ſed marem, principium motus; fœminam, materiã præſtare. Hac enim cauſa, nec per ſe ipſa fœmina generat: principium enim, & id quod moueat diſcernátque, deſiderat. Sed nõnullis, vt auibus, aliquatenus natura gignere poteſt. Aues enim conſtituunt quidem oua, ſed imperfecta, quæ ſubuentanea vocantur.

CAPVT XXII.

Eius, quod generatur, ortum non in mare ſed fœmina agi.

ET ortus eius, quod generatur, in fœmina agitur. Nec in marem ſemen emittit aut mas, aut
E fœmina, ſed ambo in fœminam conferunt quod ſuum vtrique ſit: quoniam in fœmina materia eſt, ex qua conſtat quod creatur. Ac protinus partim haberi paratam materiam neceſſe eſt, ex qua primus conceptus conſiſtat: partim ſubinde accedere, qua nutriatur, & creſcat. Itaque partum in fœmina contineri neceſſe eſt. Nam & faber adeſt ligno, & figulus limo. Denique omnis actio & motio

& motio vltima iuxta materiam eſt, vt ædificatio in iis quæ ædificantur. Hinc etiam quemadmodum mas conferat ad generationem, acceperis: nec enim mas omnis ſemen emittit, & quibus emittit, marib. nulla pars fœtus hoc eſt: ſicut nec à fabro quicquam ſecedit ad lignorum materiam, neque pars vlla artis fabrilis in eo quod efficitur, eſt, ſed forma, & ſpecies ab illo per motum in materia exiſtit. Atque anima, in qua forma, & ſcientia eſt, mouet manus, aut aliud membrum, motu certæ qualitatis, vel diuerſo, à quibus efficitur diuerſum, vel eodem, à quibus idem: manus autem inſtrumentaque materiam mouent. Ita natura etiam maris ſemen emittentis vtitur eo ſemine quaſi inſtrumento & actu habente motum: vt in operibus artium inſtrumenta mouentur: in illis enim quodam modo motio artis eſt. Quæ igitur ſemen emittunt, hoc modo ad generationem conferunt: quæ autem non emittunt, ſed fœminæ particulam ſui quandam inſerit in marem, hæc ſimile facere videntur, quaſi quis materiam ad opificem afferat. Nam ob imbecillitatem eorum marium nihil per aliud natura efficere poteſt: ſed vix aſſidente ipſa motus valent, & ſimilis fingenti, non fabricanti eſt: quippe quæ non per aliud attingens, ſed ipſa ſuis membris rem condat conſtituendam.

CAPVT XXIII.

Maris & fœminæ conuenientia & differentia in plantis & animalibus.

SExus igitur maris & fœminæ diſtinctus in genere omnium animalium greſſilium eſt. Et quanquam diuerſa ſunt animalia mas & fœmina, tamen ſpecie idem ſunt: verbi gratia, homo vtrunque. At in plantis facultates iſtæ miſcentur, nec mas à fœmina ſeparatur: quamobrem ex ſe ipſæ progenerant, nec genituram emittunt, ſed conceptum, quod ſemen vocatur, afferunt. Idque Empedocles bene retulit ſuo carmine:

Deinde etiam ouiparo genus arborum tulit ortu.

Ouum enim, conceptus eſt, & animal ex parte eius creatur: reliquum alimentum eſt. Animalis ſeminis etiam aliqua ex parte conſiſtit quod oritur: reliquum alimentum germini radicique primæ eſt. Hoc idem quodam modo in iis quoque euenit animalibus quæ ſexu diſtinguuntur. Cùm enim vniuntur, & generant, inſeparata redduntur, vt plantæ: idque natura eorum nititur, vt vnum fiat; quòd cùm coeunt & coniunguntur, conſpicitur vnum effici animal ex ambobus. Atque ea quæ ſemen emittunt, diu complexa funguntur Venere, dum conceptum conſtituant: vt inſecta, quæ ſolent coire. Alia tandiu exigunt, donec partem aduentitiam quandam mittant, quæ conceptum conſtituat ſpatio temporis longiore, quàm in ſanguineo genere agatur. Hæc enim parte quadam diei cohærent: genitura intra plures dies conſtituitur: mox vbi eam emiſerunt partem, abſoluuntur. Profectò animalia tanquam plantæ diuiſæ eſſe videntur, perinde quaſi illas quoque, poſtquam ſemen attulêre, diſſoluas, & ſepares in ſexum inſitum maris ac fœminæ. Atque hæc omnia rectè ita à natura condita ſunt. Plantarum enim ſubſtantiæ non aliud munus, nulla actio,

A nisi generatio ſeminis eſt. Quod cùm maris ac fœminæ coitu efficiatur, miſcuit ea natura, indiſcretúmque ſexum maris & fœminæ plantarum generi tribuit. Sed de his alibi diſputandum nobis eſt. At animalis munus non ſolùm generare, quod commune omnium viuẽtium eſt, ſed etiam cognitionis alicuius particeps vnumquodque eſt, aliud maioris, aliud minoris, aliud minimæ: ſenſum etenim habent. Senſus autem cognitio quædam eſt: cuius ſiue nobilis ſiue ignobilis nota plurimum referet ad hominiſne prudentiam, an ad genus inanimum, conſideretur. Nam ad prudentiam nihil eſſe videbitur, tactum guſtúmque tantùm adipiſci: at ad ſenſus vacuitatem ſum- B mum id eſſe putabitur. Charum enim cenſueris compotem eius eſſe cognitionis, nec emortuum, expertémque eſſentiæ omnis iacere. Senſu autem animalia differunt ab iis quæ tantùm viuunt. Sed cùm viuat etiam, quod animal eſt, neceſſe ſit, cùm fungi viuentis munere opus eſt, tunc coëunt, & miſcentur, & quaſi plantæ efficiuntur, vt dictum eſt. Cæterùm genus animalium teſta intectum, quoniam inter animalia & plantas ambiguum eſt, vt in ambobus conſtitutum generibus, munere neutrius fungitur: nam vt planta, ſexu maris & fœminę caret, nec in altero generat: vt autem animal, nullum ex ſe fructum affert modo plan- C tæ, ſed conſiſtunt, & generantur ex terrena & humida quadam concretione. Sed de eorum generatione poſtea diſſeremus.

ARISTOTELIS STAGIRITÆ DE ANIMALIVM GENERATIONE Liber ſecundus.

CAPVT I.

Quid ſit cauſa, vt principium generationis cuiuſque mouens primum, & procreans.

MAREM ac fœminam eſſe principia generationis, & quænam eorum eſſentiæ vis, atque ratio eſſet, dictum iam eſt. Sed quamobrem gignatur, & ſit, alterum mas, alterum fœmina, vt neceſſariò, & quonam primo mouente, & quali materia id efficiatur, procedendo explicare conabimur. At verò quod ad melioris rationem, & cauſam, cuius gratia, pertinet, cælitus principium ducitur. Cùm E enim rerum aliæ ſint ſempiternæ, ſumméque diuinæ, aliæ quæ poſſint & eſſe, & nõ eſſe: pulchrum autem diuinúmque illud cauſa ſemper ſua natura melioris conditionis in rebus contingentibus ſit: quod verò ſempiternum non eſt, id & eſſe, & particeps tum deterioris cõditionis, tum melioris eſſe poſſit: cúmque anima ſit corpore melior, animatúmque inanimato pręſtet propter animam: & eſſe, quàm non eſſe, & viuere, quàm non viuere, melius ſit: efficitur his de cauſis vt generatio ſit animalium. Cùm enim natura eius ſempiterna eſſe non poſſit: quo modo fieri poteſt, eo ſempiternum, quod gignitur, eſt. Numero igitur non poteſt: (ſubſtantia enim rerum in ſingularibus eſt.

quæ ſi talia eſſent, ſempiterna eſſent.) Specie verò poteſt. Itaque genus hominum ſemper & beſtiarum & plantarum eſt. Sed cùm principium ſit eorum mas, atque fœmina, fit vt generationis gratia ſit mas & fœmina in rerum natura. Cúmque ſua natura melior, magiſque diuina cauſa ſit ea quæ prima mouet, cui ratio ineſt, & forma, quàm materia: cúmque melius etiam ſit ſeparari à deteriori quod melius eſt, ideo in quibuſcunque poteſt, & quoad eius fieri poteſt, mas à fœmina ſeparatur. Melius enim magiſque diuinum eſt principium motus, quod per generationem mas obtinet; fœmina enim materia eſt: ſed coit & iungitur ad generationis officium mas cum fœmina: id enim commune ambobus eſt. Qua igitur ratione ſexu maris ac fœminæ participant, viuunt: quamobrem plantæ quoque vitæ participes ſunt. Qua autem ſenſus adeſt, genus animalium eſt. Quorum inceſſilibus ferè omnibus mas à fœmina ſeparatur, ob eas, quas modò reddidimus, cauſas: eorúmque alia, vt dictum eſt, ſemen emittunt, alia non emittunt, cùm coeunt. Cuius rei cauſa eſt, quòd quæ nobiliora ſunt, eadem ſua natura magnitudinem ſibi poſtulant. Quod non niſi calore animali fieri poteſt. Quod enim maius eſt, id à facultate ampliore moueri neceſſe eſt. Mouere autem calor poteſt. Quamobrem in vniuerſum, propè dixerim, maiora, quæ ſanguinem habent, quàm ea quæ non habent: & incidentia, quàm ſtabilia, maiora, quæ ſemen genitale propter calorem ac magnitudinem emittunt. De mare & fœmina, quam ob cauſam ſint, dictum iam eſt. Animalium verò alia perficiunt partum, foráſque mittunt ſibi ſimile: vt ea quæ animal edunt in lucem: alia nondum explanatum, ſuámque formam adeptum pariunt, quorum ſanguinea ouum pariunt, exanguia vermem. Inter ouum & vermem hoc intereſt: Ouum eſt, cuius ex parte animal gignitur, reliquum cibus ei quod gignitur, eſt: vermis, ex quo toto animal gignitur. Eorum autem, quæ perfectum ſibi ſimile edunt in lucem, atque viuipara ſunt, alia ſtatim intra ſe animal gignunt, vt homo, equus, bos, & ex marinis delphinus, & reliqua generis eiuſdem: alia vbi primum intra ſe ouum genuerint, mox animal edunt foras: vt quæ cartilaginea appellantur. Ouiparorum, alia ouum edunt perfectum, vt aues, & quæ quadrupedes ouum pariunt, vt lacertæ, & teſtudines: aut quæ pedib. carent, vt ſerpentum pars plurima. Oua enim eorum poſtquam prodierunt, nullum inſuper capiunt incrementum: alia imperfectum edunt, vt piſces, cruſtata, & mollia nomine: namque eorum oua edita augentur. Omnia, quæ aut animal pariunt, aut ouum, ſanguinem habent: & quæ ſanguinem habent, aut animal pariunt, aut ouum, niſi omnino improlia ſint. Exanguium inſecta vermiculum pariunt, quæ aut ex coitu generantur, aut ipſa coeunt. Sunt enim nonnulla inſecta, quæ ſponte naturæ gignãtur: ſed ſexum maris ac fœminæ habeant, coniunctáque procreent aliquid. Quod tamen generant, imperfectum eſt. cauſam antea reddidi. Magna permutatio generibus euenit. Nec enim bipedes omnes vel animal pariunt, vel ouum. Aues enim ouum, homo animal parit. Neque quadrupedes omnes, aut ouum pariunt, aut animal. Equus enim, & bos, & aliæ plurimæ, animal pariunt: lacertæ, crocodili, & aliæ complures ouum.

A Nec verò in habendis pedibus, nécne, ratio partus continetur. Nam expedum aliæ animal pariunt, vt viperæ, & cartilaginea: aliæ ouum, vt piſcium genus, ac cæteræ ſerpentes. Pedes habentium multa & ouum & animal pariunt: vt quadrupedes, quas modò enumerauimus. Necnon intra ſe pariunt, tum pedata, vt homo, tum expeda, vt balænæ, delphini. Sic igitur diuidi non poteſt, nec diſcriminis eius cauſam habet inſtrumentum vllum inceſſui delegatum. Sed enim ea pariunt animal, quę natura perfectiore ſunt, & principium ſyncerius obtinent. Nullum enim intra ſe gignit animal, niſi quod aërem recipit, & ſpirat. Perfectiora autem ſunt, quæ natura calidiora B & humidiora, nec terrena conſtant. Caloris verò naturalis ratio, pulmone deſcribitur ſanguinis compote. Quæ enim pulmonē habent, omnino calidiora ſunt iis quæ non habent: & inter ea ſuperant, quæ non fungoſum, aut retorridum, & parum ſanguinis continentem habent pulmonē, ſed ſanguinolentum, & mollem. Vtque animal res perfecta, vermis autem, & ouum, imperfecta eſt: ſic perfectum naſci ſolet à perfectiore. Quæ autem calidiora quidem ſunt propter pulmonem, ſed natura conſtant ſicciore: aut quæ frigidiora quidem, ſed humidiora ſunt, eorum altera ouum edunt perfectum, altera intra ſe, & ouum & animal pariũt. Nam & aues, & cortice intecta, calo- C re ſuo perficiunt, ſed præ ſiccitate ouum pariunt. Cartilaginea cùm minus iis calida, magis humida ſint, vtroque participant: quippe quæ & ouum, & animal intra ſe pariunt: ouum, quia frigida ſunt: animal, quia humida. Humor enim viuificus eſt: ſiccitas longè à vita remota eſt. Sed cùm non penna, non cortice, non ſquama tegantur, quæ indicia ſunt naturæ ſiccæ, atque terrenæ, idcirco molle generant ouum. Vt enim ipſis ſic eorum ouis *nulla ſatis inſidet ſiccitas*. Atque ob eam rem intra ſe pariunt oua. Nam ſi ouum foras prodiret, facilè periret, carens putamine quod protegat, duriore. Frigida ſiccioráque pariunt quidem ouum, ſed imperfectum, cru- D ſta etiam duriuſcula opertum, propter naturam terrenam ſui generis, vtque imperfectum exiens poſſit ſeruari tutela operimenti teſtacei. Piſces itaque cùm ſquamati ſint, & genus cruſtatum, vt terrena conſtitutum natura, oua putamine duriore generant. Sed mollium genus, vt ipſum natura corporis lenta eſt, ſic oua, quæ imperfecta edere ſolet, tuetur, & ſeruat. Plurimum enim lentoris ſua cum fœtura emittunt. Inſecta omnia vermiculum pariunt, eadémque omnia ſanguine carent. Vnde fit vt quæ extra vermiculum pariunt, ſanguine vacent: quanquam exanguia non omnia vermem pariant. Commutant enim inter ſe vices inſecta, & quæ ouum pariunt imperfectum: vt piſces ſquamati, & cruſtata, & mollia. Horum enim oua vermem imitantur: E quippe quæ foris incrementum recipiant: illorum vermiculi tempore procedente in ſpeciem oui tranſeunt. Quod quemadmodum fiat, poſtea explicabimus. Nunc priùs intelligendum quàm bene, miróque deinceps ordine natura reddit generationem. Perfectiora enim calidioráque animalia prolem reddunt perfectam qualitate: nam quantitate nullum omnino animal perfectè progenerat. Omnia enim poſtea quàm nata ſunt, incrementum recipiunt,

& generant quoque ea ipſa animalia intra ſe ſtatim. Cætera ab iis proxima loco ſecundo conſtituta,non ſtatim perfecta intra ſe generant. Cùm enim priùs intra ſe ouum pepererint, mox animal edunt in lucem. Alia non perfectum animal generant,ſed ouum, idque perfectum. Quæ autem iis frigidiora conſtant natura, generant quidem ouum, ſed non perfectum, verùm quod foris perficiatur, vt genus piſcium,ſquamata, & cruſtata, & mollia. Quintum genus, quod frigidiſſimum eſt, ne ouum quidem ex ſeſe parere poteſt, ſed hæc affectio foris euenit ei, vt dictum eſt. Inſecta enim primò vermiculum pariunt,qui addito tempore ſpeciem accipit oui. Aurelia enim appellata oui obtinet facultatem, tum ex eo animal naſcitur, tertia mutatione finem recipiens generationis. Sunt igitur quæ non ſemine genitali procreentur, vt antea dictum eſt. Sanguinea tamen omnia ſemine procreantur, videlicet ea quæ per coitum oriuntur, emiſſa à mare in fœminam genitura: qua ingeſta animalia conſtituuntur,ſuámque formam recipiunt, aut intra ipſa animalia, quæ ſolent animal generare,aut in ouo,aut in ſemine, & eiuſmodi alia ſecretione. De quibus quæſtio longè dubia oritur, quonam pacto ex ſemine generetur aut planta, aut animal. Quod enim gignitur,& ex aliquo,& ab aliquo & aliquid gigni neceſſe eſt. Ex quo gignitur, materia eſt, (quam nonnulla ſecum habent primam acceptam ex fœmina; verbi gratia, ea quæ non forma animalis naſcuntur, ſed vermiculi,aut oui,Quædam diu ex fœmina capiunt, quoniam lactent, vt ea quæ non modò foras, verùm etiam intus forma animalis gignantur.) Talis, id, ex quo oriuntur materia eſt. ſed hoc loco, non ex quo oriantur, quærimus, ſed à quo partes corporis generentur. Aut enim extrinſecus aliquid, aut in genitura, & ſemine inſitum agit: idque aut pars aliqua animæ, aut anima; aut habens animam eſt. Sed ab aliquo extrinſecus agente effici quæque,aut viſcera, aut alia membra, remotum à ratione videtur. Fieri enim non poteſt vt moueat quod non tangit, & quicquam ab eo quod non moueat, afficiatur. Igitur in ipſo conceptu aliquid iam ineſt, quod aut pars eius ſit, aut ſeorſum contineatur. Sed aliud quicquam eſſe abiunctum irrationabile eſt. Etenim generato iam animali, corrumpatúrne illud, an maneat? At nihil ineſſe videtur, quod non totius pars ſit,aut plantæ,aut animalis.Quinetiam corrumpi, poſtquam vel omnes,vel aliquot partes effecit, abſurdum eſt. Quid enim efficiat reliquas? Nam ſi illud poſtea quàm effecerat cor, interiit, cor autem ipſum partem aliam efficit, eiuſdem rationis eſt, vt vel omnia intereant, vel omnia ſeruentur, ergo ſeruari neceſſe eſt. Pars igitur eius eſt id, quod protinus in ſemine ineſt. Sed ſi nihil animæ, quod non aliqua in parte ſit corporis, vt animata quoque pars aliqua protinus ſit, conſequitur. Sed cætera quonam pacto efficiantur? Aut enim ſimul omnes partes generantur: verbi gratia, cor, pulmo, iecur,oculus, & reliqua omnia: aut ordine deinceps, vt in his carminibus,quæ ad Orpheum authorem referuntur. Similiter enim, vt retis implexum conſtitui animal ibi ſcribitur. Sedenim non ſimul omnia effici, vel ſenſu percipi poteſt, cùm partes aliæ iam ineſſe, aliæ nondum adeſſe cernantur. Nec dici poteſt, eas præ ſua exiguitate latêre.

A Pulmo enim, qui amplioris quàm cor magnitudinis eſt, poſterior corde in primo ortu conſpicitur. Sed cùm aliud prius, aliud poſterius fiat, vtrum alterum efficiat alterum, & ſit propter proximum, an potiùs hoc poſt hoc fiat? Verbi cauſa, non iam ortum efficit iecur, idque aliud quippiam, ſed hoc poſt hoc: vt poſtquam puer factus eſt, vir efficitur, non à puero agente vir efficitur. Cuius ratio illa eſt, quòd ab eo quod actu eſt, id quod potentia eſt, efficiatur, tum in naturæ tum in artis operibus. Itaque ſpeciem & formam eſſe in illo oportebit: verbi gratia, in corde formam iecinoris: quanquam alias quoque illa opinio abſurda & B commentitia eſt. Quin etiam vt in ſemine protinus pars aliqua animalis, aut plantæ facta contineatur, ſiue quæ cæteras efficere poſſit, ſiue quæ non poſſit, impoſſibile eſt, quando ex ſemine & genitura omnia generantur. Ab eo enim, qui ſemen fecerit, creatum id proculdubio eſt: ſiquidem protinus ineſt. At verò ſemen prius fieri oportet, idque officium generantis eſt. Nulla igitur pars condita ineſſe poteſt. Ergo quod agit, nullam habet partem, at ne extra quidem: alterutrum autem ſit, neceſſe eſt. Hæc igitur ſoluere conandum eſt: fortaſſe enim aliquid ex iis quæ diximus, non ſimplex eſt, vt ab extero nihil effici poſ- C ſe. Nam & eſt vt poſſit, & eſt vt non poſſit. Sed ſemen, an id à quo ſemen, dicamus, nihilo refert: ſcilicet qua motum, quem illud mouebat, ſemen in ſe ipſum continet. Fieri autem poteſt vt hoc ab hoc moueatur, & hoc ab hoc, ſintq́; perinde quaſi admirabilia illa ſpontina. Partes enim habēt vim modo quodam, etiam cùm quieſcunt. Quarum primam vbi extrinſecus aliquid mouerit, ſtatim proxima actu efficitur. Vt igitur in ſpontinis illis quodam modo illud mouet, quod nihil nunc tangit, ſed antè tetigit: ſic id, à quo ſemen, aut quod ſemen effecit, mouet, cùm aliquid tetigerit, quanquam non adhuc tangit. Et motus qui ineſt, quodam efficit modo, vt ædificatio ædes. Igitur ali- D quid eſſe quod efficiat, ſed non ita, vt hoc quicquã, nec perfectum ineſſe primum agens, apertum iam eſt. Quemadmodum autem vnumquodque fiat, *accipiendum hinc eſt hoc initio*. Omnia quæcunque aut natura, aut arte efficiũtur, ab eo quod actu eſt, fiunt, ex eo quod potentia tale eſt. Semen igitur tale eſt, motúmque habet, & principium tale, vt motu peracto pars exiſtat quæque, eademque ſit animata. Non eſt enim facies, niſi animam habeat, neque caro: ſed corrupta æquiuocè dicetur facies, aut caro, perinde quaſi lapidea, aut lignea facta ſit. Simul autem partes ſimilares, & inſtrumentales, ſiue officiales, efficiuntur. Et E quemadmodum non ſecurim, non aliud inſtrumentum dixerimus factum eſſe ab igne ſolo: ſic non pedem, non manum, eodémque modo ne carnem quidem. Nam eius quoque aliquod officium eſt. Dura igitur, mollia, lenta, rigida, & quæcunque alij affectus partibus inſunt animatis, à caliditate frigiditatéve effici poſſunt. At ratio, qua iam caro, aut os eſt, non poteſt: ſed à motu proficiſcente efficitur ab eo quod genuit, quódque actu eſt id quod potentia eſt id ex quo gignitur: quomodo in iis quoq; agitur, quæ arte efficiuntur. Ferrum enim durum aut molle efficitur calore vel frigore: at verò enſis à motu inſtrumentorum, qui artis obtinet rationem. Ars enim principium formáque eius, quod efficitur, eſt, ſed in alio.

Motus autem naturæ in ipſo eſt, ab altera profectus natura, quæ actu obtinet formam. Sed habetne ſemen animam, néene, ratio eadem atque de partibus reddenda eſt. Nec enim anima vlla eſſe poteſt in alio, niſi in eo cuius eſt, neque pars vlla eſſe poteſt, quod particeps animæ non eſt: niſi æquivocè, vt mortui oculus. Semen igitur & habere animam, & eſſe potentia, palàm eſt. Propius autem & remotius idem à ſe ipſo potentia eſſe poteſt: vt geometra dormiens remotiùs quàm vigilans eſt, iſque remotiùs, quàm qui iam contemplatur. Sed enim huius nulla pars cauſa eſt generationis, ſed quod primum extrinſecus mouit, id cauſa eſt. Nihil enim ſeipſum generat, ſed poſtquam generatum eſt, ſe ipſum iam auget. Quamobrem non ſimul omnes partes generantur, ſed vna primum; eámque primum oriri neceſſe eſt, quæ principium augendi contineat. Siue enim planta, ſiue animal eſt, æquè omnibus ineſt quod vim habeat vegetandi, ſiue nutriendi. Id autem eſt quod tale alterum generet, quale ipſum eſt. Hoc enim cuiuſque perfecti, tum animalis tum ſtirpis ſecundùm naturam officium eſt. Neceſſitatis autem ratio eſt, quòd cùm aliquid ortum eſt, augeri idem neceſſe eſt. Generat igitur quod eſt vniuocum, vt homo hominem, ſed per ſe ipſum augetur. Ergo ipſum, cùm aliquid ſit, auget. Quòd ſi vnum quid, ídque primum ſit, id primum generari neceſſe eſt. Itaque ſi cor primum in nonnullis oritur animalibus, aut cordis proportionale in iis quæ corde carent; ex corde principium illud eſt, in iis quæ cor habent: cæteris ex proportionali. Expoſui iam ad ea quæ antè quærebantur, quid cauſæ ſit vt principium generationis cuiuſque mouens primum, & procreans.

CAPVT II.

De ſeminis natura, & quid ſit, & quam ob cauſam non congelaſcit.

DE ſeminis natura dubitauerit quiſpiam. Semen enim prodit de animali craſſum, & album, mox refrigeratum, humidum ad aquæ ſpeciem redditur: colorem etiam accipit aquæ. Abſurdum igitur id putaueris: aqua enim non craſſeſcit calore. Id autem intrinſecus è loco calido proficiſcitur craſſum, refrigeratúmque humeſcit. Atqui omnia aquoſa concreſcunt frigore. Semen verò poſitum in gelu ſub dio non concreſcit, ſed humeſcit, quaſi à contrario craſſum conſtiterit. Sed neque à calore craſſari, ratio probabilis eſt. Quæ enim plus terræ continent, ea conſiſtunt, craſſantúrque per coctionem, vt lac. Igitur refrigeratum ſolideſcere debuit; at nihilo ſolidius fit, ſed totum modo aquæ liqueſcit. Hoc igitur dubium eſt. Nam ſi aqua eſt, cùm aqua non videatur poſſe à calore craſſari, hoc tamen ex corpore calido craſſum & calidum exit. Sed ſi ex terra conſtat, aut ſi miſtum terræ & aquæ eſt, non totum reſolui in humorem & aquam debuit. An non omnia, quæ accidunt, diximus? Non ſolùm enim quod ex aqua & terra humidum conſtat, craſſatur, ſed etiam quod ex aqua & ſpiritu: vt ſpuma craſſior, albáque exiſtit. Et quo ampullæ pauciores, incertioréſque ſunt, eo & albior & rigidior factus conſpicitur. Quod idem in oleo quoque fit:

ΠΕρὶ δὲ τῆς τοῦ σπέρματος φύσεως ἀπορήσειεν ἄν τις. τὸ γὰρ σπέρμα ἐξέρχεται μὲν ἐκ τοῦ ζῴου παχὺ καὶ λευκόν· ψυχόμενον δὲ, γίνεται ὑγρὸν, ὥσπερ ὕδωρ· καὶ τὸ χρῶμα ὕδατος. ἄτοπον δὴ ἂν δόξειεν. οὐ γὰρ παχύνεται ὕδωρ θερμῷ· τὸ δ', ἔσωθεν ἐκ θερμοῦ ἐξέρχεται παχύ, ψυχόμενον δὲ, γίνεται ὑγρόν. καίτοι πήγνυταί γε τὰ ὑδατώδη· τὸ δὲ σπέρμα οὐ πήγνυται τιθέμενον ἐν τοῖς πάγοις ὑπαίθριον, ἀλλ' ὑγραίνεται, ὡς ὑπὸ τοῦ ἐναντίου παχυνθέν. ἀλλὰ μὴν οὐδ' ὑπὸ θερμοῦ παχύνεσθαι εὔλο- E γον. ὅσα γὰρ γῆς πλεῖον ἔχει, ταῦτα συνίσταται καὶ παχύνεται ἑψόμενα, οἷον καὶ τὸ γάλα. ἔδει οὖν ψυχόμενον στερεοῦσθαι. νῦν δ' οὐθὲν γίνεται στερεὸν, ἀλλὰ πᾶν ὥσπερ ὕδωρ. ἡ μὲν οὖν ἀπορία, αὕτη. εἰ μὲν γὰρ ὕδωρ, τὸ ὕδωρ οὐ φαίνεται παχυνόμενον ὑπὸ τοῦ θερμοῦ· τὸ δ', ἐξέρχεται παχὺ καὶ θερμὸν, ἐκ θερμοῦ τοῦ σώματος. εἰ δ' ἐκ γῆς, ἢ μικτὸν ἐκ γῆς καὶ ὕδατος, οὐκ ἔδει ὑγρὸν πᾶν γίνεσθαι καὶ * ὕδωρ, ἢ οὐ πάντα τὰ συμβαίνοντα διῃρήκαμεν. οὐ γὰρ μόνον παχύνεται τὸ ἐξ ὕδατος καὶ γεώδους συνιστάμενον ὑγρὸν, ἀλλὰ καὶ τὸ ἐξ ὕδατος καὶ πνεύματος· οἷον καὶ ὁ ἀφρὸς γίνεται παχύτερος καὶ λευκός. καὶ ὅσῳ ἂν ἐλάττους καὶ ἀδηλότεραι αἱ πομφόλυγες ὦσι, τοσούτῳ καὶ λευκότερος καὶ στιφρότερος ὁ ὄγκος φαίνεται. τὸ δ' αὐτὸ καὶ τὸ ἔλαιον πάσχει

* G. ὕδωρ. ἢ ὅτι τ. ε. διῃρήκαμεν.

παχύνεται γὰρ τῷ πνεύματι μιγνύμενον. διὸ καὶ τὸ λευκαινόμενον παχύτερον γίνεται, τοῦ ἐνόντος ὑδατώδους ὑπὸ τοῦ θερμοῦ διακρινομένου καὶ γινομένου πνεύματος. καὶ ἡ μολύβδαινα μιγνυμένη ὕδατι ἢ ἐλαίῳ ἐξ ὀλίγου τε πολλοῦ ὄγκον ποιεῖ, καὶ ἐξ ὑγροῦ στιφρόν, καὶ ἐκ μέλανος λευκόν. αἴτιον δ᾽, ὅτι ἐγκαταμίγνυται πνεῦμα, ὃ τόν τε ὄγκον ποιεῖ, καὶ τὴν λευκότητα διαφαίνει, ὥσπερ ἐν τῷ ἀφρῷ καὶ τῇ χιόνι. καὶ γὰρ ἡ χιών ἐστιν ἀφρός. καὶ αὐτὸ τὸ ὕδωρ τῷ ἐλαίῳ μιγνύμενον γίνεται παχὺ καὶ λευκόν. ἔν τε γὰρ ὑπὸ τῆς τρίψεως ἐγκατακλείεται πνεῦμα, καὶ αὐτὸ τὸ ἔλαιον ἔχει πνεῦμα πολύ. ἔστι γὰρ οὔτε γῆς οὔτε ὕδατος, ἀλλὰ πνεύματος τὸ λιπαρόν. διὸ καὶ ἐπὶ τῷ ὕδατι ἐπιπολάζει. ὁ γὰρ ἐν αὐτῷ ὢν ἀήρ, ὥσπερ ἐν ἀγγείῳ, φέρει ἄνω καὶ ἐπιπολάζει, καὶ αἴτιος τῆς κουφότητός ἐστι. καὶ ἐν τοῖς ψύχεσι δὲ καὶ πάγοις, παχύνεται τὸ ἔλαιον, πήγνυται δ᾽ οὔ. διὰ μὲν γὰρ θερμότητα, οὐ πήγνυται (ὁ γὰρ ἀὴρ θερμὸν καὶ ἄπηκτον) διὰ δὲ τὸ συνίστασθαι αὐτόν, καὶ πυκνοῦσθαι ὥσπερ ὑπὸ τοῦ ψύχους, παχύτερον γίνεται τὸ ἔλαιον. διὰ ταύτας τὰς αἰτίας, καὶ τὸ σπέρμα ἔσωθεν μὲν ἐξέρχεται στιφρὸν καὶ λευκόν, ὑπὸ τῆς ἐντὸς θερμότητος πνεῦμα πολὺ ἔχον θερμόν. ἐξελθόντος δέ, ὅταν ἀποπνεύσῃ τὸ θερμόν, καὶ ὁ ἀὴρ ψυχθῇ, ὑγρὸν γίνεται καὶ μέλαν. λείπεται γὰρ τὸ ὕδωρ καὶ εἴ τι μικρὸν γεῶδες, ὥσπερ ἐν φλέγματι καὶ ἐν τῷ σπέρματι ξηραινομένῳ. ἔστι μὲν οὖν ἀτμὶς κοινὸν ὕδατος καὶ πνεύματος· τὸ δὲ πνεῦμα, ἐστὶ θερμὸς ἀήρ· διὸ ὑγρὸν τὴν φύσιν, ὅτι ἐξ ὕδατος. Κτησίας γὰρ ὁ Κνίδιος ἃ περὶ τοῦ σπέρματος τῶν ἐλεφάντων εἴρηκε, φανερός ἐστιν ἐψευσμένος. φησὶ γὰρ οὕτω σκληρύνεσθαι ξηραινόμενον, ὥστε γίνεσθαι ἠλέκτρῳ ὅμοιον· τοῦτο δ᾽ οὐ γίνεται. μᾶλλον γὰρ ἕτερον ἑτέρου σπέρμα γεωδέστερον ἀναγκαῖον εἶναι, καὶ μάλιστα τοιοῦτον, ὅσοις πολὺ γεῶδες ὑπάρχει κατὰ τὸν ὄγκον τὸν τοῦ σώματος. παχὺ δὲ καὶ λευκόν, διὰ τὸ μεμῖχθαι πνεῦμα. καὶ γὰρ λευκόν ἐστι τὸ σπέρμα πάντων. * Ἡρόδοτος γὰρ οὐκ ἀληθῆ λέγει, φάσκων μέλαιναν εἶναι τὴν τῶν Αἰθιόπων γονήν· * ὥσπερ ἀναγκαῖον τῶν τὴν χρόαν μελάνων, εἶναι πάντα μέλανα· καὶ ταῦθ᾽ ὁρῶν καὶ τοὺς ὀδόντας αὐτῶν ὄντας λευκούς. αἴτιον δὲ τῆς λευκότητος τοῦ σπέρματος, ὅτι ἐστὶν ἡ γονὴ ἀφρός· ὁ δ᾽ ἀφρός, λευκόν, καὶ μάλιστα τὸ ἐξ ὀλιγίστων συγκείμενον μορίων, καὶ οὕτω μικρῶν, ὥσπερ ἑκάστης ἀοράτου τῆς πομφόλυγος οὔσης, ὥσπερ συμβαίνει καὶ ἐπὶ τοῦ ὕδατος καὶ τοῦ ἐλαίου μιγνυμένων καὶ τριβομένων, καθάπερ ἐλέχθη πρότερον. ἔοικε δὲ οὐδὲ τοὺς ἀρχαίους λανθάνειν, ἀφρώδης ἡ τοῦ σπέρματος οὖσα φύσις. τὴν γοῦν κυρίαν θεὸν τῆς μίξεως, ἀπὸ τῆς δυνάμεως ταύτης προσηγόρευσαν. ἡ μὲν οὖν αἰτία τῆς λεχθείσης ἀπορίας εἴρηται. φανερὸν δὲ ὅτι διὰ τοῦτ᾽ οὐ πήγνυται. ὁ γὰρ ἀὴρ ἄπηκτος.

Ποῦ τρέπεται τὸ σωματῶδες τοῦ σπέρματος, εἴπερ ἐργάζεται τῇ δυνάμει τῇ ἐνούσῃ αὐτῷ· καὶ πότερον ἐνυπάρχει τῷ σπέρματι ψυχὴ καὶ τῷ κυήματι, ἢ οὔ.

Τούτων δ᾽ ἐχόμενόν ἐστι καὶ ἀπορῆσαι καὶ εἰπεῖν, εἰ τῶν προϊεμένων εἰς τὸ θῆλυ γονὴν μηδὲν μόριόν ἐστι τὸ εἰσελθὸν τοῦ γινομένου κυήματος, ποῦ τρέπεται τὸ σωματῶδες αὐτοῦ, εἴπερ ἐργάζεται τῇ δυνάμει τῇ ἐνούσῃ αὐτῷ. διοριστέον

A craſſeſcit enim miſtum cum ſpiritu. Quamobrem craſſius redditur quod albeſcit, cùm humor in eo contentus diſcernatur à calore, efficiaturque ſpiritus. Galena etiam aquæ mixta aut oleo, amplum ex paruo erigit ſtatum, & ſpiſſum ex liquido; & album ex nigro. Cauſa eſt, quòd ſpiritus intermiſcetur, qui faſtum efficit, & albedinem dilucidè aperit, vt in ſpuma, & niue: nam & nix ſpuma eſt. Aqua etiam ipſa permiſta cum oleo, craſſa albaque redditur. Per concuſſum enim attritúmque includitur ſpiritus. Et ipſum oleum quoque multum ſpiritus continet. Pingue enim nec terræ eſt, neque aquæ, ſed ſpiritus. Ex quo fit vt per ſummam aquæ fluitet: aër enim contentus in eo, B velut in vaſe, effert, per ſummáque ſuſtinet, & cauſam leuitatis præbet. Quinetiam frigore & gelu craſſeſcit oleum, non congelaſcit. Calor enim facit ne gelu cogatur. Aër nanque calidus & incongelabilis eſt. Sed quoniam à frigore is quoque conſiſtit, & denſatur, hinc oleum craſſius redditur. His de cauſis ſemen quoque exit intrinſecus ſpiſſum, & album calore interiore, multum ſpiritus calidi continens: ſed egreſſum, vbi calor euanuit, & aër refrigeratur, humidum nigrumque euadit. Remanet enim aqua, & ſi quid paruum terrenæ portionis continetur, vt in pituita, ſic in ſemine cùm ſicceſcit. C Semen igitur commune eſt ſpiritus & aquæ: ſpiritus autem aër calidus eſt. Quamobrem natura humidum eſt, quoniam ex aqua conſtat. Cteſias Cnidius planè mentitur ea quæ de ſemine elephanti ſcribit. Ait enim vſque adeo durari ſicceſcens, vt electro, id eſt ſuccino, ſimile efficiatur: quod nunquam fit. Magis enim alterum altero ſemen eſſe terrenum neceſſe eſt. Et præcipuè tale eorum eſt, quorum in corpore multum materiæ terrenæ habetur. Craſſum autem albúmque eſt, ſpiritus miſtione. Semen enim omnium album eſt. Herodotus vera non ſcribit, cùm nigram eſſe Æthiopum genituram dicat, quaſi neceſſe D ſit, omnia nigra eſſe eorum quibus nigra eſt cutis. Atqui dentes eorum albos eſſe ſecernere potuit. Cauſa vt album ſit ſemen, quòd genitura ſpuma eſt, ſpuma autem alba eſt, & maximè, quæ ex pauciſſimis partibus conſtet, & tam paruis, vt cerni ampullę nequeant. Quod in oleo quoque, & aqua euenit, cùm miſcentur, & concutiuntur, vt antè diximus. Nec verò homines antiquos latuiſſe videtur, naturam ſeminis eſſe ſpumoſam. Deam enim, quæ rei Venereæ præeſt, ab ea ipſa facultate nominarunt. Cauſa propoſitæ quæſtionis explicata iam eſt. Congelaſcere autem ſemen non poſſe ob eam rem, apertum iam eſt; aër enim incongela- E bilis eſt.

CAPVT III.

Vtrùm in his animantibus, quæ ſemen in fœminam mittunt, inſit aliqua conſtituendi conceptus pars.

SEquitur, vt & dubitemus, & dicamus, ſi in iis quæ ſemen emittunt in fœminam, nulla pars conſtituendi conceptus ſit, quod ſubierit, quonam vertatur corpulentia eius, quando ipſum facultate, quam in ſe continet, agit. Definiendum

igitur priùs eſt, vtrùm quod in fœmina conſtituitur, accipiat aliquid ab eo quod ſubierit, an nihil accipiat. Atque etiam de anima, qua animal dicitur, (eſt autem animal parte animæ ſenſuali) vtrùm in ſemine & conceptu ineſt, an non, & vnde. Conceptum enim inanimatum eſſe nemo ſtatuerit, & vita omnibus modis priuatum: quippe cùm nihilo minùs ſemina & conceptus animalium viuant, quàm ſtirpes, & aliquandiu prolifica ſunt. Ergo animam in iis habere vegetalem palàm eſt. Sed quamobrem eam primum haberi neceſſe ſit, ex iis quæ alibi de anima diſſeruimus, apertum eſt. Senſualem etiam, qua animal eſt, tempore procedente recipi, & rationalem, qua homo, certum eſt. Non enim ſimul & animal fit & homo: nec animal & equus. Eademque in cæteris animalibus ratio eſt: finis enim poſtea contingit. Proprium autem eſt, finis cuiuſque generationis. Quamobrem de mente etiam, quonam tempore, & quomodo, & vnde eam recipiant, quæ principium id participant, plurimùm dubitatur. Sed enitendum pro viribus, & quoad fieri poteſt, accepiſſe operæpretium eſt. Animam igitur vegetalem in ſeminibus, conceptibus, ſcilicet nondum ſeparatis, haberi potentia ſtatuẽdum eſt non actu, priùs, quàm eo modo, quo conceptus, qui iam ſeparatur, cibum trahant, & officio eius animæ fungantur. Principio enim hæc omnia vitam ſtirpis viuere videntur. De anima quoque ſenſuali pari modo dicendum eſt, atque etiam de intellectuali. Omnes enim potentia priùs haberi quàm actu neceſſe eſt. Sed aut omnes contingere, cùm antè non fuerint, neceſſe eſt, aut omnes, cùm antè fuerint, aut partim, cùm antè non fuerint, partim cùm antè fuerint: & contingere aut in materia non ſubeuntes ſemen maris, aut eò quidem inde venientes, ſed in mare aut omnes extrinſecus contingere, aut nullam, aut partim extrinſecus, partim non extrinſecus. Cæterùm omnes antè eſſe, impoſſibile rationibus his eſſe oſtenditur. Quorum enim principiorum actio eſt corporalis, hæc ſine corpore ineſſe non poſſe certum eſt. Verbi gratia, ambulare ſine pedibus. Itaque extrinſecus ea venire impoſſibile eſt. Nec enim ipſa per ſe accedere poſſunt, cùm inſeparabilia ſint, neque cum corpore. Semen enim excrementum alimenti mutati eſt. Reſtat igitur vt mens ſola extrinſecus accedat, eáque ſola diuina ſit. Nihil enim cum eius actione communicat actio corporalis. Sed enim omnis animæ ſiue virtus, ſiue potentia, corpus aliud, participare videtur, idque magis diuinum quàm ea quæ elementa appellantur. Verùm prout nobilitate ignobilitatevé animæ inter ſe differunt, ita & natura eius corporis differt. Ineſt enim in ſemine omnium, quod facit, vt fœcunda ſint ſemina, videlicet quod calor vocatur. Idque non ignis, non talis facultas aliqua eſt, ſed ſpiritus, qui in ſemine, ſpumoſóque corpore continetur, & natura quæ in eo ſpiritu eſt proportione reſpondens elemento ſtellarum. Quamobrem ignis nullum animal generat, neque conſtitui quicquam denſis vel humidis vel ſiccis videtur. At verò Solis calor, & animalium, non modò qui ſemine continetur, verumetiam ſi quid excrementi quanquam diuerſum à natura, tamen id quoque principium habet vitale. Cæterùm calorem in animalibus contentum,

οὔτε πῦρ, οὔτε ἀπὸ πυρὸς ἔχει τὴν ἀρχήν, ἐκ τῶν τούτων ἐστὶ φανερόν. Τὸ δὲ τῆς γονῆς σῶμα, ἐν ᾧ συναπέρχεται τὸ σπέρμα τὸ τῆς ψυχικῆς ἀρχῆς, τὸ μὲν χωριστὸν ὂν σώματος, ὅσοις ἐμπεριλαμβάνεται τὸ θεῖον, τοιοῦτος δ' ἐστὶν ὁ καλούμενος νοῦς, τὸ δ' ἀχώριστον, τοῦτο σπέρμα τῆς γονῆς διαλύεται καὶ πνευματοῦται, φύσιν ἔχον ὑγρὰν καὶ ὑδατώδη. Διόπερ οὐ δεῖ ζητεῖν ἀεὶ θύραζε αὐτὸ ἐξιέναι, οὐδὲ μόριον οὐδὲν εἶναι τῆς συστάσης μορφῆς, ὥσπερ οὐδὲ τὸν ὀπὸν τὸν τὸ γάλα συνιστάντα. καὶ γὰρ οὗτος μεταβάλλει, καὶ μόριον οὐδέν ἐστι τῶν συνισταμένων ὄγκων. Περὶ μὲν οὖν ψυχῆς πῶς ἔχει τὰ κυήματα καὶ ἡ γονή, καὶ πῶς οὐκ ἔχει, διώρισται. δυνάμει μὲν γὰρ ἔχει, ἐνεργείᾳ δ' οὐκ ἔχει. ΚΕΦΑΛ. δ'.

Ὅτι τῶν ζῴων κατὰ τὴν γένεσιν πολλαχῶς διαφερόντων, ἄρξεται ἐντεῦθεν περὶ ἑκάστων ἴδια λέγειν, καὶ πρῶτον περὶ τῶν ζῳοτικῶν περὶ τῆς τοῦ σπέρματος φύσεώς τε καὶ κινήσεως· καὶ περὶ καταμηνίων τῶν τε κατὰ φύσιν, καὶ τῶν λοιπῶν περὶ τῶν γινομένων ἐκ ζῴων μὴ ὁμογενῶν.

Τῶν δὲ ζῴων τὰ μὲν ἀτελέστερα ἔχοντα τὴν φύσιν, ὅταν γένηται κύημα τέλειον, ζῷον δὲ μήπω τέλειον, θύραζε προΐεται. δι' ἃς δ' αἰτίας, εἴρηται πρότερον. τέλειον δὲ ἤδη τότ' ἐστίν, ὅταν τὸ μὲν, ἄρρεν ᾖ, τὸ δέ, θῆλυ τῶν κυημάτων, ἐν ὅσοις ἐστὶν αὕτη ἡ διαφορὰ τῶν γινομένων. ἔνια γὰρ οὔτε θῆλυ γεννᾷ, οὔτε ἄρρεν, ὅσα μηδ' αὐτὰ γίνεται ἐκ θήλεος καὶ ἄρρενος, μηδ' ἐκ ζῴων μιγνυμένων. καὶ περὶ μὲν τῆς τούτων γενέσεως ὕστερον ἐροῦμεν. τὰ δὲ ζῳοτοκοῦντα ἐν αὑτοῖς τὰ τέλεια τῶν ζῴων, μέχρι περ οὗ γεννήσῃ ζῷον, καὶ θύραζε ἐκπέμψῃ, ἔχει συμφυὲς αὑτῷ τὸ γιγνόμενον ζῷον. ὅσα δὲ θύραζε μὲν ζῳοτοκεῖ, ἐν αὑτοῖς δ' ᾠοτοκεῖ τὸ πρῶτον, ὅταν γεννήσῃ τὸ ᾠὸν τέλειον, τούτων ἐνίων μὲν ἀπολύεται τὸ ᾠόν,

nec ignem eſſe, neque ab igne originem ducere, apertum ex his eſt. Corpus autem genituræ, in quo ſemen animalis principij contentum vnà prouenit, partim ſeparabile à corpore, in quibus diuina pars comprehenditur, qualis eſt, quæ mens appellatur: partim inſeparabile: hoc, inquam, genituræ ſemen diſſoluitur, verſúmque in ſpiritum euaneſcit, cùm naturam humidam aquoſamque habeat. Quamobrem an ſemper id foras exeat, quærendum non eſt, neque an pars vlla ſit formæ conſtitutæ: quomodo nec de ſucco, à quo lac cogitur, quæri tale quid conuenit. Nam is quoque mutat, & nulla pars conſtitutæ magnitudinis eſt. De anima quemadmodum conceptus & genitura habent eam, & quemadmodum non habeant, definitum iam eſt: potentia enim habent, actu non habent. Semen autem, cùm excrementum ſit, eodémque moueatur motu, quo augetur corpus digeſtione vltimi alimenti, vbi vterum ſubiit, conſtituit, & mouet excrementum fœminæ eodem motu, quo ipſum mouetur. Nam illud quoque excrementum eſt, habétque omnes partes potentia, actu nullam. Habet enim eas partes potentia, quibus differt fœmina à mare. Nam vt ex læſis interdum læſa, interdum non læſa gignuntur: ſic ex fœmina partim fœmina, aliàs non fœmina, ſed mas generatur. fœmina enim quaſi mas læſus eſt. Et menſtrua ſemen ſunt, quanquam non purum. Vnum enim illud non habent, originem & principium animæ. Quamobrem quibus animalibus oua ſubuentitia gignuntur, partes quidem vtrorumque obtinet ouum inſtitutum: ſed principio caret, quapropter animatũ non eſt. Id enim à maris ſemine affertur, quod principium, vbi fœminæ excrementum receperit, conceptus fit. Humidis verò corpulentiis cùm incaleſcunt, obducitur, vt in pulte refrigerata cruſtula. Corpora autem omnia cohærent, & continentur lentore, quem in dies iamque adauctis corporibus natura accipit nerui, quæ partes animalium continet. In aliis neruo, in aliis eo quod neruo proportionetur. Cutis etiam formæ eiuſdem eſt, & vena, & membrana, & omne eiuſmodi genus. Differunt hæc enim inter ſe maioris minoriſque ratione, & omnino exceſſu defectúve.

CAPVT IV.

Quænam ſint generationis cauſæ, & quemadmodum partes quæque conſtituantur in animalibus.

Animalia verò, quorum natura imperfectior eſt, conceptum, cùm perfectus iam eſt, ſed nondum animal perfectum, foras mittunt. Quod quas ob cauſas ita fiat, antè diximus. Perfectum autem eſt animal, cùm conceptus iam aut mas, aut fœmina eſt, ſcilicet in quibus ſexus hæc differentia habetur. Sunt enim quæ nec marem neque fœminam generent, videlicet quæ & ipſa non ex fœmina maréque, & coitu animalium, procreantur. Sed de eorum generatione poſtea dicemus. Quæ autem animal intra ſe generant, ſcilicet naturę perfectæ animalia, quouſque animal pariant, foráſque emittant, gerunt intra ſe innexum, quod gignitur. At verò quæ foras animal pariunt, cùm intra ſe priùs ouum genuerint, eorum nonnullis ouum iã perfectum abſoluitur,

vteorum quæ foras pariunt, ouum. Atque ita animal ex ouo intra fœminam naſcitur. Aliis cùm alimentum in ouo contentum abſumptum iam eſt, repletur ab vtero, & perficitur: atque ob eam rem ouum vtero non abiungitur. Hæc cartilagineorum piſcium differentia eſt, de quibus pòſt ſeorſum per ſe differemus. Nunc à primis incipiendum eſt. Prima autem ſunt, quæ perfecta. Eiuſmodi autem ſunt, quæ animal generant, eorúmque primum homo eſt. Deceſſio igitur ſeminis omnium non aliter quàm cæterorum excrementorum fieri ſolet. Fertur enim vnumquodque ſuum in locum, non vim ſpiritu inferente, non alia eiuſmodi cauſa cogente, vt quidam à teſtibus trahi modo cucurbitarum medicinalium per vim ſpiritus opinantur, quaſi fieri poſſit, vt niſi vis inferatur, aliò tendat excrementum alimenti, aut humidi, aut ſicci, quoniam retento ſpiritu ita vniuerſo excernatur. At id commune omnium eſt, quæ mouere volumus: vires enim retento ſpiritu augentur. Nam & ſine ea vi excrementa per ſomnum exeunt, ſi meatus laxi pleníque excrementi ſunt. Simile ab iis ducitur, vt ſi quis plantarum ſemina dixerit quotannis à ſpiritu ſecerni eò vbi fructum afferre ſolent. Sed enim cauſa eius rei, vt diximus, eſt, quòd excrementis partes capaces deſcriptæ à natura habentur omnibus, tum inutilibus illis ſicco & humido, tum ſanguini, quæ venæ vocantur. Fœminæ itaque, venis duabus, maiore atque aorta, fiſſis ſupernè, venarum multitudo tenuium in vterum deſinit, quibus alimento expletis, naturáque pre ſua frigiditate facultatis concoquendi indiga, transfunditur in vterum, propter venarum tenuitatem, cùm præ ſua anguſtia nequeant exuperantiam continere. Itaque affectus hic velvti mariſcæ, aut alia profuſio ſanguinis euenit. Cæterùm menſtrua nullo circuitu certo deſcribuntur. Tendunt tamen moueri decreſcente menſe, idque ratione rectà. Sunt enim corpora animalium frigidiora, cùm euenit vt continens aër talis efficiatur. Menſium autem coitus frigidi ſunt propter Lunæ defectum. Itaque fit vt fines menſium, quàm media, ſint frigidiores. Igitur poſtquam excrementum mutatum in ſanguinem eſt, menſtrua moueri tendunt eo, quem modò dixi, circuitu. At ſi concoctum non eſt, paulatim aliquid ſubinde ſecernitur. Quamobrem quæ alba vocantur, paruis adhuc & puellis proueniunt. Seruat corpora integra vterque excrementorum hic ſeceſſus, cùm modicè fit, vtpote cùm ab excrementis vindicentur, quæ cauſæ corporibus ſunt vt ægrotent. Sed ſi vel non fit, vel immodicè fit, damnum euenit. Aut enim morbi oriuntur, aut corpus emarceſcit, & extenuatur. Quamobrem & ea alba, cùm frequenter mouentur, & ſuperant, incrementum auferunt puellarum. Fit igitur neceſſariò excrementum hoc ob eas, quas diximus, cauſas. Cùm enim natura concoquere nequeat, excrementum fiat neceſſe eſt, non ſolùm alimenti inutilis, ſed etiam in venis, & per tenuiſſimas venas exundando ſuperet. Sed melioris notæ finiſque gratia natura eo abvtitur in hunc locum, ſcilicet generationis cauſa, vt quale erat futurum, tale alterum oriatur.

A Iam enim tale potẽtia eſt, quale eſt corpus, cuius ſecretio eſt. Fœminis igitur omnibus excrementum fiat, neceſſe eſt. Sed ſanguineis amplius, earúmque homini plurimum, verùm cæteris quoque aliquid colligi in vuluarium locum neceſſe eſt. Cauſam quamobrem ſanguineis amplius, earúmque homini plurimum, antè expoſuit. Sed cur in fœminis omnibus excrementum tale ineſt, in maribus non omnibus ineſt? Quædam enim non emittunt genituram, ſed vt quæ emittunt, motu ſuæ genituræ careant, quod inſtituitur ex materia contenta in fœmina: ſic ea motu ſuo interno in ea parte contento, vnde ſemen ſecernitur, idem faciunt, & conſtituunt. Pars ea B locus ſepti transuerſi eſt in omnibus id habentibus. Principium enim naturæ cor proportionaléve eſt. Cauſa, inquam, cur omnibus maribus non ſit excrementum genitale, cùm omnibus fœminis ſit, quòd animal corpus eſt animatũ, ad quod inſtituendum fœmina ſemper materiam præbet, mas vim creandi. Hanc eorum vtrique facultatem tribuimus: idque eſt, quo alterum mas, alterum fœmina ſit. Itaque corpus & magnitudinem præberi à fœmina neceſſe eſt: à mare nihil tale neceſſariò deſideratur. Nec enim inſtrumenta in iis quæ efficiuntur, ineſſe: neque ipſum efficiens neceſſe eſt. Corpus igitur ex fœmina eſt, anima ex mare. Subſtantia enim cor-C poris alicuius anima eſt. Et ideo quæ non vnigena coeunt, (quod ea faciunt, quorum tempus par, & vteri geſtatio proxima, & corporis magnitudo non multò diſcrepans) hæc primos partus ſimiles ſibi edunt communi generis vtriuſque ſpecie: quales ex vulpe, & cane generantur, aut ex perdice, & gallinaceo, ſed tempore procedente diuerſi ex diuerſis prouenientes, demum forma fœminæ inſtituti euadunt, quomodo ſemina peregrina ad poſtremum pro terræ natura redduntur. Hæc enim materiam corpúſque ſeminibus præſtat. Quamobrem pars fœminarum ea, quæ ſemen recipit, non meatus traiectúſque quidam eſt, ſed vterus amplior. Mares, qui ſe-D men emittunt, meatus ad id emittendum habent exangues. Excrementum autem quoduis ſimul & ſuo in loco eſt, & excrementum efficitur: nec priùs vllum, niſi vis magna cogit, & contra naturam diuertitur. Sed quam ob cauſam excrementa animalium genitalia ſecernuntur, declaratum iam eſt. Cùm autem ſemen de mare acceſſit in fœminæ vterum, partem puriſſimam excrementi conſtituit. Plurimum enim in menſtruis quoque humoris inutilis continetur, vt in maris genitura, quod humidiſſimum eſt, tum eadem emiſſione, tum in diuerſis. Prior enim emiſſio minùs fœcunda quàm poſterior, eſt: minus enim caloris animalis continet, propter cruditaE tem. At verò quod concoctum eſt, craſſum & corpulentius eſt. Quibus autem vel mulieribus vel cæterorum animalium fœminis nihil foras emittitur, quoniam non multum excrementi inutilis continetur, iis tantundem, quod colligitur, in vtero eſt, quantum iis quæ foras emittunt, remanet, quod maris facultas conſtituit, aut in ſemine decedente contenta, aut marem ſubeunte particula fœminæ, quæ proportione reſpondeat vuluis: vt in quibuſdam inſectis fieri cernitur. Humorem autẽ, qui à fœminis cum voluptate emittitur, nihil ad conceptum conferre dictum eſt antè.

Sed

Sed potiſſimùm inde videri poteſt, quòd vt maribus, ſic & fœminis accidat noctu per quietem, quod pollutionem appellant. Verùm hoc nullum indicium eſt. Nam & adoleſcentibus idem euenit, qui etſi emiſſuri aliquando ſunt, tamen nondum emittunt, & iis qui vel emittunt, vel emiſſuri ſunt, infœcundum. Res ita ſe habet, vt ſine maris emiſſione concipi impoſſibile ſit, atque etiam ſine menſtruorum excremento, quod aut redundans effluat foras, aut intus ſatis ſit. At ſine ea voluptate quæ fœminis per coitum euenire ſolet, concipitur, ſi locus turget, & vulua deſcendit propiùs. Verumtamen magna ex parte ſic accidit, vt cum profuſione fœminæ agatur, quoniam os vteri ſe comprimat, cùm profunditur. In qua quidem profuſione voluptas & mari & fœminæ contingere ſolet. Semen etiam maris meliùs ita dirigitur, & iuuatur. Profuſio autem non intus fit, vt quidam volunt. Os enim vteri anguſtum eſt: ſed antè, quò fœmina mittit vaporem illum nonnullarum recrementum: eòdem enim mas etiam mittit, quod fuderit: & aut ibidem manet ſemen emiſſum, aut intro ab vtero trahitur, ſi calidus eſt, & modicè temperatus. Cuius rei indicium quòd locus, qui modò madebat, reſiccatus mox ſentiatur. Animalibus etiam, quorum præcordiis vulua iungitur, vt auibus & piſcibus, qui animal pariunt, ſemen illuc trahatur, ſed profuſum deueniat ipſum, impoſſibile eſt. Trahit genituram hic locus ſuo calore. Menſtruorum etiam deceſſio & confluuium fomitem in ea parte caloris parat. Itaque vt vaſa non illita, calido diluta humore aquam in ſe trahunt ore inuerſo, ita attrahitur. Nec audiendi ſunt qui partibus accommodatis ad coitum officialibus id fieri opinantur: nullo enim pacto ſic fieri poteſt. Contrà etiam euenit iis qui ſemen à muliere quoque emitti aiunt. *Accidit enim vt poſtquam foras emiſerunt, retrahant intro.* Siquidem quod emiſſum eſt, miſceri debet cum maris genitura, quod ita fieri ſuperuacaneum eſt. At verò natura nullam rem ſuperuacaneam facit. Cùm autem excrementum fœminæ in vtero conſtiterit à maris genitura, quæ ſimile facit, vt lactis coagulum (coagulum enim, lac eſt continens calorem vitalem, qui partes ſimiles ducit eòdem, & vnit, atque conſtituit. Et genitura ita ſe habet ad menſtruorum naturam: eadem enim natura lactis, & menſtruorum eſt) itaque coactis iam partibus corpulentus humor excernitur, obducunturque circum parte reſicceſcente terrena membrana, tum neceſſariò tum etiam alicuius gratia. Nam & caleſcentis frigeſcentiſve rei extrema ſicceſcere neceſſe eſt, & animal nō in humido ſed ſeorſum cōtineri oportet. Vocantur ea, quibus obuolutus eſt fœtus, partim membranæ, alia ſecundæ, quæ maioris minoriſve ratione differunt. Hæc pari modo in omnibus tam ouiparis quàm viuiparis habentur. Sed enim cùm conceptus inſtitutus eſt, facit ſimile iis quæ ſeruntur. Principium enim primum ſemina quoque intra ſe continent: quod potentia primo contentum, vbi ſecretum mox eſt, germen mittit, & radicem, qua alimentum aſſumitur: incrementum enim deſideratur.

A Sic in conceptu quodam modo cùm partes corporis omnes potentia inſint, principium primum in promptu habetur. Quamobrem cor primum actu ſecernitur, quod non modò ſenſu conſtat, verùm etiam ratione. Cùm enim quod gignitur de ambobus abiunctum iam eſt, ſe ipſum gerere, gubernare, & diſpenſare debet per ſe, quaſi filius à patre emancipatus, ſeorſumque collocatus. Itaque principium haberi oportet, à quo etiam pòſt ordo membrorum deſcribatur, & quæcunque ad abſoluendum animal pertinent, diſponantur. Nam ſi extrinſecus aliquando aderit, & poſt ineſſe incipiet, non ſolùm dubitaueris, & quonam tempore accedat, quæſieris, ſed etiam cùm pars quæuis diſtinguitur, id primum ſubſtare neceſſe eſt, ex quo & incrementum, & motus B cæteris partibus contingat. Quamobrem qui ita, vt Democritus, aiunt, exteriora primùm animalis diſcerni, tum interiora, quaſi lapideum aut ligneum animal condant, non rectè dicunt. Res enim talis nullum principium habet. At animalia omnia habent, atque intra ſe continent. Quapropter cor primum diſtinctum in omnibus inſpicitur animalibus, quæ ſanguinem habent. Id enim principium eſt & ſimilarium & diſſimilarium partium. Iam enim principium id accepiſſe animalis, conſtitutique fœtus decet, cùm alimentum deſiderat. Quod enim iam animal C eſt, augetur. Alimentum autem vltimum animalis ſanguis eſt, aut quod ſanguini proportionetur, quorum vaſa & conceptacula venæ ſunt. Quamobrem venarum quoque principium cor eſt. Patet hoc ex hiſtoriis & diſſectionib. animaliū. Sed cùm potentia quidē animal ſit, ſed imperfectum, aliunde accipiat alimentum neceſſe eſt. Quamobrem vtero, & parente, vt terrâ planta, vtitur ad cibum hauriendum, donec perficiatur, & iam ſit animal potentia greſſile. Quocirca ex corde primùm venas illas duas natura deſcripſit, de quibus venulæ dependent in vterum, ex quibus, qui vmbilicus vocatur, conſtat. Vmbilicus enim vena in aliis D ſimplex, in aliis multiplex eſt: quam venam putamen cuticulare ambit, quod vmbilicus vocatur, quoniam venarum imbecillitas tutelam operimentúmque deſideret. Venæ autem quaſi radices contingunt ad vterum, per quas alimentum haurit fœtus. Eius enim rei gratia animal in vtero manet, non, vt Democritus ait, vt membra formentur ſecundùm membra parentis. Apertum hoc in ouiparis eſt. Nam illa in ouis diſtinguuntur ſeparata à vulua parentis. Sed dubitaueris, cùm primum cor oriatur ſanguine præditum, ſanguis autem ſit alimentum quod extrinſecus venit, vndenam primum alimentum ſubierit? An id verum non dicitur, alimentum omne E eſſe extrinſecus: ſed protinus vt in plantarum ſeminibus ineſt aliquid tale primum, quod lacteum vocatur: ſic in animalium materia excrementum conſtitutionis alimentum eſt. Incrementum igitur fœtui per vmbilicum contingit eodem quo plantis modo per radices. Atque etiam animalib. ipſis, vbi abſoluta iam ſunt, ex eo quod continetur, alimento idem accedit. De quibus poſt ſuo loco dicendum eſt. Diſtinctio autem partium nō, vt quidā opinantur, propterea fit, quia ſimile ſuapte natura ad ſimile feratur. Nam præter alias multas, quas ratio iſta habet, difficultates, accidet, vt quæuis pars ſimilaris ſeorſum creetur:

verbi gratia, oſſa per ſe, & neruí, & carnes, ſi quis eam cauſam approbet. Sed quoniam excrementum fœminæ potentia tale eſt, quale natura animal eſt, partéſque potentia inſunt, actu nulla ineſt, ideo pars quæque exiſtit. Quoniam etiam agens & patiens, cùm ſe inuicem tetigerunt, quendam in modum alterum agens, alterum patiens eſt, modum hunc ita intelligi volo vt conditionibus, ſic, vbi, quando, deſcribatur. Iam enim continuò alterum agit, alterum patitur. Materiam igitur fœmina præbet, principium motionis mas. Et quemadmodum quæ ab arte efficiuntur, per inſtrumenta efficiuntur, ſed veriùs dixerim per motum eorum, qui artis operatio eſt: ars autem forma eorum quæ efficiuntur eſt in alio: ſic à facultate, ſiue virtute animæ vegetalis, agitur; vtque in animalibus ipſis, & plantis, poſtea ex alimento vis eadem efficit incrementum, vtendo caliditate, & frigiditate, quaſi inſtrumentis, (motus enim in iis conſiſtit, & ratione aliqua vnumquodque efficitur) ſic etiam principio conſtituit id quod natura efficitur. Eadem enim materia eſt, ex qua agitur, & ex qua conſtituitur primum. Itaque facultas quoque agens eadem quæ principio eſt, ſed maior. Quòd ſi hæc vegetalis anima eſt, eadem quæ generet, quoque eſt, idque natura cuiuſque eſt inſita, & in plantis, & in animalibus omnibus: cæteræ animæ partes aliis inſunt, aliis deſunt animalibus. Sed cùm in plantarum genere nullo diſcerniculo ſexus mas diſtinguatur à fœmina, in animalibus, quanquam non omnibus, diſtinguitur, & mas ob eam rem deſiderat fœminam.

CAPVT V.

Qua de cauſa fœmina deſideret marem.

ATqui quæſierit quiſpiam, qua de cauſa fœmina deſideret marem, nec ex ſe ipſa generet: quandoquidem animam habet eandem, & materia excrementum fœminæ eſt. Cauſæ illud eſt, quòd animal ſenſu differat à planta. Nec fieri poteſt vt vel facies, vel manus, vel caro, vel alia pars ſit, niſi anima ſenſualis inſit, aut actu aut potẽtia: & aut aliquatenus, aut ſimpliciter. Erit enim vt mortuus, aut pars mortui. Quòd ſi mas eſt efficiens talis animæ, impoſſibile eſt vt fœmina ex ſe ipſa animal generet, vbi mas à fœmina ſeparatur. Eo .n. quod diximus, definitur, qua mas eſt ratione. Quæſtionẽ verò propoſitam ratione non carere, patet in auibus, quæ oua ſubuentanea pariunt, cùm fœmina aliquatenus poſſit generare. quod & ipſum recepit quæſtionem. Quonam modo oua eorum dicuntur viuere? nec enim ita vt oua fœcunda poſſunt. Sic enim actu animatum ex iis efficeretur. Neque ita ſe habent iſta vt lignum, aut lapis: quippe quæ corruptione aliqua pereant, vt quæ vitam quodammodo antè participarent. Conſtat igitur, hæc aliquam habere potentia animam. ſed quam? Iſtam vltimam prorſus habeant animam neceſſe eſt, quæ vegetabilis eſt. Hæc enim æquè in omnibus tam animalibus quàm plantis ineſt. Sed cur partes, & animal non efficiant? Quia ſenſualem animam habere ea oportet? non enim animalium partes ita ſunt, vt plantarum. Quamobrem maris ſocietate opus eſt: mas enim à fœmina ſeparatus in iis eſt.

& quidem ſic vſu euenit. Subuentanea enim illis fœcunda redduntur, ſi mas coiuit tempore quodam. Sed de eorum cauſa pòſt. Si quod autem genus eſt, quod fœmina ſit, & marem diſtinctum non habeat, id ex ſe ipſo animal generare poteſt. Quod etſi nondum fide digna exploratum habemus, tamen facit vt in genere piſcium dubitemus: eorum enim quos rubros ſiue rubelliones vocant mas nullus adhuc viſus eſt, ſed fœminæ omnes fœtu plenæ reperiuntur. Verùm de his nondum compertum habemus, quod fidem faciat ſatis. Quod autem nec mas, neque fœmina ſit, in genere quoque piſcium eſt, vt anguilla, & genus mugilum quoddam in fluuiis lutulentis. At verò in quibus ſexus maris & fœminæ diſtinctus habetur, fieri non poteſt vt fœmina ipſa per ſe generet perfectè: ita enim mas fruſtra eſſet: Quam ob rem in iis mas ſemper perficit generationem: hic enim ſenſualem dat animam, aut per ſe, aut per genituram. Sed cùm partes omnes potentia in materia inſint, cùm principium motionis affuit perinde vt in ſpontiniis illis miraculis, quod ſubinde ſequitur, excitatur, & quod nonnulli naturales authores exponere volunt, cùm dicant ſimile ferri ad ſimile: dicendum partes moueri, non mutãtes locum, ſed manentes, & alteraſcentes mollitie, duritie, colore, & reliquis partium ſimilarium differentiis factas iam actu, quæ ante erant potentia.

CAPVT VI.

Quæ animalium partes priùs, quæ poſteriùs generentur.

Fit autem primò principium, quod in ſanguineo genere cor eſt: in cæteris proportionale, vt ſæpius dictum eſt. Idque effici primùm non modò ſenſu percipitur, ſed etiam quòd per obitum vita hic vltimò deficit. Euenit namque in omnibus, vt quod vltimum fit, id primum deficiat: & quod primum, id vltimum, quaſi natura decurſionem reducem agat, & à calce ad carceres, vnde proruit, redeat. Eſt enim generatio ex non ente in ens: corruptio contrà, ex ente in non ens. Gignuntur poſt principium, vt dictum eſt, interiora priùs quam exteriora, ſed priùs maiora, quàm minora, viſuntur, quamuis nonnulla priùs non oriantur, primùm ſuperiora præcordiis formantur, eadémque magnitudine præſtant. Nam inferiora & minora ſunt, & minùs diſcreta, idque in omnibus, quæ parte ſuperiore inferioréque diſtinguuntur, exceptis inſectis. Quæ enim ex iis vermiculis naſcuntur, parte inferiore ampliùs creſcunt, ſuperiore iam inde à primo ortu minora ſunt. Greſſilium mollibus ſolis nullum diſcrimen eſt ſuperioris & inferioris. Quod autem de parte ſuperiore diximus, priùs, quàm inferiorem conſtitui, idem in plantarum etiam genere euenit: ſemina enim priùs mittunt radicem quàm ramos. Diſtinguuntur animalium partes ſpiritu, ſed non aut parentis, aut ſuo, vt quidam naturæ interpretes voluere. Hoc enim in genere auium, & piſcium, & inſectorum palàm fit, quæ partim ſeiuncta à parente naſcuntur ex ouo, in quo formantur, & explanantur: partim non ſpirant omnino, & tamen aut ouo, aut vermiculo enaſcuntur, alia quanquam ſpirant, & in vtero capiunt explanationem, tamen non priùs ſpirare incipiũt, quà pulmo perficiatur. Articulantur & hic,

& omnes priores partes antè quàm animal ſpiret. Item quadrupedum, quæ multifida ſunt, vt canis, leo, lupus, vulpes, lupus ceruarius, omnia cæcos generant: pòſt palpebræ dehiſcunt. Itaque conſtat in cæteris quoque omnibus, vt quantitatem, ſic qualitatem potentia antè ſubſtantem effici, actu poſt ab eiſdem cauſis, à quibus diſtinguitur quantitas, & duo ex vno effici: ſpiritum verò ineſſe, quoniam humidus & calidus eſt, cùm alterum agat, alterum patiatur. Iam antiquorum nonnulli naturæ interpretum, quæ poſt quam efficeretur pars, tentarunt quidem exponere, ſed parum vſu periti earum quæ accidunt, rerum: partium enim aliæ priores aliis ſunt: quod in cæteris etiam rebus. Prius autem multiplex iam eſt. Id enim, cuius cauſa, & quod cuius cauſa, differunt: & alterum generatione, alterum eſſentia prius eſt. Quin & quod eius cauſa duplicem recipit differentiam. Aut enim eſt vnde motus: aut quo vtatur id cuius cauſa. Verbi gratia, genitale, & inſtrumentale rei generatæ, horum enim alterum, id eſt, generans, & agens, præeſſe oportet, vt quod doceat prius, quàm quod diſcat. ſed tibias poſt eum qui tibiis diſcat: fruſtra enim adeſſunt tibiæ iis qui vti neſciant tibiis. Cùm itaque tria hæc ſint: Primum, finis, quem eſſe id dicimus, cuius cauſa: Secundum, quod eius cauſa, ſcilicet principium generans, & mouens. (Efficiens enim, & generans, qua talia ſunt, ad id pertinent, quod efficitur, & generatur.) Tertium, vtile, & quo finis vtatur. Primum eam partem habere neceſſe eſt, in qua principium motus continetur: hæc enim protinus pars finis prima & potiſſima eſt. tum poſt eam totum & finem. tertium verò & vltimum partes iis accommodatas inſtrumentales ad vſus nonnullos. Itaque ſi quid tale eſt, quod in animalibus ineſſe neceſſe ſit, quod totius naturæ principium & finem contineat, id effici primum neceſſe eſt. Quà enim mouens, primum oriri, quà pars finis eſt, cum toto oriri debet. Itaque inſtrumentalium partium, quæ ſua natura genitales ſunt, eas ſemper eſſe priores oportebit: alterius enim cauſa ſunt, tanquam principium. At verò quæ tales ex iis quæ alterius gratia conſtant, non ſunt, eas eſſe poſteriores congruit. Quamobrem vtrænam partes priores ſint, quæ alterius cauſa, an cuius cauſa ipſæ ſint, diſtingui non facilè poteſt. Incidit enim vt partes mouentes priores ſint generatione, quàm finis. Mouentes autem ab inſtrumentalibus diſtingui non facile eſt. Atqui ea ipſa via rationéque, quid poſt quod fiat, quærendum eſt. Finis enim quorundam poſterior eſt, quorundam prior. Quamobrem ea pars, quę principium continet, prima extitit: mox tota ſuperior moles. Quapropter caput & oculi fœtus maximi inter initia apparent; inferiora ab vmbilico, crura dico, exigua cernuntur. Partis enim ſuperioris gratia inferior eſt. Et neque pars finis, neque genitalis eſt eius. Neceſſitatem etiam cur ita ſit, non bene reddunt, qui quod ſemper ita fit, dicunt, idque principium in his exiſtimant, vt Democritus Abderitanus opinatur, quòd ſempiterni & infiniti principium nullum eſt. Cauſa autem cur ita, principium eſt, & infinitum, quod ſempiternum eſt. Itaque interrogare de eiuſmodi rebus cur ſit, eſt, quærere, inquit, principium infiniti. Atqui ea ipſa ratione, qua cenſeant non eſſe quærendum,

A nullius rei ſempiternæ demonſtratio eſſe poterit. Et tamen eſſe cumplurimum videtur, quarum aliæ ſemper fiunt, aliæ ſemper ſunt. Nam & triangula figura duobus rectis æquales ſemper habet, & diametrum incommenſurabilem eſſe cum coſta, ſempiternum eſt. Attamen cauſa eorum aliqua, & demonſtratio eſt. Igitur non omnium rerum principium quærendum eſſe recte dicitur: at rerum, quæ ſemper aut ſunt, aut fiunt, nullum principium eſſe quærendum non bene aſſeritur. Sed ea duntaxat principia non recipiunt examen eiuſmodi, quæ rerum ſempiternarum ſunt. Principiis enim alia cognitio, non B demonſtratio eſt. Principium verò in rebus immobilibus quiditas eſt. In rebus autem, quę fiunt, iam plura habentur principia, ſed modo diuerſo, nec omnia modo eodem, quorum principiorum vnum numero eſt, vnde motus. Quamobrem omnia quæ ſanguinem habent, animalia, cor primum poſſident, vt inter initia noſtræ diſputationis dictum eſt. In cæteris primum gignitur, quod proportionale ſit cordis. Venæ ex corde tendunt diductæ modo riuorum, qui in parietibus proficiſcentes ab eodem fonte pinguntur: partes enim coniunctæ iis ſunt, vtpote quæ ex iis coaugmententur, atque conſiſtant. Ortus ſimilarium C rigore caloréve agitur: conſiſtunt coquuntúrque alia frigido, alia calido. Quarum rerum differentias alibi expoſuimus, antè ſcilicet, quæ humore ignéque reſolubiles, quæ humore irreſolubiles, ignéque illiquabiles ſint. Per venas igitur, & meatulos quoſque alimentum reſudans, quemadmodum aqua per crudiuſculam cutem, in carnem, aut carnis proportionale conuertitur frigore conſiſtens. Ex quo fit vt caro ab igne reſoluatur. Sed quæ terrena admodum oriuntur, parum humoris caloriſque adepta, hæc dum refrigeſcunt, humore cum calore euaporante duram terrenámque formam capiunt, vt vngues, cornua, vngulæ, roſtra: quamobrem igne hæc D molliuntur. Sed humore nonnulla liqueſcunt, vt ouorum putamina. Nerui, & oſſa calore interiore conficiuntur ſicceſcente humore. Quamobrem oſſa reſolui ab igne non poſſunt: quomodo teſta indiſſolubilis eſt. Quaſi enim in fornace excocta à calore generationis ita conſtant. Hic autem calor nec ex quolibet carnem, aut os facit, neque quolibet modo, aut tempore, ſed ex materia apta, & vt aptè, & cùm aptè effici poteſt. Neque enim quod effici poteſt, efficietur à mouente, quod actu careat, neque quod actum obtinet, efficere ex quolibet poterit. Sicut nec faber arcam, niſi ex ligno facere poteſt, neque arca effici ex lignis poteſt ſine ſuo artifice. Ineſt hic calor in excremento ſeminali, tantam talémque habens motionem, & actionem, quanta modicè ad quamuis corporis partem accommodetur. Quod ſi vel deficit, vel excedit, rem, quæ fit, aut deteriorem efficit, aut læſam, & mancam, ſimiliter vt in iis agitur quæ foris igne coquuntur ad cibum, aut ad alium vſum. Sed in iis motum caloris nos moderamur, in illis natura gignentis accommodat. In iis autem quæ ſponte oriuntur, cauſa eſt, motus temporis, & calor. Frigus, priuatio caloris eſt. Vtitur his ambobus Natura vim habentibus neceſſariò, vt alterum hoc, alterum illud faciat. Sed in iis quæ alicuius gratia gignuntur,

accidit vt alterum frigefaciat, alterum calefaciat, atque ita pars quæque qualitate certa efficiatur, vt caro mollis partim neceſſariò talis exinde facta, partim alicuius gratia. Neruus ſiccus, & ductilis, os ſiccum & fragile cutis carne ſicceſcente efficitur: quomodo in polentis cruſtula, quam netuiam vocant. Nec ſolùm propter extremum generatio eius euenit, ſed etiam quòd lentitudo reſideat, cùm euaporari non poſſit: verùm in cæteris lentum id ſqualidum eſt. Itaque fit vt extrema exanguium animalium teſta cruſtáve conſtent. At in ſanguineo genere lentum hoc pinguius eſt, & quidẽ quæ natura non terrena admodũ ſunt, eorũ pingue ſub cutis operimento colligitur, quaſi cutis ex eiuſmodi lentitate conſiſtat. Pingue enim habet aliquid lẽtitatis. Sed hęc omnia, vt diximus, partim neceſſariò, partim nõ neceſſariò, ſed alicuius gratia effici aſſerendum eſt. Primùm igitur moles ſuperior per generationem diſtinguitur: inferior tempore procedente recipit incrementum in ſanguineo genere. Omnia verò lineamentis primùm deſcribuntur, deinde colores recipiunt, & mollitiem, & duritiem, quaſi pictoris officio fungatur natura, cùm condit, & creat. Pictor enim, vbi lineis primùm deſcripſerit animantem, mox vario illinit colore, ac perficit. Cùm itaque principium ſenſuum, totiúſque animalis, in corde contineatur, hoc ob eam rem primum gignitur, mox ob eius calorem frigiditas ſuprà, vbi deſinunt venæ, reſpondens cordis calori, conſtituit cerebrum. Itaque caput à corde continuo generatur, & magnitudine cæteris præſtat. Principio enim cerebrum multum & humidum eſt. Sed recipit dubitationem, quod oculis animalium euenit. Principio enim maximi viſuntur, & in pedeſtri, & in natatili, & in volatili genere: vltimi verò omnium partium perficiuntur. interim enim conſidunt. Cauſa autem eſt, quòd oculorum ſenſorium poſitum quidem eſt, vt cætera ſenſoria, apud meatum: ſed cùm ſenſorium tangendi guſtandique protinus ſit aut corpus, aut aliquid proprium corporis animalium, olfaciendi verò audiendique meatus contingant aërem externum, pleni ſpiritus natiui, ortique à corde tendant ac deſinant ad venulas cerebro adiunctas, oculus ſolus proprium corpus præ cæteris habet ſenſoriis, quod humidum & frigidum eſt: nec antè contentum eo in loco potentia, vt cæteræ partes, tum deinde actu exiſtens. Sed à cerebri humore ſecernitur pars puriſſima per meatus, qui ab oculis ipſis tendere ad membranam cerebri viſuntur. Cuius rei argumentum, quòd nec alia pars humida & frigida eſt in capite, præter cerebrum, & oculus frigidus atque humidus eſt. Itaque neceſſariò locus hic magnitudinem primum capit, pòſt conſidit. Nam & in cerebro eodem euenit modo, vt primum præhumidum, multúmque ſit, mox humore efflato concoctóque corporatur magis, ſubſidétque & cerebrum, & magnitudo oculorum. Principio igitur caput prægrande propter cerebrum, oculi grandes propter humorem in ipſis contentũ apparent.

A συμβαίνει τὸ μὲν ψύχειν αὐτῶν, τὸ δὲ θερμαίνειν, καὶ γίνεσθαι τῶν μορίων ἕκαστον τὴν μὲν σάρκα, μαλακήν, τῇ μὲν ἐξ ἀνάγκης ποιουμένων τοιαύτην, τῇ δ' ἕνεκά τινος· τὸ δὲ νεῦρον, ξηρὸν καὶ ἑλκτόν· τὸ δ' ὀστοῦν, ξηρὸν καὶ θραυστόν. τὸ δὲ δέρμα, ξηραινομένης τῆς σαρκὸς γίνεται, καθάπερ ἐπὶ τοῖς ἑψήμασιν ἡ καλουμένη γραῦς. οὐ μόνον δὲ διὰ τὸ ἔσχατον συμβαίνει αὐτοῦ ἡ γένεσις, ἀλλὰ καὶ διότι ἐπιπολάζει τὸ γλίσχρον, διὰ τὸ μὴ δύνασθαι ἐξατμίζειν. ἐν μὲν οὖν τοῖς ἄλλοις, αὐχμηρὸν τὸ γλίσχρον. διὸ ὀστρακόδερμα καὶ μαλακόστρακα, τὰ ἔσχατά ἐστι τῶν ἀναίμων ζώων. ἐν B δὲ τοῖς ἐναίμοις τὸ γλίσχρον λιπαρώτερόν ἐστι. καὶ τούτων ὅσα μὴ γεώδη τὴν φύσιν ἔχει λίαν, ἀθροίζεται τὸ πιμελῶδες ὑπὸ τὴν τοῦ δέρματος σκέπην, ὡς τοῦ δέρματος γινομένου ἐκ τῆς τοιαύτης γλισχρότητος. ἔχει γάρ τινα γλισχρότητα τὸ λιπαρόν. πάντα δὲ ταῦτα, καθάπερ εἴπομεν, λεκτέον γίνεσθαι τῇ μὲν ἐξ ἀνάγκης, τῇ δ' οὐκ ἐξ ἀνάγκης, ἀλλ' ἕνεκά τινος. πρῶτον μὲν οὖν τὸ ἄνω κύτος ἀφορίζεται κατὰ τὴν γένεσιν· τὸ δὲ κάτω, προϊόντος τοῦ χρόνου λαμβάνει τὴν αὔξησιν ἐν τοῖς ἐναίμοις. ἅπαντα δὲ ταῖς περιγραφαῖς διορίζεται πρότερον, ὕστερον δὲ C λαμβάνει τὰ χρώματα καὶ τὰς μαλακότητας καὶ τὰς σκληρότητας, ἀτεχνῶς, ὥσπερ ἂν ὑπὸ τοῦ ζωγράφου, τῆς φύσεως δημιουργούσης. καὶ γὰρ οἱ γραφεῖς ὑπογράψαντες ταῖς γραμμαῖς, οὕτως ἐναλείφουσι τοῖς χρώμασι τὸ ζῷον. διὰ μὲν οὖν τὸ τὴν ἀρχὴν ἐν τῇ καρδίᾳ τῶν αἰσθήσεων εἶναι καὶ τοῦ ζῴου παντός, αὕτη γίνεται πρῶτον. διὰ δὲ τὴν θερμότητα τὴν αὐτῆς, ᾗ τελευτῶσιν αἱ φλέβες ἄνω, τὸ ψυχρὸν συνίστησιν ἀντίστροφον τῇ θερμότητι τῇ περὶ τὴν καρδίαν, τὸν ἐγκέφαλον. διόπερ τὰ περὶ τὴν κεφαλὴν λαμβάνει συνεχῆ τὴν γένεσιν μετὰ τὴν καρδίαν, καὶ μεγέθει τῶν ἄλλων διαφέρει. πολὺς γὰρ καὶ ὑγρὸς ἐξ ἀρ- D χῆς ὁ ἐγκέφαλος. ἔχει δ' ἀπορίαν τὸ περὶ τοὺς ὀφθαλμοὺς συμβαῖνον τῶν ζῴων. μέγιστοι μὲν γὰρ ἐξ ἀρχῆς φαίνονται καὶ πεζοῖς, καὶ πλωτοῖς, καὶ πτηνοῖς· τελευταῖοι δὲ γίνονται τῶν μορίων. ἐν τῷ μεταξὺ γὰρ χρόνῳ συμπίπτουσιν. αἴτιον δ', ὅτι τὸ τῶν ὀφθαλμῶν αἰσθητήριον, ἔστι μὲν ὥσπερ καὶ τὰ ἄλλα αἰσθητήρια, ἐπὶ πόρων. ἀλλὰ τὸ μὲν τῆς ἁφῆς καὶ γεύσεως, εὐθύς ἐστιν ἢ σῶμα, ἢ τοῦ σώματός τι τῶν ζῴων· ἡ δ' ὄσφρησις καὶ ἡ ἀκοή, πόροι συνάπτοντες πρὸς τὸν ἀέρα τὸν θύραθεν, πλήρεις συμφύτου πνεύματος· συμπεραίνοντες δὲ περὶ τὰ φλεβία τὰ περὶ τὸν ἐγκέφαλον, γίνονται ἀπὸ τῆς καρδίας. ὁ δ' ὀφθαλμός, σῶ- E μα μόνον ἴδιον ἔχει τῶν αἰσθητηρίων. ἔστι δ' ὑγρὸν καὶ ψυχρόν, καὶ οὐ προϋπάρχει ἐν τῷ τόπῳ, καθάπερ καὶ τὰ ἄλλα μόρια δυνάμει, ἔπειτα δὲ ἐνεργείᾳ γινόμενα ὕστερον· ἀλλ' ἀπὸ τῆς περὶ τὸν ἐγκέφαλον ὑγρότητος ἀποκρίνεται τὸ καθαρώτατον διὰ τῶν πόρων, οἳ φαίνονται φέροντες ἀπ' αὐτῶν πρὸς τὴν μήνιγγα τὴν περὶ τὸν ἐγκέφαλον. τούτου δὲ τεκμήριον· οὔτε γὰρ ἄλλο μόριον ὑγρὸν καὶ ψυχρόν ἐστιν ἐν τῇ κεφαλῇ παρὰ τὸν ἐγκέφαλον, τό,τε ὄμμα ψυχρὸν καὶ ὑγρόν. ἐξ ἀνάγκης οὖν ὁ τόπος περιλαμβάνει μέγεθος τὸ πρῶτον, συμπίπτει δ' ὕστερον. καὶ γὰρ περὶ τὸν ἐγκέφαλον συμβαίνει τὸν αὐτὸν τρόπον τὸ πρῶτον, ὑγρὸς καὶ πολύς. ἀποπνέοντος δὲ καὶ πεττομένου, σωματοῦταί τε μᾶλλον καὶ συμπίπτει καὶ ὁ ἐγκέφαλος καὶ τὰ σώματα, καὶ τὸ μέγεθος τὸ τῶν ὀμμάτων. ἐξ ἀρχῆς δὲ διὰ μὲν τὸν ἐγκέφαλον ἡ κεφαλὴ μεγίστη· διὰ δὲ τὸ ὑγρὸν τὸ ἐν τοῖς ὄμμασιν, οἱ ὀφθαλμοὶ μεγάλοι φαίνονται.

τελευταῖοι δὲ λαμβάνουσι τέλος, διὰ τὸ καὶ τὸν ἐγκέφαλον συνίστασθαι μόλις. ὀψὲ γὰρ παύεται τῆς ψυχρότητος καὶ τῆς ὑγρότητος, ἐπὶ πάντων μὲν, μάλιστα δ᾽ ὡς ἐπὶ τῶν ἀνθρώπων. διὰ γὰρ τοῦτο καὶ τὸ βρέγμα τῶν ὀστῶν γίνεται τελευταῖον. ἤδη γὰρ γεγενημένων θύραζε τῶν ἐμβρύων, μαλακὸν ἐστὶ τοῦτο τὸ ὀστοῦν τῶν παιδῶν. αἰτία δὲ τοῦ μάλιστα ἐπὶ τῶν ἀνθρώπων τοῦτο συμβαίνειν, ὅτι τὸν ἐγκέφαλον ὑγρότατον ἔχουσι καὶ πλεῖστον τῶν ζώων. τούτου δ᾽ αἴτιον, ὅτι καὶ τὴν ἐν τῇ καρδίᾳ θερμότητα καθαρωτάτην. δηλοῖ δὲ τὴν εὐκρασίαν ἡ διάνοια. φρονιμώτατος γὰρ τῶν ζώων ἄνθρωπος. ἀκρατῆ δὲ καὶ τὰ παιδία μέχρι πόρρω τῆς κεφαλῆς ἐστι, διὰ τὸ βάρος τὸ περὶ τὸν ἐγκέφαλον. ὁμοίως δὲ καὶ τῶν μορίων ὅσα δεῖ κινεῖν. ἡ γὰρ ἀρχὴ τῆς κινήσεως, ὀψὲ κρατεῖ τῶν ἄνωθεν καὶ τελευταίων, ὅσων ἡ κίνησις μὴ συνήρτηται πρὸς αὐτὴν, ὥσπερ τῶν κώλων. τοιοῦτο δ᾽ ἐστὶ μόριον τὸ βλέφαρον. ἐπεὶ δ᾽ οὐθὲν ποιεῖ περίεργον οὐδὲ μάτην ἡ φύσις, δῆλον ὡς οὐδ᾽ ὕστερον οὐδὲ πρότερον. ἔσται γὰρ τὸ γενόμενον μάτην, ἢ περίεργον. ὥστ᾽ ἅμ᾽ ἀνάγκη τὰ βλέφαρα διαχωρίζεσθαι καὶ δύνασθαι κινεῖν. ὀψὲ μὲν [οὖν] διὰ τὸ πλῆθος τῆς περὶ τὸν ἐγκέφαλον πέψεως, τελειοῦται τὰ ὄμματα τοῖς ζώοις. τελευταῖα δὲ, διὰ τὸ σφόδρα κρατούσης τῆς κινήσεως εἶναι, τὸ κινεῖν καὶ τὰ οὕτως πόρρω τῆς ἀρχῆς, καὶ ἀπεψυγμένα τῶν μορίων. δηλοῖ δὲ τὰ βλέφαρα τοιαύτην ἔχοντα τὴν φύσιν. ἂν γὰρ καὶ ὁποσονοῦν βάρος γένηται περὶ τὴν κεφαλὴν, διὰ ὕπνον, ἢ μέθην, ἢ ἄλλο τι τῶν τοιούτων, οὐ δυνάμεθα τὰ βλέφαρα αἴρειν, οὕτω βάρος αὐτῶν ἐχόντων μικρόν. περὶ μὲν οὖν ὀφθαλμῶν εἴρηται πῶς γίνονται, καὶ διὰ τίν᾽ αἰτίαν τελευταίαν λαμβάνουσι τὴν διάρθρωσιν. τῶν δ᾽ ἄλλων γίνεται μορίων ἕκαστον ἐκ τῆς τροφῆς· τὰ μὲν τιμιώτατα καὶ μετειληφότα τῆς κυριωτάτης ἀρχῆς, ἐκ τῆς πεπεμμένης καὶ καθαρωτάτης καὶ πρώτης τροφῆς· τὰ δ᾽ ἀναγκαῖα μόρια καὶ τούτων ἕνεκεν, ἐκ τῆς χείρονος, καὶ τῶν ὑπολειμμάτων καὶ περιττωμάτων. ὥσπερ γὰρ οἰκονόμος ἀγαθὸς, καὶ ἡ φύσις οὐδὲν ἀποβάλλειν εἴωθεν, ἐξ ὧν ἐστι ποιῆσαί τι χρηστόν. ἐν δὲ ταῖς οἰκονομίαις τῆς γινομένης τροφῆς, ἡ μὲν βελτίστη, τέτακται τοῖς ἐλευθέροις· ἡ δὲ χείρων καὶ τὸ περίττωμα ταύτης, τοῖς οἰκέταις· τὰ δὲ χείριστα, καὶ τοῖς συντρεφομένοις δίδοασι ζώοις. καθάπερ οὖν ἐπὶ τὴν αὔξησιν ὁ θύραθεν ταῦτα ποιεῖ νοῦς, οὕτως ἐν τοῖς γινομένοις αὐτοῖς ἡ φύσις. ἐκ μὲν τῆς καθαρωτάτης ὕλης σάρκας, καὶ τῶν ἄλλων αἰσθητηρίων τὰ σώματα συνίστησιν· ἐκ δὲ τῶν περιττωμάτων, ὀστᾶ καὶ νεῦρα καὶ τρίχας· ἔτι δ᾽ ὄνυχας καὶ ὁπλὰς, καὶ πάντα τὰ τοιαῦτα. διὸ τελευταῖα ταῦτα λαμβάνει τὴν σύστασιν, ὅταν ἤδη γίνηται περίττωμα τῆς φύσεως. ἡ μὲν οὖν τῶν ὀστῶν φύσις, ἐν τῇ πρώτῃ συστάσει γίνεται τῶν μορίων, ἐκ τῆς σπερματικῆς περιττώσεως, καὶ τῶν ζώων αὐξανομένων, ἐκ τῆς φυσικῆς τροφῆς λαμβάνει τὴν αὔξησιν, ἐξ ἧσπερ τὰ μόρια τὰ κύρια. ταύτης μέντοι αὐτῆς τὰ ὑπολείμματα καὶ τὰ περιττωματικά. γίνεται γὰρ ἐν παντὶ τὸ πρῶτον καὶ τὸ δεύτερον καὶ τῆς τροφῆς τὸ μὲν, θρεπτικόν· τὸ δ᾽, αὐξητικόν. θρεπτικὸν μὲν, ὃ τὸ εἶναι παρέχεται, τῷ τε ὅλῳ καὶ τοῖς μορίοις· αὐξητικὸν δὲ, τὸ εἰς μέγεθος ποιοῦν τὴν ἐπίδοσιν· περὶ ὧν ὕστερον διοριστέον μᾶλλον. τὸν αὐτὸν δὲ τρόπον τοῖς ὀστοῖς καὶ τὰ νεῦρα συνίσταται, καὶ ἐκ τῶν αὐτῶν, ἐκ τῆς σπερματικῆς περιττώσεως, καὶ τῆς θρεπτικῆς

A Vltimi verò perficiuntur, quoniam cerebrũ quoque vix conſiſtat. Serò enim à frigiditate humiditateque vendicatur, in omnibus quidem, ſed præcipuè in homine; nam & ſinciput inter oſſa ultimum confirmatur. Iam enim cùm partus in lucem venit, molle hoc infantis os eſt. Cauſa vt hoc maximè hominibus accidat, quoniam cerebrum humidiſſimum, & maximum omnium animalium homines habeant. Cuius rei cauſa eſt, quòd calorem etiam cordis puriſſimum obtinet, quod temperamentum intellectus planè ſignificat. Homo enim omnium animalium prudentiſſimus eſt. Pueri etiam longo tempore nequeunt continere caput, præ pondere cerebri. Nec ſe-
B cus partes, quas mouere oportet. Principium enim mouendi ſerò ſuperioribus dominatur, & ad poſtremum iis quorum motus non iungitur cum principio, vt cruribus. Palpebra etiam talis pars eſt. Sed cùm natura nihil ſuperuacaneum, nihil fruſtrà facere ſoleat, conſtat, nec priùs neque poſteriùs, quàm vſus exigat, ab ea effici quicquam. Sic enim quod factum eſt, fruſtra aut ſuperuacaneum fuerit. Itaque palpebras ſimul & diſtingui & poſſe moueri neceſſe eſt. Serò igitur oculi animalium perficiuntur propter copiam humoris concoquendi in cerebro. Vltimi autem, quòd mouendi facultas, niſi increuerit, nequeat mouere eas partes, quæ tam remotæ à princi-
C pio, refrigerat æque ſunt. Declarant hoc idem palpebræ ſua natura. Cùm enim vel quantalibet grauitate caput tentatur, aut ex ſomno, aut temulentia, aut alia eiuſmodi cauſa, palpebras attollere non poſſumus, quanquam leui pondere aggrauentur. Sed de oculis iam dictum eſt, quemadmodum oriantur, & quam ob cauſam vltimi articulentur, & abſoluantur. Cęterarum partium vnaquæque ex alimento gignitur. Nobiliſſima quæque, & potiſſimi principij particeps ex concocto ſynceriſſimo, primóque alimento. Reliquæ neceſſariæ, ac illarum gratia inſtituendæ, ex deteriore, & reliquiis, excrementíſque. Perinde enim natura, atque pater-
D familias prudens, nihil amittere ſolet, ex quo facere aliquid commodi poſſit. Diſpenſatur autem in cura rei familiaris ita, vt cibus optimus detur liberis, deterior ſeruis, viliſſimus ſociis animalibus. Vt igitur incremento iam addito mens aduena facit hæc, ſic in ortu ipſa natura ex materia ſynceriſſima carnem cęterorum ſenſoriorum corpora cõficit, in excrementis oſſa, neruos, pilos, vngues, vngulas & reliqua generis eiuſdem cõſtituit. Quamobrem hæc vltima efficiuntur, cùm iam ſuppetit excrementum naturę. Oſſa igitur in prima partium conſtitutione gignuntur ex ſeminali excremento, cúmque animal augetur, hæc incrementum ex alimento capiunt naturali, quo
E partes principales augentur. Eius tamen ipſius alimenti ſunt, & reliquiæ, & excrementa. Fit enim in quouis primum & ſecundum. Alimentíque ratio duplex eſt, altera nutriendi, altera augendi. Nutriens eſt, quod eſſe præbeat & toti, & partibus. Augens, quod acceſſionem ad magnitudinem faciat. De quibus poſtea differendum latiùs eſt. Nerui etiam eo modo, quo oſſa, inſtituuntur, & ex eodem, videlicet ex ſeminali excremento, & nutritiuo.

A Sed vngues, pili, cornua, roſtra auium, & calcaria, & ſi quid eiuſmodi aliud eſt, ex cibo gignuntur aduentitio, & auctiuo, quem tum à fœmina tum de foris ſibi acquirunt. Quamobrem oſſa quadam tenus capiunt incrementum. omnibus enim animalibus exitus magnitudinis eſt. Itaque oſſa quoque certo augendi termino deſcribuntur. Nam ſi hæc ſemper augerentur, animalia quoque, in quibus os, aut oſſis proportionale eſt, augerentur quàdiu viuerent. Magnitudinis animalium meta, & terminus* his deſcribitur. Sed quam ob cauſam non ſemper capiant incrementum, poſtea declarandum eſt. Pili autem, & eorum cognata omnia, quamdiu inſunt, tandiu augentur: & magis cùm

B corpora aut ægrotant, aut ſeneſcunt, atque decreſcunt, quoniam plus excrementi tantiſper remanet, cùm minùs in partes præcipuas conſumatur propter ſenium, aut morbum. Nam vbi id quoque ob ætatem defecerit, pili quoque deficiunt. At oſſa contra: decreſcunt enim cum corpore, & membris. Defunctis etiam pili augentur, ſed naſci nequeunt. De dentibus dubitaueris: ſunt enim eiuſdem naturæ, cuius oſſa: gignunturque ex oſſibus, vt vngues, pili, cornua, & ſimilia ex cute. Quo fit vt ipſa colorem pariter cum cute immutent: alba enim, & nigra, & vario modo diuerſa pro colore cutis redduntur. At dentes nihil tale recipiunt. Oſſibus enim annu-

C merantur in iis animalibus, quæ oſſa habent, & dentes. Accreſcunt ſoli omnium oſſium tota vita. Quod patet in iis dentibus, qui mutuum tactum declinant. Cauſa incrementi eſt, quoad pertinet ad id, cuius gratia, vt fungi officio poſſint. Breui enim tempore attritu conſumerentur, niſi ſubinde repararentur, quando vel nunc ſeneſcentibus nonnullis edacibus dente non magno præditis admodum perteruntur: plus enim in dies adimitur quàm additur. Quamobrem bene id quoque ad rem, quæ accidit, emolita natura eſt: quippe quæ in ſenectutem vitæque exitum defectum dentiū proferat, & pro vitæ ſpatio præſcripſerit modum. Sed ſi decies millies, aut decies centum

D annis vita ſeruaretur, & prægrandes primos oriri oporteret, & ſæpius renaſci. Quamuis enim aſſiduè reciperent incrementum, tamen detriti plùs quàm accreſcerent, inutiles demum ad cibum conficiendum euaderent. Sed cuiuſnam gratia capiant incrementum, dictum iam eſt. Accidit autem vt neque eandem naturam, quam cætera oſſa, dentes habeant. Cætera enim in prima conſtitutione omnia gignuntur, neque eſt quod pòſt oriatur: at dentes pòſt enaſcuntur. Quamobrem cùm deciderint, denuò poſſunt oriri. Tangunt enim oſſa, *non continuantur. Ex eo tamen gignuntur alimento, quod in oſſa adminiſtratur. Quapropter eandem, quam oſſa, habent naturam, & tunc cùm illa iam ſuum numerum receperunt. Sed cùm cætera animalia

E dentibus, aut dentium proportionali prædita enaſcantur, niſi quid præter naturam accidit, (perfectiora enim quàm homo, generatione abſoluuntur) homo dentibus carens venit in lucem, niſi quid præter naturam interceſſerit. Sed quam ob cauſam dentes alij decidant, alij non, pòſt explicabimus. Quòd autem eiuſmodi partes excremento conſtituuntur, ea cauſa homo inobſcepto & nudiſſimo omnium animalium corpore eſt, & vngues minimos pro magnitudine habet:

ΚΕΦΑΛ. ζ΄.

Πῶς τὰ ἐν τῇ γαστρὶ ἔμβρυα αὔξησιν ἔχει.

Ἔχει δὲ τὴν αὔξησιν τὰ ζωοτοκούμενα τῶν ἐμβρύων (ὥσπερ ἐλέχθη πρότερον) διὰ τῆς τοῦ ὀμφαλοῦ προσφύσεως. ἐπεὶ γὰρ ἔνεστιν ἐν τοῖς ζώοις καὶ ἡ θρεπτικὴ δύναμις τῆς ψυχῆς, ἀφίησιν εὐθὺς οἷον ῥίζαν τὸν ὀμφαλὸν ἐπὶ τὴν ὑστέραν. ἔστι δὲ ὁ ὀμφαλὸς ἐν κελύφει φλέβες· τοῖς μὲν μείζοσι, πλείους, οἷον βοῒ καὶ τοῖς τοιούτοις· τοῖς δὲ μέσοις, δύο· μία δὲ, τοῖς ἐσχάτοις. διὰ δὲ τούτου λαμβάνει τὴν τροφὴν αἱματικήν· αἱ γὰρ ὑστέραι πέρατα φλεβῶν πολλῶν εἰσι. τὰ μὲν οὖν μὴ ἀμφόδοντα πάντα, καὶ τῶν ἀμφοδόντων ὅσων ἡ ὑστέρα μὴ μίαν φλέβα μεγάλην ἔχει διατείνουσαν, ἀλλ' ἀντὶ μιᾶς, πυκνὰς πολλὰς, ταῦτα ἐν ταῖς ὑστέραις ἔχει τὰς καλουμένας κοτυληδόνας, τὸ μὲν περιφερὲς ἐχούσας πρὸς τὴν ὑστέραν, τὸ δὲ κοῖλον, πρὸς τὸ ἔμβρυον. μεταξὺ δὲ τῆς ὑστέρας καὶ τοῦ ἐμβρύου, τὸ χόριον καὶ οἱ ὑμένες εἰσίν. αἱ δὲ κοτυληδόνες, αὐξανομένου καὶ τελειουμένου τοῦ ἐμβρύου, γίνονται ἐλάττους, καὶ τέλος ἀφανίζονται τελειωθέντος· ἐπὶ τοῦτο γὰρ παρεκτίθεται τοῖς ἐμβρύοις ἡ φύσις τὴν αἱματικὴν τῆς ὑστέρας, ὥσπερ εἰς μαστούς. καὶ διὰ τὸ ἀθροίζεσθαι καὶ κατὰ μικρὸν ἐκ πολλῶν, οἷον ἐξάνθημα καὶ φλεγμασία γίνεται τὸ σῶμα τῆς κοτυληδόνος. ἕως μὲν οὖν ἔλαττον ᾖ τὸ ἔμβρυον, οὐ δυναμένου πολλὴν λαμβάνειν τροφὴν, δῆλαί εἰσι καὶ μείζονες· αὐξηθέντος δὲ, συμπίπτουσι. τὰ δὲ πολλὰ τῶν κολοβῶν ζώων καὶ ἀμφοδόντων, οὐκ ἔχει κοτυληδόνα ἐν ταῖς ὑστέραις· ἀλλ' ὁ ὀμφαλὸς εἰς φλέβα τείνει μίαν· αὕτη δὲ τέταται διὰ τῆς ὑστέρας, ἔχουσα μέγεθος. ἐπεὶ δὲ τὰ μὲν, μονοτόκα, τὰ δὲ, πολυτόκα τῶν τοιούτων ἐστὶ ζώων, καὶ τὰ πλείω τῶν ἐμβρύων, τὸν αὐτὸν ἔχει τρόπον τῷ ἑνί. δεῖ δὲ ταῦτα θεωρεῖν ἔκ τε τῶν παραδειγμάτων τῶν ἐν ταῖς ἀνατομαῖς, καὶ τῶν ἐν ταῖς ἱστορίαις γεγραμμένων. πεφύκασι γὰρ τὰ ζῶα ἐκ τοῦ ὀμφαλοῦ, ὁ δ' ὀμφαλὸς ἐκ τῆς φλεβὸς ἐφεξῆς ἀλλήλοις, ὥσπερανεὶ παρ' ὀχετὸν τὴν φλέβα ῥέουσαν. περὶ δὲ ἕκαστον τῶν ἐμβρύων οἱ ὑμένες καὶ τὸ χόριόν ἐστιν. οἱ δὲ λέγοντες τρέφεσθαι τὰ παιδία ἐν ταῖς ὑστέραις, διὰ τοῦ σαρκίδιόν τι βδάλλειν, οὐκ ὀρθῶς λέγουσιν. ἐπί τε γὰρ τῶν ἄλλων ζώων ταὐτὸ συνέβαινε· νῦν δ' οὐ φαίνεται· θεωρῆσαι γὰρ τοῦτο ῥᾴδιον διὰ τῶν ἀνατομῶν. καὶ περὶ πάντα τὰ ἔμβρυα καὶ τὰ πτηνὰ, καὶ τὰ πλωτὰ, καὶ τὰ τῶν πεζῶν, ὁμοίως λεπτοὶ περιέχουσιν ὑμένες, χωρίζοντες ἀπὸ τῆς ὑστέρας καὶ τῶν ἐγγινομένων ὑγρῶν· ἐν οἷς οὐδ' αὐτοῖς ἔνεστι τοιοῦτον οὐδὲν, οὔτε διὰ τούτων οὐθενὸς ἐνδέχεται ποιεῖσθαι τὴν ἀπόλαυσιν. τὰ δὲ ᾠοτοκούμενα πάντα, ὅτι λαμβάνει τὴν αὔξησιν χωρισθέντα τῆς μητρὸς ἔξω, φανερόν. γίνεται δὲ ὁ συνδυασμὸς τοῖς ζώοις, κατὰ φύσιν μὲν, τοῖς ὁμογενέσιν. οὐ μὴν ἀλλὰ καὶ τοῖς μὲν ἐγγὺς τὴν φύσιν ἔχουσιν, οὐκ ἀδιαφόροις δὲ τὸ εἶδος,

A minimum namque in eo eſt excrementum terrenum. Cùm enim excrementum quodquod ſit, inconcoctum remaneat, tum quod terreum in corporibus eſt, omnium maximè eſt inconcoctum. Quemadmodum partes quæque conſtituantur, & quænam cauſa generationis, declaratum iam eſt.

CAPVT VII.

Quomodo fœtus in vtero animantium augeantur.

Augentur fœtus, qui forma animalis naſcuntur, per vmbilici annexum, vt antè diximus. B Cùm enim vis quoque nutriendi in animalibus inſit, vmbilicum ſtatim quaſi radicem agunt in vterum. Vmbilicum venæ contentæ in putamine complent. Plures in maioribus animalibus, vt boue, cæteriſque generis eiuſdem: binæ in mediocribus, ſingulæ in minimis: hoc ſanguineum hauriunt alimentum. Vterus enim exitus eſt venarum multarum. Animalia igitur non vtrinque dentata omnia, & dentatorum vtrinque, quorum vterus venam non ſingularem habet pertinentem grandem, ſed pro vna plures frequentes continet, hæc in vtero habent, quæ acetabula appellantur, in quæ vmbilicus deuenit, atque adhæret. Ten- C duntur enim venæ vmbilicares vndique laterum, fiſſæque ſparguntur vſquequaque per vterum, & qua deſinunt, hac illa acetabula exiſtunt curuamine ſuo coniuncta cum vtero: cauo autem ad fœtum conuerſa. Secundæ verò & membranæ, inter fœtum & vterum poſitæ ſunt. Acetabula fœtu accreſcente proficiſcentéque ad exitum, minora ſubinde redduntur, demúmque obliterantur, cùm perfectus iam eſt. In ea enim velvti mamma reponitur à natura fœtui alimentum ſanguineum, quod dum colligitur, & paulatim ex multis conſiſtit, quaſi puſtula & inflammatio corpus acetabulorum exiſtit. Ita- D que quamdiu fœtus ſit minor, nec multum cibi aſſumere poſſit, conſpicua maioráque ſunt: ſed aucto iam fœtu conſidunt & exoleſcunt. Minuta & vtrinque dentata animalia, magna ex parte acetabulis vteri carent. Tendit vmbilicus in iis in venam ſingularem, quæ per vterum maiuſculi fertur. Cúmque eiuſmodi animalia, alia vnum, alia plura pariant, quo modo vnum, eodem plura habentur. Sed hæc diſſectionum exemplis, & hiſtoriarum commentariis, inſpicienda explorandáque ſunt. Hærent enim & continentur animalia ex vmbilico, qui ex vena dependet per æquilibrium directum ad venam quaſi aquædu- E ctum fluentem. Fœtus membranis & ſecundis obuolutus continetur. Qui infantes ali in vtero aiunt, ſugentes carunculam quandam, non rectè dicunt: idem enim & cæteris animalibus eueniret, quod tamen nuſquam videmus. Atqui facilè per diſſectiones videtur, ſi eſſet. Omnes etiam fœtus, tum volucres tum aquatiles & pedeſtres pari modo membranæ tenues ambiunt, ſeparantes ab vtero, & humoribus admiſſis. Sed nec iis ipſis tale quicquam ineſſe videmus. Neque fieri poteſt vt per eorum aliquod alimentum hauriant. Iam quæ ouo naſcuntur, omnia incrementum foris recipere abiuncta ab vtero, apertum eſt. Itaque non rectè aiunt, qui ita dicunt, vt Democritus. Coeunt animalia generis eiuſdem ſecundùm naturam, ſed ea etiam, quorum genus diuerſum quidem, ſed natura non multùm diſtat,

A ſi modò par magnitudo ſit, & tempora æquent grauiditatis. Raro id fit, ſed tamen fieri & in canibus, & in vulpibus, & in lupis certum eſt. Canes etiam Indici ex bellua quadam ſimili, & cane generantur. Necnon in auibus ſalacioribus idem fieri viſum eſt, vt perdicibus, & gallinis. Quinetiam aduncorum accipitres ſpecie diuerſi coire putantur. Idemque in nonnullis aliis auibus euenire animaduerſum eſt. In marinis nihil adhuc exploratum habemus dignum memoratu. Qui tamen rhinobati appellantur, gigni creduntur ex ſquatina & raia. Adhæc, quod de Africa in prouerbio eſt, Semper aliquid noui Africam afferre, propterea dicitur, quòd diuerſa etiam genera coeant. B Nam ob aquæ penuriam terræ illius, vel alienigena libidine copulantur, cùm in loca pauciſſima rigua congregentur. Sed cùm cætera ſic orta, rurſus ipſa inter ſe coëant, generaréque poſſint, genus vnum mulorum ſterile eſt: quippe quod neque ſecum, neque cum aliis iunctum generet. Quæſtio igitur in vniuerſum, quam ob cauſam ſterilis, aut mas, aut fœmina ſit: ſunt enim ſteriles, & mulieres, & viri. Atque etiam in cæterorum animalium genere, vt equorum, vt ouiũ, ſunt quæ nullam faciant prolem: ſed mulorum genus totum ſterile eſt. Cauſæ verò ſterilitatis in cæteris animalibus plures ſunt. Nam & à primo ortu Naturæ locis ad coitum commodis oblæſis, C ſteriles & mulieres & viri redduntur, vt alteræ non pubeſcant, alteri non barbeſcant, ſed ſpadones quidem ſint. Aliis in proceſſu ætatis idem accidit affectus; aut propter corporis nutricationem pleniorem. Mulieribus enim pinguioribus factis, viris corpore meliùs habito excrementum ſeminale in corpus abſumitur. Itaque fit vt illis menſtrua deſint, his genitura. Aut ex morbo, viris humidum frigidúmque emittitur ſemen: mulieribus purgationes vitiantur, plenæque excrementorum morbificorum redduntur. Multis etiam tum viris tum mulieribus hoc idem accidit malum, oblæſis partibus, & locis accommodatis ad Venerem. Quæ vitia partim curabilia ſunt, D partim incurabilia. Sed maximè ſteriles tunc perſeuerant, cùm primo naturæ ortu tales conſtiterunt. Gignuntur enim & mulieres viragines, & viri fœminares: alteris, menſtrua deſunt, alteris ſemen exile, frigidúmque eſt. Quamobrem ratione fecta experimento in aqua probatur fœcunditas ſeminis. Quod enim tenue ac frigidum eſt, citò diffuſum per ſumma innatat: quod fœcundum eſt, in imum deſcendit. Calidum enim, quod concoctum eſt. Concoctum autem eſt, quod ſpiſſum craſſúmque eſt. Mulierum probatio ſuffitu, vt odores ſubeuntes vterum efferantur ad locum ſpirandi, & afficiant halitum. Atque etiam illitu, vt colores oculis E impoſiti ſaliuam perficiant oris. Nam niſi hæc ita fiant, meatus corporis, per quos excrementum decedit, confuſos, obſeptos, & obcæcatos eſſe ſignificatur. Sedes enim oculorum maximè omnium locorum capitis ſeminalis eſt. Quod patet, cùm ſola ipſa per coitum Venereum manifeſtè immutetur, & vſu immodico rei Venereæ oculi apertè langueant, & ſubſideant.

Τὸ δὲ τῶν ἡμιόνων γένος, ὅλον ἄγονόν ἐστι. περὶ δὲ τῆς αἰτίας, ὡς μὲν λέγουσιν Ἐμπεδοκλῆς καὶ Δημόκριτος, λέγων ὁ μὲν οὐ σαφῶς, Δημόκριτος δὲ γνωρίμως μᾶλλον, οὐ καλῶς εἰρήκασι. λέγουσι γὰρ ἐπὶ πάντων ὁμοίως τὴν ἀπόδειξιν τῶν παρὰ τὴν συγγένειαν συνδυαζομένων. Δημόκριτος μὲν γάρ φησι, διεφθάρθαι τοὺς πόρους τῶν ἡμιόνων ἐν ταῖς ὑστέραις, διὰ τὸ μὴ ἐκ συγγενῶν γίνεσθαι τὴν ἀρχὴν τῶν ζώων. συμβαίνει δὲ ἐφ' ἑτέρων ζώων τοῦτο μὲν ὑπάρχειν, γεννᾶν δὲ μηδὲν ἧττον. καίτοι χρῆν, εἴπερ αἴτιον τοῦτ' ἦν τῆς ἀγονίας, ἄγονα καὶ τἆλλα εἶναι τὰ μιγνύμενα τὸν τρόπον τοῦτον. Ἐμπεδοκλῆς δ' αἰτιᾶται τὸ μίγμα τὸ τῶν σπερμάτων γίνεσθαι πυκνὸν, ἐκ μαλακῆς τῆς γονῆς οὔσης ἑκατέρας. συναρμόττειν γὰρ τὰ κοῖλα τοῖς πυκνοῖς ἀλλήλων. ἐκ δὲ τῶν τοιούτων γίνεσθαι ἐκ μαλακῶν σκληρὸν, ὥσπερ τῷ καττιτέρῳ μιχθέντα τὸν χαλκὸν λέγων οὔτ' ἐπὶ τοῦ χαλκοῦ καὶ τοῦ καττιτέρου, τὴν αἰτίαν ὀρθῶς (εἴρηται δ' ἐν τοῖς προβλήμασι περὶ αὐτῶν) οὔθ' ὅλως ἐκ γνωρίμων ποιούμενος τὰς ἀρχάς. τὰ γὰρ κοῖλα καὶ τὰ στερεὰ ἁρμόττοντα [ἀλλήλοις] πῶς ποιεῖ τὴν μίξιν, οἷον οἴνου καὶ ὕδατος. τοῦτο γὰρ ὑπὲρ ἡμᾶς ἐστι τὸ λεγόμενον. πῶς δεῖ γὰρ λαβεῖν τὰ κοῖλα τοῦ οἴνου καὶ τοῦ ὕδατος, λίαν ἐστὶ παρὰ τὴν αἴσθησιν. ἔτι δ' ἐπεὶ συμβαίνει ἐξ ἵππων γίνεσθαι ἵππους, καὶ ἐξ ὄνων, ὄνους, καὶ ἐξ ἵππου καὶ ὄνου ἡμίονον, ἀμφοτέρως ἄρρενος καὶ θήλεος ὁποτερουοῦν ὄντος, διὰ τί ἐκ μὲν τούτων γίνεται πυκνὸν οὕτως, ὥστε ἄγονον εἶναι τὸ γινόμενον. ἐκ δ' ἵππου θήλεος καὶ ἄρρενος, ἢ ὄνου θήλεος καὶ ἄρρενος, οὐ γίνεται ἄγονον; καίτοι μαλακὸν καὶ τὸ τοῦ ἄρρενος ἵππου ἐστὶ, καὶ τὸ τοῦ θήλεος. μίγνυται δὲ ὁ θῆλυς ἵππος καὶ ὁ ἄρρην τῷ ὄνῳ, καὶ τῷ ἄρρενι καὶ τῷ θήλει. καὶ διὰ τοῦτο γίνονται ἄγονα ἐξ ἀμφοτέρων, ὥς φησιν, ὅτι ἐξ ἀμφοῖν ἕν τι γίνεται, μαλακῶν ὄντων τῶν σπερμάτων. ἔδει οὖν καὶ τὸ ἐξ ἵππου ἄρρενος καὶ θήλεος γινόμενον. εἰ μὲν γὰρ θάτερον ἐμίγνυτο μόνον, ἐνῆν ἂν λέγειν, ὅτι θάτερον αἴτιον τοῦ μὴ γεννᾶν ὅμοιον τῇ τοῦ ὄνου γονῇ. νῦν δ'* οἵαπερ ἐστὶν ἐκείνη μιγνυμένη, τοιαύτη καὶ τῇ τοῦ συγγενοῦς. ἔτι δ' ἡ μὲν ἀπόδειξις κατ' ἀμφοτέρων εἴρηται, ὁμοίως καὶ τοῦ θήλεος καὶ τοῦ ἄρρενος. γεννᾷ δ' ὁ ἄρρην ἑπταετὴς ὢν μόνος, ὥς φασιν. ἀλλ' ἡ θήλεια ἄγονος ὅλως, καὶ αὕτη τῷ μὴ ἐκτρέφειν εἰς τέλος. ἐπεὶ ἤδη κύημα ἔσχεν ἡμίονος. ἴσως δὲ μᾶλλον ἂν δόξειεν ἀπόδειξις εἶναι πιθανὴ τῶν εἰρημένων λογική. λέγω δὲ λογικὴν διὰ τοῦτο, ὅτι ὅσῳ καθόλου μᾶλλον, πορρωτέρω τῶν οἰκείων ἐστὶν ἀρχῶν. ἔστι δὲ τοιαύτη τις. εἰ γὰρ ἐξ ὁμοειδῶν ἄρρενος καὶ θήλεος, ὁμοειδὲς γίνεσθαι πέφυκε τοῖς γεννήσασιν ἄρρεν ἢ θῆλυ, οἷον ἐκ κυνὸς ἄρρενος καὶ θήλεος κύων ἄρρην ἢ θήλεια·

* κ. οἱ. τῇ ἐκείνῃ γεν.

Cauſa eſt, quòd natura geniturę ſimilis cerebro eſt. Aquoſa enim materia eius eſt, calórque aduẽtitius. Purgationes autem ſeminales à ſepto veniunt: principium enim naturæ hinc eſt. Itaque fit vt motus à genitali ad pectus deueniant, hinc odores per ſpirationem ſenſum efficiunt. Hominibus igitur cæteriſque generibus, vt ante retulimus, particulatim hæc læſio obuenit.

CAPVT VIII.

Contra Empedoclis & Democriti ſententiam, qui non rectè ſenſerunt, quam ob cauſam muli ſint ſteriles.

At genus mulorum totum ſterile eſt. Cuius rei cauſa non bene ab Empedocle & Democrito redditur. Obſcurè Empedocles, planiùs Democritus ſcribit: ſed neuter benè. Afferunt enim demonſtrationem æquè de omnibus, quæ præter ſuam cognationem coeant. Democritus meatus mulorum corruptos in vteris dicit, quoniam non ex cognatis principium eorum conſiſtit. Sed id cùm aliis etiam animalibus accidat, tamen nihilo minùs poſſunt generare. Atqui ſi id cauſa eſſet ſterilitatis, cætera quoque ſterilia eſſe deberent, quæ ita coëunt. Empedocles miſturam ſeminum cauſatur, quæ denſa ex molli vtraque genitura conſiſtat. Caua enim & denſa coaptari viciſſim, fieríque ex iis durum ex mollibus, vt ſi æs ſtanno miſceatur. Sed nec in ſtanno & ære cauſam rectè aſſignat (dixi de his in problematis) neque principia ex rebus vllo modo cognitis accipit. Caua enim, & ſolida coaptata viciſſim, quonam modo faciant miſtionem, aut vini & aquæ, aut alius cuiuſpiam? hoc enim ſupra hominis captum dicitur. Nam quemadmodum caua vini & aquæ debeant accipi, præter ſenſum omnino eſt. Item cùm ita ſit, vt & equi ex equis gignantur, & aſini ex aſinis, & mulus ex equo & aſino, alterutro mare, aut fœmina, cur ex his tam denſum conſiſtat, vt ſterile ſit quod prodierit? Ex equo autem fœmina & mare, aut aſino fœmina & mare ſterile non prouenia? Atqui molle & maris equi & fœminæ ſemen eſt. Coit autem equus cum aſino, tum mare tum fœmina, pro differentia ſui ſexus. Ideóque gigni ex iis ſterile ait, quia vnum ex ambobus ſeminibus mollibus conficiatur. Ergo & quod ex equo mare ac fœmina gignitur, ſterile eſſe debebit. Nam ſi alterum miſceretur ſolùm, liceret dicere alterum cauſam eſſe ſterilitatis, vt diſſimile genituræ aſini. Nunc verò quaſi illius ſemini, tali & cognati miſcetur. adhæc demonſtratio æquè de ambobus, tam mare quàm fœmina, rectè affertur. Sed intereſt, quòd mas ſeptennis duntaxat generat, vt aiunt, fœmina improlis omnino eſt: idque propterea, quia perducere ad finem, quod conceperit, nequeat. Nam concepiſſe quidem iam mulam conſtat. Sed fortaſſe veriſimilior iis demonſtratio logica illa videbitur. Logicam appello, quia quo vniuerſalior, eo remotior à propriis principiis eſt. Si ex mare ac fœmina ſpeciei eiuſdem, proles ſpeciei eiuſdem gigni ſolet, aut mas, aut fœmina, vt ex cane mare, & fœmina, canis aut mas, aut fœmina:

ex diuerſis

ex diuerſis etiam ſpeciebus diuerſum ſpecie proueniat, neceſſe eſt. Verbi gratia, ſi canis diuerſum eſt à leone, ex cane mare, & leone fœmina, diuerſum proueniet, ex leone mare & cane fœmina diuerſum. Cùm itaque mulus mas & fœmina ſine ſpeciei differentia gignantur, ex equo & aſino, quę diuerſa ſpecie ſunt, impoſſibile eſt vt aliquid ex mulis gignatur. Nec enim diuerſum ſpecie prouenire poteſt, quando ex mare ac fœmina ſpeciei eiuſdem, idem ſpecie generatur, neque idem, hoc eſt, mulus. gignitur enim mulus ex equo & aſino, quæ diuerſa ſpecie ſunt. Ex diuerſis autem ſpecie diuerſum animal gigni poſitum eſt. Sed enim hæc ratio admodum vniuerſalis inaniſque eſt. Rationes enim, quæ non ex propriis ducuntur principiis, inanes ſunt, & rerum eſſe videntur, cùm longè aberrent. Sunt profectò geometricæ rationes, quæ ex principiis geometricis afferuntur. Idémque in cæteris eſt intelligendum. Videntur tamen eiuſmodi rationes, quamuis inanes, aliquid eſſe. Nam & inane, ſiue vacuum illud, aliquid eſſe videtur, cùm tamen nihil omnino ſit. Nec verum eſt quod concluditur. Multa enim ex iis quæ non eadem ſpecie progenerantur, fœtifera prodeunt, vt antè expoſui. Hoc igitur modo, nec de cæteris rebus neque de naturalibus indagandum eſt. Sed ex iis quæ in genere, tum equorum tum aſinorum, inſunt, conſiderando potiùs acceperis cauſam. Primum enim vtrumque eorum ſingularem parit inter cognata animalia plura numero, tum fœminæ non ſemper concipere poſſunt. Et quidem equi interpoſito tempore admittuntur, quoniam ferre continuè nequeãt. Sed equa menſtruoſa non eſt: imò minimum inter quadrupedes emittere ſolet. Aſina conceptus incontinens eſt: genituram vtique iniectam emingit. Quamobrem verberibus eam ſectantes cogunt ne id faciat. Ad hęc, frigidum animal aſinus eſt: quamobrem locis frigidis gigni non poteſt, vtpote ſua natura impatiens frigoris, velvt apud Scythas, & eorum finitimos. Nec verò apud Gallos, qui ſupra Hiſpaniam colunt, genus id animalis eſt: nam ea quoque prouincia frigida eſt. Hinc admiſſarios etiam non vt equæ, ſic aſinæ, æquinoctio admouent: ſed æſtiuo ſolſtitio, vt tempore calido pulli naſcantur: eodem enim tempore parit, quo coierit. Annum vterum fert & aſina, & equa. Cùm igitur natura ſit frigidum animal, vt dictum eſt, ſemen quoque genitale eius frigidum eſſe, neceſſe eſt. Cuius rei indicium, quòd ſi equus ſuperuenerit aſinam, quam inierit aſinus, non peruertet aſini initum: ſed ſi aſinus ſuperuenerit equam, quam equus inierit, peruertet, propter ſeminis ſui frigiditatem. Cùm igitur inter ſeipſa iunguntur, ſeruatur ſemen propter alterius calorem: calidius eſt enim, quod ab equo ſecernitur. Nam aſini & materia & genitura frigida eſt, qui calidior eſt. Cùm autem miſtum vel calidum cum frigido, vel frigidum cum calido eſt, euenit vt conceptus ex iis ſeruetur, eáque viciſſim ex ſeipſis fœcunda ſint. At verò quod ex iis prodiit, non inſuper fœcundum, ſed infœcundum ad perfectam fœtificationem eſt. Omnino cùm vtrumque aptum propenſúmque ſit ad ſterilitatem, (ſunt enim in aſino tum ea quæ diximus, tum etiam, vt niſi à prima dentium mutatione generare incipiat, nuſquam pòſt generet, ſed ſterilis omnino perduret) ita in exiguo continetur generandi vis corporis aſinini, facilliméque labitur ad ſterilitatem.

A Equus etiam ſimili modo idoneus eſt ad ſterilitatem, tantóque deeſt vt ſterilis ſit, quanto, vt quod ex ipſis prodierit ſemen frigidius reddatur. Quod tunc efficitur, cùm aſini excrementum inijcitur. Aſinus quoque parum deeſt quin ſui generis initu ſterile generet. Itaque cùm acceſſerit quod præter naturam eſt, ſi antè vterque ſuum partu naturæ legitimum poterat generare, iam quod peregrinum ex iis prodiit, ſterilius, nihil deerit vt ſterile ſit, ſed neceſſariò ſterile erit. Euenit etiam vt corpora mulorum magna efficiantur, quoniam menſtruorum deceſſus ad corporis incrementum vertatur. Cúmque partus eorum annuus ſit, non modò concipiat, ſed etiam B enutriat mula opus eſt: quod fieri non poteſt ſine menſtruis. Mulis autem menſtrua deſunt: ſed quantum inutile eſt, cum excremento veſicæ abigitur. Vnde fit ne muli genitale fœminarum, ſed ipſum excrementum olfaciant. Reliquum in corporis incrementum & magnitudinem vertitur. Itaque concipere quidem aliquando mula poteſt, (quod iam factum eſt) ſed enutrire, atque in finem perducere non poteſt. Mas generare interdum poteſt, quoniam & calidioris naturæ, quàm fœmina, mas eſt, & nihil corporis per coitum confert ad generationem. Quod autem facit, ginnus eſt: quod mulus oblæſus eſt. Nam ex equo & aſino, ginni proueniunt, cùm C conceptus in vtero ægrotauit. Eſt enim ginnus idem quod metachœrum in porcis; quod enim ibi læſum deprauatúmque in vtero eſt, metachœrum vocatur, quaſi aporcellum dixeris. Idque cuilibet porco accidere poteſt. Pygmæorum etiam, id eſt, nanorum, pomilionum, & puſillorum generatio ſimilis eſt: nam eorum quoque membra & magnitudines vitiantur in vtero, & ſunt velut aporcella, & ginni. Hactenus de mulorum ſterilitate.

D ARISTOTELIS STAGIRITÆ DE ANIMALIVM GENERATIONE Liber tertius.

CAPVT I.

De generatione animantium ſanguineorum, & ouiparorum, déque ouis ſubuentaneis, & cæterorum ouorum natura: & quam ob cauſam alia vnicolora ſunt, alia bicolora.

E DE MVLORVM ſterilitate dictum iam eſt, atque etiam de iis quæ animal & foras & intra ſe pariunt. In ſanguineo autem ouiparo genere partim ſimilis generatio vt in pedeſtribus eſt, idémque de omnibus aliquid accipi poteſt: partim differentia, tum inter ipſa tum ad pedeſtria exiſtit. Oriuntur omnia coitu, mare in fœminam emittente ſemen genitale. Sed aues ouum edunt perfectum, cruſta intectum dura, niſi morbo lædatur. Atque omnia auium oua bicolora ſunt.

Piſcium cartilaginei, vt ſæpius dixi, cùm intra ſe oua pepererint, animal excludunt, ouo in alium vteri locum ex alio tranſlato. Molle hoc ouum eſt, & vnicolor. Vnus ex iis animal non parit, qui rana vocatur: cuius cauſam pòſt exponam. Cæteri piſces, qui oua pariunt, ouum vnicolor edunt, quod imperfectum eſt: quippe quod extra capiat incrementum eadem cauſa, qua & quod intus perficitur. De vteris qua inter ſe differentia diſcrepent, & quas ob cauſas ita ſit, declaratum eſt antè. Viuiparorum enim alia ſuprà, iuxta cinctum vterum continent: alia infrà iuxta genitale. Suprà cartilaginea habent: infrà, quæ animal & intra ſe, & foras generant, vt homo, equus, & reliqua generis eiuſdem. Ouiparorum etiam alia infrà, vt piſces, qui oua pariunt: alia ſuprà, vt aues. Conſiſtunt vel ſponte conceptus in auium genere, quos ſubuentaneos, & Zephyros à Fauonio quidam appellant. Qui profectò in iis fiunt auibus, quæ non volaces ſunt, aut vncæ, ſed multiparæ, quoniam excremento ipſæ abundant; vncis in alas & pennas id vertitur, corpúſque exiguum ſiccum & calidum habetur. Deceſſus autem menſtruorum, & genitura, excrementum ſunt. Cùm igitur & pennarum natura, ex ſeminis excremento gignatur, nequit Natura largè vtróque verſùs profundere. Hæc eadem cauſa eſt & vt aues vncæ, nec ſalaces ſint nec multiparæ, ſed graues volacéſque, quarum corpus grandiuſculum, vt columba & ſimiles; aut graues non volaces, quarum corpus grande, vt gallina, coitu ſuperent, & partu: grauibus enim non volacibus, vt gallinis, perdicibus, & reliquis id genus, multum eius excrementi fit: quapropter mares eorum ſalaces ſunt, & fœminæ multum materiæ ſuggerunt, & quidem pariunt ex his aliæ complura, aliæ ſæpe: complura gallina, perdix, ſtruthio *Libycus.* ſæpe autem columbarium genus, ſed non multa: quippe quod medium ſit inter aduncum genus, & graue. Volax enim, vt aduncum eſt; corpulentum, vt graue. Itaque quoniam volax eſt, excrementúmque eò tranſit, pauca parit, ſed ſæpe corporis magnitudine, & ventris calore, & facultate concoquendi maxima, atque etiam quòd cibum facilè ſibi acquirat: adunca enim difficulter id faciunt. Paruæ etiam aues ſalaces, præfœcundæque ſunt, quomodo interdum plantæ minores ſunt fertiliores. Quod enim incremento corporis deeſt, in excrementum ſeminale exundat. Quamobrem gallinæ Adrianæ multa admodum pariunt. Fit enim propter corporis exiguitatem, vt alimentum ad partionem ſumptitetur. Vulgares etiam gallinæ fœcundiores ſunt generoſis. Corpora enim alteris humidiora, alteris grandiora, & ſicciora. Animus generoſus in eiuſmodi corporibus potiùs conſiſtit. Quin & tenuitas ac imbecillitas crurium facit, vt eorum natura & ſalacior ſit, & fœcundior: quo modo & hominibus euenit. Alimentum enim quod crura ſubiret, in ſeminale excrementum transfertur. Quicquid enim inde Natura adimit, hic adiicit. Nam vncungues aues pede ſunt firmiore, & crure craſſiore, cauſa victus.

A Itaque omnibus his de cauſis, neque ſalaces ſunt, neque præfœcundæ. Tinnunculus potiſſimùm in eo genere fœcundiſſimus eſt, qui ſolus ferè aduncarum & bibit. Humor autem & natiuus & aduentitius ſeminalis cum calore indiget. Sed ne ipſe quidem multa admodum parit, verùm cùm plurimùm quatuor. Cuculus parum generat, quanquam aduncus non eſt, quia naturæ frigidæ eſt, quod ipſius pauore indicatur. Seminale autem animal calidum eſſe & humidum oportet. Pauidam eſſe hanc auem, apertum eſt, cùm ab omnibus auibus fugetur, & in alienis pariat nidis. Columbarium genus bina, magna ex parte, parere ſolet. Nec enim vniparum eſt, cùm B nulla auis pariat vnum, excepto cuculo, qui & ipſe duo interdum parit. Nec multa parit: ſed ſæpe bina aut terna cùm plurimùm, ſed bina magna ex parte. Sunt enim hi numeri inter vnum & multa. Cibum in ſemen conuerti in iis quæ abundè fœtificant, pluribus declaratur euentis. Arborum enim multæ cùm admodum copioſè tulerint, exareſcunt fructificatione, niſi corpori alimentum remanſerit. Annuis etiam idem euenit, vt leguminibus, vt frumentis, & reliquis huiuſcemodi. Cibum enim omnem in ſemen conſumunt: quippe cùm genus id fertile admodum ſit. Necnon gallinarum nonnullæ, cùm adeo valdè peperiſſent, vt etiam bis die pepere- C rint, mox à tanto partu interiêre. Hyperinæ enim, id eſt, effœtæ, & aues & plantæ fiunt. Quod vitium nimia excrementi ſeceſſio eſt, vt exhauſtæ effœtæque dicantur, quæ ita afficiuntur. Hæc eadem affectio cauſa leænæ etiam eſt, vt ſterileſcat: primùm enim quinque aut ſex parit catulos, tum anno ſecundo quatuor, mox tres. Deinde pari modo per annos ſingulos minus vno, poſtremo nullum, cùm & excrementum omne conſumptum iam ſit, & ætate deſinente, ſemen vnà defecerit. Quibuſnam auibus ſubuentanei partus conſiſtant, & quæ perfœcundæ, parúmve fœcundæ, quáſque ob cauſas, dictum iam eſt. Fiunt ſubuentanea oua, vt antè retulimus, quoniam materia ſe- D minalis in fœmina eſt, nec menſtruorum deceſſio fit auib. *vt viuiparis ſanguine præditis.* In iis enim *omnibus fit, aliis magis, aliis minùs,* aliis quantum rem indicet. Piſcibus etiam, vt auibus, menſtrua nulla prodeunt. Quamobrem iis quoque conceptus conſiſtit ſine coitu vt auibus, ſed minùs apertè. Frigidior enim natura piſcium eſt. Deceſſio igitur menſtruorum, quæ viuiparis fit, eadem conſiſtit in auibus per debita excrementi tempora. Et quia locus ſepto propinquus calidus eſt, magnitudine iuxtà perficiuntur. Sed ad generationem imperfecta, tum hæc tum illa piſcium ſunt, niſi ſemen maris accedat. Cuius rei cauſam antè expoſui. Volacibus ſubuentanea non gignuntur, E ſcilicet eadem cauſa, qua multa nec ab iis ipſis generantur: Vncunguibus enim parum excrementi ineſt, & marem deſiderant ad excrementi commotionem. Gignuntur ſubuentanea oua plura numero, quàm quæ fœcunda ſunt, ſed minora, ob vnam eandémque cauſam. Quòd enim imperfecta ſunt, minùs augentur: quòd minùs augentur, plura numero exiſtunt: minùs etiam ſuauia ſunt, quoniam minùs concocta

Concoctum enim in quouis genere dulcius eſt: ſed oua auium aut piſcium non perfici ad generationem ſine mare, ſatis exploratum habemus. An in piſcibus quoque fiat conceptus ſine mare, non æquè apertum eſt. Sed potiſſimùm in fluuiatili genere, rubellionibus id accidere viſum eſt. Etenim nonnulli ſtatim habere oua videntur; vt de his in hiſtoriis ſcripſimus. Omnino in auium genere, ne ea quidem oua, quæ per coitum oriuntur, poſſunt magna ex parte augeri, niſi coitus auis continuetur. Cuius rei cauſa eſt, quòd vt in mulieribus coitu maris detrahitur menſium excrementum, (trahit enim humorem vterus tepefactus, & meatus aperiuntur) ſic in auibus pariter euenit, dum paulatim quidem menſtruum excrementum accedit, quod foras decedere non poteſt, quoniam parum eſt, & ſupernè ad cinctum continetur, ſed in vterum ipſum collabitur. Hoc enim ouum augetur ſicvt fœtus viuiparorum, eo quod per vmbilicum affluit. Nam cùm ſemel aues coierunt, omnia ferè oua ſemper habere perſeuerant, ſed parua admodum. Quamobrem de ſubuentaneis dicere non ſolent oriri ſponte, ſed reliquias eſſe prægreſſi coitus: quod falſum eſt. Satis enim conſpectum eſt in nouella, tum gallina, tum anſere, gigni ſine coitu: tum etiam perdices fœminæ, & quæ nondum coierint, & quæ coierint, quarum vſus in aucupiis, cùm olfaciunt marem, vocémque eius audiunt, alteræ implentur: alteræ ſtatim pariunt. Cuius affectionis cauſa eſt eadem, quæ in homine & quadrupede. Nam ſi fortè eorum corpora accenſa libidine turgent ad coitum, alia cùm primùm viderunt, alia cùm leuiter tetigerunt, ſemen emittunt. Eſt hoc auium genus ſua natura libidinoſum, vt leui egeat motu, cùm turget, citóque ſecernat: vt in iis quæ non coierint, ſubuentanea conſiſtant: in iis, quæ coierint, oua breui augeantur, & perficiantur. Aues, ex iis quæ ouum pariunt foras, perfectum hoc edunt, piſces imperfectum: quod extra recipit incrementum, vt antè diximus. Cauſa eſt, quòd genus piſcium fœcundum admodum eſt. Itaque fieri non poteſt vt multa intus finem recipiant: quapropter foras deponunt. Idque agitur citò: quòd vterus eorum piſcium, qui ouum pariunt, foras iuxta genitale poſitus eſt. Sunt auium oua bicolora: piſcium vnicolora omnium. Coloris cauſam videris ex facultate partis candidæ atque luteæ. Secernitur enim à ſanguine quod eò venit: nullum enim exſangue animal ouum generat. Sanguinem autem materiam eſſe corporum dictum iam ſæpius eſt. Pars igitur eius, quæ calida eſt, propiùs ad formam in membris inſtituendis accedit: quæ autem terroſior eſt, corporis inſtitutionem præbet, & remotior eſt. Quamobrem in bicoloribus ouis animal initium ſuæ generationis à candido ſumit. Initium enim animale in candido eſt, cibum à luteo capit. Calidioribus itaque animalibus ſeorſum iſta habentur diſtincta, ex quo principium ortus, & ex quo alimentum, atque alterum candidum, alterum luteum eſt: & plus candidi ſyncerique ſemper eſt, quàm lutei & terreni: at minùs calidis & humidioribus contrà, plus lutei, idque humidius eſt: quod in paluſtribus accidit auibus.

Περὶ τῆς ᾠοτοκίας.

Ἀποκρίνεται δ' ἐν τοῖς ᾠοῖς ἡ τοῦ ἄρρενος ἀρχὴ καθ' ὃ προσπέφυκε τῇ ὑστέρᾳ τὸ ᾠόν. καὶ γίνεται ἀνόμοιον * τὸ τῶν διχρόων ᾠῶν, καὶ οὐ πάμπαν στρογγύλον, ἀλλ' ἐπὶ θάτερα ὀξύτερον, διὰ τὸ διαφέρειν δεῖν ἀεὶ τοῦ λευκοῦ, ἐν ᾧ ἔχει τὴν ἀρχήν. διόπερ σκληρότερον ταύτῃ τὸ ᾠόν, ἢ κάτωθεν. σκεπάζειν γὰρ δεῖ καὶ φυλάττειν τὴν ἀρχήν. καὶ διὰ τοῦτο ἐξέρχεται ὕστερον τοῦ ᾠοῦ τὸ ὀξύ. τὸ γὰρ προσπεφυκὸς ὕστερον ἐξέρχεται· κατὰ τὴν ἀρχὴν δὲ προσπέφυκεν· ἐν τῷ ὀξεῖ δὲ ἡ ἀρχή. τὸν αὐτὸν δ' ἔχει τρόπον καὶ ἐν τοῖς τῶν φυτῶν σπέρμασιν. προσπέφυκε γὰρ ἡ ἀρχὴ τοῦ σπέρματος, τὰ μὲν ἐν τοῖς κλάδοις, τὰ δ' ἐν τοῖς κελύφεσι, τὰ δ' ἐν τοῖς περικαρπίοις. δῆλον δ' ἐπὶ τῶν χεδρόπων. ᾗ γὰρ ἐν τῷ λεγομένῳ ὄμματι συνήρτηται τὸ δίθυρον τῶν κυάμων, καὶ τῶν τοιούτων σπερμάτων, ταύτῃ προσπέφυκεν ἡ ἀρχὴ τοῦ σπέρματος. ἀπορήσειε δ' ἄν τις περὶ τῆς αὐξήσεως τῶν ᾠῶν, τίνα τρόπον ἐκ τῆς ὑστέρας συμβαίνει. τὰ μὲν γὰρ ζῷα, διὰ τοῦ ὀμφαλοῦ λαμβάνει τὴν τροφήν· τὰ δ' ᾠά, διὰ τίνος; ἐπειδὴ περ οὐχ ὥσπερ οἱ σκώληκες, αὐτὰ δι' αὑτῶν λαμβάνει τὴν αὔξησιν.

* Gaza, τὸ δίχροον τῶν ᾠῶν,

A Cùm enim illæ ſua natura humidiores ſint, tum frigidiores terrenis auibus conſtant. Itaque oua earum multum eius, quod vitellum vocatur, habent, minúſque luteum: quoniam candidum minùs ab eo ſeparetur. Quæ iam ſua natura frigida inter ouipara ſunt, ea longè humidiora conſtant: quale genus piſcium eſt. Nec candidum habent diſtinctum, quia exiguum hoc eſt, & frigidæ terrenæque qualitatis copia impedit. Quamobrem omnia piſcium oua vnicolora ſunt, atque ad lutea candida, ad candida lutea eſſe dixeris. Auium vel ſubuentanea oua colorem tum duplicem obtinent: habent enim ex quo vtrumque fit, & vnde principium, & vnde cibus. Sed hæc imperfecta B ſunt, & maris indiga. Fiunt enim fœcunda, ſi quo tempore ineuntur à mare. Nec verò ſexus cauſa coloris duplicis eſt, vt candidum à mare, luteum à fœmina ſit, ſed ambo à fœmina proficiſcuntur: verùm alterum frigidum, alterum calidum eſt. In quibus multum caloris eſt, diſtinguuntur: in quibus parum, diſtingui non poſſunt. Et ob eam rem conceptus eorum ſunt vnicolores, vt dictum eſt: ſemen autem maris conſtituit tantùm: ideo primùm exiguus albúſque conceptus auium cernitur: mox tempore C procedente luteus totus, cùm iam plus ſanguinis admiſcetur: poſtremò ſecedente calore pars candida circum inſiſtit, quaſi humore æquè feruente quoquouerſus. Candida enim pars oui, ſua natura humida eſt, caloremque animalem intra ſe continet. Quamobrem circùm ipſa diſcernitur, lutea & terrena intus manet. Et ſi plura oua coniecta in patinam, aut tale aliquod vas, coquis igne, ita ne motus caloris citatior ſit, quàm ouorum diſtinctio, idem in vniuerſis ouis, quod in ſingulis, euenit, vt lutea cuncta in medio conſtituantur, candida circiter ambiant. Sed quam ob cauſam alia vnicolora, alia bicolora ſunt oua, D dictum iam eſt.

CAPVT II.

De ortu eorum quæ perfectis ouis foras generantur, tum auium tum quadrupedum ouum cruſta intectum parientium.

SEcernitur in ouo principium genitale maris ea parte qua ouum vtero adhæret, ſitque proinde diſſimile, quod bicolor eſt: nec planè rotundum, ſed altera parte acutius, quoniam partem eam differre oportet, in qua principium il- E lud continetur. Quamobrem durius ea ipſa parte eſt ouum, quam inferiore. Principium enim operiendum cuſtodiendúmque eſt. Exit etiam pars oui acuta pòſt. Quod enim adhæret, id exire poſtea conuenit. Adhæret autem ea parte qua principium continetur. Et principium ipſum in parte acuta eſt. Idem in plantarum etiam ſeminibus modus eſt. Principium enim ſeminis adhæret aut ramo, aut putamini, aut pulpæ: vt in legumine patet. Quà enim biualuis fabarum ſtrues, & cæterorum id genus cemungitur, hac principium ſeminis adhæret. Sed quæres de incremento ouorum, quonam modo ex vtero veniat: animalia enim per vmbilicum capiunt cibum: oua autem quo? cùm non modo vermium, ipſa per ſe recipiant incrementum.

At ſi quid eſt, quo adhærent, id quónam tranſeat perfecto iam ouo? Nihil enim tale exit cum ouo, vt vmbilicus cum animali. Quod enim circiter ambit, teſta perfecto iam ouo efficitur: rectè igitur hoc ita quæritur. Sed latet primò, membranam mollem id eſſe, quod poſtremò teſta efficitur: perfecto enim ouo, durum ac rigidum euadit ita modicè, vt exeat adhuc molle. Dolorem enim moueret, niſi ita exiret. Egreſſum ſtatim refrigeratum duratur; euaporato humore quàm primùm qui exiguus ineſt, relictáque portione terrena. Huius itaque membranæ particula quædam vmbilicaris parte acuta principio continetur, tenditque paruis adhuc velut fiſtula: quod in eiectitiis inchoatis ouis patet. Nam ſi auis madefacta, aut alia cauſa algeſcens eiecit, cruentus adhuc cernitur conceptus, habénſque ſibi annexam appendiculam vmbilicarem, quæ ouo ampliùs increſcente obtenditur latiùs, atque minuitur, perfectóque mucro exitum complet. Membrana interior ſub hoc vmbilico eſt, quæ vitellum albuménque ab eo diſterminet. Vbi iam ad conſummationem ventum eſt, ouum abſoluitur totum, & vmbilicus ratione non inſuper apparet; extremum enim vltimum eius eſt. Partus ouorum contrà atque animalium euenit. Animal enim verſum in caput, ſummúmque principium naſcitur: at ouum quaſi in pedes conuerſum exit. Cuius rei cauſa, quod diximus, eſt, quòd ouum, ea parte qua principium continetur, adhæret. Generatio auium ex ouo ita euenit, vt incubante & concoquente aue, animal ex parte oui ſecernatur: augeatur ex reliqua parte, & conficiatur: natura enim ſimul & materiam animalis in ouo reponit, & ſatis cibi ad incrementum. Cùm enim auis intra ſe perficere nequeat, cibum vnà parit in ouo. Nam iis quæ forma animalis naſcuntur, cibus in alia corporis parte paratur, quod lac vocatur, videlicet in mammis. At auibus hoc idem in ouo natura conſtituit, ſed contrà, quàm homines putant, & Alcmæon Crotoniates ait. Non enim albumen oui lac eſt, ſed vitellum. Hoc enim pullis pro cibo eſt. Illi albumen pro cibo eſſe exiſtimant, propter caloris affinitatem. Oritur pullus incubante aue, vt dictum eſt. Sed ſi aut tempus ſit bene temperatum, aut locus, in quo oua manent, tepidus, concoquuntur & auium oua, & quadrupedum ouiparorum ſine parentis incubitu. Hæc enim omnia in terrà pariunt, concoquuntúrque oua tepore terræ. Nam ſi quæ quadrupedes ouiparæ frequentantes fouent quæ ediderint oua, cuſtodiæ gratia potiùs id faciunt. Gignuntur verò eodem modo oua quadrupedum, quo auium. Cruſta enim dura intecta, & bicolora ſunt, & iuxta cinctum conſiſtunt, vt auium: & reliqua eadem tum intus tum extrà eueniunt. Itaque omnium cauſæ eadem conſideratione continentur. Sed quadrupedum oua vt validiora tempore concoquuntur, auium imbecilliora ſunt: atque ob eam rem parentem deſiderant. Tum etiam natura attendere videtur, vt ſenſum prouidum curámque diligentem erga prolem parentes habeant. Sed in genere deteriore hoc facit quouſque pariant: in aliis quibuſdam etiam donec perficiant. Prudentioribus verò plus curæ mandatur, vt etiam enutriant.

A εἰ δ' ἔστι τι ᾧ προσπέφυκε, τοῦτο ποῖ τρέπεται τελειωθέντος; οὐ γὰρ συνεξέρχεται, καθάπερ ὁ ὀμφαλὸς τοῖς ζῴοις. γίνεται γὰρ τὸ πέριξ ὄστρακον τελειωθέντος. τὸ μὲν οὖν εἰρημένον, ὀρθῶς ζητεῖται. λανθάνει δ', ὅτι τὸ γινόμενον ὄστρακον, τὸ πρότερον μαλακὸς ὑμήν ἐστι. τελειωθέντος δὲ, γίνεται σκληρὸν καὶ κραυρὸν, οὕτω συμμέτρως, ὥστε ἐξέρχεται μὲν ἔτι μαλακὸν, (πόνον γὰρ ἂν εἶχε τικτόμενον) ἐξελθὸν δὲ εὐθὺς πήγνυται ψυχθὲν, συνεξατμίζοντος τοῦ ὑγροῦ ταχὺ δι' ὀλιγότητα, λειπομένου δὲ τοῦ γεώδους. τούτου δή τι τοῦ ὑμένος κατ' ἀρχὰς ὀμφαλῶδές ἐστι πρὸς τὸ ὀξὺ, καὶ ἀπέχει ἔτι B μικρῶν ὄντων, οἷον αὐλός. δῆλος δ' ἐστὶν ἐν τοῖς ἐκβολίμοις τῶν μικρῶν ᾠῶν. ἐὰν γὰρ βρεχθῇ, ἢ ἄλλως πως ῥιγώσασα ἐκβάλῃ ἡ ὄρνις, ἔτι αἱματῶδές τε φαίνεται τὸ κύημα, καὶ ἔχον δι' αὑτοῦ στόλον μικρὸν ὀμφαλώδη. μείζονος δὲ γινομένου, περιτείνεται μᾶλλον οὗτος, καὶ ἐλάττων γίνεται. τελειωθέντος δὲ, τὸ ὀξὺ τοῦ ᾠοῦ. τοῦτο συμβαίνει τὸ πέρας. ὑπὸ δὲ τοῦτο ὁ ἐντὸς ὑμὴν, ὃς ὁρίζει τὸ λευκὸν καὶ τὸ ὠχρὸν ἀπὸ τούτου. τελειωθέντος δ' ἀπολύεται ὅλον τὸ ᾠὸν, καὶ οὐ φαίνεται εὐλόγως ὁ ὀμφαλός· αὐτοῦ γάρ ἐστι τοῦ ἐσχάτου τὸ ἄκρον. ἡ δὲ ἔξοδος τοὐναντίον γίνεται τοῖς ᾠοῖς, ἢ τοῖς ζῳοτοκουμένοις. τοῖς μὲν γὰρ ἐπὶ τὴν κεφαλήν τε καὶ τὴν C ἀρχήν· τοῦ δὲ ᾠοῦ γίνεται ἡ ἔξοδος οἷον ἐπὶ πόδας. τούτου δ' αἴτιον, τὸ εἰρημένον, ὅτι προσπέφυκε κατὰ τὴν ἀρχήν. ἡ δὲ γένεσις ἐκ τοῦ ᾠοῦ συμβαίνει τοῖς ὄρνισιν ἐπῳαζούσης καὶ συμπεττούσης τῆς ὄρνιθος, ἀποκρινομένου μὲν τοῦ ζῴου ἐκ μέρους τοῦ ᾠοῦ, λαμβάνοντος δὲ αὔξησιν, καὶ συντελουμένου ἐκ τοῦ λοιποῦ μέρους. ἡ γὰρ φύσις ἅμα τήν τε τοῦ ζῴου ὕλην ἐν τῷ ᾠῷ τίθησι, καὶ τὴν ἱκανὴν τροφὴν πρὸς τὴν αὔξησιν. ἐπεὶ γὰρ οὐ δύναται τελεοῦν ἐν αὑτῇ ἡ ὄρνις, συνεκτίκτει τὴν τροφὴν ἐν τῷ ᾠῷ. τοῖς μὲν γὰρ ζῳοτοκουμένοις, ἐν ἄλλῳ μορίῳ γίνεται ἡ τροφὴ, τὸ καλούμενον γάλα, ἐν τοῖς μαστοῖς· τοῖς δ' ὄρνισι τοῦτο ποιεῖ ἡ φύσις ἐν τοῖς D ᾠοῖς. τοὐναντίον μέντοι ἐστὶν, ἢ οἵ τε ἄνθρωποι οἴονται, καὶ Ἀλκμαίων φησὶν ὁ Κροτωνιάτης. οὐ γὰρ τὸ λευκόν ἐστι γάλα, ἀλλὰ τὸ ὠχρόν. τοῦτο γάρ ἐστιν ἡ τροφὴ τοῖς νεοττοῖς. οἱ δ' οἴονται τὸ λευκὸν, διὰ τὴν ὁμοιότητα τοῦ χρώματος. γίνεται μὲν οὖν ἐπῳαζούσης (καθάπερ εἴρηται) τῆς ὄρνιθος ὁ νεοττός. οὐ μὴν ἀλλὰ κἂν ἡ ὥρα ᾖ εὔκρατος, ἢ ὁ τόπος ἀλεεινὸς, ἐν ᾧ ἂν κείμενα τυγχάνωσιν, ἐκπέττονται καὶ τὰ τῶν ὀρνίθων, καὶ τὰ τῶν τετραπόδων καὶ ᾠοτόκων. πάντα γὰρ ἐς τὴν γῆν ἐκτίκτει, καὶ συμπέττονται ὑπὸ τῆς ἐν τῇ γῇ θερμότητος. ὅσα δ' ἐπῳάζει φοιτῶντα τῶν ᾠοτοκούντων καὶ τετραπόδων, ταῦτα ποιεῖ μᾶλλον φυλακῆς χάριν. τὸν αὐτὸν δὲ τρόπον γίνεται τά τε τῶν ὀρνίθων ᾠὰ, καὶ τὰ τῶν ζῴων τῶν τετραπόδων. καὶ γὰρ σκληρόδερμα καὶ δίχροα, καὶ πρὸς τῷ διαζώματι συνίσταται, καθάπερ καὶ τὰ τῶν ὀρνίθων· καὶ τὰ ἄλλα ταὐτὰ πάντα συμβαίνει καὶ ἐντὸς καὶ ἐκτός. ὥστε ἡ αὐτὴ θεωρία περὶ τῆς αἰτίας ἐστὶ πάντων. ἀλλὰ τὰ μὲν τῶν τετραπόδων διὰ ἰσχὺν ἐκπέττονται, καὶ ὑπὸ τῆς ὥρας· τὰ δὲ τῶν ὀρνέων ἐπικηρότερα, καὶ δεῖται τῆς τεκούσης. ἔοικε δὲ ἡ φύσις βούλεσθαι τὴν τῶν τέκνων αἴσθησιν ἐπιμελητικὴν παρασκευάζειν. ἀλλὰ τοῖς μὲν χείροσι τοῦτ' ἐμποιεῖ μέχρι τοῦ τεκεῖν, τοῖς δὲ καὶ περὶ τὴν τελείωσιν. ὅσα δὲ φρονιμώτερα, καὶ περὶ τὴν τροφήν,

τοῖς δὲ δὴ μάλιστα κοινωνοῦσι φρονήσεως, καὶ πρὸς τὰ τέλεια γίνεται συνήθη καὶ φιλία, καθάπερ τοῖς ἀνθρώποις, καὶ τῶν τετραπόδων ἐνίοις· τοῖς δὲ ὄρνισι, μέχρι τοῦ γεννῆσαι καὶ ἐκθρέψαι.* διόπερ καὶ μὴ ἐπῳάζουσαι αἱ θήλειαι, ὅταν τέκωσι, διατίθενται χεῖρον, ὥσπερ ἑνός τινος στερισκόμεναι τῶν συμφύτων. τελεοῦνται δ' ἐν τοῖς ᾠοῖς τὰ ζῷα θᾶττον ἐν ταῖς ἀλεειναῖς ἡμέραις. συνεργάζεται γὰρ ἡ ὥρα. καὶ γὰρ ἡ πέψις, θερμότης τίς ἐστιν. ἥ τε γὰρ γῆ συμπέττει τῇ θερμότητι, καὶ ἡ ἐπῳάζουσα τὸ αὐτὸ δρᾷ. προσέχει γὰρ τὸ ἐν αὐτῇ θερμόν. καὶ διαφθείρεται δὲ τὰ ᾠά, καὶ γίνεται τὰ καλούμενα οὔρια μᾶλλον κατὰ τὴν θερμὴν ὥραν εὐλόγως. ὥσπερ γὰρ οἱ οἶνοι ἐν ταῖς ἀλέαις ὀξύνονται, ἀναστρεφομένης τῆς ἰλύος (τοῦτο γὰρ αἴτιον τῆς διαφθορᾶς) καὶ ἐν τοῖς ᾠοῖς ἡ λέκιθος. τοῦτο γὰρ ἐν ἀμφοτέροις τὸ γεῶδες. διὸ καὶ ἀναθολοῦται ὁ οἶνος, μιγνυμένης τῆς ἰλύος· καὶ τὰ διαφθειρόμενα ᾠά, τῆς λεκίθου. τοῖς μὲν οὖν πολυτόκοις συμβαίνει τὸ τοιοῦτον εὐλόγως. οὐ γὰρ ῥᾴδιον τὴν ἁρμόττουσαν πᾶσιν ἀποδιδόναι θερμασίαν, ἀλλὰ τοῖς μὲν ἐλλείπειν, τοῖς δὲ πλεονάζειν, καὶ ἀναθολοῦν, οἷον σήπουσαν. τοῖς δὲ γαμψώνυξιν, ὀλιγοτόκοις οὖσιν, οὐδὲν ἧττον συμβαίνει τοῦτο. πολλάκις μὲν γὰρ καὶ τοῖν δυοῖν θάτερον, οὔριον γίνεται· τὸ δὲ τρίτον, ὡς εἰπεῖν, ἀεί. θερμὰ γὰρ ἀεὶ ὄντα τὴν φύσιν, οἷον ὑπερζεῖν ποιεῖ τὴν ὑγρότητα τὴν ἐν τοῖς ᾠοῖς. ἔχει γὰρ δὴ καὶ τὴν φύσιν ἐναντίαν, τό, τε ὠχρόν, καὶ τὸ λευκόν. τὸ μὲν γὰρ ὠχρόν, ἐν τοῖς πάγοις πήγνυται· θερμαινόμενον δέ, ὑγραίνεται· διὸ καὶ συμπεττόμενον ἐπὶ τῆς γῆς, ἢ ἐπὶ τῇ ἐπῳάζειν ὑγραίνεται, καὶ τοιοῦτον ὂν γίνεται τροφὴ τοῖς συνισταμένοις ζῴοις. πυρούμενον δὲ καὶ ὀπτώμενον οὐ γίνεται σκληρόν, διὰ τὸ εἶναι τὴν φύσιν γεῶδες οὕτως ὥσπερ κηρός· καὶ διὰ τοῦτο θερμαινόμενα μᾶλλον, ἐὰν ᾖ μὴ ἐξ ὑγροῦ περιττώματος, διουρεῖται, καὶ γίνεται οὔρια. τὸ δὲ λευκόν, ὑπὸ μὲν τῶν πάγων οὐ πήγνυται, ἀλλ' ὑγραίνεται μᾶλλον. τὸ δ' αἴτιον εἴρηται πρότερον. πυρούμενον δὲ γίνεται στερεόν· διὸ καὶ πεττόμενον περὶ τὴν γένεσιν τῶν ζῴων παχύνεται. ἐκ τούτου γὰρ συνίσταται τὸ ζῷον, τὸ δ' ὠχρὸν τροφὴ γίνεται, καὶ τοῖς ἀεὶ συνισταμένοις τῶν μορίων, ἐντεῦθεν ἡ αὔξησις. διὸ καὶ διείργεται τό, τε ὠχρὸν καὶ τὸ λευκὸν χωρὶς ὑμέσιν, ὡς ἔχοντα τὴν φύσιν ἑτέραν. δι' ἀκριβείας μὲν οὖν, ὃν τρόπον ἔχουσι ταῦτα πρὸς ἄλληλα, κατ' ἀρχάς τε τῆς γενέσεως καὶ συνισταμένων τῶν ζῴων, ἔτι δὲ περὶ τῶν ὑμένων καὶ ὀμφαλῶν, ἐκ τῶν ἐν ταῖς * ἱστορίαις γεγραμμένων δεῖ θεωρεῖν. πρὸς δὲ τὴν παροῦσαν σκέψιν, ἱκανὸν φανερὸν εἶναι τὸ τοσοῦτον, ὅτι συστάσης πρῶτον τῆς καρδίας, καὶ τῆς μεγάλης φλεβὸς ἀπὸ ταύτης διορισθείσης, δύο ὀμφαλοὶ ἀπὸ τῆς φλεβὸς τείνουσιν· ὁ μέν, ἐπὶ τὸν ὑμένα τὸν περιέχοντα τὸ ὠχρόν· ὁ δ' ἕτερος, ἐπὶ τὸν ὑμένα τὸν χοριώδη, ὃς κύκλῳ περιέχει τὸ ζῷον. ἔστι δ' οὗτος περὶ τὸν ὑμένα τὸν τοῦ ὀστράκου. διὰ μὲν οὖν θατέρου λαμβάνει τὴν ἐκ τοῦ ὠχροῦ τροφήν. τὸ δ' ὠχρὸν γίνεται πλέον· ὑγρότερον γὰρ γίνεται θερμαινόμενον. δεῖ γὰρ τὴν τροφὴν σωματώδη οὖσαν, ὑγρὰν εἶναι, καθάπερ τοῖς φυτοῖς. (ζῇ δὲ τὸ πρῶτον καὶ τὰ ἐν τοῖς ᾠοῖς, καὶ τὰ ἐν τοῖς ζῴοις, φυτοῦ βίον. τῷ προσπεφυκέναι γάρ, ἔκ τινος λαμβάνει τὴν πρώτην αὔξησιν καὶ τροφήν.) ὁ δ' ἕτερος ὀμφαλὸς τείνει εἰς τὸ περιέχον χόριον. δεῖ γὰρ ὑπολαβεῖν τὰ ᾠοτοκούμενα τῶν ζῴων, πρὸς μὲν τὸ ὠχρὸν οὕτως ἔχειν τὸν νεοττόν,

A Poſtremò iis quæ prudentia iam maximè prædita ſunt, conſuetudo, amor, & charitas in prolem etiam adultam ſeruatur, vt homini, & quadrupedum nonnullis. Auibus cura donec pariant & enutriant. Quamobrem & ab incubitu laborant in prole enutrienda: à partu verò deteriùs afficiuntur, quaſi priuatæ aliquo ſibi natiuo geſtamine. Perficitur animal in ouo celeriùs diebus tepidis; tepore enim iuuatur. Nam concoctio eſt calor quidam. Terra enim ſuo calore concoquit. Et quæ incubant, hoc idem faciunt: adhibent enim ſuum calorem. Deprauantur etiam oua, & fiunt, quæ vrina appellantur, tempore potiùs calido, idque ratione. Vt enim vina B temporibus calidis coaceſcunt fæce ſubuerſa, (hoc enim cauſæ eſt, vt deprauentur,) ſic oua pereunt vitello corrupto. Id enim in vtrique terrena portio eſt. Quamobrem & vinum obturbatur fæce permiſta, & ouum vitello diffuſo. Multiparis igitur hoc accidit meritò, cùm non facilè omnibus calor conueniens reddi poſſit, ſed aliis deficiat, aliis ſuperet, & quaſi putrefaciendo obturbet. Vncunguibus etiam, quamuis parum fœcundis, nihilo minùs tamen idem euenit: ſæpe enim vel alterum ex duobus vrinum fit, ſed tertium ſemper ferè. Cùm enim calida ſua natura ſint, faciunt vt quaſi ferueat C ſupra modum humor ouorum. Iam enim naturam quoque contrariam luteum & candidum habent. Luteum namque gelu duratur, & coit, calore contrà humeſcit: quapropter cùm vel in terra, vel per incubitum concoquitur, humeſcit. Atque ita pro cibo animalibus naſcentibus eſt. Nec verò cùm ignitur aſſatúrque, dureſcit, quoniam naturæ terrenæ eſt, vt cera. Ideóque cùm plus iuſto caleſcunt, niſi ex recremento humido ſint, ſanieſcunt, redduntúrque vrina. At candidum gelu non concreſcit, ſed magis humeſcit. Cauſam antè reddidi. Ignitum ſolideſcit. Quamobrem cùm ad generationem animalium concoquitur, craſſeſcit. Ex hoc enim conſiſtit animal. D Luteum autem pro cibo eſt, & membris ſubinde inſtituendis incrementum hinc adminiſtratur. Quocirca luteum & candidum membranis inter ſe diſtinguuntur, quaſi naturam habeant diuerſam. Sed quemadmodum hæc inter ſe habeant, tum initio generationis, tum conſiſtentibus animalibus, atque etiam de membranis & vmbilicis diligentiùs ex iis quæ per hiſtoriam ſcripſimus, conſiderandum annotandúmque eſt. Ad id autem, quod impræſentiarum tractamus, tantùm aperuiſſe ſatis eſt. Principio corde conſtituto, & vena maiore ab eo diſtincta, vmbilici duo de vena eadem pertendunt: alter ad membranam, quæ luteum continet: alter ad membra- E nam, cui ſecundarum ſpecies eſt, qua animal obuolutum continetur, quæ circa teſtæ membranam eſt. Altero igitur vmbilico cibum ex luteo aſſumit. Efficitur luteum copioſius, quippe quòd caleſcens reddatur humidius. Cibum enim, quoniam corpulentus eſt, humidum eſſe oportet, qualis plantæ ſuppeditatur. (Viuunt autem principiò, & quæ in ouis & quæ in animalibus gignuntur, vita plantæ. Adhærendo enim capiunt primum & incrementum, & alimentum.) Alter vmbilicus ad ſecundas tendit. Ita enim in iis quæ ouo naſcuntur, animalibus, pullum vti luteo exiſtimandum,

vt fœtus viuiparus ſua parente vtitur, quamdiu intra parentem continetur. Cùm enim non intra parentem nutriantur, quæ ouo proueniunt, partem eius accipiunt aliquam, habéntque ſecum in cibo. Membrana verò exteriore nouiſſima ſanguinolenta hæc perinde, vt illa vtero, vtuntur. Simul autem & luteum, & ſecundas teſta oui cōplectitur vteri proportione, perinde quaſi quid vnum obductum amplectatur fœtum, parentémque totam. Quod ita eſt, quoniam fœtum eſſe in vtero, & cum parente neceſſe eſt. Itaque in viuiparis vterus in parente eſt. In ouiparis è diuerſo fit, quaſi dixeris parentem eſſe in vtero. Luteum eſt enim cibus qui à parente præſtatur. Cauſa eſt, quòd fœtus nutricatio non intra parentem eſt. Creſcentibus vmbilicus primùm conſidet, qui ſecundis adiungitur. Hac enim pullum excludi conuenit. Reliquum lutei, & vmbilicus ad luteum pertinens pòſt collabitur. Cibum enim habeat ſtatim oportet, quod excluſum eſt. Nec enim à parēte nutritur, & per ſe ipſum ſtatim capere cibum non poteſt: quapropter luteum ſubit cum vmbilico, & caro adnaſcitur. Talis ortus eorum eſt, quæ ex ouis perfectis foris generantur, tum in auibus tum in quadrupedibus, quæ ouum cruſta intectum dura pariunt. Sed hæc euidentiora in auctioribus ſunt animalibus. Nam in minoribus obſcura præ ſua exiguitate habentur.

CAPVT III.

De ijs animantibus, quæ perfectum ouum intra ſe pariunt, foras autem animal: quámque ob cauſam piſcium oua mollia ſint contrà quàm auium.

GEnus etiam piſcium ouiparum eſt, cuius ea, quæ infra continent vterum, imperfectum pariunt ouum, cauſa, quam antè reddidimus. Quæ autem cartilaginea nuncupantur, perfectum intra ſe ouum pariunt, mox animal foras edunt, vno excepto, quam ranam vocant: hæc enim vna foras ouum perfectum parit. Cauſa, natura corporis eſt. Caput enim longè grandius reliquo corpore habet, ídque aculeatum, valdéque aſperum: quamobrem nec poſtea ſuos catulos intra ſe recipit, neque principio animal parit. Capitis enim magnitudo, & aſperitas, vt aditum, ſiç exitum impedit. Et cùm cartilagineorum ouum cute molli operiatur, quòd enim frigidiora quàm aues ſint, nequeunt partem circumdantem indurare, ideo ouum vnum ranarum ſolidum durúmque eſt, vt foris ſeruetur. Cæterorum humida ſunt natura, & molli. Operiuntur enim intus corpore ſuæ parentis. Ortus ex ouo idem ranis quæ extra perficiuntur, & iis quæ intus. Sed eorum atque auium ortus partim ſimilis, partim diuerſus eſt. Primùm enim altero carent vmbilico, qui ad ſecundas pertinet, quæ ſub teſta ambiente poſitæ ſunt. Cuius rei cauſa eſt, quòd teſtam illam circumdantem non habent, cùm nihilò his vtilis eſſe poſſit: parens enim ipſa integit, & ſeruat. Teſta in ouis edendis tutela eſt contra detrimenta, quæ deforis veniant. Tum generatio iis quoque ex oui parte extrema eſt, ſed non qua vtero adhærent. Aues enim ex acumine oriuntur, qua ouum adhæret. Cauſa eſt,

ΚΕΦΑΛ. γ'.

Περὶ τῆς τῶν ἰχθύων γενέσεως ἐξ ᾠῶν. καὶ πρότερον περὶ σελαχῶν.

ΕΤι δ' ἐστὶν ᾠοτόκον τὸ τῶν ἰχθύων γένος. τούτων δὲ τὰ μὲν ἔχοντα κάτω τὴν ὑστέραν, ἀτελὲς ᾠὸν τίκτει, διὰ τὴν προειρημένην αἰτίαν. τὰ δὲ καλούμενα σελάχη τῶν ἰχθύων, ἐν αὑτοῖς μὲν ᾠοτοκεῖ τὸ τέλειον ᾠὸν, ἔξω δὲ ζωοτοκεῖ, πλὴν ἑνὸς ὃν καλοῦσι βάτραχον. οὗτος δ' ᾠοτοκεῖ θύραζε τὸ
D τέλειον ᾠὸν μόνος. αἰτία δ' ἡ τοῦ σώματος φύσις. τήν τε γὰρ κεφαλὴν πολλαπλασίαν ἔχει τοῦ λοιποῦ σώματος, καὶ ταύτην ἀκανθώδη, καὶ σφόδρα τραχεῖαν. διόπερ οὐδ' ὕστερον εἰσδέχεται τοὺς νεοττοὺς, οὐδὲ ἐξ ἀρχῆς ζωοτοκεῖ· τὸ γὰρ μέγεθος καὶ ἡ τραχύτης τῆς κεφαλῆς, ὥσπερ καὶ εἰσελθεῖν κωλύει, οὕτω καὶ ἐξελθεῖν. ἐπεὶ δὲ μαλακόδερμόν ἐστι τὸ ᾠὸν τὸ τῶν σελαχῶν, (οὐ γὰρ δύναται σκληρῦναι τὸ πέριξ· ψυχρότεροι γὰρ τῶν ὀρνίθων εἰσὶ) τὸ τῶν βατράχων ᾠὸν μόνον στερεόν ἐστι καὶ στιφρὸν πρὸς τὴν ἔξω σωτηρίαν· τὰ δὲ τῶν ἄλλων, ὑγρὰ καὶ μαλακὰ τὴν φύσιν. σκεπάζεται γὰρ ἐντὸς τῷ σώματι τῷ τῆς ἐχούσης. ἡ δὲ γένεσις ἐκ τοῦ ᾠοῦ, τοῖς τε βατράχοις ἔξω τελειουμένοις, καὶ τοῖς ἐντὸς, ἡ αὐτή. τούτοις δὲ ἐκ τοῖς τῶν ὀρνίθων, τῇ μὲν ὁμοία, τῇ δὲ διάφορός ἐστι.
E πρῶτον μὲν γὰρ οὐκ ἔχουσι τὸν ἕτερον ὀμφαλὸν τὸν ἐπὶ τὸ χόριον τείνοντα, ὅ ἐστιν ὑπὸ τὸ περιέχον ὄστρακον. τούτου δ' αἴτιον, ὅτι τὸ πέριξ ὄστρακον οὐκ ἔχουσιν. οὐδὲν γὰρ αὐτοῖς χρήσιμον. σκεπάζει γὰρ ἡ μήτηρ. τὸ δ' ὄστρακόν ἐστι τοῖς ἐκτικτομένοις ᾠοῖς ἀλεωρὰ πρὸς τὰς θύραθεν βλάβας. ἔπειθ' ἡ γένεσις ἐξ ἄκρου μέν ἐστι τοῦ ᾠοῦ καὶ τούτοις, ἀλλ' οὐχ ᾗ προσπέφυκε πρὸς τὴν ὑστέραν. οἱ γὰρ ὄρνιθες ἐκ τοῦ ὀξέος γίνονται. ταύτῃ δ' ἦν ἡ τοῦ ᾠοῦ πρόσφυσις. αἴτιον δ',

ἔτι τὸ μὲν τῶν ὀρνίθων χωρίζεται τῆς ὑστέρας, τῶν δὲ τοιούτων οὐ πάντων, ἀλλὰ τῶν πλείστων πρὸς τῇ ὑστέρᾳ προσπέφυκε τὸ ᾠὸν τέλειον. ἐπ' ἄκρον δὲ γιγνομένου τοῦ ζῴου, καταναλίσκεται τὸ ᾠόν, ὥσπερ καὶ ἐπὶ τῶν ὀρνίθων καὶ τῶν ἄλλων τῶν ἀπολελυμένων, καὶ τέλος πρὸς τῇ ὑστέρᾳ ὁ ὀμφαλὸς προσπέφυκε τῶν ἤδη τελείων. ὁμοίως δ' ἔχει καὶ ὅσων ἀπολέλυται τὰ ᾠὰ τῆς ὑστέρας. ἐνίοις γὰρ αὐτῶν, ὅταν τέλειον γένηται τὸ ᾠόν, ἀπολύεται. ἀπορήσειεν ἂν οὖν τις, τίνι διαφέρουσιν αἱ γενέσεις τοῖς ὄρνισι κατὰ τοῦτο, καὶ τοῖς ἰχθύσιν. αἴτιον δ', ὅτι τὰ μὲν τῶν ὀρνίθων κεχωρισμένον ἔχει τὸ ὠχρὸν καὶ τὸ λευκόν· τὰ δὲ τῶν ἰχθύων μονόχροα, καὶ πάντῃ μεμιγμένον τὸ τοιοῦτο. ὥστ' οὐδὲν κωλύει τὸ ἐξ ἐναντίας ἔχειν τὴν ἀρχήν. οὐ γὰρ μόνον κατὰ τὴν πρόσφυσίν ἐστι τοιοῦτον, ἀλλὰ καὶ καταντικρύ. τὴν δὲ τροφὴν ῥᾴδιον ἕλκειν ἐκ τῆς ὑστέρας, πόροις τισὶν ἀπὸ ταύτης τῆς ἀρχῆς. δῆλον δὲ ἀπὸ τῶν μὴ ἀπολυομένων ᾠῶν. ἐν ἐνίοις γὰρ τῶν σελαχῶν οὐκ ἀπολύεται τῆς ὑστέρας τὸ ᾠόν, ἀλλ' ἐχόμενον μεταχωρεῖ κάτω πρὸς τὴν ζῳοτοκίαν, ἐν οἷς τελεωθὲν τὸ ζῷον ἔχει τὸν ὀμφαλὸν ἐκ τῆς ὑστέρας, ἀνηλωμένου τοῦ ᾠοῦ. φανερὸν οὖν ὅτι καὶ πρότερον ἔτεινον οἱ πόροι τοῦ ᾠοῦ, ἔτι ὄντος περὶ ἐκεῖνο πρὸς τὴν ὑστέραν. τοῦτο δὲ συμβαίνει, καθάπερ εἴπομεν, ἐν τοῖς γαλεοῖς τοῖς λείοις. διαφέρει μὲν οὖν ἡ γένεσις κατὰ ταῦτα τῶν ἰχθύων τοῖς ὄρνισι, καὶ διὰ τὰς εἰρημένας αἰτίας· τὰ δ' ἄλλα συμβαίνει τὸν αὐτὸν τρόπον· τόν τε γὰρ ὀμφαλὸν ἔχουσι τὸν ἕτερον, ὡσαύτως ὥσπερ οἱ ὄρνιθες πρὸς τὸ ὠχρόν, οὕτως οἱ ἰχθύες πρὸς τὸ ὅλον ᾠόν. οὐ γάρ ἐστιν αὐτοῦ τὸ μὲν λευκόν, τὸ δ' ὠχρόν, ἀλλὰ μονόχροον πᾶν, καὶ τρέφονται ἐκ τούτου, καταναλισκομένου τε ἐπέρχεται καὶ περιφύεται ἡ σὰρξ ὁμοίως. περὶ μὲν οὖν τῶν ἐν αὑτοῖς ᾠοτοκούντων τέλειον ᾠόν, θύραζε δὲ ζῳοτοκούντων, τοῦτον ἔχει τὸν τρόπον ἡ γένεσις.

ΚΕΦΑΛ. δʹ.

Διατί τὰ τῶν ἄλλων ἰχθύων ᾠὰ ἐκτὸς αὐξάνεται.

Οἱ δὲ πλεῖστοι τῶν ἄλλων ἰχθύων ἐκτὸς ᾠοτοκοῦσιν, ἀτελὲς δ' ᾠὸν πάντες, πλὴν * βατράχου· περὶ δὲ τούτου τὸ αἴτιον εἴρηται πρότερον. εἴρηται δὲ καὶ περὶ τῶν ἀτελῆ τικτόντων τὸ αἴτιον. ἡ δὲ γένεσις καὶ τούτων, ἡ μὲν ἐκ τοῦ ᾠοῦ, τὸν αὐτὸν ἔχει τρόπον, ὅνπερ καὶ τῶν σελαχῶν τῶν ἐντὸς ᾠοτοκούντων· πλὴν ἥ γε αὔξησις ταχεῖα, καὶ ἐκ μικρῶν, καὶ τὸ ἔσχατον τοῦ ᾠοῦ σκληρότερον. ἡ δὲ τοῦ ᾠοῦ αὔξησις, ὁμοία τοῖς σκώληξίν ἐστι. καὶ [γὰρ] τὰ σκωληκοτοκοῦντα τῶν ζῴων, μικρὸν ἀποτίκτει τὸ πρῶτον. τοῦτο δ' αὐξάνεται δι' αὑτοῦ, καὶ οὐ διὰ πρόσφυσιν οὐδεμίαν. τὸ δ' αἴτιον παραπλησίως ὥσπερ ἐπὶ τῆς ζύμης. καὶ γὰρ ἡ ζύμη ἐκ μικρᾶς μεγάλη γίνεται, τοῦ μὲν στερεωτέρου ὑγραινομένου, τοῦ δ' ὑγροῦ πνευματουμένου. δημιουργεῖ δὲ τοῦτο ἡ τοῦ ψυχικοῦ θερμοῦ φύσις ἐν τοῖς ζῴοις· ἐν δὲ ταῖς ζύμαις ἡ τοῦ χυμοῦ τοῦ συγκραθέντος θερμότης. αὐξάνεται μὲν οὖν τὰ ᾠά, ἐξ ἀνάγκης μὲν διὰ ταύτην τὴν αἰτίαν· ἔχει γὰρ περίττωμα ζυμῶδες. χάριν δὲ τοῦ βελτίονος· ἐν ταῖς ὑστέραις γὰρ ἀδύνατον αὐτοῖς λαμβάνειν ὅλην τὴν αὔξησιν, διὰ τὴν τῶν ζῴων πολυτοκίαν τούτων. διὰ τοῦτο γὰρ καὶ μικρὰ πάμπαν ἀποκρίνεται, καὶ ταχεῖαν λαμβάνει τὴν αὔξησιν. μικρὰ μέν, διὰ τὸ στενοχωρῆ τὴν ὑστέραν εἶναι πρὸς τὸ πλῆθος τῶν ᾠῶν· ταχὺ δ', ὅπως μὴ χρονιζόντων ἐν τῇ γενέσει πρὸς τὴν αὔξησιν, φθείρηται τὸ γένος, ἐπεὶ καὶ νῦν τὰ πολλὰ φθείρεται τῶν ἐκτικτομένων κυημάτων. διόπερ πολύγονόν ἐστι τὸ γένος τὸ τῶν ἰχθύων.

* ἢ βατράχων.

quòd auium ouum ſeparatur ab vtero. At eorum, quanquam non omnium, tamen plurimorum ouum perfectum vtero adhęret. Cúmque animal extremo innaſcitur, ouum conſumitur totum, quomodo in auibus cæteríſque, quorum omnium abſoluitur, demúmque vtero vmbilicus iam perfectorum adhęret. Similis modus eorum etiam eſt, quorum oua vtero abſoluuntur. Nonnullis enim eorum ouum abſoluitur, cùm perfectum eſt. Quæres igitur cur ita differant auium & piſcium generationes. Cauſa eſt, quòd auium oua luteum à candido ſeparatum continent: piſcium vnicolora ſunt, miſcentúrque inter ſe vſquequaque, & confunduntur. Itaque nihil prohibet quo minus econtrario principium habeant genitale. Non ſolùm enim parte ſua adhærente tale eſt, ſed etiam altera obiecta. Alimentum verò ex vtero meatibus trahere quibuſdam eo ipſo principio facile eſt. Apertum hoc eſt in iis ouis quæ non abſoluuntur. Nam in nonnullis cartilagineis ouum non abſoluitur vtero, ſed inhærens deſcendit ad animalis generationem, in quibus animal perfectum habet ſuum vmbilicum ex vtero, conſumpto iam ouo. Conſtat igitur vel antè meatus oui eòdem tendere. Fit hoc in muſtelorum genere læui cognomine, vt dictum eſt. Ortus piſcium his rebus & his de cauſis differt ab auium. Cætera eodem veniunt modo. Alterum enim vmbilicum habent ſimiliter, vt aues ad luteum, ſic piſces ad totum ouum. Non eſt enim huius pars altera lutea, altera candida, ſed totum eſt vnicolor, atque ex eo aluntur, conſumptóque pari modo ſubſidet & caro circum adnaſcitur. Talis eorum generatio eſt quæ intra ſe ouum perfectum, foras animal pariunt.

CAPVT IV.

Quam ob cauſam piſcium oua foras ſuſcipiunt incrementum.

CÆteri piſces maxima ex parte foras pariunt oua, omnéſque imperfecta, prætérquam rana, cuius cauſam iam reddidimus. Eorum etiam, qui imperfectum pariunt ouum, cauſa declarata eſt. Ortus verò eorum quoque ouo proueniens, eodem agitur modo quo cartilagineorum, quæ intra ſe pariunt: ſed incrementum celere, atque ex paruis: & vltimum oui durius eſt. Incrementum oui ſimile vermibus eſt. Animalia enim, quę vermem pariunt, primò exiguum edunt, quod per ſe augetur ſine vllo annexu. Cauſa ſimilis, vt in farina ſubacta humore. Fit enim maſſa ex parua magna, parte ſolidiore humeſcente, humida ſpiraſcente, quod in animalibus natura caloris animalis facit, in maſſa calor permiſti humoris. Augentur igitur oua neceſſariò ea cauſa: habét enim excrementũ maſſale, ſed rei melioris gratia. Quoniam fieri non poteſt vt totum ſuum incremẽtum recipiant, propter ſummam eorum animalium fœcunditatem. Hinc enim & parua admodum excernuntur, & celeriter augentur: parua, quòd vterus anguſtior ſit quàm vt tantam ouorum copiam poſſit capere celeriter, ne, dum per generationem mora in augendo protrahitur, genus pereat, quando vel nunc magna pars editi partus interit. Quamobrem genus piſcium perfœcundum eſt:

rependitur enim & compenſatur à natura interitus multitudine. Sunt quorum vterus dehiſcat, & diſrumpatur, vt quæ acus vocatur, præ magnitudine ouorum: hæc enim pro multis maiuſculos habet conceptus. Quod enim natura numero ademerat, id magnitudini addidit. Oua piſcium foris augeri, & quam ob cauſam, dictum iam eſt.

A ἀναμάχεται γὰρ ἡ φύσις τῷ πλήθει τὴν φθοράν. * εἰσὶ δέ τινες οἳ διαρρήγνυνται τῶν ἰχθύων, οἷον ἡ καλουμένη βελόνη διὰ τὸ μέγεθος τῶν ᾠῶν. αὕτη γὰρ ἀντὶ τοῦ πολλὰ, μεγάλα τὰ κυήματα ἴσχει. τοῦ γὰρ πλήθους ἡ φύσις ἀφελοῦσα, προσέθηκε * τὸ μέγεθος. ὅτι μὲν ἔξω αὐξάνεταί τε καὶ δι' * ἣν αἰτίαν τὰ τοιαῦτα τῶν ᾠῶν, εἴρηται.

CAPVT V.

De ortu cartilagineorum piſcium: eóſque, qui piſces omnes eſſe fœminas putant, non rectè ſentire.

ΚΕΦΑΛ. έ.

Περὶ γενέσεως τῶν σελαχῶν, καὶ ὅτι οὐ πάντες οἱ ἰχθῦς θήλεις.

SEd ouum eos etiam piſces parere indicium eſt, quòd viuipari quoque piſces, vt cartilaginei, primùm oua inter ſe pariunt. Totum enim piſcium genus ouiparum eſſe certum eſt. Finem tamen nullum recipit ouum eorum piſcium, qui ſexu maris & fœminæ diſtinguũtur, & per coitum generant, niſi mas ſuum ſemen aſpergat. Sunt qui omnes piſces fœminas eſſe opinentur, exceptis cartilagineis, ſed non rectè. Putant enim, eos qui mares habiti ſunt, differre à ſuis fœminis, modo plantarum, in quibus altera fructificet, altera non, vt olea, & oleaſter, ficus, & caprificus. Sic piſces differre inter ſe volunt, præter cartilagineos. De iis enim non ambigunt; quanquam ſimilis ratio partium ſeminalium in maribus omnibus, tum cartilaginei tum ouipari generis, eſt, & ſemen genitale vtriuſque ſuo tempore emitti videtur. Vuluas etiam fœminæ habent. Atqui non modò ouiparos ſed etiam cæteros vuluas habere oporteret, quamuis diuerſas, vt mulæ habent in genere vterinorum, ſi genus totum ſexu fœmineo eſſet, nec niſi ſterilitate nonnullorum diffideret. Nunc verò partim conceptacula habent ſeminis genitalis, partim vuluas. Atque in omnibus, excepto rubro, & hiatula, hoc diſcrimen eſt, vt aut conceptacula ſeminis prolifici habeant, aut vuluas. Difficultas autem, qua ita opinari mouentur, ſolui facilè poteſt, cùm rem, quæ accidit, audis. Nullum enim ex iis quæ coeunt, tam multa parere poſſe aiunt: idque rectè. Quæ enim ex ſe generant perfectum, vel animal, vel ouum, hæc non ita pariunt multa, vt piſces qui oua pariunt. Nam innumera quædam eorum multitudo ouorum eſt. Sed illud non vident, quàm diuerſa piſcium oua, ab auium ſint. Aues enim, & quadrupedum ouiparæ, & ſi qua cartilaginea enumeranda ſunt in hoc genere, perfectum generant ouum, & quod editum non recipiat incrementum. At piſces imperfecta pariunt oua, quæ foris incrementum iuſtum recipiant. Eodémque modo mollia, & cruſtata, quæ quidem & coire planè cernuntur, quoniam eorum coitus diuturnior eſt. Alterum etiam eorum marem eſſe, alterum vuluam habere certum eſt. Abſurdum præterea eſt, niſi in omnibus generibus vis hæc habeatur, quomodo in viuiparis eſt, alterum mas, alterum fœmina. Cauſa verò ignorantiæ eorum, qui ita cenſent, quòd differentiæ, quæ multæ ac variæ in animalium coitu generationéque ſunt, non omnes pateant, ſed paucarum quarundam intuitu, idem in omnibus eſſe oportere arbitrentur. Quamobrem & qui conceptus fieri aiunt captu ſeminis genitalis, quod à fœminis piſcibus deuoretur, rem, de qua verba faciunt, non tenent.

κατὰ τὸν αὐτὸν γὰρ χρόνον οἵ τε ἄρρενες τὸν θορὸν, καὶ αἱ θήλειαι τὰ ᾠὰ ἔχουσι. καὶ ὅσῳ ἂν ἡ θήλεια ἐγγυτέρω ᾖ τοῦ τίκτειν, τότε πλείων καὶ ὑγρότερος ὁ θορὸς ἐν τοῖς ἄρρεσι γίνεται· καὶ ὥσπερ ἡ αὔξησις κατὰ τὸν αὐτὸν χρόνον τοῦ θοροῦ ἐν τοῖς ἄρρεσι, καὶ τοῦ ᾠοῦ ἐν τῇ θηλείᾳ, οὕτω καὶ ἡ ἄφεσις συμβαίνει. οὔτε γὰρ αἱ θήλειαι ἀθρόα τίκτουσιν, ἀλλὰ κατὰ μικρόν· οὔθ' οἱ ἄρρενες ἀθρόον ἀφιᾶσι τὸν θορόν. καὶ ταῦτα πάντα συμβαίνει κατὰ λόγον. ὥσπερ γὰρ καὶ τὸ τῶν ὀρνέων γένος ἐνίοις ἔχει μὲν ᾠὰ ἄνευ κυήσεως, ὀλίγα δὲ καὶ ὀλιγάκις, ἀλλ' ἐξ ὀχείας τὰ πολλά, ταὐτὸ συμβαίνει καὶ ἐπὶ τῶν ἰχθύων· ἧττον δέ. ἄγονα δὲ καὶ ἀμφότερα γίνεται τὰ αὐτόματα, ἐὰν μὴ ἐπιρράνῃ ὁ ἄρρην, ἐν οἷς γένεσιν αὐτῶν καὶ τὸ ἄρρεν ἐστί. τοῖς μὲν οὖν ὄρνισι, διὰ τὸ τέλεια ἐξιέναι τὰ ᾠά, ἔτι ἐντὸς ὄντων, ἀνάγκη τοῦτο συμβαίνειν· τοῖς δ' ἰχθύσι, διὰ τὸ ἀτελῆ συμβαίνειν τὴν αὔξησιν πᾶσιν, εἰ καὶ μὴ ἐντὸς ἐξ ὀχείας γίνηται τὸ ᾠόν, ὅμως τὰ ἔξωθεν ἐπιρραινόμενα σώζεται, καὶ ἐν τούτῳ ἀναλίσκεται ὁ θορὸς τοῖς ἄρρεσι. διὸ καὶ συγκαταβαίνει ἅμα ἐλαττούμενος τοῖς ᾠοῖς τοῖς ἐν ταῖς θηλείαις. ἀεὶ γὰρ τοῖς ἐκτικτομένοις ἐπιρραίνουσι παρακολουθοῦντες· ὥστε ἄρρενες μὲν καὶ θήλεις εἰσὶ καὶ ὀχεύονται πάντες, εἰ μὴ ἔν τινι γένει ἀδιάστατόν ἐστι τὸ θῆλυ καὶ τὸ ἄρρεν. καὶ ἄνευ τῆς τοῦ ἄρρενος γονῆς, οὐ γίνεται τῶν τοιούτων οὐδέν. συμβάλλεται δὲ πρὸς τὴν ἀπάτην αὐτοῖς καὶ τὸ ταχὺ εἶναι τὸν συνδυασμὸν τῶν τοιούτων ἰχθύων, ὥστε πολλοὺς λανθάνειν καὶ τῶν ἁλιέων. οὐδεὶς γὰρ αὐτῶν οὐδὲν τηρεῖ τοιοῦτον, τοῦ γνῶναι χάριν· ἀλλ' ὅμως ὠμμένος συνδυασμός ἐστι. τὸν αὐτὸν γὰρ τρόπον οἵ τε δελφῖνες ὀχεύονται παραπίπτοντες, καὶ οἱ ἰχθύες, ὅσοις ἐμποδίζει τὸ οὐραῖον. ἀλλὰ τῶν μὲν δελφίνων χρονιωτέρα ἡ ἀπόλυσίς ἐστι· τῶν δὲ τοιούτων ἰχθύων, ταχεῖα. διόπερ τοῦτο οὐχ ὁρῶντες, τὰς δὲ ἀναλήψεις τοῦ θοροῦ καὶ τῶν ᾠῶν, καὶ οἱ ἁλιεῖς περὶ τῆς κυήσεως τῶν ἰχθύων, τὸν εὐήθη λέγουσι λόγον καὶ τεθρυλημένον, ὅνπερ καὶ * Ἡρόδοτος ὁ μυθολόγος, ὡς κυϊσκομένων τῶν ἰχθύων ἐκ τοῦ ἀναχάπτειν τὸν θορὸν· οὐ συνορῶντες ὅτι τοῦτ' ἐστὶν ἀδύνατον. ὁ γὰρ πόρος ὁ διὰ τοῦ στόματος εἰσιών, εἰς τὴν κοιλίαν φέρει, ἀλλ' οὐκ εἰς τὰς ὑστέρας· καὶ τὸ μὲν εἰς τὰς κοιλίας ἐλθὸν, ἀνάγκη τροφὴν γίνεσθαι (καταπέττεται γάρ)· αἱ δ' ὑστέραι φαίνονται πλήρεις ᾠῶν· ἃ πόθεν εἰσῆλθεν;

A Tempore enim eodem mares ſemen genitale, fœminæ oua habent, & quo fœmina propiùs ad partum accedit, eo copioſius & humidius redditur ſemen genitale in mare: & vt incrementum ſeminis in mare, oui in fœmina eodem tempore euenit, ſic emiſſio. Nec enim fœminæ vniuerſum, ſed paulatim pariunt: neque mares ſemen ſuum vniuerſum emittunt. Atque hæc omnia ratione ita vſu eueniunt. Vt enim in auium genere ſunt, quæ ſine coitu oua concipiant, quanquam pauca, & rarò, ſed per coitum magna ex parte implentur: ſic in piſcibus euenit, ſed minùs. Æquè tamen vtroque in genere infœcunda ſunt, quæ ſponte conſtiterunt, niſi mas ſuum aſperſerit ſemen, B videlicet in quibus mas quoque eſt. Auibus igitur quoniam oua perfecta exeunt, id fiat, cùm intus adhuc ſunt, neceſſe eſt. At piſcibus quoniam imperfecta omnia oua eduntur, quanquam non intus per coitum conſtitit ouum, tamē ſi extrà aſperſum eſt, ſeruari poteſt: atque in hunc vſum conſumitur ſemen marium genitale. Quapropter vnà cum ouis fœminarum ſubſidet, atque minuitur. Aſpergunt enim mares ſequendo in iis quæ ſubinde eduntur, ouis. Ergo in piſcibus quoque ſexus diſcrimen, maris ac fœminæ, eſt, omnéſque coeunt, niſi ſexus alicui generi ſit indiſcretus. Et ſine maris genitura nihil ex iis poteſt generari: facit enim celeritas coitus piſcium, vt eius opinio- C nis authores decipiantur. Tanta enim celeritate rem Veneream peragunt, vt etiā piſcatores complures lateant: nemo enim eorum aliquid tale cognitionis gratia obſeruat. Verumtamen coitus viſus eſt. Eodem enim modo, quo delphini, piſces etiam coeunt, amouendo ſupina per lapſum, quibus impedimento cauda. Sed delphinorum abiunctio diuturnior eſt: piſcium verò huiuſcemodi celerrima eſt. Itaque cùm eam non cernant, captu, ſiue voratu ſeminis, & ouorum, quem exploratum habent, mouentur vel piſcatores vt ſtultam illam & vulgarem rationem de conceptione piſcium afferant, quā & fabulator Herodotus ſcribit, quaſi ſeminis deuoratu piſces implean- D tur. Nec vident id fieri non poſſe: meatus enim, qui per os intrò tendit, in ventriculum fertur, non in vuluam. Quódque ventriculum ſubierit, alimentum id effici neceſſe eſt: concoquitur enim. Vuluæ autem plenæ ouorum cernuntur, quæ vnde, quæſo, ſubierint?

CAPVT VI.

Contra eos, qui coruos & ibin ore coire, muſtelam autem ore parere, hyænam duplex genitale habere, trochum verò ſe ipſum inire, opinati ſunt.

E SImilis error in generatione quoque auium euenit. Sunt enim qui coruos & ibin ore coire opinentur: inter quadrupedes etiam muſtelam ore parere. Hæc enim & Anaxagoras, & alij quidam naturales authores ſcribunt, ſimpliciter valde, & inconſideratè, qui in auium genere ratiocinatione illa falluntur, quòd rarò coruorū coitus cernatur, roſtrorum coniunctio ſæpenumero, quæ omnibus id genus auibus ſolita eſt. Quod in monedulis, quas manſuetas alimus, planum eſt. Genus etiam columbinum hoc idem facit.

Verùm

A Verùm hæc, quoniam coire quoque viſuntur, ea fama caruerunt. Coruinum genus libidinoſum non eſt, quippe quod parum fœcundum ſit. Coire tamen id quoque viſum eſt. Sed enim non cogitaſſe, quemadmodum ſemen ad vuluam deueniat per ventriculum, qui ſemper, quod ingeſtum eſt, concoquat, vt patet in cibo perficiendo, abſurdum omninò eſt. Vuluas autem id quoque auium genus, & oua habere cernitur iuxta ſeptum. Muſtelam etiam, modo cæterarum quadrupedum, vuluam habere certum eſt: ex qua quónam pacto fœtus ad os deueniat? Sed quia muſtela paruos admodum parit, vt & cæteræ fidipedes, de quibus poſtea dicemus, & ſæpe catulos ſuos ore ſuſceptos transfert, fecit vt ita B opinarentur. Quinetiam de trocho & hiæna ſtultè magnóque errore narratur. Hyænam enim complures aiunt; trochum, Herodorus Heracleota ſcribit duplex genitale habere, maris, ac fœminæ, & trochum ſe ipſum inire: hyænam inire & iniri annis alternis. Sed viſa eſt hyæna mas, & altera fœmina, ſui diſcrimine genitalis. Locis enim nonnullis penuria huius conſpectus non eſt. Verùm hyænæ tam mares quàm fœminæ, habent ſub cauda lineam quandam ſimilem genitali fœminino. Quę quidem nota, quamuis communis ſit, tamen in maribus potiùs cernitur, quia mares quàm fœminæ, magis capiuntur. Itaque qui rem parum diligenter conſiderant, in hanc aberrant C opinionem. Sed de his ſatis.

ἀλλὰ καὶ διὰ τὸ ὀχευόμενα φαίνεσθαι, διὰ τοῦτο ταύτης οὐ τετυχήκασι τῆς φήμης. τὸ δὲ κορακῶδες γένος οὐκ ἔστιν ἀφροδισιαστικόν· ἔστι γὰρ τῶν ὀλιγογόνων· ἐπεὶ ὦπταί γε καὶ τοῦτο ὀχευόμενον. τὸ δὲ μὴ συλλογίζεσθαι, πῶς εἰς τὰς ὑστέρας ἀφικνεῖται τὸ σπέρμα διὰ τῆς κοιλίας πεττούσης ἀεὶ τὸ εἰσιόν, καθάπερ τὴν τροφήν, ἄτοπον. ὑστέρας δὲ ἔχουσι καὶ ταῦτα τὰ ὄρνεα, καὶ ᾠὰ φαίνεται πρὸς τοῖς ὑποζώμασιν. καὶ ἡ γαλῆ, καθάπερ καὶ τὰ ἄλλα τετράποδα, τὸν αὐτὸν τρόπον ἔχει ἐκείνοις τὰς ὑστέρας· ἐξ ὧν εἰς τὸ στόμα πῶς βαδιεῖται τὸ ἔμβρυον; ἀλλὰ διὰ τὸ τίκτειν πάμπαν μικρὰ τὴν γαλῆν, ὥσπερ καὶ τὰ ἄλλα τὰ σχιζόποδα, περὶ ὧν ὕστερον ἐροῦμεν, τῷ δὲ στόματι πολλάκις μεταφέρειν τοὺς νεοττούς, ταύτην πεποίηκε τὴν δόξαν. εὐηθικῶς δὲ καὶ λίαν διεψευσμένοι, καὶ οἱ περὶ τρόχου καὶ ὑαίνης λέγοντες. φασὶ γὰρ τὴν μὲν ὕαιναν πολλοί, τὸν δὲ τρόχον Ἡρόδωρος ὁ Ἡρακλεώτης, δύο αἰδοῖα ἔχειν, ἄρρενος καὶ θήλεος· καὶ τὸν μὲν τρόχον, αὐτὸν αὑτὸν ὀχεύειν, τὴν δ᾽ ὕαιναν ὀχεύειν καὶ ὀχεύεσθαι παρ᾽ ἔτος. ὦπται γὰρ ἡ ὕαινα ἔχουσα αἰδοῖον. ἐν ἐνίοις γὰρ τόποις οὐκ ἀπορία τῆς θεωρίας· ἀλλ᾽ ἔχουσιν αἱ ὕαιναι ὑπὸ τὴν κέρκον ὁμοίαν γραμμὴν τῷ τοῦ θήλεος αἰδοίῳ. ἔχουσι μὲν οὖν καὶ ἄρρενες καὶ αἱ θήλειαι τὸ τοιοῦτον σημεῖον· ἀλλὰ ἁλίσκονται οἱ ἄρρενες μᾶλλον· διὸ τοῖς ἐκ παρόδου θεωροῦσι, ταύτην ἐποίησε τὴν δόξαν. ἀλλὰ περὶ μὲν τούτων ἅλις τὰ εἰρημένα.

CAPVT VII.

Quare cartilaginei piſces mares ſemen ſpargere non viſuntur, nec fœmina ſuos conceptus.

DE piſcium generatione quęres, quam ob cauſam, cartilagineorum, nec fœminę ſuos conceptus, neque mares ſuum ſemen ſpargere viſuntur, cùm generis non viuipari, & fœminæ oua, & mares ſemen ſpargere ſoleant. Cauſa verò eſt, quòd genus cartilagineum ſemine minimè abundat. Vuluas etiam fœminæ ad ſeptum poſitas continent. D Æquè enim mares à maribus, & fœminæ à fœminis differunt. Sunt enim cartilaginei minùs copioſi genitura. At verò mas ouipari generis, vt fœmina oua præ multitudine reponit, ſic ipſe ſpargit. Plus enim ſeminis habet, quàm ſatis ad coitum ſit. Tendit enim natura potiùs abſumere ſemen id ad augenda oua repoſita, quàm ad primam conſtitutionem. Nam vt & antè, & modò diximus, oua auium intus perficiuntur, piſcium extrà. Similis enim quodam modo generatio atque in vermiparis eſt, quanquam imperfectiorem edunt conceptum, quæ vermem pariunt. Sed vtriſque tã auium quàm piſciũ ouis perfectionem mas adhibet: verũ auium intus, cũ intus perfi- E ciantur: piſcium extrà, cùm hæc imperfecta edantur. Nam aliàs idem vtriſque contingit. Auium igitur ſubuentanea fœcunda redduntur, & quæ concepta maris diuerſi coitu ſunt, naturam in eum, qui pòſt coierit, mutant. Propria etiam, quæ incremento carent, cùm coitus intermiſſus eſt, celeriter accreſcunt, cùm repetitur coitus:

Διὰ τί τῶν σελαχωδῶν, οὔθ᾽ αἱ θήλειαι τὰ κυήματα, οὔθ᾽ οἱ ἄρρενες ἀπορραίνοντες ὁρῶνται τὸν θορόν.

Περὶ δὲ τῆς τῶν ἰχθύων γενέσεως ἀπορήσειεν ἄν τις, διὰ τίνα ποτὲ αἰτίαν τῶν μὲν σελαχωδῶν οὔθ᾽ αἱ θήλειαι τὰ κυήματα, οὔθ᾽ οἱ ἄρρενες ἀπορραίνοντες ὁρῶνται τὸν θορόν· τῶν δὲ μὴ ζῳοτόκων καὶ αἱ θήλειαι τὰ ᾠά, καὶ οἱ ἄρρενες τὸν θορόν. αἴτιον δ᾽, ὅτι τὸ γένος οὐ πολύσπερμον τὸ τῶν σελαχωδῶν. καὶ ἔτι αἱ θήλειαι πρὸς τῷ διαζώματι τὰς ὑστέρας ἔχουσι. τὰ γὰρ ἄρρενα τῶν ἀρρένων, καὶ τὰ θήλεα τῶν θηλέων ὁμοίως διαφέρουσιν. ὀλιγοσπερμότεροι γὰρ πρὸς τὴν γονὴν οἱ σελαχώδεις εἰσί. τὸ δ᾽ ἄρρεν γένος ἐν τοῖς ᾠοτόκοις, καθάπερ αἱ θήλειαι τὰ ᾠὰ διὰ πλῆθος ἀποτίκτουσιν, οὕτως ἐκεῖνοι [οἱ ἄρρενες τὸν θορὸν] ἀπορραίνουσι. πλείω γὰρ ἔχουσι θορόν, ἢ ὅσον πρὸς τὴν ὀχείαν ἱκανόν. μᾶλλον γὰρ βούλεται ἡ φύσις δαπανᾶν τὸν θορὸν πρὸς τὸ συναυξάνειν τὰ ᾠά, ὅταν ἀποτέκῃ ἡ θήλεια, ἢ πρὸς τὴν ἐξ ἀρχῆς σύστασιν. καθάπερ γὰρ ἔν τε τοῖς ἄνω καὶ τοῖς ὑπογύοις εἴρηται λόγοις, τὰ μὲν τῶν ὀρνέων ᾠὰ τελειοῦται ἐντός, τὰ δὲ τῶν ἰχθύων, ἐκτός. τρόπον γάρ τινα ἔοικε τοῖς σκωληκοτοκοῦσιν. ἔτι γὰρ ἀτελέστερον προΐεται τὸ κύημα τὰ σκωληκοτόκα τῶν ζῴων. ἀμφοτέρως δὲ τὴν τελείωσιν καὶ τοῖς τῶν ὀρνίθων ᾠοῖς καὶ τοῖς τῶν ἰχθύων ποιεῖται τὸ ἄρρεν· ἀλλὰ τοῖς μὲν τῶν ὀρνίθων, ἐντός (τελειοῦται γὰρ ἐντός) τοῖς δὲ τῶν ἰχθύων, ἐκτός, διὰ τὸ ἔξω προΐεσθαι ἀτελές· ἐπεὶ συμβαίνει γε ἐπ᾽ ἀμφοτέρων ταὐτό. τῶν μὲν οὖν ὀρνίθων τά τε ὑπηνέμια γίνεται γόνιμα, καὶ τὰ προοχευθέντα ὑφ᾽ ἑτέρου γένους τῶν ἀρρένων, μεταβάλλει τὴν φύσιν εἰς τὸν ὕστερον ὀχεύοντα. καὶ τὰ οἰκεῖα δέ, ἀναύξητα ὄντα, ἂν διαλείπῃ τὴν ὀχείαν, ὅταν ὀχευθῇ πάλιν, ποιεῖ ταχεῖαν λαμβάνειν τὴν αὔξησιν.

οὐ μέντοι κατὰ πάντα τὸν χρόνον, ἀλλ' ἐάνπερ πρότερον γένηται ἡ ὀχεία, πρὶν μεταβάλλειν εἰς τὴν τοῦ λευκοῦ ἀπόκρισιν. τοῖς δὲ τῶν ἰχθύων οὐδὲν ὥρισται τοιοῦτον· ἀλλὰ πρὸς τὸ σώζεσθαι, ταχέως ἀποῤῥαίνουσιν οἱ ἄῤῥενες. αἴτιον δ', ὅτι οὐ δίχροα ταῦτα· διόπερ οὐχ ὥρισται τοιοῦτος καιρὸς τούτοις. ἐπὶ δὲ τῶν ὀρνίθων τοῦτο συμβέβηκεν εὐλόγως. ὅταν γὰρ τὸ λευκὸν ἀφωρισμένον ᾖ καὶ τὸ ὠχρὸν ἀπ' ἀλλήλων, ἔχει ἤδη τὴν ἀπὸ τοῦ ἄῤῥενος ἀρχήν. εἰς ταύτην γὰρ συμβάλλεται τὸ ἄῤῥεν. τὰ μὲν οὖν ὑπηνέμια λαμβάνει τὴν γένεσιν μέχρι τοῦ ἐνδεχομένου αὐτοῖς. τελεωθῆναι μὲν γὰρ εἰς ζῷον ἀδύνατον· δεῖ γὰρ αἰσθήσεως. τὴν δὲ θρεπτικὴν δύναμιν τῆς ψυχῆς ἔχει τὰ θήλεα, καὶ πάντα τὰ B ζῶντα, καθάπερ εἴρηται πολλάκις. διόπερ αὐτὸ τὸ ᾠόν, ὡς μὲν φυτοῦ κύημα, τέλειόν ἐστιν· ὡς δὲ ζῷον, ἀτελές. εἰ μὲν οὖν μὴ ἐνῆν ἄῤῥεν ἐν τῷ γένει αὐτῶν, ἐγίγνετο ἄν, ὥσπερ καὶ ἐπὶ τῶν ἰχθύων εἴπερ ἐστί τι τοιοῦτον γένος, ὃ ἄνευ ἄῤῥενος γεννᾷ. εἴρηται δὲ περὶ αὐτῶν πρότερον, ὅτι οὔπω ὦπται ἱκανῶς. νῦν δ' ἐστὶν ἐν πᾶσι τοῖς ὄρνισι τὸ μὲν, θῆλυ, τὸ δ', ἄῤῥεν. ὥσθ' ᾗ μὲν φυτόν, τετελείωκε (διόπερ οὐ μεταβάλλει πάλιν μετὰ τὴν ὀχείαν) ᾗ δ' οὐ φυτόν, οὐ τετελείωκεν, οὐδ' ἀποβαίνει ἐξ αὐτοῦ ἕτερον οὐδέν. οὔτε γὰρ ὡς φυτοῦ ἁπλῶς, οὔθ' ὡς ζῴου ἐκ συνδυασμοῦ γέγονε. τὰ δ' ἐξ ὀχείας μὲν γινόμενα ᾠά, διακεκριμένα δ' εἰς τὸ C λευκόν, γίνεται κατὰ τὸ πρῶτον ὀχεῦσαν. ἔχει γὰρ ἀμφοτέρας ἤδη τὰς ἀρχάς.

Περὶ τοῦ τῶν μαλακίων τόκου.

Τὸν αὐτὸν δὲ τρόπον καὶ τὰ μαλάκια ποιεῖται τὸν τόκον, οἷον σηπίαι καὶ τὰ τοιαῦτα· καὶ τὰ μαλακόστρακα, οἷον κάραβοι καὶ τὰ συγγενῆ τούτοις. τίκτει γὰρ ἐξ ὀχείας καὶ ταῦτα, καὶ συνδυαζόμενον τὸ ἄῤῥεν τῷ θήλει πολλάκις ὦπται. διόπερ οὐδ' ἱστορικῶς οὐδὲ ταύτῃ φαίνονται λέγοντες, οἱ φάσκοντες τοὺς ἰχθῦς θήλεις εἶναι πάντας, καὶ τί- D κτειν ἄνευ ὀχείας. τὸ γὰρ ταῦτα μὲν ἐξ ὀχείας οἴεσθαι, ἐκεῖνα δὲ μή, θαυμαστόν. εἴτε τοῦτ' ἐλελήθει, σημεῖον ἀπειρίας. γίνεται δὲ ὁ συνδυασμὸς τούτων χρονιώτερος πάντων, ὥσπερ τῶν ἐντόμων εὐλόγως. ἄναιμα γάρ ἐστι· διόπερ ψυχρὰ τὴν φύσιν ἐστί. ταῖς μὲν οὖν σηπίαις καὶ ταῖς τευθίσι δύο τὰ ᾠὰ φαίνεται, διὰ τὸ διηρθρῶσθαι τὴν ὑστέραν, καὶ φαίνεσθαι δικρόαν. τὸ δὲ τῶν πολυπόδων, ἓν ᾠόν. αἴτιον δ', ἡ μορφή, στρογγύλη τὴν ἰδέαν οὖσα καὶ σφαιροειδής. ἡ γὰρ σχίσις ἄδηλος πληρωθείσης ἐστί. δικρόα δὲ καὶ ἡ τῶν καράβων ἐστὶν ὑστέρα. ἀποτίκτουσι δὲ τὸ κύημα ἀτελὲς καὶ [ταῦτα πάντα,] διὰ τὴν αὐτὴν αἰτίαν. τὰ μὲν οὖν κα- E ραβώδη τὰ θήλεα, πρὸς αὑτὰ ποιεῖται τὸν τόκον (διόπερ μείζους ἔχει τὰς πλάκας τὰ θήλεα αὐτῶν, ἢ τὰ ἄῤῥενα, φυλακῆς χάριν τῶν ᾠῶν) τὰ δὲ μαλάκια, ἔξω. καὶ τοῖς μὲν θήλεσι τῶν μαλακίων ἐπιῤῥαίνει ὁ ἄῤῥην, καθάπερ οἱ ἄῤῥενες ἰχθύες τοῖς ᾠοῖς, καὶ γίνεται συνεχὲς καὶ κολλῶδες· τοῖς δὲ καραβώδεσιν οὔτε ὦπται τοιοῦτον, οὔτε εὔλογον. ὑπό τε γὰρ τῇ θηλείᾳ τὸ κύημα, καὶ σκληρόδερμόν ἐστι, καὶ λαμβάνει αὔξησιν καὶ ταῦτα καὶ τὰ τῶν μαλακίων ἔξω, καθάπερ καὶ τὰ τῶν ἰχθύων. προσπέφυκε δ' ἡ γινομένη σηπία τοῖς ᾠοῖς, κατὰ τὸ πρόσθιον. ταύτῃ γὰρ ἐνδέχεται μόνον.

A non tamen quouis tempore, ſed ſi priùs quàm albumen ſecerni incipiat. At piſcium ouis nihil tale præſcriptum eſt: ſed vt ſeruentur, quàm primùm mares aſpergunt. Cuius rei cauſa eſt, quòd hæc bicolora non ſunt: hinc enim tempus his tale ſtatum non eſt. At in auium genere ratione ſic euenit. Cùm enim luteum & candidum diſtincta inter ſe ſunt, principium iam habetur, quod proficiſcitur à mare. iſthuc enim mas confert. Subuentanea igitur recipiunt generationem quoad fieri poteſt. Perfici namque ad animalis vſque fœcunditatem impoſſibile eſt: ſenſibus enim opus eſt. At vegetalem animæ virtutem obtinent & fœminæ, & omnia quæ viuunt, vt ſæpius dictum eſt. Quamobrem hoc ouum, vt plantæ conce- B ptus, perfectũ eſt: vt animalis, imperfectum. Quòd ſi mas in eorum genere deeſſet, idem ſanè fieret, quod in piſcium genere, ſi tale genus in iis eſt, quod ſine mare progeneret. Dixi de his antè nondum exploratum haberi ſatis: nunc verò in omni auium genere, alterum mas, alterum fœmina eſt. Itaque fit, vt quà planta eſt, perficiat quod non mutetur à coitu: quà non planta, non perficiat, nec aliud quicquam proueniat ex eo quod genuit. Neque enim vt plantæ ſimpliciter: neque vt animalis per coitum prouentus eſt. Quæ autem oua coitu concepta, diſcreta iam ſunt in albuminis portionem, hęc pro eo qui primùm coi- C uerit, mare euadunt. Iam enim vtrumque principium obtinent.

CAPVT VIII.

De partu mollium animantium, & ortu locuſtarum.

Mollium etiam partus ſimilis eſt, vt ſepiæ cæterorúmque id genus, atque etiam cruſtatorum, vt locuſtæ & reliquorum generis eiuſdem. Pariunt enim ea quoque per coitum: & quidem ſæpe mas coniunctus cum fœmina viſus eſt. Quamobrem hinc etiam hiſtoricè nequa- D quam dicere illi videntur, qui piſces omnes fœminas eſſe autumant, nec per coitum parere. Hæc enim oriri per coitum arbitrari, illa non, mirum eſt. Aut ſi hæc ita parere illos latuit, indicium imperitiæ eſt. Diutius hæc, quàm cætera coeunt more inſectorum, ratione. Sunt enim exanguia, & ob eam rem frigida natura. Sepiis & lolliginibus oua gemina apparent: quoniam vulua earum ita articulata eſt, vt bifida cernatur. At polyporum ouum ſimplex eſt. Cauſa eſt, forma eorum vteri, quæ ſpecie rotunda conglobatáque eſt: fiſſio enim eius iam repleti incerta eſt. Locuſtarum etiam vulua bifurcis eſt. Conceptum hæc quoque omnia imperfectum eadem de cauſa edunt. E Locuſtacei generis fœminæ apud ſe partum exponunt: quamobrem ampliores ipſæ, quàm mares, habent tabellas, vt oua ſeruentur. Mollia foris reponunt. Fœminis huius generis mares aſpergunt, quomodo ouis mares in genere piſcium: redduntúrque oua eorum glutino cohærentia ad ſpeciem vuæ. At locuſtaceis tale quid fieri nec viſum eſt, neque ratione exigitur: conceptus enim eorum ſub fœmina continetur, & cruſta intectus eſt. Incrementum tam eorum quàm mollium oua foris recipiunt, ſicut piſcium. Adhæret ouo ſepia naſcens, parte ſui priore. Hac enim tantùm poteſt adhærere,

cùm hæc vna partem poſteriorem & priorem eodem habeat. Quænam ſitus diſpoſitio ſit eius, cùm oritur, petendum ex hiſtoriis eſt. De ortu cæterorum animalium, tum pedeſtrium tum volatilium, tum etiam natatilium, diximus.

CAPVT IX.

De triplici inſectorum generatione.

DE inſectis atque cruſtatis hoc loco dicendum eſt, via & ratione, qua cœpimus. At primùm de inſectis. Hæc partim coitu, partim ſponte oriri dictum iam eſt. Item vermiculum ea parere, & quam ob cauſam ita pariunt. Genus hoc enim omne ferè vermiculum quodam modo parere videtur. Conceptus enim, qui imperfectior eſt, talis eſt. In omnibus autem vel iis quæ perfectum pariunt ouum, conceptus primus indiſcretus adhuc recipit incrementum: qualis natura etiam vermis eſt. Mox alia conceptum ſuum ouo perfecto edunt, alia imperfecto, quod extra perficiatur, vt ſæpe de piſcibus dictum eſt. Quæ verò intra ſe pariunt animal, iis quodam modo poſt primum conceptum ouiforme quiddam efficitur. Humor enim in membrana tenui continetur, perinde quaſi oui teſtam detraxeris. Quamobrem deprauationes conceptuum, quæ per id temporis accidunt, fluxus vocant. Sed inſecta & vermem generant, quæ vim obtinent generandi, & quæ non per coitum, ſed ſponte naturæ oriuntur, ex tali origine conſiſtunt. Nam & erucas genus eſſe vermis cenſendum eſt, & fœtum araneorum, quanquam propter figuræ orbiculatam ſpeciem ſimilia ouo, tum eorum nonnulla, tum alia complura primordia eſſe videantur. Verùm non figura, nec mollitie, aut duritie ouum definiendum eſt. Sunt enim conceptus nonnullorum duri, quamuis ouo diuerſi: ſed quod totum mutetur, nec ex parte eius animal gignatur, id vermis eſt. Omne autem hoc vermiculi genus, vbi ſuæ magnitudinis finem receperit, quaſi ouum efficitur. Indureſcit enim putamen eorum, & tantiſper immota redduntur. Quod in vermiculis apum & veſparum, atque etiam in erucis apertum eſt. Cuius rei cauſa eſt, quòd Natura præ ſua imperfectione quaſi maturans antè quàm tempeſtiuum ſit ouum, pariat, tanquam hic vermis ad incrementum oui mollis adhuc pergat. Hoc eodem modo in cæteris quoque euenit omnibus, quæ non coitu oriuntur, vel in lanis, vel aliis huiuſcemodi, atque etiam in aquis. Omnia enim poſt vermis naturam, motu ceſſant, & putamine obareſcunt. Mox rupto putamine exit, velut ex ouo, animal, tertia perfectum generatione, idque pinnatum magna ex parte. Ratione illud etiam euenit, quod iure multi admirẽtur. Erucæ enim cùm primò capiant cibum, mox non capiunt, ſed motu ceſſant, quæ per id tempus aureliæ à nonnullis vocantur. Veſparum etiam vermiculis, & apum idem accidit. Poſt deinde quæ nymphæ appellantur, proueniunt, quæ nihil huiuſcemodi habeant. Ouorum enim natura adepta ſuum finem, non inſuper accreſcit, ſed antè augetur, & alitur, donec diſtinguatur, & fiat ouum perfectum. Vermium autem alij, hoc intra ſe habent, vnde excrementum ipſis nutriendis accedat, vt vermes apum, & veſparum:

ΚΕΦΑΛ. ί.

Περὶ τῆς τῶν μελιττῶν καὶ κηφήνων γενέσεως.

Η Δὲ τῶν μελιττῶν γένεσις ἔχει πολλὴν ἀπορίαν. ἐπεὶ γὰρ ἔστι καὶ περὶ τοὺς ἰχθῦς τοιαύτη τις γένεσις ἐνίων, ὥστ᾽ ἄνευ ὀχείας γεννᾶν, τοῦτο συμβαίνειν ἔοικε καὶ περὶ τὰς μελίττας ἐκ τῶν φαινομένων. ἀνάγκη γὰρ ἤτοι φέρειν αὐτὰς ἄλλοθεν τὸν γόνον, (ὥσπερ τινές φασι) καὶ τοῦτον ἢ φυόμενον αὐτόματον, ἢ ἄλλου τινὸς ζώου τίκτοντος· ἢ γεννᾶν αὐτάς· ἢ τὸν μὲν φέρειν, τὸν δὲ γεννᾶν· καὶ γὰρ τοῦτο λέγουσί τινες, ὡς τὸν τῶν κηφήνων φέρουσι γόνον. καὶ γεννᾶν ἢ ὀχευομένας, ἢ ἀνοχεύτους. καὶ ὀχευομένας, γεννᾶν, ἤτοι ἕκαστον γένος καθ᾽ αὑτό, ἢ ἕν τι αὐτῶν τἆλλα, ἢ συνδυαζόμενον ἄλλο γένος ἄλλῳ. λέγω δ᾽, οἷον μελίττας μὲν γίνεσθαι ἐκ μελιττῶν συνδυαζομένων, κηφῆνας δ᾽ ἐκ κηφήνων· βασιλεῖς δ᾽ ἐκ βασιλέων, ἢ πάντα τἆλλα ἐξ ἑνός· οἷον ἐκ τῶν καλουμένων βασιλέων καὶ ἡγεμόνων, ἢ ἐκ τῶν κηφήνων καὶ τῶν μελιττῶν. φασὶ γὰρ τοὺς μὲν, ἄρρενας εἶναι· * τοὺς δὲ, θήλεις· οἷον τὰς μὲν μελίττας, θηλείας· τοὺς δὲ κηφῆνας, ἄρρενας. ταῦτα δὲ ἔστι πάντα ἀδύνατα συλλογιζομένοις, τὰ μὲν, ἐκ τῶν συμβαινόντων ἰδίᾳ περὶ τὰς μελίττας· τὰ δ᾽, ἐκ τῶν κοινοτέρων τοῖς ἄλλοις ζώοις. εἴτε γὰρ μὴ τίκτουσαι φέρουσιν ἄλλοθεν, ἔδει γίνεσθαι μελίττας· καὶ μὴ φερουσῶν τῶν μελιττῶν ἐκ τοῦ τόπου, ὅθεν τὸ σπέρμα φέρουσι. διὰ τί γὰρ μετενεχθέντος μὲν ἔσται, ἐκεῖ δ᾽ οὐκ ἔσται; προσήκει γὰρ οὐδὲν ἧττον, εἴτε φυόμενον ἐν τοῖς ἄνθεσιν αὐτόματον, εἴτε ζώου τινὸς τίκτοντος. κἂν εἴτε ζώου τινὸς ἑτέρου τὸ σπέρμα ἦν, ἐκεῖνο ἔδει γίνεσθαι ἐξ αὐτοῦ, ἀλλὰ μὴ μελίττας. ἔτι δὲ καὶ τὸ μὲν μέλι κομίζειν, εὔλογον· τὸ δὲ τὸν γόνον, ἀλλότριον ὄντα, καὶ μὴ τροφήν, ἄτοπον. τίνος γὰρ χάριν; πάντα γὰρ ὅσα πραγματεύεται περὶ τὰ τέκνα, περὶ τὸν φαινόμενον οἰκεῖον διαπονεῖται γόνον. ἀλλὰ μὴν οὐδὲ τὰς μελίττας θηλείας εἶναι, τοὺς δὲ κηφῆνας ἄρρενας, εὔλογον. οὐδενὶ γὰρ τὸ πρὸς ἀλκὴν ὅπλον τῶν θηλειῶν ἀποδίδωσιν ἡ φύσις. εἰσὶ δ᾽ οἱ μὲν κηφῆνες ἄκεντροι, αἱ δὲ μέλιτται πᾶσαι κέντρον ἔχουσαι. οὐδὲ τοὐναντίον εὔλογον, τὰς μὲν μελίττας, ἄρρενας· τοὺς δὲ κηφῆνας, θηλείας. οὐδὲν γὰρ τῶν ἀρρένων εἴωθε διαπονεῖσθαι περὶ τὰ τέκνα· νῦν δ᾽ αἱ μέλιτται τοῦτο ποιοῦσιν. ὅλως δ᾽ ἐπεὶ φαίνεται ὁ μὲν τῶν κηφήνων γόνος ἐγγινόμενος, καὶ μηδενὸς ὄντος κηφῆνος, ὁ δὲ τῶν μελιττῶν οὐκ ἐγγινόμενος ἄνευ τῶν βασιλέων, διὸ καί φασί τινες τὸν τῶν κηφήνων φέρεσθαι μόνον, δῆλον ὡς οὐκ ἐξ ὀχείας γίνονται, οὔτ᾽ ἐξ ἑκατέρου τοῦ γένους, αὐτοῦ αὑτῷ συνδυαζομένου, οὔτ᾽ ἐκ μελιττῶν καὶ κηφήνων. τό, τε τοῦτον φέρειν μόνον διά τε τὰ εἰρημένα ἀδύνατον, καὶ οὐκ εὔλογον μὴ περὶ πᾶν τὸ γένος αὐτῶν ὅμοιόν τι συμβαίνειν πάθος. ἀλλὰ μὴν οὐδ᾽ αὐτὰς τὰς μελίττας ἐνδέχεται τὰς μὲν ἄρρενας εἶναι, τὰς δὲ θηλείας.

* κ. τὰς δὲ θηλείας.

A alij deforis capiunt vt erucæ, & cæterorum nonnulli vermium. Sed quamobrem triplicem generationem hæc ſortiantur, & qua de cauſa ex motis immota reddantur, explicatum iam eſt. Oriuntur eorum alia per coitum, more auium & viuiparorum, & piſcium partis plurimæ: alia ſponte, modo nonnullarum plantarum.

CAPVT X.

De generatione, & ortu apum.

APum generatio magnam recipit ambiguitatem, & quæſtionem. Cùm enim in genere B piſcium talis quædam ſit generatio nonnullorum, vt ſine coitu generent, hoc idem in apibus etiam euenire videtur, quoad ſenſus ratióque apparens admoneat. Aut enim aliunde portare fœtum eas neceſſe eſt, vt quidam volunt, cúmque vel ſponte naſcentem, vel ab aliquo animali editum: aut ipſas generare: aut partim portare, partim generare. Nam id quoque aliqui dicunt, fucorúmque fœtum tantum portari opinantur. Item generare eas aut per coitum, aut ſine coitu, & per coitum generare, aut ſingula genera per ſe, aut quodlibet vnum cætera, aut aliud cum alio iunctum. Verbi gratia, apes ex apibus coeuntibus inter ſe gigni, fucos ex fucis, reges C ex regibus, aut cætera omnia ex vno, vt ex iis qui reges ac duces vocantur: aut ex fucis & apibus. Sunt enim qui fucos mares eſſe, apes fœminas arbitrentur: alij contrà, apes mares eſſe, fucos fœminas opinantur. Quæ omnia impoſſibilia ſunt ratiocinanti, partim ex iis quæ apibus priuatim eueniant, partim ex iis quę cum cæteris ſint animalibus communiora. Nam ſi non ipſę pariunt, ſed aliunde portant fœturam, oriri apes oportet etiam ſine vlla opera apum, ſcilicet eo loco, de quo ſemen portetur. Cur enim tranſlato ſemine oriantur, à manente ſuo loco non oriantur? prorſus oriri nihilominùs conuenit, ſiue ſponte in floribus ſemen id naſcitur, ſiue ab D aliquo editur animali: quanquam non apes, ſed illud animal gigni oportebit, quod ſemen generet. Ad hæc, mel portari ab apibus, rationis eſt: cibus eſt enim. At fœtum alienigenam deferre abſurdè credideris. Nam, cuius rei gratia, quęſo? quando omnis labor, qui prolis cauſa ſuſcipitur, in ea, quæ propria eſſe videtur, prole verſatur? Nec verò apes, fœminas eſſe; fucos, mares, ratio patitur. Arma enim ad pugnam, viréſque exercendas, nulli fœminæ à natura tribuuntur. Sunt autem fuci inermes: carent enim aculeo. Apes verò omnes aculeo armantur. Nec contrà dici ratione probabili poteſt, apes eſſe mares, fucos fœminas: mas enim nullus ſolet E in prole elaborare. Quod apes faciunt omnino, cùm fœtus fucorum gigni videatur, etiam cùm nullus eſt fucus: apum autem non gigni ſine regibus: & quidem ob eam rem fœtum fucorum tantùm portari aliqui putant. Conſtat non per coitum gigni vel ex alterutro genere ſecum coëunte, vel ex apibus & fucis. Portari etiam fœtum fucorum tantum cùm impoſſibile ſit, ob ea quæ modò diximus, tum ratio aſpernatur, vt in genere toto earum talis affectio non eueniat. Quinetiam fieri non poteſt vt ipſæ apes, partim mares partim fœminæ ſint.

In omnibus enim generibus mas à fœmina differt. Generarent etiam ſeipſæ. At nullus earum cernitur fœtus, niſi duces adſint, vt aiunt. Commune autem argumentum tam ad agendam viciſſim generationem, quàm ad eam quam fuci efficiant, & ſiue ſeorſum ſiue promiſcuè agi dicitur, quòd nullum eorum coire vnquam viſum eſt. At ſæpenumero eueniret, vt coitus cerneretur, ſi alterum mas, alterum fœmina in iis eſſet. Reliquum eſt vt ſi per coitum oriantur, reges coeuntes inter ſe generent. At fuci oriri viſuntur, etiam cùm nulli ſunt duces, quorum fœtum nec portare neque parere apes ſuo coitu poſſunt. Relinquitur itaque, vt, quod in piſcibus euenire videmus, apes ſine coitu fucos generent & fœminæ ſint, qua generant ratione: ſed habeant intra ſe, vt plantæ, ſexum maris, & fœminæ. Quamobrem iis datum eſt inſtrumentum ad pugnam. Nec fœmina appellandum eſt, in quo mas diſtinctus non eſt. Quòd ſi in fucis id euenire videtur, ortúſque eorum exiſtit ſine coitu, iam & apibus & regibus eandem ſeruari rationem neceſſe eſt, vt ſine coitu procreentur. Cæterùm ſi ſine regibus gigni fœtus apum videretur, apes etiam ſine coitu ex ſeſe generari neceſſe eſſet. Sed cùm hoc negent, qui in eorum animalium cura verſantur, relinquitur, vt reges & ſe generent, & apes. Itaque cùm ſingulari quadam peculiarique natura genus ſit apum, ortus quoque earum peculiaris meritò eſſe percipitur. Nam vt apes ſine coitu generent, minùs proprium eſt, cùm idem vel in aliis eueniat animalibus, quibus ne idem procreent genus, proprium eſt. Rubri enim generant rubros, & hiatulæ hiatulas. Cauſa eſt, quòd ipſæ generantur, non vt muſcæ, & reliqua id genus animalia, ſed ex diuerſo, tamen cognato genere prodeunt: ex ducibus enim oriuntur. Quamobrem proportio quodammodo in eorum generatione ſeruatur. Duces enim magnitudine fucis, aculeo apibus ſimiles ſunt. Apes igitur aculeo regibus aſſimilantur: fuci magnitudine. Aliquid enim diſcriminis ineſſe neceſſe eſt, niſi ſemper genus ex quouis idem gigni neceſſe ſit: quod impoſſibile eſt. Ita enim genus totum duces eſſent. Apes itaque viribus & pariendi facultate ſimiles ducibus ſunt: fuci magnitudine æmulantur. Quòd ſi aculeum quoque haberent, duces vtique eſſent. Sed nunc id ipſum ex propoſita quæſtione reſtat, & ſolutum iam eſt. Quæ enim ſuperiùs dicta ſunt, totam hanc ſoluunt quæſtionem: duces enim iidem ſimiles ſunt generi vtrique. Qua enim aculeum gerunt, apibus: qua magnitudine præſtant, fucis aſſimilantur. Sed duces etiam ipſos ab aliquo gigni neceſſe eſt. Itaque cùm nec ex apibus, neque ex fucis creentur, ipſos ſe etiam generare neceſſe eſt. Cellulæ eorum nouiſſimæ conſtruuntur, nec multæ numero. Itaque euenit vt duces generent & ſe ipſos, & aliud genus, quod apum eſt: apes aliud generent, id eſt, fucos: ipſi verò fuci non inſuper generent, ſed hoc ipſi priuentur. Cùm enim ſemper quod ſecundùm naturam eſt, ordinem habeat, ideo fucos ea quoque facultate priuari vt aliud generent, neceſſe eſt. Et quidem ita hoc euenire videmus. Ipſi enim generantur, nihil verò aliud generant, ſed in ternario numero finem generatio recipit. Atque adeò bene inſtitutũ eſt à natura vt ſemper hæc genera ſeruentur,

A & nullum deficiat, quanquam non omnia generent. Ratione illud etiam euenit, vt annis proſperis copia mellis proueniat, & fucorum; imbribus verò crebris fœtus omnino ſuperet. Humor enim facit plus excrementi in corporibus ducum. Anni verò temperies facit hoc idem in apibus. Cùm enim corpore ſint minore, temperiem magis deſiderant. Rectè etiam reges manent immunes omni negotio neceſſario, quaſi nati ad ſobolis procreationem. Magnitudine item præſtant, quaſi ad prolem generandam corpus eorum ſit inſtitutum. Conuenit & fucos otioſos inertéſque eſſe, cùm nulla habeant arma, B quibus de cibo poſſint dimicare. Cúmque pigritia tarditatéque corporis degenerent, apes medium inter reges & fucos tenent. Ita enim vtiles ad negotia, officioſæque operariæ eſſe poſſunt, vtque & filios alant, & parentes. Quin & ſequi ſuos reges, vt faciunt, conſentaneum eſt rationi, qua generationem apum à regibus proficiſci ſtatuimus. (Nam niſi tale quid eſſet, ratione carerent ea quæ aguntur in earum imperio.) Atque etiam regibus concedere nihil laboris ſuſcipere, vt parentibus: fucos verò caſtigare, vt filios. Iuſtiùs enim filij caſtigantur, & quorum negotium nullum eſt. Apes autem multas à ducibus ipſis pau- C cis generari, ſimile videtur leonum generationi: qui cùm primum quinque numero genuerint, mox pauciores generant, poſtremóque vnum, tum deinde nullum. Nam & apum duces primùm multitudinem generant, mox ſeſe paucos, atque illarum fœtum minorem, ſuum verò auctiorem. Quod enim eorum numero natura ademerat, id magnitudini addidit. Generatio apum ita ſe habere videtur, tum ratione, tum etiam iis quę in earum genere euenire viſuntur. Non tamen ſatis adhuc explorata quæ eueniant, habemus. Quòd ſi quando ſatis cognita habebuntur, tunc ſenſui magis erit quàm rationi credendum. Rationi etiam fides adhibenda eſt, ſi, quæ demonſtrantur, conue- D niunt cum iis quæ ſenſu percipiuntur, rebus. Apes ſine coitu generare argumento illud etiam eſt, quòd fœtus exiguus admodum in cellulis faui cernitur, cùm inſecta, quæ, per coitum oriuntur, coëant diu, pariant breui, magnitudine ad ſpeciem vermis. Quod ad generationem cognatorum iis animalium pertinet, vt crabronum veſparúmque, ſimilis quodam modo ratio eſt: ſed defuit his locuples naturæ dotatio meritò. Nihil enim, vt apum genus, habent diuinitatis. Generant quippe matrices vocatæ, primóſque fauos confingunt. Generatione verò coeundo inter ſe funguntur. Viſus eſt enim ſæpe eorum coitus. Sed quotnam differentiis hæc genera aut inter ſe diſſideant, aut cum apibus, petendum eſt ex iis quæ per hiſtorias explicauimus. Atque de generatione inſectorum omnium dictum iam eſt.

CAPVT XI.

De generatione, & ortu teſtatorum animantium, quomodóque nonnulla plantarum generationi contigua ſint: déque teſtatorum incremento.

SEquitur vt de teſtatis diſſeramus. Generatio eorum quoque partim ſimilis, partim diſſimilis cæteris eſt. Idque euenit ratione: quippe cùm animalium comparatione, plantis; plantarum, animalibus aſſimulentur, ita, vt

ſemine gigni quodammodo velvt animalia videãtur: vt alio modo, non ſemine, & tum ſponte, tum ex ſe: aut alia ſponte, alia ex ſe oriri. Sed quoniam naturam proportione plantis reſpondentem hoc genus habeat, hinc teſta intectum, aut nullum in terra gignitur, aut paruum: quale genus limacum eſt, & ſi quid eiuſmodi aliud ſit, ſed rarum. At in mari, ſimilique humore multa & varia gignuntur. Genus plantarum contrà mari locisque huiuſcemodi paruum, & nullum ferè: in terra autem hæc omnia oriuntur. Habent enim naturam proportionalem, atque diſiunctam. Sed quanto vitalius humidum, quàm ſiccum, & aqua quàm terra, eſt, tanto natura teſtatorum, quàm plantarum, viuacior eſt. Nam aliàs eò quidem ſpectant, vt ſicvt plantæ ad terram, ſic teſtata ad humorem ſe habeant, quaſi plantæ oſtrea terrena, oſtrea plantæ aquatiles ſint. Hinc etiam fit vt multiformiora ſint, quæ in humore gignuntur, quàm quæ in terra. Humor enim naturam habet ad effingendum afformandúmque habiliorem, quàm terra: nec multo minùs corpulentam ea quæ potiſſimùm in mari habentur. Humor enim potulentus dulcis quidem, alumnúſque eſt. Sed tum minùs corpulentus, tum frigidus eſt. Quamobrem quæ ſanguine carent, nec natura calida ſunt, ea naſci in lacu non poſſunt: minùs etiam in ſalſis aquis, quæ ſint potulentiores, gignuntur, vt teſtata, vt mollia, vt cruſtata. Hæc enim omnia ſanguine vacant, & natura frigida ſunt. Sed ſtagnis marinis, & iuxta amnium oſtia gigni ſolent. Quærunt enim vnà teporem, & alimentum. Mare autem humidum, multóque corpulentius aqua potulenta eſt, atque etiam ſua natura calidum eſt, vt particeps omnium partium ſit, videlicet humoris, aëris, terræ. Itaque omnia adipiſcuntur, quæ ſingulis his locis gignuntur. Plantas enim terræ *incolas* quiſpiam eſſe ſtatuerit: aquæ, aquatile animalium genus: aëris, pedeſtre. ſed quòd magis minúſve, & remotiùs aut propiùs res conſtet, magna miráque differentia exiſtit. Quartum genus non his locis quærendum eſt, quanquã aliquid eſſe exigit ordine ignis. Id enim quartum corpus enumeratur. Verùm ignis ſemper formam non propriam habere videtur, ſed in alio corpore. Aut enim aër, aut fumus, aut terra eſſe videtur quod ignitum eſt. Sed enim genus hoc apud Lunam quærendum eſt. hæc enim quartam illam diſtantiam adipiſci videtur. Sed de his aliàs. Natura teſtati generis conſiſtit, partim ſponte, partim aliqua ab ipſis emiſſa facultate: quanquam ſæpenumero ea quoque ſpontina oriantur conſtitutione. Sed generationes plantarum accepiſſe hóc loco congruit. Oriuntur enim earum aliæ ſemine, aliæ auulſione, nonnullæ etiam ſobole, vt cæpe. Hoc igitur tertio modo mituli gignuntur: quippe qui minores ſubinde iuxta principium adnaſcuntur. Buccina, & purpuræ, & quæ fauatæ dicuntur, quaſi à ſeminali natura humores quoſdam mucoſos emittunt. Semen verò nullum eſſe eorũ putandum eſt, ſed quo diximus modo, plantis aſſimilantur. Quãobrem larga eorum copia prouenit, cùm primùm conſtiterit aliquid. Hæc enim omnia vel ſponte vt oriantur, euenit. Itaque ratione tunc magis, cùm origo præceſſerit, conſiſtunt. Aliquid enim excrementi ſingulis proficiſci credendum meritò eſt ab eo principio, cui ſoboles quæque adnaſcitur.

A Ἔστιν μὲν τινά, ἀπὸ σπέρματος φαίνεσθαι γινόμενα, ἔστιν δὲ ἄλλον οὐκ ἀπὸ σπέρματος· καὶ τῇ μὲν, αὐτόματα· τῇ δ', ὑφ' αὐτῶν ἢ τὰ μὲν οὕτως, τὰ δ' ἐκείνως. διὰ δὲ τὸ τοῖς φυτοῖς ἀντίστροφον ἔχειν τὴν φύσιν, διὰ τοῦτο ἐν μὲν τῇ γῇ τῶν ὀστρακοδέρμων οὐδὲν, ἢ μικρὸν γένος, οἷον τὸ τῶν κοχλιῶν, κἂν ἤ τι τοιοῦτον ἕτερον μὲν, σπάνιον δέ· ἐν δὲ τῇ θαλάττῃ καὶ τοῖς ὁμοίοις ὑγροῖς, πολλὰ καὶ παντοδαπὴν ἔχοντα μορφήν. τὸ δὲ τῶν φυτῶν γένος, ἐν μὲν τῇ θαλάττῃ καὶ τοῖς τοιούτοις, μικρὸν καὶ πάμπαν (ὡς εἰπεῖν) οὐδέν· ἐν δὲ τῇ γῇ τὰ τοιαῦτα γίγνεται πάντα. τὴν γὰρ φύσιν ἀνάλογον ἔχει καὶ διέστηκεν. ὅσῳ δὲ ζω- B τικώτερον τὸ ὑγρὸν τοῦ ξηροῦ, καὶ γῆς ὕδωρ, τοσούτῳ ἡ τῶν ὀστρακοδέρμων φύσις τῆς τῶν φυτῶν· ἐπεὶ βούλεταί γε ὡς τὰ φυτὰ πρὸς τὴν γῆν, οὕτως ἔχειν τὰ ὀστρακόδερμα πρὸς τὸ ὑγρόν· ὡς ὄντα τὰ μὲν φυτά, ὡσπερανεὶ ὄστρεα χερσαῖα· τὰ δὲ ὄστρεα, ὡσπερανεὶ φυτὰ ἔνυδρα. διὰ τοιαύτην δ' αἰτίαν καὶ πολύμορφα τὰ ἐν τῷ ὑγρῷ μᾶλλόν ἐστι τῶν ἐν τῇ γῇ· τό, τε γὰρ ὑγρὸν εὐπλαστοτέραν ἔχει τὴν φύσιν τῆς γῆς καὶ σωματικήν. οὐ πολλῷ δ' ἧττον καὶ μάλιστα ἐν τῇ θαλάττῃ ταῦτα. τὸ μὲν γὰρ πότιμον, γλυκὺ μὲν καὶ τρόφιμον, ἧττον δὲ σωματῶδες, καὶ ψυχρόν ἐστι. διόπερ ὅσα ἄναιμα καὶ μὴ θερμὰ τὴν φύ- C σιν, οὐ γίνονται ἐν ταῖς λίμναις, οὐδὲ τῶν ἁλμυρῶν ἐν τοῖς ποτιμωτέροις, ἀλλ' ἧττον οἷον τὰ ὀστρακόδερμα, καὶ τὰ μαλάκια, καὶ τὰ μαλακόστρακα (πάντα γὰρ ἄναιμα καὶ ψυχρὰ ταῦτα τὴν φύσιν ἐστίν) ἐν δὲ ταῖς λιμνοθαλάτταις καὶ πρὸς ταῖς ἐκβολαῖς τῶν ποταμῶν γίνονται. ζητοῦσι γὰρ ἅμα τήν τε ἀλέαν καὶ τὴν τροφήν. ἡ δὲ θάλασσα ὑγρά τε καὶ σωματώδης πολλῷ μᾶλλον τοῦ ποτίμου, καὶ θερμὴ τὴν φύσιν ἐστί, καὶ κεκοινώνηκε πάντων τῶν μορίων, ὑγροῦ, καὶ πνεύματος, καὶ γῆς· ὥστε καὶ πάντων μετέχειν τῶν καθ' ἕκαστα γινομένων ἐν τοῖς τόποις τῶν ζώων. τὰ μὲν γὰρ φυτά, θείη τις ἂν γῆς· ὕδατος δὲ, τὰ ἔνυδρα· τὰ δὲ πεζά, ἀέρος. τὸ δὲ μᾶλλον καὶ ἧττον, καὶ ἐγ- D γύτερον καὶ πορρώτερον, πολλὴν ποιεῖ καὶ θαυμαστὴν διαφοράν. τὸ δὲ τέταρτον γένος οὐκ ἐπὶ τούτων δεῖ ζητεῖν (καίτοι βούλεταί γέ τι κατὰ τὴν τοῦ πυρὸς εἶναι τάξιν· τοῦτο γὰρ καὶ τέταρτον ἀριθμεῖται τῶν σωμάτων. ἀλλὰ τὸ μὲν πῦρ ἀεὶ φαίνεται, τὴν μορφὴν οὐκ ἰδίαν ἔχον, ἀλλ' ἐν ἑτέρῳ τῶν σωμάτων. ἢ γὰρ ἀὴρ ἢ καπνός, ἢ γῆ φαίνεται τὸ πεπυρωμένον) ἀλλὰ δεῖ τὸ τοιοῦτον γένος ζητεῖν ἐπὶ τῆς σελήνης. αὕτη γὰρ φαίνεται κοινωνοῦσα τῆς τετάρτης ἀποστάσεως. ἀλλὰ περὶ τούτων ἄλλος ἂν εἴη λόγος. ἡ δὲ τῶν ὀστρακοδέρμων συνίσταται φύσις, τῶν μὲν αὐτομάτως, ἐνίων δὲ προϊεμένων τινὰ δύναμιν ἀπ' αὐτῶν· πολλάκις δὲ γινομένων καὶ τούτων ἀπὸ συστάσεως αὐτομάτης. E δεῖ δὲ λαβεῖν τὰς γενέσεις τὰς τῶν φυτῶν. τούτων γὰρ γίνονται τὰ μὲν ἐκ σπέρματος, τὰ δ' ἀπὸ ἀποσπασμάτων ἀποφυτευομένων· ἔνια δὲ τῷ παραβλαστάνειν, οἷον τὸ τῶν κρομμύων γένος. τοῦτον μὲν οὖν οἱ μύες γίνονται τὸν τρόπον. παραφύονται γὰρ ἐλάττους ἀεὶ παρὰ τὴν ἀρχήν. κήρυκες δὲ καὶ πορφύραι καὶ τὰ λεγόμενα κηριάζειν, οἷον ἀπὸ σπερματικῆς φύσεως προΐενται μυξώδεις ὑγρότητας. σπέρμα δ' οὐδὲν τούτων δεῖ νομίζειν, ἀλλὰ κατὰ τὸν εἰρημένον τρόπον μετέχειν τῆς ὁμοιότητος τοῖς φυτοῖς. διὸ καὶ γίνεται πλῆθος τῶν τοιούτων, ὅταν ἅπαξ γένηταί τι. πάντα μὲν γὰρ καὶ αὐτόματα ταῦτα συμβαίνει γίνεσθαι, κατὰ λόγον δὲ καὶ προϋπαρξάντων συνίστασθαι μᾶλλον. παραγίγνεσθαι γάρ τι περίττωμα πρὸς ἑκάστῳ τῆς ἀρχῆς εὔλογον, ἀφ' ἧς παραβλαστάνει τῶν παραφυομένων ἕκαστον.

ἐπεὶ δὲ παραπλησίαν ἔχει τὴν δύναμιν ἡ τροφὴ καὶ τὸ ταύτης περίττωμα, τὴν κηριαζόντων ὁμοίαν εἰκὸς εἶναι τῇ ἐξ ἀρχῆς συστάσει οὐσίαν. διόπερ εὔλογον καὶ ἐκ ταύτης γίνεσθαι. ὅσα δὲ μὴ παραβλαστάνει, μηδὲ κηριάζει, τούτων ἡ γένεσις αὐτόματός ἐστι. πάντα δὲ τὰ συνιστάμενα τὸν τρόπον τοῦτον, καὶ ἐν γῇ καὶ ἐν ὑγρῷ διαφαίνεται γινόμενα μετὰ σήψεως, καὶ μιγνυμένου τοῦ ὀμβρίου ὕδατος. ἀποκρινομένου γὰρ τοῦ γλυκέος εἰς τὴν συνισταμένην ἀρχήν, τὸ περιττεῦον τοιαύτην λαμβάνει μορφήν. γίνεται δ' οὐθὲν σηπόμενον, ἀλλὰ πεττόμενον. ἡ δὲ σῆψις καὶ τὸ σαπρόν, περίττωμα τοῦ πεφθέντος ἐστίν. οὐδὲν γὰρ ἐκ παντὸς γίνεται, καθάπερ οὐδ' ἐν τοῖς ὑπὸ τῆς τέχνης δημιουργουμένοις. οὐδὲν γὰρ ἂν ἔδει ποιεῖν. νῦν δὲ τὸ μὲν ἡ τέχνη τῶν ἀχρήστων ἀφαιρεῖ· τὸ δέ, ἡ φύσις. γίνεται δ' ἐν γῇ καὶ ὑγρῷ τὰ ζῷα καὶ τὰ φυτά, διὰ τὸ ἐν γῇ μὲν ὕδωρ ὑπάρχειν, ἐν δ' ὕδατι πνεῦμα, ἐν δὲ τῷ παντὶ θερμότητα ψυχικήν· ὥστε τρόπον τινὰ πάντα ψυχῆς εἶναι πλήρη. διὸ συνίσταται ταχέως, ὁπόταν ἐμπεριληφθῇ. ἐμπεριλαμβάνεται δὲ καὶ γίνεται, θερμαινομένων τῶν σωματικῶν ὑγρῶν, οἷον ἀφρώδης πομφόλυξ.* ἡ μὲν οὖν διαφορὰ τοῦ τιμιώτερον εἶναι τὸ γένος καὶ ἀτιμότερον τὸ συνιστάμενον, ἐν τῇ περιλήψει τῆς ψυχικῆς ἀρχῆς ἐστί. τούτου δὲ καὶ οἱ τόποι αἴτιοι, καὶ τὸ σῶμα τὸ περιλαμβανόμενον. ἐν δὲ τῇ θαλάττῃ πολὺ τὸ γεῶδές ἐστι. διόπερ ἐκ τῆς τοιαύτης συστάσεως ἡ τῶν ὀστρακοδέρμων γίνεται φύσις, κύκλῳ μὲν τοῦ γεώδους σκληρυνομένου καὶ πηγνυμένου τὴν αὐτὴν πῆξιν τοῖς ὀστοῖς καὶ τοῖς κέρασι (πυρὶ γὰρ ἄτηκτα ταῦτ' ἐστίν) ἐντὸς δὲ περιλαμβανομένου τοῦ τὴν ζωὴν ἔχοντος σώματος. μόνον δὲ τῶν τοιούτων, συνδυαζόμενον ἑώραται τὸ τῶν κοχλιῶν γένος. εἰ δ' ἐκ τοῦ συνδυασμοῦ ἡ γένεσις αὐτῶν ἐστιν, ἢ μή, οὔπω ὦπται ἱκανῶς. ζητήσειε δ' ἄν τις βουλόμενος ὀρθῶς ζητεῖν, τί τὸ κατὰ τὴν ὑλικὴν ἀρχὴν συνιστάμενόν ἐστιν ἐν τοῖς τοιούτοις. ἐν μὲν γὰρ τοῖς θήλεσι, περίττωμά τι τοῦ ζῴου τοῦτ' ἐστίν, ὃ ἡ παρὰ τοῦ ἄρρενος ἀρχὴ κινοῦσα δυνάμει τοιοῦτον ὄν, οἷον ἀφ' οὗπερ * ἦλθεν, ἀποτελεῖ τὸ ζῷον. ἐνταῦθα δὲ * τί λέγειν τὸ τοιοῦτον, καὶ πόθεν, καὶ τίς ἡ κινοῦσα ἀρχὴ ἡ κατὰ τὸ ἄρρεν; δεῖ δὴ λαβεῖν ὅτι καὶ ἐν τοῖς ζῴοις τοῖς γεννῶσιν, ἐκ τῆς εἰσιούσης τροφῆς ἡ ἐν τῷ ζῴῳ θερμότης ἀποκρίνουσα καὶ συμπέττουσα ποιεῖ τὸ περίττωμα, τὴν ἀρχὴν τοῦ κυήματος. ὁμοίως δὲ καὶ ἐν φυτοῖς· πλὴν ἐν μὲν τούτοις καὶ ἔν τισι τῶν ζῴων, οὐδὲν προσδεῖται τῆς τοῦ ἄρρενος ἀρχῆς. ἔχει γὰρ ἐν αὐτοῖς μεμιγμένην. τὸ δὲ τῶν πλείστων ζῴων περίττωμα προσδεῖται. τροφὴ δ' ἐστὶ τοῖς μέν, ὕδωρ καὶ γῆ· τοῖς δέ, τὰ ἐκ τούτων. ὥσθ' ὅπερ ἡ ἐν τοῖς ζῴοις θερμότης ἐκ τῆς τροφῆς ἀπεργάζεται, τοῦθ' ἡ τῆς ὥρας ἐν τῷ περιέχοντι θερμότης, ἐκ θαλάττης καὶ γῆς συγκρίνει πέττουσα καὶ συνίστησι. τὸ δ' ἐναπολαμβανόμενον ἢ ἀποκρινόμενον ἐν τῷ πνεύματι τῆς ψυχικῆς ἀρχῆς, κύημα ποιεῖ καὶ κίνησιν ἐντίθησιν. ἡ μὲν οὖν τῶν φυτῶν τῶν ἀπὸ ταὐτομάτου γινομένων σύστασις, ὁμοειδής ἐστιν. ἔκ τινος γὰρ μορίου γίνεται· καὶ τὸ μὲν ἀρχή, τὸ δὲ τροφὴ γίνεται ἡ πρώτη τοῖς ἐκφυομένοις. τὰ δὲ τῶν ζῴων σκωληκοτοκεῖται τά τε τῶν ἀναίμων· οἷον γένος τι κεστρέων, καὶ ἄλλων ποταμίων ἰχθύων· ἔτι δὲ τὸ τῶν ἐγχέλεων γένος,

A Sed cùm ſimilem habeant facultatem cibus excrementúmque cibi, fauantium ſubſtantiam ſimilem eſſe conſtitutioni primæ conſentaneum eſt: quapropter excremento hoc gigni probabile eſt. Quæ autem vel ſobolem nullam procreant vel non fauant, eorum omnium ortus ſpontaneus eſt. Omnia verò, quæ hoc modo conſiſtunt, aut in terra aut in aqua cum putredine gigni videntur, & imbre admiſſo. Cùm enim dulce in principium conſtituendum ſecernitur, quod ſupereſt talem accipit formam. Nihil autem gignitur putreſcens, ſed concoctum. Putredo verò, & putridum excrementum rei concoctæ eſt. Nihil enim ex toto efficitur, quomodo neque in iis quæ ab
B arte conduntur. Nam niſi ita eſſet, facere non requireretur. Sed quantum inutile eſt, id aut à natura, aut ab arte detrahitur. Generantur autem in terra humoréque animalia, & plantæ, quoniam humor in terra, ſpiritus in humore, calor animalis in vniuerſo ineſt, ita vt quodam modo plena ſint animæ omnia. Quamobrem conſiſtunt celeriter, cùm calor ille comprehenſus ſiue exceptus eſt. Comprehenditur autem, & humoribus corporeis incaleſcentibus efficitur velut bulla ſpumoſa. Sed differentia nobilioris ignobilioriſve generis conſtituendi in comprehenſione principij animalis eſt. Huius autem rei cauſam, & loca habent, &
C corpus, quod comprehenditur. In mari verò multum portionis terrenæ eſt. Quocirca ex tali concretione natura teſtati generis oritur, ita vt pars terrena circiter dureſcat, cogatúrque eodem modo, quo oſſa, & cornua, (ſunt enim hæc illiquabilia igne) corpus intus contineatur, quod vitam obtinet. Vnum ex his genus cochlearum coire perſpectum eſt. Sed an ortus earum per coitum ſit, nécne, nondum exploratum ſatis habetur. Sed enim *quæret* quiſpiam rectè, quidnam in his ſit, *quod ſecundùm materiale principium* conſiſtat: nam in fœminis excrementum quoddam animalis hoc eſt, quod principium genitale à mare profectum mouens potentia ta-
D le, quale id eſt de quo venit, animal efficit. At in his, quidnam hoc eſſe dicendum ſit, & vnde, & quod principium genitale ſecundùm marem? Ponendum igitur, in animalibus generantibus, calorem in animali contentum, ſecernendo ex cibo ingeſto, & concoquendo facere excrementum quod conceptus principium ſit. Nec ſecus in plantis, niſi quod in iis, & quibuſdam animalibus, nihilo maris principium deſideratur. Habent enim hoc intra ſe miſtum. At plurimorum animalium excrementum illo principio eget. Alimentum autem aliis aqua, aliis terra, aliis quod ex iis conſtet. Itaque quod calor in ani-
E malibus contentus ex alimento efficit, hoc temporis calor in aëre ambiente contentus, ex mari aut terra concernit concoquens, atque conſtituit. Quod autem comprehenditur exceptum in ſpiritu animali, id conceptum facit, motúmque imponit. Conſtitutio igitur plantarum, quæ ſponte oriuntur, ſimilis eſt. Quædam enim ex parte contrahitur, & alterum eius partis principium genitale, alterum alimentum fit primùm iis quæ oriuntur. At verò animalia quædam verme naſcuntur, tum exanguia, quæ non ab animalibus gignuntur, tum etiam ſanguinea, vt mugilum genus quoddam, & aliorum fluuiatilium piſcium: ad hæc, anguillarum genus.

A Hæc enim omnia, quamuis naturam parum ſanguineam habeant, tamen ſanguinea ſunt, & cor obtinent: quod principium ſanguinarium corporis eſt. Quæ autem inteſtina terræ vocantur, vermis habent naturam, in quibus corpus anguillarum conſiſtit. Quamobrem de prima hominum atque quadrupedum generatione, ſi quando primùm terrigenæ oriebantur, vt aliqui dicunt, non temere exiſtimaueris altero de duobus his modo oriri. Aut enim ex verme conſtituto primùm, aut ex ouo: quippe cùm aut intra ſe habeant cibum ad incrementum neceſſe ſit, qui quidem conceptus vermis eſt: aut aliunde accipere, idque aut ex parente, aut ex parte conceptus. Itaque ſi alterum fieri non poteſt, vt affluat ex terra, quomodo cæteris animalibus ex parente, relinquitur neceſſariò, vt ex parte conceptus recipiatur. Talem autem generationem eſſe ex ouo aut verme fatemur. Ergo ſi initium vllum generationis omnium animalium fuit, alterutrum de his fuiſſe probabile eſſe apertum eſt. Sed minus rationis eſt, vt ex ouo prodierint: nullius enim generationem animalem talem videmus, ſed alteram tum ſanguineorum, quæ diximus: tum exanguium, qualia ſunt inſectorum nonnulla, & ea quæ teſta operiuntur, de quibus agitur. Non enim ex parte aliqua oriuntur, vt ea quæ ouo naſcuntur. Incrementum etiam ſimiliter, vt vermes, capeſſunt. Vermes enim augentur in partem ſuperiorem, & qua principium continetur. Alimentum enim ſuperius ab inferioribus miniſtratur. Atque id quidem commune cum iis quæ ex ouo proueniunt, habetur: ſed illa totam materiam abſumunt. In iis verò quæ ex verme gignuntur, cùm ex conſtitutione in parte inferiore contenta pars ſuperior creuerit, mox & reliquo alimento inferiore articulatur. Cuius rei cauſa eſt, quòd cibus poſtea quoque in parte ſepto ſubiecta conficitur omnibus. Incrementum autem hoc modo fieri vermium, apertum in apibus cæteriſque ſimilibus eſt. Principio enim partem inferiorem magnam, ſuperiorem habent minorem. Idem augeſcendi modus in teſtatis etiam eſt. Quod & ipſum conſtat in genere turbinato, ſcilicet anfractibus eius, qui ſubinde accreſcentes plures efficiuntur in partem priorem quod caput vocatur. Dixi ferè quemadmodum generatio, tum eorum tum cæterorum ſponte orientium agitur. Omne autem genus teſtatum ſponte inſtitui, apertum hinc eſt, quòd nauigiis putreſcente fæce ſpumoſa adnaſcuntur, & locis multis, vbi nihil tale aderat antè, pòſt per inopiam humoris facto cœno oſtreæ prouenerunt: vt apud Rhodum inſulam, cùm claſſis applicuiſſet, & fictilia proiecta eſſent in mare, tempore pòſt cœno obducto teſtis oſtreæ in iis reperiebantur. Nihil autem partis genitalis emitti ab iis argumentum eſt, quòd cùm Chij quidam ex Pyrrha Lesbi inſulæ oſtreas viuas portaſſent, & in loca quædam maris reciproci æſtus, & luto ſimilia dimiſiſſent, plures nihilo fuere temporis ſpatio, quanquam incremento corporis plurimum profecerunt. Quæ autem oua appellantur, nihil ad generationem conferunt, ſed indicio ſunt nutricationis melioris, quale in ſanguineis pingue eſt. Quamobrem ſapore per id tempus præſtant, ciboque laudantur: argumento, quòd & pinnæ, & buccina,

ARISTOTELIS STAGIRITÆ DE ANIMALIVM GENERATIONE Liber quartus.

CAPVT I.

Democritum, Empedoclem, & nonnullos alios non rectè de maris & fœmina generatione ſenſiſſe.

C DE generatione animalium omniũ, tum vniuerſim tum ſingulatim dictum iam eſt. Sed cùm in eorum perfectiſſimis mas & fœmina diſtinctè habeantur, eáſque facultates, omnium animalium & plantarum eſſe principia fateamur, quanquam in aliis indiſcretas, in aliis diſcretas, diſſerendum hic eſt primò de eorũ ipſorum generatione. Imperfectis enim adhuc ſuo in genere diſtinguitur ſexus maris & fœminæ. Sed vtrũ priùs etiam quã hæc differentia ſenſu noſtro percipi poſſit, alterum mas, alterum fœmina ſit, diſcrimine facto in vtero, an pòſt, ambigitur. Alij enim protinus in ſe-D minibus hanc eſſe contrarietatem aiunt, vt Anaxagoras, & alij naturales authores. Etenim ſemen gigni ex mare, fœminam autem locum præbere: marem, à parte dextra; fœminam, ſiniſtra, proficiſci: & vteri latere dextro marem contineri; fœminam, ſiniſtro. Alij verò matri id adſcribunt, vt Empedocles. Quæ enim vterum ſubierint calidum, hæc effici mares arbitratur: quæ frigidum, fœminas. Caliditatis verò frigiditatiſve cauſam eſſe confluuium menſtruorum, quòd frigidius vel calidius ſit, & aut antiquius aut recentius. Democritus Abderites differentiam maris ac fœminæ fieri quidem in E matre ait, ſed non caliditate frigiditatéve, alterum effici marem, alterum fœminam: ſed vtrius tandem ſemen euicerit, quod ab ea prodiiſſet parte, qua mas & fœmina inter ſe differunt. Hoc enim Empedocles profectò negligentiùs opinatus eſt, vt caliditate frigiditatéque tantùm differre hęc inter ſe exiſtimaret, cùm partes ipſas genitaleſ & vterum magnam habere differentiam cerneret. Nam ſi poſteaquam formata ſunt animalia, alterum, partibus fœminæ omnibus; alterum, maris, conſtitutum, mox in vtero, tanquàm fornace, ponantur, quod vterum habet, in calido, quod non habet, in frigido: erit fœmina, quod vtero caret; mas, quod vterum habet. Quæ res impoſſibilis eſt. Itaque catenus quidem meliùs à Democrito dicitur.

Quærit enim ille differentiam huius generationis, & reddere conatur: ſed an bene nécne, id aliò pertinet. Tum etiam ſi caliditas & frigiditas cauſæ ſint, vt partes hæ differant, hoc explicare debuerunt, qui ita volunt. Hoc enim ferè eſt docere de generatione maris ac fœminæ. His enim partibus planè differunt. Nec parum negotij eſt, cauſam generationis earum partium ab illo principio ducere, cùm neceſſe ſit ita ſequi, vt ſi animal refrigeratur, pars efficiatur ea quam vterum appellâmus: ſi caleſcit, non hæc efficiatur. Eodémque modo de iis partibus quæ ad coitum accommodantur. Nam eæ differunt inter ſe, vt antè expoſitum eſt. Ad hæc ſæpenumero euenit vt eadem in parte vteri, gemini mas & fœmina generentur: idque ſatis inſpeximus in diſſectionibus animalium viuiparorum, tum pedeſtrium, tum etiam piſcium. Quæ ſi non ille conſpexerat, meritò errabat, cùm eam adferret cauſam. Sed ſi cùm hæc explorata habuiſſet, ita ſenſit, abſurdum ſanè eſt, quòd inſuper putarit cauſam vteri eſſe caliditatem aut frigiditatem. Ambo enim ſemper aut mares aut fœminæ efficerentur: quod non ita euenire videmus. Item cùm partes eius quod gignitur, diſcerptas eſſe fateatur, (partim enim in mare partim in fœmina eſſe putat, ideóque alterum coire cum altero concupiſcere) magnitudinem earum quoque partium eſſe diuiſam, velléque coniungi neceſſe eſt, non refrigeratione calefactionéve ita inſtitui. Sed ſeminis huiuſmodi cauſæ complura fortaſſe obiici poſſunt: modus enim hic cauſæ figmento ſimilis eſt omnino. Cæterùm ſi ratio ſeminis ita ſe habet, vt explicatum à nobis eſt, & neque ex omni corporis parte decedit, neque materiam vllam iis quæ gignuntur, præbet, quod proficiſcitur à mare, iam & ei, & Democrito, & ſi quis alius ita cenſet, occurrendum ſimili modo eſt. Nec enim diſcerptum eſſe poteſt ſeminis corpus, vt partim in fœmina ſit, partim in mare, vt Empedocles cenſet, cùm dicat,

Sed diſcerpta gerunt, mas ipſe & fœmina membra:

neque totum ipſum ex vtroque decedens, quia pars aliqua partem aliam vicerit, ideo efficitur mas, aut fœmina, quanquam omnino meliùs partis exuperantia fœminam aut marem effici dixerit, quàm per incuriam calori aut frigori tantùm cauſam tribuat. Sed cur formam etiam genitalis diuerſam eſſe vnà eueniat, cauſa reddenda eſt, vt hæc ſemper viciſſim conſequantur. Nam ſi quoniam iuxta ſunt, ita fit, reliquæ etiam quæque partes conſequi debuerunt: ſunt enim inter eas, quæ ſuperant, aliæ aliis propinquæ. Itaque ſimul & fœmina eſſet, & matri ſimile: aut mas, & ſimile patri. Abſurdum etiam tantùm eas effici partes oportere, nec totum corpus mutari exiſtimare, & præcipuè, primóque venas, quibus, velvti deſcriptione deductis, corpus adiacet carnium, quas ſuam recipere qualitatem propter vterum, nulla probabili ratione dici poteſt: ſed potiùs vterum propter eas ſuam recipere qualitatem ratio eſt. Quanquam enim vtrumque ſanguinis conceptaculum eſt, tamen venæ ſunt priùs. Principium autem mouens prius eſſe ſemper, & cauſam generationis aliqua ſui qualitate neceſſe eſt. Accidit igitur differentia earum partium inter ſe fœminæ & mari. Nec id eſſe principium, neque cauſam eſſe hanc arbitrandum,

A ſed aliam, etiam ſi nullum ſemen vel à mare vel à fœmina decedit, ſed quolibet modo conſiſtit, quod gignitur. Quin etiam contra eos qui marem à dextra, fœminam à læua parte proficiſci aiũt, eadem ratio ſufficit, quæ contra Empedoclem & Democritum. Siue enim nulla materia à mare affertur, ſiue aliqua affertur, vt quidam volunt, nihil dicunt qui ita cenſent. Necnon Empedoclis ſententiæ pari ratione occurrendum eſt, qui marem à fœmina diſtinguit caliditate vteri, & frigiditate. Quod illi etiam faciunt, qui dextris ſiniſtriſque rationem deſcribunt, quanquam videant marem & fœminam inter ſe differre, & parte, & toto. Sed cur ſiniſtris corpus vteri adiungatur,
B dextris nequaquam? Nam ſi fœtus eò venerit, nec eam ipſam habuerit partem, fœmina erit ſine vtero, & mas erit cum vtero, ſi ita fors tulerit. Item, vt antè retulimus, & fœmina parte vteri dextra contineri viſa eſt, & mas læua: & ambo eadem in parte, idque non ſemel, ſed ſæpius quàm aut mas in dextra, aut fœmina in læua, nec minùs ambo in dextra gignuntur. Atque etiam cùm gemini, mas & fœmina geſtarentur, marem in læua, fœminam in dextra contineri, perſpectum eſt. Proximè quia aliqui perſuaſi dicunt, teſte præligato dextro, aut ſiniſtro, euenire per coitum, vt mas aut fœmina generetur: ſic enim & Leophanes dicebat. Tum etiam excĩſis
C alterum teſtem, hoc idem accidere quidam aiunt, non verè: ſed rem coniectantur futuram ex conſentaneis, atque anticipant, quaſi ita ſit, priùs quàm ita fieri videant. Ignorant etiam, nihil ad generationem maris aut fœminæ conferri ab iis partibus. Cuius rei indicium, quòd multa animalia & ipſa mares ac fœminæ ſunt, & generant partim fœminas, partim mares, cùm tamen teſtes non habeant: velvt ea quæ pedibus carent: *Verbi gratia, genus piſcium & ſerpentum.* Cauſam verò maris & fœminæ, caliditatem frigiditatémve arbitrari, ſecernique de dextris aut de ſiniſtris, non ſine vlla ratione dici poteſt. Sunt enim partes corporis dextræ calidiores ſiniſtris, &
D ſemen concoctum calidius eſt, quale id quod ſpiſſum eſt, fœcundius autem quod ſpiſſius eſt. Sed valde à longè tangitur cauſa, cùm ita affertur. Accedendum autem ſemper ad rei cauſas primas, quoad maximè fieri poteſt, propiùs. De corpore igitur toto, & de partibus, quid quęque ſit, & qua de cauſa, iam antè explicatum alibi eſt. Sed cùm mas & fœmina potentia quadam & impotentia definiantur (quod enim poteſt concoquere, & conſtituere, & ſecernere ſemen, atque principium obtinet formæ, id mas eſt. Principium autem non hoc dico, ex quo vt materia tale gignitur, quale, quod generat, eſt: ſed id quod primum moueat, ſiue in ſe ipſo, ſiue in altero poſſit hoc facere: quod autem recipit, nec poteſt conſtituere, & ſecernere, id fœmina eſt.) Item,
E ſi omnis concoctio calore efficitur, mares quàm fœminas, eſſe calidiores neceſſe eſt. Ob frigiditatem enim & impotentiam fœmina ſanguine abundat quibuſdam ſui corporis locis. Idque indicium facit contra quam aliqui afferunt cauſam, cùm fœminam eſſe mare calidiorem opinentur, ob menſtruorum emiſſionem.

Sanguis

Sanguis enim calidus eſt, & quod plus ſanguinis habet, hoc calidius eſt. Putant autem hunc affe-ctum moueri abundãtia ſanguinis, & caloris, quaſi æquè quoduis ſanguis eſſe poſſit, modò humidum ſit, & colore cruentum: nec ita eueniat, vt minus ſanguinis & ſyncerius fiat in corpore alimenti melioris, & habitus. Sed illi perinde ac excrementum alui, quod pluris ſit, hoc indicium eſſe naturæ calidioris magis, quàm quod minus, exiſtimant. Atqui contrà omnino eſt. Vt enim in fructibus conficiendis ex copia primi alimenti parum ſecernitur, quod vtile ſit, demúmque nulla pars remanet reſpectu copiæ primæ: ſic in corpore animalis, poſtquam partes per ſucceſſionem alimentum conficiendum receperunt: ad poſtremum parum admodum remanet ex toto alimento: quod in aliis ſanguis, in aliis proportionale ſanguinis eſt. Sed cùm alterum poteſt, alterum non poteſt ſecernere excrementum ſyncerum, omniſque facultas inſtrumentum aliquod ſibi accommodatum habet, & quæ melius & quæ deterius idem efficiat: fœmina autem, & mas, cùm multifariàm verba hæc, poſſe & non poſſe, dicantur, modo prædictoq ſibi opponuntur, inſtrumentum ob eam rem tum fœminæ tum mari tribui neceſſe eſt. Itaque alteri vterus, alteri coles datus eſt. Natura autem ſimul, & facultatem cuiuis dat, & inſtrumentum: ſic enim melius eſt. Quamobrem ſingula loca vnà cum ſingulis excrementis & facultatibus ſibi accommodatis inſtituuntur. Atque vt nec viſus ſine oculis, neque oculus ſine viſu perficitur, ſic & aluus & veſica ſimul atque excrementa fieri poſſunt, conditur. Sed cùm idem ſit, ex quo generentur, & augeantur, idque ſit alimentum, pars corporis quæque ex tali materia, talique excremento, qualis eſt capax, conſiſtet, & fiet. Gignitur item ex contrario quodam modo vnumquodque, vt nos cenſemus. Adhæc, tertium illud ſumendum eſt, vt quoniam omnis delatio in contrarium eſt, quod non ab eo ſuperatur, à quo conditur, ſiue creatur, id in contrarium mutari neceſſe ſit. His ita ſubiectis, apertius fortaſſe iam fuerit, qua de cauſa alterum mas, alterum fœmina fiat. Cùm enim principium non ſuperat, neque concoquere poteſt propter caloris inopiam, neque ducit in ſuam formam, ſed tantiſper ſuperatur, mutari in contrarium neceſſe eſt. Contrarium autem maris, fœmina eſt, videlicet, qua alterum mas, alterum fœmina eſt. Et cùm facultatis ſuæ virtutis differentiam habeat, inſtrumentum quoque habet auerſum: itaque in tale mutatur. Parte autem aliqua opportuna mutata, conſtitutio tota animalis multo diſcrepat forma. Licet hoc perſpicere in ſpadonibus, qui vna parte truncati iam à priſtina forma diſcedunt, parúmque à fœmina ſpecie diſtant. Cuius rei cauſa eſt, quòd partes nonnullæ principia ſunt. Principio autem mutato, multa ex iis quæ ſequuntur, commutari & dimoueri neceſſe eſt. Quòd ſi mas principium quoddam & cauſa eſt, máſque eſt quà aliquid poteſt, fœmina verò quà non poteſt, potentiæ autem & impotentiæ ratio ſic deſcribenda eſt, vt facultas aut adſit aut deſit concoquendi vltimi alimenti, quod in ſanguineis ſanguis appellatur, in exanguibus proportionale, eiúſque cauſa in principio, & parte, quæ originem naturalis caloris continet, ſita eſt, cor profectò in ſanguineis conſtitui,

A καὶ ἢ ἄρρεν ἔσεσθαι, ἢ θῆλυ τὸ γινόμενον. ἐν δὲ τοῖς ἄλλοις γένεσιν ὑπάρχει τὸ θῆλυ καὶ ἄρρεν τὸ τῇ καρδίᾳ ἀνάλογον. ἡ μὲν οὖν ἀρχὴ τοῦ θήλεος καὶ ἄρρενος, καὶ ἡ αἰτία, αὕτη, καὶ ἐν τούτῳ ἐστί. θῆλυ δ' ἤδη καὶ ἄρρεν ἐστὶν, ὅταν ἔχῃ καὶ τὰ μόρια, οἷς διαφέρει τὸ θῆλυ τοῦ ἄρρενος. οὐ γὰρ καθ' ὁποιονοῦν μέρος ἄρρεν οὐδὲ θῆλυ, ὥσπερ οὐδὲ ὁρῶν καὶ ἀκοῦον. ἀναλαβόντες δὲ πάλιν λέγομεν, ὅτι τὸ μὲν σπέρμα ὑπόκειται περίττωμα τροφῆς ὂν τὸ ἔσχατον. ἔσχατον δὲ λέγω, τὸ πρὸς ἕκαστον φερόμενον. διὸ καὶ ἔοικε τὸ γινόμενον τῷ γεννήσαντι. οὐδὲν γὰρ διαφέρει ἀφ' ἑκάστου τῶν μορίων ἀπελθεῖν, ἢ πρὸς ἕκαστον προσελθεῖν. ὀρθότερον δ' οὕτως. διαφέρει δὲ τὸ τοῦ ἄρρενος σπέρμα, ὅτι ἔχει ἀρχὴν ἐν αὐτῷ B τοιαύτην, οἵαν κινεῖν καὶ ἐν τῷ ζώῳ, καὶ διαπέττειν τὴν ἐσχάτην τροφήν. τὸ δὲ τοῦ θήλεος, ὕλην μόνον. κρατῆσαν μὲν οὖν, εἰς αὐτὸ ἄγει· κρατηθὲν δὲ, ἐπὶ τοὐναντίον μεταβάλλει, εἰς φθοράν. ἐναντίον δὲ τῷ ἄρρενι τὸ θῆλυ. θῆλυ δὲ, τῇ ἀπεψίᾳ καὶ τῇ ψυχρότητι τῆς αἱματικῆς τροφῆς. ἡ δὲ φύσις ἑκάστῳ τῶν περιττωμάτων ἀποδίδωσι τὸ δεκτικὸν μόριον. τὸ δὲ σπέρμα, περίττωμα. τοῦτο δὲ τοῖς μὲν θερμοτέροις καὶ ἄρρεσι τῶν ἐναίμων, ἐν ὄγκῳ τῷ πλήθει. διὸ τὰ δεκτικὰ μόρια πόροι ταύτης τῆς περιττώσεώς εἰσι τοῖς ἄρρεσι· ταῖς δὲ θηλείαις δι' ἀπεψίαν, C πλῆθος αἱματικόν. ἀκατέργαστον γάρ· ὥστε καὶ μόριον δεκτικὸν ἀναγκαῖον εἶναί τε τι, καὶ εἶναι τοῦτο ἀνόμοιον, καὶ μέγεθος ἔχειν. διὸ τῆς ὑστέρας τοιαύτη ἡ φύσις ἐστί. ταύτῃ τὸ θῆλυ διαφέρει τῷ μορίῳ τοῦ ἄρρενος. δι' ἣν τινα μὲν οὖν αἰτίαν γίνεται τὸ μὲν, ἄρρεν, τὸ δὲ, θῆλυ, εἴρηται.

& aut marem aut fœminam fieri, quod gignitur, neceſſe eſt. In cæteris verò generibus mas & fœmina eſt, quod proportionale cordis habeatur. Origo & cauſa fœminæ & maris hæc & in hoc eſt. Fœmina autem & mas iam eſt, cùm partes etiam habent, quibus fœmina differat à mare. Non enim quauis parte mas, aut fœmina eſt, quomodò nec videns, nec audiens. ſed repetendo dicimus. Item, ſemen excrementum eſſe vltimi alimenti, poſitum eſt. Vltimum autem id intelligo, quod in vnamquamque partem feratur. Quamobrem quod generatum eſt, ſimile ei quod generauit, eſt. Nihil enim refert ab vnaquaque parte proficiſcatur, an ad vnamquamque accedat. Sed rectiùs ita. Maris autem ſemen differt, quòd principium in ſe continet tale, quo moueat, & alimentum in animali vltimum concoquat: fœminæ ſemen materiam tantùm præbet. Quoties igitur ſemen ſuperat maris, ad ſe ducit: cùm ſuperatum eſt, in contrarium demutatur, hoc eſt, in corruptionem. Contrarium autem maris, fœmina eſt. Fœmina cruditate frigiditatéque ſanguinei alimenti deſcribitur. Natura verò excremento cuique dat conceptaculum. Semen autem excrementum eſt, quod in calidioribus atque maribus ſanguinei generis contractius eſt. Quapropter membra capientia eius excrementi meatus in maribus ſunt. At fœminis præ cruditate copia redundat ſanguinea: inconfectus enim inconcoctúſque ſanguis eſt. Itaque conceptaculum eius haberi neceſſe eſt, ídque diſſimile eſſe, & amplius. Quocirca natura vteri talis eſt, qua parte fœmina differt à mare. Expoſui cauſam, quamobrem alterum mas, alterum fœmina generetur.

CAPVT II.

Indicia quibus maris à fœminæ generatione generatio diſcernatur.

D INdicia verò faciunt res, quæ accidunt. Nouella enim & ſeneſcens ætas magis quàm florens, fœminas generat. In altera enim calor nondum perfectus eſt, in altera deficit. Humidiora etiam effœminatioráque corpora fœminam potiùs gignunt: & ſemina humida magis quàm ſpiſſa, hoc idem faciunt. Hæc enim omnia eueniunt caloris inopia naturalis. Flatibus item Aquiloniis magis quàm Auſtrinis, mares gignuntur. Fit etiam vt excrementis eiuſmodi corpora abundent. Plus autem excrementi concoctu difficilius eſt. Quamobrem maribus ſemen, mulieribus menſtrua decedunt humidiora. Tum etiam vt menſtrua ſecundùm naturam menſibus E decreſcentibus potiùs fiant, eadem de cauſa accidit. Tempus enim hoc menſis frigidius eſt, & humidius, propter Lunæ decrementum defectionémque. Sol enim per totum annum, hyemem atque æſtatem facit: at Luna per menſem id agit. Quod ita fit, non acceſſu diſceſſúque Lunæ, ſed alterum increſcente luce, alterum decreſcente. Necnon paſtores aiunt intereſſe ad maris ac fœminæ pecoris fœturam, non ſolùm ſi ita accidit, vt initus Aquilonijs Auſtriníſve flatibus fiat: ſed etiã ſi, cùm pecus coit, ſpectat ad Aquilonem, aut Auſtrum. Ita minimo interdum momento cauſa datur caliditatis aut frigiditatis.

Hæc verò cauſam complent generationis. Diſſident omnino inter ſe mas & fœmina, ob eas, quas diximus, cauſas, ad maris aut fœminæ generationem: ſed moderatione, quę intercedat, opus eſt. Nam omnia, quæ vel natura vel arte efficiuntur, ratione aliqua ſunt. Calor autem, ſi valde ſuperat, exiccat humorem: ſi multùm deficit, non concernit. Sed medij rationem ad rem condendam ſeruari requiritur. Alioqui, vt in iis quæ igne coquuntur, plus ignis deurit, minus non coquit, ac euenit vtrinque, ne quod agitur, perficiatur: ſic in coitu maris & fœminæ moderatione opus eſt. Hinc multis tum maribus tum fœminis euenit, vt coniuncti inter ſe nequeant generare, diſiuncti queant: & aut minoribus natu aut maioribus hæ contrarietates exiſtant, æquè in generatione ſterilitatéque, & maris fœminæque procreatione. Quin inter terras & aquas intereſt eiſdem de cauſis. Qualitatem enim quandam potiſſimùm recipit, & alimentum, & diſpoſitio corporis ex temperamento aëris continentis, & cibi ingredientis: ſed præcipuè ex alimonia aquæ. Huius enim vſus plurimus eſt, atque in omnibus aqua alimento eſt, etiam ſiccis. Quamobrem aquę crudæ, & frigidæ, aut ſterilitatem aut partum fœmineum faciunt.

CAPVT III.

Cauſæ, ob quas nati, vel parentibus, vel aliis ſint aut ſimiles aut diſſimiles.

EÆdem cauſæ ſunt, & vt alij parentibus ſimiles generentur, alij diſſimiles, & alij patri, alij matri, tum corpore toto, tum verò partibus ſingulis, & parentibus magis quàm maioribus ſuis, & iis potiùs quàm quibuslibet, ac mares potiùs patri, fœminæ matri, alij nulli conſanguineo ſimiles, ſed tamen homini ſimiles, alij ne homini quidem, ſed iam monſtro. Qui enim ſuis parentibus ſimilis non eſt, monſtrum quodammodo eſt. Diſceſſit enim in eo quodam modo natura ex proprio genere, cœpitque degenerare: ſed initium primum degenerandi eſt, fœminam generari, non marem. Verùm hoc neceſſarium eſt naturæ. Genus enim ſeruari oportet eorum quæ & fœmina & mare diſtinguuntur. Sed cùm fieri poſſit, ne aliquando ſemen ſuperet maris, aut ob ætatem iuuenilem ſenilémve, aut ob aliam eiuſmodi cauſam, fœminam ob eam rem gigni neceſſe eſt. At monſtrum gigni, non neceſſe eſt, ſcilicet ad cauſam, cuius gratia, & finem; quanquam per accidens neceſſe eſt. nam principium hinc ſumatur oportet. Quoties enim excrementum ſeminale bene concoctum in menſtruis eſt, motus maris agit pro ſua forma. Nihil enim refert genitura dicatur, an motus, id, quod partem corporis vnamquamque augeat. Nec intereſt, augentem motum an principio inſtituentem placeat appellare. Eadem namque ratio motus eſt. Itaque ſi ſuperat, faciet marem, non fœminam, & ſimilem ei qui generat, non matri: ſed ſi non ſuperat, pro ea qua non ſuperarit, facultate, defectum faciet. Facultatem autem hoc modo intelligi volo: Quod generat, non ſolùm mas eſt, ſed etiam talis mas, vt Coriſcus, aut Socrates: nec modò Coriſcus eſt, verùm etiam homo.

A Ad hunc modum alia propiùs alia remotiùs inſunt in eo quod generat, videlicet quà genitale eſt, non per accidens. Verbi gratia, ſi grammaticus aut vicinus cuiuſquam, qui generat, eſt. Valet autem ſemper in generando magis quod proprium & particulare eſt. Coriſcus enim, & homo & animal eſt: ſed propiùs à proprio diſtat homo, quàm animal. Generat autem & quod particulare eſt, & quod genus eſt: ſed magis quod particulare. Hoc enim ſubſtantia eſt. Quod enim gignitur, & ſi quale quid eſt, tamen hoc quicquam eſt, ídque ſubſtantia eſt. Quamobrem ex facultatibus inſunt in ſeminibus eiuſmodi omnium motus. B Maiorum etiam propria in nepotum ſemine inſunt potentia: ſed propinquius ſemper, quod particulare eſt. Particulare Coriſcum dico, & Socratem. Sed cùm omne, quod mutatur, non in quodlibet, verùm in ſibi oppoſitum tranſeat, ideo & quod in generatione non ſuperatur, tranſeat in oppoſitum, neceſſe eſt, prò ea facultate, qua non ſuperarit, quod generat, moueatq́ue. Quòd ſi quà eſt mas, non potuit, fœmina gignitur. Sed ſi quà eſt Coriſcus, aut Socrates, non patri ſed matri ſimile gignitur. Vt enim omnino patri mater opponitur, ſic ſingulis generantibus ſingulæ generantes opponuntur: ſimilique modo in ſequentibus facultatibus agitur. C Semper enim in ſequentem & proximum maiorum potiùs tranſitur, tam in patre quàm in matre. Inſunt autem motus alij actu alij potentia. Actu inſunt motus eius qui generat, & vniuerſalium, vt hominis, vt animalis. Potentia inſunt motus fœminæ, & maiorum, tam in patre quàm in matre. Mutatur igitur tranſiens in oppoſita. Motus autem qui creant, ſoluuntur in propinquos. Verbi gratia, motus eius qui generat, ſi ſoluatur, primùm *differentia minima in motum patris* tranſibit, mox in aui, atque deinceps ad hunc modum in cæteros ſimiles. In fœminis quoque tranſitus fit. Motus enim concipientis in motum ſoluitur matris: ſi non in eum, in auiæ: eo- D démque modo in ſuperiores. Sed potiſſimùm ita natura fert, vt quà mas & quà pater eſt, ſimul & ſuperet, & ſuperetur: parum enim diſcriminis eſt. Itaque vt ſimul vtrumque eueniat, nequaquam difficile eſt. Socrates enim vir talis quis eſt: quamobrem mares magna ex parte ſimiles patri exiſtunt, fœminæ matri. Simul enim in vtrumque diſceditur. Opponitur autem fœmina mari, mater patri: diſceſſúſque in oppoſita fit. Sed ſi motus, qui à mare eſt, ſuperarit, qui verò à Socrate eſt, non ſuperarit, aut hic ſuperarit, ille non: ita euenit vt mares ſimiles matri, fœminæ ſimiles patri generentur. Item, ſi motus ſoluantur, & quà mas eſt, ſeruetur, Socratis autem ſoluatur in patris, mas erit auo ſimilis, aut alicui cęterorum ſuperiorum E maiorum, provt ſolutio tetenderit. Sed ſi, quà eſt mas, ſuperetur, fœmina erit ſimilis potiſſimùm matri. Si autem & hic ſoluatur motus, matri aſſimilabitur matris, aut alicui ſuperiorum pari ratione. Idem modus partium quoque eſt. Sæpe enim aliæ patri ſimiles, aliæ matri, aliæ maiorum alicui ſimiles conſtituuntur. Inſunt enim & partium motus, alij actu, alij potentia, vt ſæpius diximus. Omnino ſubiicienda ſunt tria illa:

Vnum, quod modò dixi, motus ineſſe, alios potentia, alios actu. Alterum, degenerare in oppoſitum, quod ſuperatur. Tertium, tranſire in motum proximum id quod ſoluitur: & ſi minùs ſoluitur, in propinquum: ſi magis, in remotiorem diſcedere: demúmque ita confundi, vt nemini ſuorum ſimiles prodeant, ſed commune tantùm relinquatur, vt homo ſit. Cuius rei cauſa eſt, quòd commune particularia conſequitur omnia. Homo enim vniuerſale eſt: Socrates pater, & quæcunque eſt mater, particulare eſt. Cauſa, vt motus ſoluantur, eſt, quòd omne agens patitur etiam à patiente: vt quod ſecat, habetatur ab eo quod ſecatur: quod calefacit, refrigeratur à caleſcente. Denique quodcunque mouet, excepto primo, mutuo mouetur aliquo motu. Verbi gratia, quod pellit, pellitur quodam modo: quod premit, reprimitur. Interdum etiã ita fit vt quod agit, magis patiatur, quàm agat, & refrigeretur, quod calefacit, caleſcat, quod frigefacit, cùm aut nihil fecerit, aut minus quàm ipſum affectum eſt. Dixi de iis, cùm de ratione agendi patiendique docerem: videlicet quibus in rebus ineſſet agere & pati. Degenerat autem quod patitur, nec ſuperatur, aut defectu facultatis eius quod coquit, & mouet, aut copia frigiditatéque eius quod concoquitur, & diſtinguitur. Cùm enim partim ſuperet, partim non ſuperet, facit multiforme, quod conſtituitur: vt athletarum nonnullis per vſum cibi nimium accidit. Cùm enim per copiam paſtus natura nequeat ſuperare, vt proportione augeat, formámque ſeruet eandem, diuerſæ efficiuntur partes, & adeo interdum, vt nihilo ferè ſimiles primis euadant. Proximum huic eſt morbus, quem ſatyriam appellamus. Etenim in eo præ abundantia fluxionis, aut flatus crudi in partes faciei decumbentis, facies animalis diuerſi, & ſatyri apparet. Sed quam ob cauſam mares & fœminæ generentur, & alij parentibus ſimiles, fœminæ fœminis, mares maribus, alij è diuerſo, fœminæ patri, mares matri, denique alij maioribus ſuis ſimiles, alij ſuorum nemini ſimiles exiſtant, idque tum corpore toto tum partibus ſingulis, de iis, inquam, omnibus dictum iam eſt. Sententiæ autem aliorum etiam naturæ interpretum ſunt de iis rebus, ſcilicet quamobrem ſimiles parentibus generentur. Afferunt illi duplicem modum rationis: Nonnulli enim ita cenſent, vt ab vtrouis plus ſeminis venerit, ei ſimilis magis generetur, æquè toti totum, & parti pars, quaſi ex vnaquaque parte ſemen decedat: ſed ſi par de vtroque venerit, ſimilis neutri procreetur. Quod ſi falſum eſt, nec omni ex parte decedit, conſtat nec ſimilitudinis & diſſimilitudinis cauſam id eſſe, quod referunt. Tum etiam quemadmodum ſimul & fœmina ſit, & patri ſimilis, aut mas, & ſimilis matri, non facilè explanare poſſunt. Qui enim, vt Empedocles, aut Democritus, cauſam de mare & fœmina reddunt, impoſſibilia modo alio dicunt: ſed qui quod plus minúſve à mare, aut à fœmina receſſerit, alterum marem, alterum fœminam gigni cauſantur: ij nequeunt explicare quemadmodum fœmina patri ſimilis, mas ſimilis matri reddatur: ſimul enim plus de vtroque venire impoſſibile eſt. Ad hæc, cur ſimiles maioribus ſuis magna ex parte, remotiſq; generentur, cùm nihil ſeminis ab illis receſſerit,

A nihil profectò iſti, quod bene tueantur, habent: ſed qui reliquum ſimilitudinis modum afferunt, ij tum cætera tum verò hoc meliùs dicunt. Sunt enim qui ſemen genitale dicant, quamuis vnum, tamen velvti omnifariam quandam eſſe multorum ſeminum miſtionem. Itaque vt ſi quis multa ſaporum genera in eodem humore miſcuerit, móxque inde ſumat, poſſitque ſumere ſemper non tantundem ex vnoquoque, ſed modò huius, modò illius plus, aliàs etiam ex hoc ſumat, ex illo nihil ſumat: ſic in ſemine genitali eſſe, cùm ex multis ac variis miſtum ſit: à quocunque enim gignente acceſſerit plurimum, ei ſimilem forma generari. B Sed hæc ratio nec plana eſt, & paſſim fictitia eſt. Vult hęc non actu ſed potentia ineſſe, quam omnifariam ſeminis commiſtionem appellat. Et quidem ita dici melius eſt: illo enim modo impoſſibile eſt: hoc poſſibile eſt. Verùm qui ita cauſam reddunt, nullo modo rationem afferre de omnibus facilè poterunt, cur fœmina cur mas gignatur: quamobrem ſæpenumero fœmina patri ſimilis, mas matri proueniat. Atque etiam de maiorum ſimilitudine. Ad hæc, qua de cauſa interdum homo quidem, ſed nulli ſuorum ſimilis generetur: aliàs, vſqueadeo procedendo degeneret, vt demum ne homo quidem, ſed animal C tantùm aliquod exiſtat: quæ monſtra dicuntur. Proximum enim ab iis quæ iam explicauimus, eſt, vt cauſas de monſtris reddamus. Ad extremum enim, cùm motus ſoluantur, & materia non ſuperetur, remanet quod maximè eſt vniuerſale, id eſt, animal. Iam puerum ortum capite arietis, aut bouis, referunt. Idémque in cæteris membrum nominant animalis diuerſi. Vitulum capito pueri, & ouem capite bouis natam aſſeuerant. Quæ omnia accidunt quidem cauſis ſuprà dictis. Sed nihil ex iis quæ nominant, eſt, quamuis ſimilitudo quædam generatur. Quod euenit etiam non in monſtrum peruerſis. Quamobrem ſæpenumero per conuicium nonnulli deformes aſſi- D milantur, aut capræ ignem efflanti, aut arieti petulco. Phyſiognomon quidam omnes ad duorum aut trium animalium formas redigebat, & dicendo plerumque perſuadebat. Sed enim impoſſibile eſſe vt tale monſtrum gignatur, id eſt, alterum in altero animal, tempora ipſa grauiditatis declarant, quæ plurimùm diſcrepant in homine & cane, & in oue & boue. Naſci autem nullum, niſi ſuo tempore, poteſt. Partim igitur hoc modo dicuntur monſtra, partim quòd forma prodeant multimembri, ſcilicet multis pedibus, aut multis capitibus. Sed profectò rationes monſtrorum, & oblæſorum animalium propinquæ, & ſimiles inter ſe quodam modo ſunt. Monſtrum enim, oblæſio quædam eſt.

CAPVT IV.

Quas ob cauſas monſtroſa animalia generentur, & quare aliis vnifer, aliis paucifer, aliis multiplex ſit partus.

Democritus verò monſtra fieri ea cauſa ſcribit, quòd duo ſubeűt ſemina, alterum antè, alterum poſtea: quæ cűm in vtero confundantur, euenit vt membra coaleſcant atque diſſideant.

Auibus verò, quoniam coitus agitur crebrò, idcirco ſemper & oua & colorem euariare autumat. Sed ſi ita ſit, vt ex vno ſemine, eodémque coitu plura generentur, quod patet, præſtat nō circumire via omiſſa breui, & facili. Iis enim tum maximè id accidere neceſſe eſt, cū ſemina non diſtinguuntur, ſed ſimul ſubeūt. Quòd ſi ſemini maris cauſa ttibuenda eſt, hoc modo dicēdum ſit. Sed enim ex toto potiùs cauſam in materia, conſtituendiſque conceptibus eſſe cēſendum eſt. Quamobrem monſtra eiuſmodi raro admodum fiunt in iis quę ſingulos pariunt: ſed crebriùs in iis quorum partus eſt numeroſus, & præcipuè in auium genere, earúmque potiſſimùm in gallinis. Iis enim partus numeroſus, non modò quòd ſæpe pariant, vt columbæ, verumetiam quòd multos ſimul conceptus intra ſe continent, & temporibus omnibus coeūt. Hinc gemina etiam pariunt plura. Cohærēt enim conceptus, quoniam in propinquo alter alteri eſt, quomodo interdum fructus arborum complures. Quòd ſi vitella diſtinguuntur membrana, gemini pulli diſcreti ſine vlla ſuperuacua parte generantur. Sed ſi vitella continuantur, nec vlla interiecta membrana diſterminantur, pulli ex iis monſtrifici prodeunt, corpore, & capite vno, cruribus quaternis, alis totidem, quoniam ſuperiora ex albumine generentur, & priùs, (vitellum enim cibo iis eſt) pars autem inferior poſtea inſtitoitur, quanquam cibus idem indiſcretúſque ſuppeditatur. Iam ſerpens etiam biceps viſus eſt, videlicet eadem de cauſa. Nam id quoque genus oua parit, & multa numero. Sed rariùs in eo monſtri inſtitutio euenit, propter vteri formam. Porrecta enim in verſum copia ouorum continetur pro vteri longitudine. Nec verò in genere apum aut veſparum, tale quid accidit. Cellulis enim diſcretis partus earum continetur. At in gallinis è contrario fit. Vnde apertum eſt, cauſam euentorum huiuſmodi in materia eſſe putare oportere. Vt enim in iis quæ plura pariunt, magis: ſic in iis quæ pauciora, minùs id accidit. Quocirca homini minùs: ſingularem enim perfectúmque parit. Nam & homini, locis quibus mulieres præfœcundæ ſunt, magis id euenit, vt in terra Ægypto. Capris verò, & ouibus magis, vt fœcundioribus, accidit. Atque etiam magis multifidis. Multipara enim id genus animalia ſunt, nec partum perficiunt, vt canis. Cæcos enim magna eorū pars ſolet parere. Quod quam ob cauſam accidit, & quamobrem pariant multos, poſtea explicabimus. Sed enim hæc propenſiora iam ſunt ſuapte natura ad monſtrificam partionem, quando non ſimiles ſibi generant, ſed imperfectos. Nam & monſtrum, quid diſſimile eſt. Quamobrem iis quorum talis natura eſt, faciliùs caſus hic obuenit. In iis enim potiſſimùm, & quæ metachœra appellantur, conſiſtunt: quæ aliquatenus labe monſtrifica ſunt affecta. Nam deeſſe aut ſupereſſe quicquam, monſtroſum eſt. Monſtroſum eſt enim, res præter naturam: ſed præter eam, quæ magna ex parte fit. Nam præter eam, quæ ſemper & neceſſariò eſt, nihil fit. Verùm in rebus iis quæ magna quidem ex parte ita fiunt, ſed aliter etiam poſſunt fieri, euenit, quod pręter naturam conſiſtat. Nam & inter eas ipſas quibus accidit quidem pręter hunc ordinem, ſed nunquam quolibet modo, minùs monſtrum eſſe videtur: quoniam quod præter naturam ſit, idem etiam ſecundùm naturam quodam modo eſt,

A cùm naturam materiæ, natura formæ non ſuperat: quamobrem nec ea monſtri nomine appellantur, neque vbi fieri aliquid ſolet, vt in fructibus. Vitis enim quædam eſt, quam aliqui capneum vocant, quæ cùm vuam albam ſoleat ferre, ſi nigram tulit, monſtrum id eſſe non putant, quoniam ſæpiſſimè id facere ea ſoleat. Cauſa eſt, quòd ſua natura inter albam & nigram eſt. Itaque non longè diſceditur, nec præter naturam ferè. Non enim in aliam naturam tranſitur. At in iis quæ pariunt plura, tum ea ipſa eueniunt, tum verò copia partus impedit alter alterius perfectionem, & cauſam genitalem. De partu numeroſo, paucifero, & ſingulari, atque etiam B de iis partibus, quæ aut ſuperſunt, aut deſunt, quæſtio exiſtere poteſt. Gignuntur enim interdum alia pluribus, quàm iuſtum ſit, digitis: alia vno tantùm. Eodémque modo in cæteris partibus, aut excedunt, aut deficiunt. Nonnulla etiam duplici genitali, altero maris, altero fœminæ naſcuntur. Et in genere quidem hominum, ſed maximè in caprarum. Gignuntur enim, quas vocant hircinas, propterea quòd ſimul genitale habent & maris & fœminæ. Iam & cornu gerens in crure capra conſpecta eſt. Partibus etiam internis mutationes detrimentáque accidunt: vt vel careant aliquibus, vel habeant minuta, & læſa, vel plura numero: vel non ſuis poſita locis. C Sed corde carens nullum vnquam animal ortum eſt: quanquam liene carens: & duplicem habens lienem, & altero vacans rene, viſum eſt. Iecore etiam carens toto nullum notatum eſt: quanquam quod non totum haberet, iam patuit. Hæc autem in perfectis viuiſque reperiuntur. Felle item priuata prodierunt, cùm ſua natura habere deberent. Alia contrà, plura habuerunt. Iam locis etiam permutatis iecur latere ſiniſtro, *lien dextro contineri viſus eſt*. Hæc, vt modò dixi, in animalibus iam perfectis explorata ſunt: in naſcentibus autem variè perturbatur. Quæ ſi parum de ſua natura diſcedunt, viuere ſolent: ſi plus, viuere nequeunt; videlicet D cùm quod præter naturam eſt, partibus viuendi principalibus accidit. Modus verò conſiderandi de his eſt, vtrùm eandem cauſam putare oporteat partus ſingularis, & partium defectus: itémque partus numeroſi, & partium exceſſus, an non eandem. Primùm igitur quòd alia pariunt multa, alia vnum, meritò quiſpiam miretur. Quæ enim maxima inter animalia ſunt, ea ſingulos pariunt: vt elephas, camelus, equus, & reliquæ ſolipedes: quæ partim maiora cæteris ſunt, partim longè magnitudine ſuperant. Canis verò, & lupus, & reliqua multifida omnia ferè pariunt multa: atque etiam parua eiuſdem generis, vt mures. Biſulca pauca generant, præterquam E ſues: hæc enim inter multipara eſt enumeranda. Ratio enim probabilis eſt, vt maiora animalia plura generare, plúſque afferre ſeminis poſſint. Sed certè id ipſum quod admirari facit, cauſæ eſt ne admiremur. Facit enim eorum magnitudo, ne multa pariant. Cibus enim in iis abſumitur in corporis incrementum. Minoribus verò natura demendo de magnitudine, auget in excremento ſeminali exuperantiam. Item plus ſeminis genitalis eſſe, quod maioris eſt animalis, minus autem, quod minoris, neceſſe eſt. At multa effici parua in eodem poſſunt, multa magna effici difficile eſt.

A Mediocribus verò magnitudinis medium à natura datum eſt. Sed quamobrem animantium alia maiora ſunt, alia minora, alia mediocria, cauſam antè reddidimus. Sunt autem alia vnipara, alia paucipara, alia multipara. Et magna ex parte vnipara ſunt, quæ ſolipeda: paucipara, quæ biſulca: multipara, quæ multifida. Cuius rei cauſa eſt, quòd magna ex parte magnitudines corporis iis differentiis diſtinguuntur. Tamen non ita in omnibus eſt. Magnitudo enim & paruitudo corporis cauſam habent partus amplioris, & parcioris, non ſolipedis, aut multifidi, aut biſulci generis ratio. Cuius rei teſtimonium eſt, quòd elephas, animalium maximum, idémque multifidum eſt. Camelus biſulcum eſt, quod maximum inter B reliqua eſt. Nec ſolùm in pedeſtrium genere, ſed etiam in volatilium & nantium magna parum fœcunda ſunt, parua verò perquam fœcunda, eadem de cauſa. Plantæ etiam, non quæ maximæ ſunt, plurimum afferunt fructus. Diximus quamobrem alia parere multa, alia pauca ſua natura aſſolent. Sed huius quæſtionis illud maximè quis miretur in iis quæ pariunt multa, quòd plerumque vno initu animalia id genus impleri cernuntur. Semen autem maris, ſiue ad materiam confert, ſe adhibens partem conceptus, & miſcens cum ſemine fœminæ, ſiue non eo modo, ſed vt nos cenſemus, cogit conditque materiam contentam in vtero, fœminaléque fœminæ ex- C crementum, vt ſuccus lactis humorem ſpiſſat, cur tandem non vnum efficit animal incrementi maioris? vt ſuccus in lacte non certa quantitate ad cogendum deſcribitur: ſed quo plus lactis, plus ſucci ſubierit, eo plus coloſtri concreſcit. Semen igitur trahi à locis vteri, atque ob eam rem multa generari pro numero locorum, & acetabulorum, quæ vnum non ſunt, opinari nihil rationis eſt. Sæpe enim eodem in loco vteri gemini conſiſtunt. In genere etiam multiparo, cùm plenus fœtuum vterus fuerit, deinceps alius ab alio iacere cernuntur. Quod ex diſſectionibus patet. Sed vt perficiendi cuiuſque animalis certa eſt magnitudo, tum ad maius, tum D verò ad minus, quem terminum non ſupergrediuntur, vt vel maiora vel minora euadant, ſed in medio magnitudinis ſpatio exceſſum defectúmve inter ſe capiunt, atque ita homo alius alio auctior eſt, & cæterorum quoduis animalium: ſic materia ſeminalis, ex qua conſiſtunt, non indefinita eſt, nec in plus nec in minus, vt ex quantalibet poſſint generari. Quæ igitur animalia ea, quam diximus, cauſa plus excrementi ſecernunt, quàm ſatis ſit ad vnius animalis originem, iis fieri non poteſt vt ex eo toto vnum gignatur animal: ſed tot numero gigni neceſſe eſt, quot magnitudinibus debitis præſcripta ſunt. Nec verò maris ſemen, aut facultas contenta in E maris ſemine, plus quicquam aut minus conſtituit, quàm à natura ſancitum eſt. Eodémque modo, ſi plus ſeminis mas emiſerit, aut facultates plures in ſemine diuidendo contentas, nihilo maius efficiet, quamuis plurimum acceſſerit: imò contrarium aget: exiccando enim corrumpet. Neque enim ignis, quo plus fuerit, eo magis calefaciet aquam: ſed certus caloris terminus eſt, vltra quem ſi ignem augeas, nihilo reddes aquam calidiorem, ſed facies vt magis euaporetur, demúmque deleatur, & exſiccetur.

* γ. ὁποσονοῦν

A Cùm igitur hęc moderationem certam inter ſe requirant, ſcilicet excrementum fœminæ, & maris, qui ſemen emittant, multipara animalia ſtatim emittunt quod ſibi conueniat, videlicet mas quod diuiſum poſſit conſtituere plura: fœmina tantum vt plura conſtitui poſſint. Lactis autem illud exemplum ſimile non eſt. Seminis enim calor, non modò efficit quantum, ſed etiam quale quid. [illegible] ci & coaguli calor quantum duntaxat conſtituit. Cauſa igitur vt plures conceptus contrahantur, nec vnum continuum ex cunctis conſummetur in multiparis animalibus, hęc eſt, quòd non ex quantolibet conceptus inchoetur, ſed ſi aut pa- B rum aut multum admodum ſit, gigni non poterit. Præſcripta enim certáque eſt virtus & patientis & agentis. Simili modo in vniparis, magníſque animalibus, non multa ex multo excremento conſiſtunt, cùm in iis etiam ex certo quanto certum quantum, quod conficitur, ſit. Plus igitur materiæ talis non mittit, ea, quam prædiximus, cauſa. Quam autem mittit, talis per naturam eſt, ex qua vnus tantùm conceptus generetur. Quòd ſi aliquando plus acceſſerit, tum gemini naſcentur. Ex quo fit vt hæc portenta potiùs iudicentur, quoniam præter ſolitum, & quod magna ex parte agatur, proueniunt. Homo cum C omnibus generibus ambigit. Nam & vniparum, & pauciparum, & multiparum interdum eſt. Sed maximè ſua natura vniparum eſt. Humore profectò caloréque corporis multiparum eſt. Seminis enim natura humida, & calida eſt. Sed ſuæ magnitudinis ratione pauciparum atque vniparum eſt. Hinc tempus etiam vteri ferendi enorme vnum hoc animal ſortitum eſt. Cęteris enim vnum eſt tempus, homini verò plura ſunt, quippe cùm & ſeptimo menſe, & decimo naſcatur, atque etiam inter ſeptimum & decimum poſitis. Qui enim menſe octauo naſcuntur, etſi minùs, tamen viuere poſſunt. Cuius rei cauſa accipi ex iis quæ modò explicauimus, poteſt. Dixi de his D in Problematibus, atquę de his rebus ita diſſeruiſſe ſtatuiſſéque ſatis ſit. Partium autem ſuperuacuarum præter naturam eadem cauſa eſt, quæ geminorum generationis. Iam enim in conceptu cauſa accidit, videlicet ſi plus materiæ conſiſtit, quàm pro ipſius natura partis ſit. Sic enim accidit, vt vel pars maior, quàm iuſtum ſit, efficiatur. Verbi gratia, digitus, aut manus, aut pes, aut aliud ex cæteris poſtremis, aut membris: vel fiſſo conceptu plures reddantur, quomodo in fluuiis vertigines geminantur. Fit enim ibi, vt humor, qui fertur, & profluens mouetur, ſi in aliquid offenderit, ſecetur, & ex vna in duas euadat conſtitutiones, quæ eundem habeant E motum. Hoc eodem modo in conceptibus euenit. Adnaſcuntur partes illæ vacantes, maximè quidem propinquæ, ſed aliquando etiam remotæ propter conceptus motionem, quanquam præcipuè, quòd materiæ exuperantia ibi redditur, quò tandem decubuit: formam verò, vnde ſuperfuit, inde recipit. Quibus autem gemina habere genitalia accidit, alterum maris, alterum fœminæ, iis ſemper alterum ratum, alterum irritum redditur, cùm per alimentum ſubinde deliteſcat, quoniam præter naturam eſt. Agnatum eſt enim modo abſceſſus. Nam & abſceſſus aſſumunt aliquid nutrimenti, quamuis pòſt geniti ſint, & præter naturam.

Sed ſi quod creat, omnino aut ſuperat, aut ſuperatur, ſimilia oriuntur duo: ac ſi partim ſuperauit, partim ſuperatum eſt, alterum fœmina, alterum mas generatur. Nihil enim intereſt de partibus an de toto dicamus, videlicet quam ob cauſam alterum mas, alterum fœmina gignatur. Vbi autem partes eiuſmodi deſunt, vt poſtrema aliqua, aut alia quæuis membra, eandem cauſam eſſe putandum, quam, ſi omnino quod gignitur, abortum patiatur. Abortus autem conceptum euenire complures, certum eſt. Differunt agnationes à partu multiplici, quomodo expoſui. Monſtra verò cum iis diſſident, eo quòd pluribus coaleſcant. Sed nonnulla hoc etiam modo veniunt, ſi in parte maiore & præcipua quadam peruerſum eſt. Vt ſi qua gemino liene, aut pluribus renibus oriuntur, tum etiam locis partium commutatis, monſtrum dicimus. Quod diuerſione motuum, tranſlationéque materiæ accidit. Vnúmne, an plura ſit per coagmentationem, quod monſtrificum prodit animal, iudicandum eſt principij ratione. Verbi gratia, ſi cor pars eiuſmodi eſt, quod vnum cor habet, vnum animal eſt, quod duo, id duo eſt animalia, quæ ſibi coaluerunt propter conceptuum coniunctionem. Partes verò ſuperuacuas, agnationes eſſe, declaratum iam eſt. Accidit etiam ſæpe vt pluribus ex iis quæ antè oblæſa non viderentur, animalibus iam perfectis meatus aut adducti corporarentur, aut diuerterentur. Iam fœminis nonnullis os vteri compreſſum corporatúmque ab ineunte ætate ad tempus vſque menſtruorum perſeuerauit, mox vrgentibus menſtruis, doloréque infeſtante, aliis ſponte diſruptum eſt, aliis diſſectum à medicis. Nonnullæ interierunt, cùm aut per vim diſrumperetur, aut diſrumpi non poſſet. Pueris etiam quibuſdam genitalis poſtremum, & meatus, quà excrementum veſicæ tranſit, non eòdem tetenderunt, ſed infrà meatus ille tranſegit. Quamobrem demiſſis clunibus mingunt, qui teſtibus paulò in partem ſuperiorem retractis, videntur à longè ſimul, & maris habere genitale, & fœminæ. Meatus etiam alimenti ſicci coaluit aliquibus beſtiis, ſcilicet ouibus, & quibuſdam aliis. Nam & vaccam fuiſſe Pirinthi accepimus, cui cibi excrementum per veſicam tranſmittebatur, diſſectúſque anus denuò propere coaleſcebat, nec reſecando euincere vitium poterant. De partu multiplici, & paucifero, ac de agnatione partium, aut defectu, atque etiam de monſtrifico partu, dictum iam eſt.

CAPVT. V.

Quamobrem animalium alia ſuperfœtant, alia non: & quæ ſuperfœtant, interdum fœtus enutriant, interdum non: & alia libidinoſa in eo genere ſint, alia non.

Animalium verò alia nunquam ſuperfœtant, alia ſuperfœtant. Quorum quædam enutrire ſuos cõceptus ſemper poſſunt, quædam interdum poſſunt, interdum nequeunt. Cauſa, ne ſuperfœtent, eſt, quòd ſingula pariunt. Solipedes enim, & quæ iis auctiores ſunt animantes, nunquam ſuperfœtant. Facit enim earum magnitudo vt excrementum omne in conceptum abſumatur:

Διὰ τί τῶν ζῴων τὰ μὲν οὐκ ἐπικυΐσκεται, τὰ δ' ἐπικυΐσκεται μὲν, τὰ δὲ κυήματα ἐκτρέφει, ὁτὲ μὲν, ὁτὲ δ' οὔ· καὶ διὰ τί τὰ μὲν ἀφροδισιαστικὰ, τὰ δ' οὔ.

Τῶν δὲ ζῴων τὰ μὲν ὅλως οὐκ ἐπικυΐσκεται· καὶ τῶν ἐπικυϊσκομένων τὰ μὲν, δύναται τὰ κυήματα ἐκτρέφειν, τὰ δὲ, ποτὲ μὲν, ποτὲ δ' οὔ. τοῦ δὲ μὴ ἐπικυΐσκεσθαι αἴτιον, ὅτι μονοτόκα ἐστί. τά τε γὰρ μώνυχα οὐκ ἐπικυΐσκεται, καὶ τὰ τούτων μείζονα. διὰ γὰρ τὸ μέγεθος, τὸ περίττωμα ἀναλίσκεται εἰς τὸ κύημα.

πᾶσι γὰρ ὑπάρχει τούτοις μέγεθος σώματος. τῶν δὲ μεγάλων, καὶ τὰ ἔμβρυα μεγάλα κατὰ λόγον ἐστί· διὸ καὶ τὸ τῶν ἐλεφάντων ἔμβρυον, ἡλίκον μόσχος ἐστί. τὰ δὲ πολυτόκα ἐπικυΐσκεται, διὰ τὸ τὰ πλείονα τοῦ ἑνὸς εἶναι θάτερον θατέρου ἐπικύημα. τούτων δὲ ὅσα μὲν μέγεθος ἔχει, καθάπερ ἄνθρωπος, ἐὰν μὲν ἡ ἑτέρα ὀχεία τῆς ἑτέρας γένηται σύνεγγυς, ἐκτρέφει τὸ ἐπικυηθέν. ἤδη γὰρ ὦπται τὸ τοιοῦτον συμβεβηκός. αἴτιον δὲ τὸ εἰρημένον. καὶ γὰρ ἐν τῇ μιᾷ συνουσίᾳ πλεῖον τὸ ἀπιὸν ἐστὶ σπέρμα· ὃ μερισθὲν, ποιεῖ πολυτοκεῖν, ὧν ὑστερίζει θάτερον. ὅταν δὲ ἤδη τοῦ κυήματος ηὐξημένου συμβῇ γίνεσθαι τὴν ὀχείαν, ἐπικυΐσκεται μέν ποτε, ὀλιγάκις μέντοι, διὰ τὸ τὴν ὑστέραν συμμύειν ὡς τὰ πολλὰ, μέχρι τῶν κυουμένων, ταῖς γυναιξίν. ἂν δὲ συμβῇ ποτε, (καὶ γὰρ τοῦτ' ἤδη γέγονεν) οὐ δύναται τελεοῦν· ἀλλὰ κυήματ' ἐκπίπτει παραπλήσια τοῖς καλουμένοις ἐκτρώμασιν. ὥσπερ γὰρ ἐπὶ τῶν μονοτόκων διὰ τὸ μέγεθος, εἰς τὸ προϋπάρχον τὸ περίττωμα τρέπεται πᾶν, οὕτω καὶ τούτοις· πλὴν ἐκείνοις μὲν, εὐθύς· τούτοις δ', ὅταν αὐξηθῇ τὸ ἔμβρυον· τότε γὰρ ἔχουσι παραπλησίως τοῖς μονοτόκοις. ὁμοίως δὲ διὰ τὸ τὸν ἄνθρωπον φύσει πολυτόκον εἶναι, καὶ περιεῖναί τι τοῦ μεγέθους τῆς ὑστέρας, καὶ τοῦ περιττώματος, μὴ μέντοι τοσοῦτον ὥστε ἐκτρέφειν ἕτερον· μόνα τῶν ζῴων ὀχείας ἐπιδέχονται κυοῦντα γυνὴ καὶ ἵππος· ἡ μὲν, διὰ τὴν εἰρημένην αἰτίαν· ἡ δ' ἵππος, διά τε τὴν φύσεως στερρότητα, καὶ τὸ περιεῖναί τι μέγεθος τῆς ὑστέρας, πλέον μὲν ἢ τῷ ἑνὶ, ἔλαττον δὲ ἢ ὥστε ἄλλο ἐπικυΐσκεσθαι τέλειον. ἔστι δὲ φύσει ἀφροδισιαστικὸν, διὰ τὸ ταὐτὸ πεπονθέναι τοῖς στερροῖς. ἐνδεᾶ τε γὰρ ταῦτ' ἐστί, διὰ τὸ μὴ γίνεσθαι κάθαρσιν· τοῦτο δ' ἐστὶν, ὥσπερ τοῖς ἄρρεσι τὸ ἀφροδισιάσαι· καὶ ἵπποι αἱ θήλειαι ἥκιστα προΐενται κάθαρσιν. ἐν πᾶσι δὲ τοῖς ζῳοτοκοῦσι τὰ στερρὰ τῶν θηλειῶν ἀφροδισιαστικὰ, διὰ τὸ παραπλησίως ἔχειν τοῖς ἄρρεσιν, ὅταν συνειλεγμένον μὲν ᾖ τὸ σπέρμα, μὴ ἀποκρινόμενον δέ. ταῖς γὰρ θηλείαις ἡ τῶν καταμηνίων κάθαρσις, σπέρματος ἔξοδός ἐστιν. ἔστι γὰρ τὰ καταμήνια, σπέρμα ἄπεπτον, ὥσπερ πρότερον εἴρηται. διὸ καὶ τῶν γυναικῶν ὅσαι πρὸς τὴν ὁμιλίαν ἀκρατεῖς τὴν τοιαύτην, ὅταν πολυτεκνήσωσι, παύονται τῆς ὀργήσεως. ἐκκεκενωμένη γὰρ ἡ σπερματικὴ περίττωσις, οὐκέτι ποιεῖ τῆς ὁμιλίας ταύτης ἐπιθυμίαν. ἐν δὲ τοῖς ὄρνισιν αἱ θήλειαι τῶν ἀρρένων ἧττόν εἰσιν ἀφροδισιαστικαὶ, διὰ τὸ πρὸς τῷ ὑποζώματι τὰς ὑστέρας ἔχειν· τὰ δὲ ἄρρενα, τοὐναντίον. ἀνεσπασμένους γὰρ ἔχει τοὺς ὄρχεις ἐντός· ὥστε ἂν ᾖ τὸ γένος τῶν τοιούτων ὀρνίθων φύσει σπερματικὸν, ἀεὶ δεῖσθαι τῆς ὁμιλίας ταύτης. ταῖς μὲν οὖν θηλείαις τὸ κάτω καταβαίνειν τὰς ὑστέρας, τοῖς δὲ ἄρρεσι, τὸ ἀνασπᾶσθαι τοὺς ὄρχεις, συμβαίνει πρὸ ὁδοῦ πρὸς τὴν ὀχείαν. δι' ἣν μὲν οὖν αἰτίαν τὰ μὲν οὐκ ἐπικυΐσκεται παντελῶς, τὰ δ' ἐπικυΐσκεται μὲν, τὰ δὲ κυήματα ἐκτρέφει ὁτὲ μὲν, ὁτὲ δ' οὔ· καὶ διὰ τίν' αἰτίαν τὰ μὲν, ἀφροδισιαστικὰ, τὰ δ', οὐκ ἀφροδισιαστικὰ τῶν τοιούτων ἐστὶν, εἴρηται. ἔνια δὲ τῶν ἐπικυϊσκομένων, καὶ πολλοῦ χρόνου διαλιπούσης τῆς ὀχείας, δύναται τὰ κυήματα ἐκτρέφειν, ὅσων σπερματικόν ἐστι τὸ γένος, καὶ μὴ τὸ σῶμα μέγεθος ἔχει, καὶ τῶν πολυτόκων. διὰ μὲν γὰρ τὸ πολυτοκεῖν, εὐρυχωρίαν ἔχει τῆς ὑστέρας·

A quippe cùm in iis omnibus corporis ſit magnitudo. Quæ autem magno corpore ſunt, eorum fœtus quoque magni pro ſui generis magnitudine inſtituuntur. Ex quo fit vt elephantorum fœtus magnitudine vituli geſtetur. Multipara ideo ſuperfœtant; quoniam plures conceptus ſuperfœtatus quidam, alter alteri ſunt. Quæ autem corporis magnitudine prædita ſunt, vt homo, ſi alter coitus proximè ab altero acceſſit, enutrire, quod ſuperfœtatum eſt, poſſunt. Iam enim id eueniſſe viſum eſt. Cuius rei cauſa id, quod diximus, eſt. Eodem enim coitu plus ſeminis mittitur, quod partitum multiplicare conceptum poteſt, ſi alterum poſt alterum accedit. Sed ſi iam aucto con-B ceptu coitus adhibetur, ſuperfœtari quidem poteſt, ſed raro: quoniam vterus magna ex parte ad partum vſque ſe comprimat. Si tamen aliquando accedit vt ſuperfœtetur, (iam enim id eueniſſe conſtat) perfici non poteſt; ſed conceptus ambiguntur ſimiles iis quos abortus vocamus. Vt enim in vniparo genere omne excrementum abſumitur in id quod præceſſerit, ob corporis magnitudinem, ſic in iis fieri ſolet, ſed in illis ſtatim, in his cùm iam fœtus accreuerit. tunc enim ſimilem vniparis conditionem recipiunt. Pari ratione ſola animalium mulier, & equa grauida coitum patiuntur. Homo enim ſua natura præfœcundum animal eſt. Aliquid etiam in vtero, tum ſpa-C tij, tum excrementi ſupereſt, quanquam non tantum, vt vel alterum poſſit alere. Mulier itaque ob eam cauſam coitum recipit. Equa autem ſoliditate ſuæ naturæ, & quòd aliquid ſpatij in vtero ſuperſit, vt dictum eſt, amplius quidem, quàm vt ab vno occupetur, ſed arctius, quàm vt alterum perfectè poſſit ſuperfœtari. Libidinoſa natura eſt equa, ob eundem affectum, quo ſolida omnia Veneris ſunt appetentiora. Illa enim ita ſe habent, quia carent purgatione, quæ perinde eſt fœminis, vt coitus maribus. Equa enim menſtrua minimè emittit. Omnium autem viuiparorum fœminæ ſolidæ ſunt libidinoſiores, quoniam ſimili modo ſe habent atque mares, qui ſemen geni-D tale collectum non excernunt. Fœminis enim purgatio menſtruorum ſeminis exitus eſt, cùm menſtrua non niſi ſemen ſint inconcoctum, vt antè diximus. Quamobrem mulieres, quæ incontinentes ad rem Veneream ſunt, libidine ceſſant, cùm ſæpius generarint. Iam enim ſeminale excrementum quod libidinem accendebat, emiſſum facit ne præterea concumbendi auiditas ſtimulet. In genere auium fœminæ minùs quàm mares, Venerem appetunt, quoniam vterum continent iuxta ſeptum: mares contrà ſalaciores ſunt, quoniam teſtes intus habent retractos. Itaque fit vt quæ ex iis ſua natura abundant ſemine, coitum ſemper deſiderent. Fœminæ igitur huius generis propenſiores ad coitum ſunt vteri deſcenſu: mares teſtium retractu. Diximus quam ob cauſam alia nullo pacto ſuperfœtant, alia ſuperfœ-E tant quidem, ſed conceptus interdum enutriunt, interdum non, & quamobrem alia libidinoſa, alia non libidinoſa in eo genere ſunt. Sunt autem nonnulla ſuperfœtantia, quæ longo etiam interpoſito tempore coeundi poſſint enutrire conceptum, quæ ſuperfœtarint: videlicet ea quorum genus ſemine genitali abundat, & corporis magnitudine caret & multa generat. Cùm enim multiparum ſit, vterum habet ampliorem.

Cùm

Cùm ſemine abundet, multum purgationis excrementitiæ emittit. Cùm corporis magnitudine careat, maioréque portione purgatio ſuperet, quàm conceptus deſideret nutrimentum, poſſunt vel poſt conſtitui animalia, eadémque enutriri, ac perfici. Vteri etiam eorum non ſe comprimunt, quoniam excrementum purgationis ſupereſt. Quod mulieribus quoque euenit. Fit enim nonnullis grauidis purgatio: & interdum quæ ad finem vſque perſeueret. Sed iis præter naturam hoc euenit. Quamobrem fœtus afficitur detrimento. At eiuſmodi animalibus per naturam ſic agitur. Ita enim corpus eorum principio conſtitutum eſt, quale corpus leporum eſt. Hoc enim animal ſuperfœtat: quippe quod nec magnum ſit, & plura generet, multifidum enim eſt. Tale autem quoduis plura generat. Semine etiam abundat, quod eius hirſutie ſignificatur. copia enim pili exuperat. Nam hoc vnum pilos & ſub pedibus habet, & intra genas. Pili autem abundantia, & hirſuties, copiam indicat excrementi. Quamobrem homines piloſi libidinoſiores, & feminis copioſiores ſunt, quàm læues. Lepus igitur ſæpenumero fœtus alios imperfectos geſtat, alios perfectos iam edit.

A διὰ δὲ τὸ σπερματικὸν εἶναι, πολὺ προΐεται περίττωμα τῆς καθάρσεως. διὰ δὲ μὴ τὸ σῶμα μέγεθος ἔχειν, ἀλλὰ πλείονι λόγῳ τὴν κάθαρσιν ὑπερβάλλειν τῆς εἰς τὰ κυήματα τροφῆς, δυνατόν τε συνίστασθαι ζῷα καὶ ὕστερον, καὶ ταῦτα τ' ἐκτρέφειν. ἔτι δ' αἱ ὑστέραι τῶν τοιούτων, οὐ συμμεμύκασι, διὰ τὸ περιεῖναι περίττωμα τῆς καθάρσεως. τοῦτο δὲ καὶ ἐπὶ τῶν γυναικῶν συμβέβηκε· γίνεται γάρ τισι κυούσαις κάθαρσις καὶ διὰ τέλους· ἀλλὰ ταύταις μὲν, παρὰ φύσιν (διὸ βλάπτει τὸ κύημα) τοῖς δὲ τοιούτοις τῶν ζῴων, κατὰ φύσιν. οὕτω γὰρ τὸ σῶμα συνέστηκεν ἐξ ἀρχῆς, οἷον τὸ τῶν δασυπόδων. τοῦτο γὰρ ἐπικυΐσκεται τὸ ζῷον. οὔτε B γὰρ τῶν μεγάλων ἐστὶ, πολυτόκον τε, (πολυσχιδὲς γὰρ· τὰ δὲ πολυσχιδῆ, πολυτόκα) καὶ σπερματικόν. δηλοῖ δ' ἡ δασύτης. ὑπερβάλλει γὰρ τοῦ τριχώματος τὸ πλῆθος· καὶ γὰρ ὑπὸ τοὺς πόδας, καὶ ἐντὸς τῶν γνάθων, τοῦτ' ἔχει τρίχας μόνον [τῶν ζῴων.] ἡ δὲ δασύτης, σημεῖον πλήθους περιττώματός ἐστι. διὸ καὶ τῶν ἀνθρώπων οἱ δασεῖς ἀφροδισιαστικοὶ, καὶ πολυσπέρμοι μᾶλλον εἰσὶ τῶν λείων. ὁ μὲν οὖν δασύπους, τὰ μὲν τῶν κυημάτων ἀτελῆ πολλάκις ἔχει· τὰ δὲ, προΐεται τετελειωμένα τῶν τέκνων.

CAPVT VI.

Quare viuiparorum alia perfectum, alia imperfectum animal pariant.

VIuiparorum alia imperfectum animal pariũt, alia perfectum, ſolipedes, & biſulcæ perfectum: multifidæ complures imperfectum. Cuius rei cauſa eſt, quòd ſolipedes ſingulos pariunt: biſulcæ aut ſingulos, aut binos magna ex parte. Enutrire autem quæ pauca gignuntur, facilè poſſunt. Multifidæ, quæ pariunt imperfecta, omnes multiparæ ſunt. Quo fit vt partum adhuc recentem alere poſſint, auctum iam adeptumque magnitudinem, nequeant: ſed cùm corpus ad nutriendum non ſufficiat, partum emittunt, vt ea quæ vermem pariunt. Quædam enim ex iis catulos inarticulatos propemodum pariunt, vt vulpes, vrſa, leæna, & alia nonnulla. Sed omnia ferè cæcos, vt ea, quæ modò dixi, atque etiam canis, lupa, lupus ceruarius. Sola inter multipara ſus parit perfectos, eáque vna euariat. Generat enim multos more multifidi generis, cùm & biſulcum & ſolipes ſit. Sunt enim locis quibuſdam ſues ſolida vngula. Partu igitur numeroſa eſt, quoniam alimentum, quod in corporis magnitudinem abſumeretur, in excrementum ſeminale decedit. Id enim vt ſolipes magnitudine caret. Quin & potius quaſi ambigens cum natura ſolipedum biſulcum eſt. Hac igitur cauſa & vnum parit, & duos, & quod plurimum, multos. Enutrit verò vſque in finem, quæ peperit, propter ſui corporis alimoniam probam. Habet enim vt ſolum pingue ſuis ſtirpibus, ſic ſcrofa filiis alimentum copioſum, & commodum. Aues etiam nonnullę imperfectos & cæcos pariunt pullos, videlicet quæ cùm paruæ corpore ſint, multos progenerant, vt cornix, pica, paſſer, hirundo, & paucipari generis, quæ copiam alimenti parere vnà cum prole non ſolent, vt palumbes, turtur, columba. Quamobrem ſi quis hirundinum nouellarum adhuc oculos præpungat, rurſum incolumes reddentur.

* γ. τῆς καθάρσεως

A Cùm enim fiunt, non facti iam corrumpuntur: itaque denuò oriuntur, ac pullulant. Omnino hæc præueniunt generationem perfectam ob alendi inopiam. Generant verò imperfectos, quoniam perfectionem præueniunt. Quod in pueris etiam patet, qui menſe ſeptimo naſcuntur. Sæpe enim nonnulli eorum præ ſua imperfectione ne meatus quidem integros adhuc habent, vt aurium, aut nariũm: ſed pòſt accreſcentes recipiunt: multique ex iis vitæ compotes euadunt. Mares potiùs quã fœminæ, oblæſi in genere hominum naſcuntur, cùm in cæteris animalibus nihilò potiùs mares quã fœminæ ita proueniant. Cuius rei cauſa eſt, quòd in hominibus longè mas à fœmina differt calore na- B turæ. Quo fit vt mobiliores ſint mares in vtero, quàm fœminę. Motu autem ipſo franguntur, cùm recens quoduis facilè præ ſua imbecillitate frangi poſſit. Hæc eadem cauſa eſt, ne fœminæ ſimiliter atque mares, perficiantur in genere hominum: quippe cùm & intra parentem fœmina tempore longiore conficiatur, quàm mas: & vbi in lucẽ venerint, celeriùs fœminæ quam mares, perficiantur. Nam & pubes, & vigor, & ſenectus fœminis priùs venit, quàm maribus. Sunt enim fœminæ ſua natura debiliores frigidioréſque: & ſexum fœmineum quaſi læſionem naturalem, & detrimentum eſſe, putandum eſt. Intus igitur tardè præ ſua frigiditate diſcernuntur. hæc etenim diſcretio, con- C coctio eſt. Calor autem concoquit, & quod calidius, id concoctu facilius eſt. Sed foris propter ſuã debilitatem citò ad ętatis florem, ſenectutemque, perueniunt. Etenim omnia minora, vt in artis operibus, ſic in naturæ, citiùs ad finem deueniunt. Eadem cauſa eſt, vt qui gemini mas & fœmina in genere hominum prodeunt, minùs ſeruentur, cùm in cæteris animalibus nihilo referat. Hominibus enim hic concurſus præter naturam eſt, cùm non pari tempore mas & fœmina diſcernantur: ſed aut marem contari aut fœminam præuenire, neceſſe ſit. At in cæteris id non præter naturam eſt. In ferendo etiam vtero homines cum cæteris animalibus diſſident. Cùm enim cætera plurimum tem- D poris valeant corpore, cùm vterum ferunt; mulieres magna ex parte ægræ degunt. Cuius rei cauſa aliqua vel ad vitam referri poteſt. Cùm enim mulieres vitam otioſam & ſellulariam quandam degant, plus contrahunt ſibi excrementi. Nam quib. gentibus ſolitum eſt vt mulieres labores ſuſcipiãt, iis nec vterus tam difficulter geſtatur, & partus facilis eſt. Denique quibuſuis locis mulieres, quę laborare conſueuerunt, faciliùs pariũt. Labor enim incrementa conſumit, quæ in mulieribus otioſis augentur. Cúmque parturigo laborioſa ſit, labor & exercitatio actæ vitæ facit vt ſpiritum poſſint retinere: in qua re partus facilitas conciliatur. Adferũt igitur ea quoque, vt modò dixi, aliquid cau- E ſæ ad eius affectionis* differentiam, qua mulieres cæteris animalibus in ferendo vtero diſcrepant. Sed maximè cauſa eſt, quòd cùm cæteris aut exigua purgatio, aut nulla manifeſta fiat, fieri plurima euenit. Quæ cùm per vteri geſtationem deſierit, infeſtat, atque perturbat: quippe cùm etiam non grauidis, niſi purgationes fiant, ægritudines accidant. Principio potiùs cùm concipiunt, perturbari ſolent magna ex parte. Conceptus enim purgationem impedit, & præ ſua exiguitate abſumere copiam excrementi inter initia non poteſt: quãquam pòſt, vbi iam pleniùs abſumere cœperit, leuat.

At in cæteris animalibus, quoniam parum excrementi eſt, modicè ad fœtus incrementum accommodatur. Cúmque excrementa, quæ nutricationem impediunt, abſumantur, valent feliciùs. Nec ſecus aquatile genus aut volatile afficitur. Iam verò accreſcente fœtu, quibus non æquè proba altio contingit, cauſa eſt, quòd fœtus incrementum plus excrementitij alimenti deſideret: paucis verò quibuſdam mulieribus euenit, vt prægnantes meliùs valeant corpore, videlicet iis quarum in corpore exigua continentur excrementa, quę abſumi poſſint cum alimento, quod fœtui adminiſtratur.

CAPVT VII.

Quam ob cauſam mola in vteris mulierum generetur, & quare potiùs in muliere, quàm in cæteris animalibus.

DE eo, quod mola vocatur, videndum eſt. Accidit hoc vitium mulieribus nonnullis grauidis, quanquam rarò. Pariunt enim quod molam vocant. Iam accidit enim mulieri cuidam, vt cùm concubuiſſet, & ſe concepiſſe putaſſet, primùm ventris moles augeretur, & reliqua ex ratione venirent. Sed cùm tempus pariendi iam eſſet, nec pareret, neque moles minueretur, ſed annos tres aut quatuor ita perſeueraret, quoad dyſenteriæ, id eſt, difficultati inteſtinorum implicata, eóque modo periclitata, demum pepererit carnem, quam molam vocant. Quin & tota vita edurat hoc vitium, vt & conſeneſcat & commoriatur. Quæ autem prodierit, adeo obdureſcit, vt vix ferro tranſfigi poſſit. Cauſam huius affectus dixi in Problematibus. Afficitur enim conceptus eodem modo, quo ea quæ inquinari dicimus, cùm elixantur, nec per calorem, vt quidam volunt, ſed potiùs propter caloris debilitatem. Natura enim de vita certare videtur, nec poſſe perficere, ſinémque apponere generationi. Quamobrem aut tota vita, aut longo tempore durat, quod inchoatum eſt. Nec enim vt perfectam nec vt alienam omnino habet naturam. Cauſa namque duritiæ cruditas eſt: quippe cùm inquinatio quoque cruditas quædam ſit. * κ. ὡς ἔχον τὰ αὑτοῦ, οὐκέτι λαμβάνει τὰ μὴ ἑαυτοῦ.

A hoc tempus ſolet accedere. Hominibus verò quoniam plura ſunt tempora, primò adeſſe neceſſe eſt. Quamobrem lac mulierum, cùm ante ſeptimum menſem inutile ſit, vtile iam ſeptimo redditur menſe. Cauſa etiam neceſſitatis propria, concoctio lactis temporibus vltimis habetur. Principio enim deceſſio huiuſcemodi excrementi abſumitur in fœtus generationem. Omnibus autem alimento eſt, quod dulciſſimum, & coctiſſimum ſit. Itaque ſublata hac facultate, reliquum ſalſum maléque ſapidum eſſe neceſſe eſt. Sed cùm fœtus magis magiſque perficiatur, plus excrementi ſupereſt. Minùs abſumitur, idque dulcius eſt, cùm non æquè detrahatur, quod bene concoctum ſit. B Non enim inſuper ad fœtus informationem conſumitur, ſed ad incrementum mediocre, quaſi iam fœtus conſtet adeptus finem ſuum. Eſt enim & conceptus perfectio. Quamobrem exit, permutatque generationem, vt qui iam ſua receperit, nec præterea accipit quod ſuum non eſt. Quo tempore lac vtile datur. Colligitur hoc parte ſuperiore corporis, & mammis propter ordinem primæ originaliſque conſtitutionis. Præcipua enim pars animalis, quæ ſupra ſeptum eſt, inferior verò ad cibum & excrementum accommodata eſt, vt greſſile animalium genus habens intra ſe alimenti ſuppetias loca permutet. Hinc ſeminale quoque excrementum ſecernitur ob C eam, quam inter initia diſputationis noſtræ reddidimus, cauſam. Eſt enim naturæ ſanguineæ, tum excrementum maris, tum menſtrua fœminæ. Sanguinis autem & venarum principium cor eſt, quod in ea ipſa parte ſuperiore poſitum eſt. Quapropter hic primum excrementi talis mutationem innoteſcere neceſſe eſt. Ex quo fit vt & voces, tum marium tum fœminarum immutentur, cùm ſemen ferre incipiunt, (hinc enim vox ſuam originem trahit: alteratur verò, cùm id quod moueat, alteretur) & mammę ſubleuentur etiam maribus planè, ſed fœminis ampliùs. Quod enim in parte inferiore multum excernitur, ideo locus mammarum inanis fungoſúſque D fœminis fit. Eodémque modo iis euenit animalibus, quibus mammæ infrà habentur. Igitur & vox & mammæ in cæteris quoque animalibus documentum euidens præbent homini vſum habenti generis cuiuſque. Sed plurimum in genere hominum intereſt. Cuius rei cauſa eſt, quòd excrementum plurimum, & mulieribus præ cæteris fœminis, & viris præ cæteris maribus, eſt pro magnitudine, alteris menſtruorum, alteris genituræ. Itaque cùm hoc fœminæ excrementum non à fœtu hauritur, & tamen ne foras profluat, prohibetur, colligi id in loca inania, quæcumque eiſdem meatibus adhærent, neceſſe eſt. Talis autem locus mammarum in omnibus eſt vtraque de cauſa, ſcilicet notę melioris gratia ita conditus, atque etiam neceſſariò hic E iam conſiſtit, & alimentum concoctum animalibus redditur. Concoctionis autem cauſam non ſolùm quam modò diximus, accipere licet, ſed contrariam etiam. Nam & vt fœtus maiuſculus iam factus plus aſſumat cibi, minúſque ob eam rem per id tempus ſuperſit, ratio probabilis eſt. Quod autem minus eſt, concoqui celeriùs poteſt. Sed lactis naturam eandem eſſe, quam excrementi, ex quo vnumquodque generetur, apertum eſt. Nam, quod antè diximus,

eadem materia eſt, quæ alit, & ex qua generationem natura conſtituit, eáque ſanguineus humor in ſanguinem habentibus eſt. Lac enim ſanguis concoctus eſt, non corruptus. Empedocles verò aut non rectè putauit, aut non bene vſus verbo tranſlatitio eſt, cùm dixerit:

Octaui decimo menſis, pus extitit album.

putredo enim concoctioni contrarium eſt. Pus autem putredo quædam eſt. Lac verò res eſt concocta prorſus, nec lactantibus fiunt purgationes ſecundùm naturam, neque lactantes concipiunt: & ſi conceperint, lac extinguitur: quoniam eadem lactis & menſtruorum natura eſt. Natura autem non tam largè profundere poteſt, vt anceps ſit. Sed ſi alterutram in partem ſecernitur, in alteram deſit, neceſſe eſt, niſi quid acciderit violentum, & præter id quod ſolitum magna ex parte eſt. Temporibus etiam bene præſcripta eſt generatio animalium. Cùm enim præ magnitudine non ſatis præterea fœtui eſt alimentum quod per vmbilicum miniſtratur, lac ad alendum vtile ſuccedit. Cùmque per vmbilicum alimentum non ſubeat, comprimunt ſeſe venæ illæ, circum quas tunica eſt, quæ vmbilicus vocatur, atque ob eam rem tunc exitus opportunè fœtus conſequitur.

CAPVT IX.

Quam ob cauſam partus nonnullis animalibus in caput verſis fiat.

PArtus autem pronis in caput conuerſis fit per naturam animalibus omnibus, propterea quòd partem ab vmbilico maiorem habeant, quàm inferiorem. Maiora autem plus ponderis continent. Itaque veluti in ſtatera dependentes eò vergunt, quò trahuntur.

CAPVT X.

De tempore ferendi vteri, & quare non omne animal poſſit eſſe diuturnius.

VTeri autem ferendi tempora certa cuique animalium ſunt magna quidem ex parte pro vitæ ſpatio. Viuaciorum enim generationes quoque diuturniores eſſe neceſſe eſt. Non tamen id cauſæ eſt, ſed magna ex parte ſic euenit. Maiora enim perfectioráque ſanguinei generis animalia plus temporis viuunt. Sed non omnia maiora ſunt viuaciora. Homo enim plus temporis quàm quoduis animal viuit, excepto elephante; quod quidem vſu adhuc fide digno nouerimus: quanquam homo minoris eſt incrementi, quàm veterina, & alia multa. Cauſa ne quoduis animal poſſit diu viuere, eſt, quòd pro aëre ambiente temperatur, atque etiam ob alios naturales caſus, de quibus mox dicam. Tempora ferendi vteri pro magnitudine animalium, quæ generantur, deſcripta ſunt. Haud enim tempore breui conſtitutiones perfici magnas, vel animalium, vel quorumuis aliorum, ferè facile eſt. Quamobrem equi, & quæ his cognata ſunt animalia, quanquam minus temporis viuunt, tamen diutius vterum ferunt: alia enim annum, alia, quod plurimum, menſes decem grauida exigunt. Hac eadem de cauſa elephantorum etiam vterus diutinus eſt.

ARISTOTELIS STAGIRITÆ DE ANIMALIVM GENERATIONE Liber quintus.

CAPVT I.

De diſcrimine oculorum in animantibus, & eorundem differentia, & quid ſit ſomnus, quid item vigilia.

DE affectionibus, quibus animalium partes differant inter ſe, differendum nunc eſt. Affectiones partium dico cæſietatem oculorum, aut nigredinem, vocis, acumen, aut grauitatem, & coloris, aut corporis, & pilorum, aut pennarum diſcrimen, quorum alia totis generibus inſunt, alia vtcunque ſors tulit, habentur: quod maximè in hominibus accidit. Mutationes etiam per ætatem aliæ omnibus æquè animalibus veniunt, aliæ contrà: vt in vocis coloriſque pilorum ratione videre licet. Cùm enim cætera non caneſcant, manifeſtè in ſenectute, homo maximè omnium ita afficitur. Et alia ſtatim ab ortu Naturę conſequuntur, alia progrediente ætate,

& ſeneſcentibus accidunt. De his igitur, cæteriſque huiuſmodi omnibus non eundem præterea modum cauſæ eſſe putandum. Quæ enim non ſint opera vel naturæ communia, vel generum ſingulorum propria, horum nullum alicuius gratia aut eſt, aut fit. Oculus enim alicuius gratia eſt, ſed cæſius non alicuius gratia eſt, niſi hæc affectio ſit propria generis. Nec vero ad rationem ſubſtantiæ pertinet in nonnullis, ſed vt quæ neceſſariò fiant. Ad materiam & principium, quod mouerit, cauſæ eorum referendæ ſunt. Etenim, vt initio diſputationis noſtræ dictum eſt, non quia tale quid gignitur, quódque ideo tale quid eſt, ſcilicet in iis quæ ſtatuta, definita, & certa naturæ ſunt opera: ſed potiùs quia tale eſt, idcirco tale & gignitur. Subſtantiam enim generatio ſequitur, & ſubſtantiæ gratiâ eſt, non ipſa generationem. Veteres tamen naturæ interpretes contrà eſſe putarunt. Cuius erroris cauſa fuit, quòd cauſas plures eſſe non viderent, ſed materiæ tantùm, & motus cauſam, eámque indefinitè cognoſcerent, rationis verò & finis cauſam non conſiderarent. Sed enim alicuius gratia vnumquodque eſt. Gignitur autem iam ob eam cauſam, & reliquas, quæ in ratione cuiuſque continentur, quæ vel alicuius gratia eſt, vel cuius gratia aliud eſt. Quæ verò non eiuſmodi ſunt, videlicet quorum generatio eſt, eorum iam cauſa quærenda in motu generationéque eſt: vt pote cùm diſcrimen conſtitutione recipiant. Oculum enim neceſſariò habebit. Tale enim animal ſubiectum eſt. Sed talem oculum neceſſariò quidem, ſed non tali neceſſitate. Verùm alio modo, ſcilicet quoniam talem aut talem rem ſuapte natura agere patiue poteſt. His ita definitis, de rebus quæ deinceps eueniant, diſſeramus. Principio pueri cùm nati fuerint, dormire omnium maximè imperfectorum animalium ſolent, quoniam intra parentem cùm primum ſentire cœperint, tempus dormiendo totum ferè conſumunt. Sed quæritur de prima generatione, vtrùm vigilia præcedat, an ſomnus. Quòd enim progrediente ætate magis expergiſci viſuntur, contrarium, id eſt, ſomnum, principio generationis ineſſe probabile eſt. Tum etiam tranſitio de non eſſe in eſſe per medium fieri ſolet. Somnus autem talis ſua natura eſſe videtur, vt viuendi & non viuendi interliminium ſit, & neque omnino ſit qui dormit, neque non ſit. Viuitur enim potiſſimùm vigilia propter ſenſum. ſed ſi animal habere ſenſum neceſſe eſt, & tunc primùm eſt animal, cùm primùm contingit ſenſus, primam illam diſpoſitionem non ſomnum ſed ſimilem ſomno eſſe putandum, qualis plantarum eſt. Etenim ita accidit vt per id tempus vita plantæ animalia viuant. At plantis ſomnum ineſſe impoſſibile eſt. Nullus enim ſomnus inexpergiſcibilis eſt. Affectio autem illa plantarum, quæ ſomni eſt proportionalis, inexpergiſcibilis eſt. Neceſſe etiam eſt, animalia dormire partem maximam temporis, quoniam incrementum, & pondus locis ſuperioribus impoſitum eſt. Cauſam autem dormiendi talem eſſe alibi expoſuimus. Verumtamen expergiſci in vtero etiam videntur, (quod tum in diſſectionibus tum in prole ouipari generis patet:) mox obdormiſcunt ſtatim, rurſúſque delabuntur.

A Quamobrem egreſſa quoque in lucem, bonam temporis partem dormiendo traducunt. Cùm pueri vigilant, non rident: cùm dormiunt, rident: interdum etiam lacrymant. Accidit enim dormientibus etiam animalibus ſenſus, non modò quæ ſomnia vocantur, ſed etiam præter ſomnia, vt iis, qui dormientes reſurgunt, & quidem pleraque agunt ſine ſomnio. Sunt enim qui dormientes reſurgant, & ambulent, videntes eo modo quo qui vigilant. Iis enim ſenſus accidentium contingit, quanquam non vigilantibus, tamen non vt ſomnium; infantes verò propter conſuetudinem quaſi neſcij vigilandi, ſentire viuereque in dormiendo videntur. Tempore autem procedente, incrementóque tranſeunte B in partem inferiorem, expergiſcuntur. Iam magis, & partem maiorem temporis ita degunt, ſed initio plus quàm cætera animalia ſomno dediti viuunt. Imperfectiſſimi enim omnium perfectorum partuum naſcuntur, & incremento partis ſuperioris exuperant. Oculi omnium puerorum ſtatim à partu cæſiuſculi ſunt: pòſt verò immutantur in eam naturam, quæ futura eſt. Quod in cæteris animalibus non euenit manifeſtè. Cuius rei cauſa eſt, quòd cæteris animalibus oculi in ſuo cuiuſque genere vnicolores potiùs ſunt, vt boum nigri, ouium omnium aquini, aliorum rufi toto genere, aut C cæſij, nonnullorum caprini, vt caprarij generis. At hominum oculos varios verſicoloreſque eſſe euenit. Nam alij cæſij, alij flauidi, alij nigri, alij caprini. Quamobrem cæterorum vt nulli ſuo in genere diſſident inter ſe, ſic nulli à ſe ipſi differunt: quippe qui non plus quàm vnum colorem habeant ſua natura. Equus maximè omnium cæterorum animalium verſicolor eſt. Aliqui enim cæſij altero oculo naſcuntur, quod nulli ex cæteris beſtiis euenit manifeſtè. *Quanquam homines nonnulli altero oculo diuerſo gignantur.* Ergo vt cætera animalia nihil mutationis, vel recens nata, vel D ætate prouectiora recipiant, pueris autem id eueniat, ſatis cauſę hoc eſſe exiſtimandum, quòd cæterorum ea pars vnicolor, hominis verſicolor eſt. Sed vt cæſium potiùs quàm alium, habeant colorem, cauſa eſt, quòd partes nuper natorum imbecilliores ſunt. Cæſietas autem, imbecillitas eſt. Sed in vniuerſum de oculorum diſcrimine quærendum, accipiendúmque eſt, quam ob cauſam alij cęſij, alij flauidi, alij caprini, alij nigri. Sed cæſios, opinari plus ignis habere, vt Empedocles ait; nigros autem plus aquæ, quàm ignis: atque ob eam rem cæſios interdiu acutè cernere non poſſe, ſcilicet ob aquæ inopiam: nigros noctu deficere, ob ignis E inopiam, non bene eſt. Siquidem viſus non igni ſed aquæ tribuendus in omnibus eſt. Cauſam etiam colorum, vel alio modo reddere poſſumus. Sed ſi ita eſt, vt antè dixi, cùm de ſenſibus agerem, atque etiam priùs cùm de anima, vt aquæ propria pars hæc ſenſoria ſit, non aëris, aut ignis, cur ita hanc eſſe cauſam eorum putandum eſt, quòd alij plus humidi habent, alij minùs quàm motus competens requirat, alij modicum? Itaque qui multum humoris continent, nigri ſunt, quoniam humoris copia tranſpici ſatis non poteſt. Cæſij, qui parum habent humoris, vt in mari etiam cernitur.

Etenim quantum eius ſatis tranſpicitur, cæſium apparet: quantum minus, aquinum: quantum præ gurgite alto non præfinitur, id opacat, & nigrum aut cæruleum ſentitur. Qui autem inter eos ſunt, eo iam differunt, quòd magis minúſve ita conſtiterint. Eandem cauſam eſſe putandum, & vt cæſij acutè interdiu cernere nequeant, nigri noctu. Cæſij enim præ ſui humoris exiguitate mouentur magis à luce, & rebus viſibilibus, ſcilicet qua humidi, quáque perlucidi ſunt, quanquam motio eius partis viſio eſt, qua perlucida, non qua humida eſt. Nigri verò ob humoris copiam minùs mouentur. Lux enim nocturna exilis eſt, & ſimul quiuis humor per noctem moueri difficiliùs poteſt. Conuenit autem, eum, quà perlucidum, nec non moueri, neque magis moueri quàm congruum ſit. Leuior enim motus expellitur à vehementiore. Quamobrem qui aut ſuum conſpectum à colore validiore tranſtulerint, aut de Sole in opacum ſe contulerint, non cernunt. Motio enim, quæ iam vehemens ineſt, impedit eam quæ extrinſecus accidit. Denique viſus ſiue validus ſiue inualidus nequit res ſplendidas cernere, quoniam eius humor vltra modum afficitur, & mouetur. Ægritudines etiam oculorum, vtrorumque indicium faciunt. Glaucoma enim cæſiis potiùs accidit, luſcioſitas nigris. Eſt autem glaucoma ſiccitas potiùs oculorum. Itaque ſeneſcentibus magis euenit. Nam oculi quoque, vt reliquum corpus, ſenectute ſicceſcunt. Luſcioſitas verò humoris copia eſt. quapropter minoribus natu potiùs accidit. Cerebrum enim eorum humidius eſt. Viſus autem optimus eſt, qui inter multum & parum humoris moderatus conſtat. Hic enim nec per exiguitatem turbatur, vt colorum motiones impediat, neque per nimietatem præbet mouendi difficultatem. Sed non modò ea quæ diximus, cauſam habent, vt obtuſè acutéve cernatur, verùm natura etiam cutis, quæ pupillæ vocatæ obtenditur. Tranſlucidam enim eſſe eam requiritur. Talem autem eſſe, quæ tenuis, alba, & læuis ſit, neceſſe eſt. Tenuis igitur eſt, vt motus, qui extraneus veniat, recto tramite feratur. Læuis, ne rugis obumbret. Senes enim ob eam rem acutè non cernunt. Nam vt cæterarum partium cutis, ſic oculorum quoque ſeneſcentibus obrugatur: & craſſior redditur. Alba autem eſſe debet, quoniam nigrum tranſlucidum eſſe non poteſt. Hoc enim ipſum eſt nigrum quod non tranſluceat. Vnde fit ne laternæ poſſint lucere, ſi ex tali cute confectæ ſunt. Per ſenectutem igitur, & morbos acutè cernere ob eas cauſas nequeunt. Pueri verò, paucitate humoris, cæſij principio ſunt: ſed altero oculo cæſij præcipuè homines atque equi gignuntur eadem de cauſa, qua & homo ſolus caneſcit, & equus inter cætera animalia vnus euidentiùs albeſcit pilo per ſenectutem. Canities enim debilitas quædam humoris ſiti in cerebro, & cruditas eſt: quod idem cæſietas quoque eſt. Vis enim eadem eſt humoris admodum tenuis, quæ pauci; & admodum craſſi, quæ multi. Cùm igitur natura æquè conficere nequit, aut vtroque concocto humore, aut non vtroque concocto, ſed altero concocto, altero non, tunc euenit vt cæſij altero oculo reddantur. Quamobrem autem alia acutè cernant, alia non, duplex ratio eſt: acumen enim cernendi bifariàm ferè dicitur.

Περὶ τῆς ἀκοῆς καὶ ὀσφρήσεως.

Τὸν αὐτὸν δὲ τρόπον ἔχει καὶ περὶ τὴν ἀκοὴν, καὶ περὶ τὴν ὄσφρησιν. ἓν μὲν γάρ ἐστι τὸ ἀκριβῶς ἀκούειν καὶ ὀσφραίνεσθαι, τὸ τὰς διαφορὰς τῶν ὑποκειμένων αἰσθητῶν ὅτι μάλιστα αἰσθάνεσθαι πάσας· ἓν δὲ, τὸ πόρρωθεν καὶ ἀκούειν καὶ ὀσφραίνεσθαι. τοῦ μὲν οὖν τὰς διαφορὰς κρίνειν καλῶς, τὸ αἰσθητήριον αἴτιον· ὥσπερ τῆς ὄψεως, ἂν ᾖ καθαρὸν αὐτό τε καὶ ἡ περὶ αὐτὸ* μῆνιγξ. οἱ γὰρ πόροι τῶν αἰσθητηρίων ἁπάντων (ὥσπερ εἴρηται ἐν τοῖς περὶ αἰσθήσεως) τείνουσι πρὸς τὴν καρδίαν· τοῖς δὲ μὴ ἔχουσι καρδίαν, πρὸς τὸ ἀνάλογον. ὁ μὲν οὖν τῆς ἀκοῆς, ἐπεὶ ἔστι τὸ αἰσθητήριον ἀέρος, ᾗ τὸ πνεῦμα τὸ σύμφυτον ποιεῖται, ἐνίοις μὲν τὴν σφύξιν, τοῖς δὲ τὴν ἀναπνοὴν καὶ εἰσπνοήν, ταύτῃ περαίνει· διὸ καὶ μάθησις γίνεται τῶν λεγομένων· ὥστ' ἀντιφθέγγεσθαι τὸ ἀκουσθέν. οἵα γὰρ ἡ κίνησις εἰσῆλθε διὰ τοῦ αἰσθητηρίου, τοιαύτη πάλιν, οἷον ἀπὸ χαρακτῆρος τοῦ αὐτοῦ καὶ ἑνός, διὰ τῆς φωνῆς γίνεται ἡ κίνησις, ὥστε ὃ ἤκουσε, τοῦτο εἰπεῖν. καὶ χασμώμενοι καὶ ἐκπνέοντες, ἧττον ἀκούουσιν ἢ εἰσπνέοντες,

* γρ. μῆνιγξ.

A Audiendi etiam olfaciendique ratio ſimilis eſt. Dicitur enim acutè cernere, aut quod procul cernere poteſt, aut quod differentias rerum, quæ cernuntur, quam maximè ſentiat. Quæ quidem ſimul nullis eiſdem contingunt. Idem enim, manu admota, aut per fiſtulam, quamquam nihilo magis colorum differentias iudicet, tamen longiùs cernet. Et quidem ex foueis puteiſque interdum ſtellas conſpiciunt. Itaque ſi quod animal multum quidem prominentiæ adiunctum oculis habet, ſed humorem pupillæ non purum, neque modicum conuenienter extraneo motui, neque ſummam cutem prætenuem obtinet, id vt B exquiſitè colorum differentias non percipiet, ſic procul cernere poterit. Quomodo etiam cominus magis quàm quæ humorem quidem illum ſyncerum operimentúmque eius prætenue habeant, ſed ſupercilio, quod promineat oculis, careant omnino. Cauſa enim cernendi tam acutè, vt differentiæ percipiantur, in ipſo oculo eſt. Nam vt in veſte mundiſſima, vel minima macula perſpicua eſt, ſic in puro ſynceróque oculo, vel parua motio patet, ſenſúmque afficit. At vt procul cernatur, motúſque à longinquis viſibilibus deueniat, cauſæ ſitus eſt oculo- C rum. Quæ enim oculis prominentibus ſunt, procul cernere nequeunt. Quæ contrà, intus in cauo oculos habent poſitos, longè aſpicere poſſunt, quoniam motus in vaſtum non diſſipatur, ſed recto tramite meat. Nihil enim intereſt an viſus exitu cerni dicatur, vt quidam aiunt. Nam niſi ante oculos quicquam ſit, diſſipari viſum, atque ita minorem rebus occurrere, quæ cernuntur, neceſſe eſt, minúſque procul videre, quàm ſi motu à rebus, quæ videntur, proficiſcente cernatur. Similem enim motui effici viſionem neceſſe eſt. Ita igitur potiſſimùm res cernerentur longinquæ, ſi illico ab oculo velut fiſtula quædam porrecta ad rem vſque cernendam continuaretur. *Sic* enim nulla D ex parte diſſolueretur motus, qui à re viſibili proficiſceretur. Sed cùm ita non ſit, quo amplius porrigitur, eo longiùs cernatur, neceſſe eſt. Cauſæ diſcriminis oculorum, hæ ſunt.

CAPVT II.

De auditoriis ſenſibus, & olfactu, eorúmque ratione.

EAdem verò audiendi olfaciendique ratio eſt. Aut enim ita exquiſitè audiunt & olfaciunt, vt quàm maximè differentias omnes ſubiectarum ſenſibilium rerum ſentiant: aut E ita, vt procul audiant, aut odorentur. Vt igitur bene differentię iudicentur, cauſa ſenſorium eſt, quomodo in cernendo, videlicet ſi ſyncerum, tum ipſum, tum eius membrana eſt. Meatus enim ſenſoriorum omnium, vt dixi, cùm de ſenſibus agerem, tendunt ad cor, aut ad cordis proportionale, ſi corde carent. Itaque meatus audiendi, quoniam ſenſorium hoc aëris eſt, qua ſpiritus natiuus in aliis pulſum, in aliis ſpirationem facit, hac deſinit. Quapropter verba ediſcuntur, vt quod audieris, reddere ore poſſis. Qualis enim motus ſubierit per ſenſorium, talis quaſi ab vna eademque effigie motus per vocem agitur, vt quod audieris, idem dicas. Oſcitantes etiam, aut ſpiritum reddentes, accipientéſve, minùs audiunt,

quoniam extremum ſenſorij auditus ad partem A ſpiritalem terminetur, & quatiatur, moueaturque vnà cum inſtrumento ſpiritali, quoties illud ſpiritum mouet. Mouetur enim cùm mouet. Necnon temporibus anni, temperamentiſque humidis idem accidit, vt aures impleri ſpiritu videantur, quoniam vicinæ ſint origini loci ſpiritalis. Iudicium igitur exquiſitum differentiarum tum ſoni tum odoris, in ſynceritate ſenſorij ſummæque membranæ poſitum eſt. Ita enim omnes motus manifeſti, vt in viſu, in his etiam veniunt, quoniam & procul ſentire, aut non ſentire, ſimiliter atque in ratione videndi accidit. Quæ enim ante ſuas ſenſorias partes productiores, velvti B aquæ ductus poſſident, hæc procul ſentire poſſunt. Quamobrem quorum nares porrectę ſunt longiùs, vt catellorum Laconicorum, hæc valent olfactu. Ita enim motus non interpellantur, ſed à longè directi, ſenſorium ſubeunt integri: quomodo in iis qui manu admota fronti longiùs cernunt. Auriculæ etiam longæ, imbricatæque ampliùs, quaſi grundis, intúſque anfractu longiore intortæ (quales nonnullarum quadrupedum ſunt) meliùs adminiſtrant: quippe quæ motum eminus excipientes ad ſenſorium reddãt. Homo pro magnitudine minimè ferè omnium animalium procul ſentire poteſt, cùm tamen dif- C ferentiarum ſenſu maximè omnium valeat. Cuius rei cauſa eſt, quòd ſenſorium ſyncerum miniméque terrenum corpulentúmve obtinet. Cutem etiam tenuiſſimam præ cæteris animalibus homo ſuapte natura pro magnitudine habet. Vitulus marinus nimirum rectè à natura conſtitutus eſt. Cùm enim quadrupes ouiparum ſit, auribus caret, meatúſque tantùm habet, quibus audiat. Cauſa eſt, quòd vitam hic in humore traducit. Pars autem aurium abdita meatibus eſt, vt motus à longè delatus aëris ſeruaretur. Itaque nihilo vtiles ei auriculæ eſſent, imo verò offenderent, cùm intra ſe copiam reciperent humoris. De viſu, auditu olfactúque, dictum D iam eſt.

CAPVT III.

De pilorum in animantibus varietate, & quæ pilorum loco ſint.

PIli diſcrepant, & inter ſe in hominum genere per ætates, & cum cæteris animalibus, quæ habent pilos. Habent autem quæ intra ſe animal generant, ferè omnia. Iam & aculeos, qui à nonnullis vice pilorum geruntur, genus eſſe pilorum exiſtimandum eſt, vt herinaceorum aculeos, & ſi quid eiuſmodi aliud in E genere viuiparo eſt. Differentiæ verò pilorum exiſtunt, duritie, mollitie, longitudine, breuitate, rectitudine, criſpitudine, multitudine, paucitate: ad hæc coloribus, vt albedine, nigredine, eorúmque mediis. Sed nonnullas earum differentiarum per ætates quoque recipiunt, videlicet cùm minora natu aut maiora ſunt. Quod præcipuè in homine palàm fit. Piloſior enim ætate prouectus redditur homo, & parte priore capitis nonnulli caluefcunt. Pueri quidem mulieréſque non caluefcunt. Viri autem procedente ætate calui euadunt: necnon capite homines ſeneſcentes caneſcunt.

A Quod nulli ferè ex cæteris animalibus accidit manifeſtè, quamuis equus euidentiùs quàm cætera, ita afficiatur. Caluefcunt homines parte capitis priore. Caneſcunt primò temporibus: ſed nemo vel temporibus, vel occipite caluefcit. Quibus autem animalium pili non ſunt, ſed pilorum proportionale, vt auibus pennæ, piſcibus ſquamæ, iis etiam nonnulli ex iis affectibus veniunt ratione eadem. Sed cuiuſnam rei cauſa genus pilorum datum animalibus à natura eſt, diximus antè, cùm cauſas partium redderemus. Nunc præſentis operis atque officij eſt, vt quibuſnam præcedentibus rebus, & quas ob neceſſitates hæc eueniant, explicemus.

B Cauſa craſſitudinis tenuitatiſque pili, cutis potiſſimùm eſt.. Aliis enim cutis craſſa, aliis tenuis, & aliis rara, aliis denſa eſt. Tum differentia humoris inditi, conſors cauſæ eſt. Aliis enim pinguis, aliis aquoſa eſt. Omnino cutis naturam terrenam eſſe ſtatuimus. Cùm enim per ſumma ſit, humore euaporante, ſolida terrenáque redditur. Pili autem proportionaléque pilorum non ex carne ſed ex cute oriuntur, cùm humor in iis euaporetur, atque exhalet. Quamobrem craſſi ex craſſa, tenues ex tenui cute proueniunt. Quòd ſi cutis rarior & craſſior ſit, craſſi gignentur propter copiam portionis terrenæ, & meatuum laxitatem. Sed ſi ſpiſſior eſt, tenuio-

C res exeunt propter meatuum anguſtiam. Item ſi vapor aquoſus ineſt breui reſiceſcens, facit ne pili capiant magnitudinem. At ſi pinguis eſt, contrà euenit. Non enim facilè exiccari poteſt, quod pingue eſt. Quamobrem in totum animalia, quorum cutis craſſior eſt, pilo ſunt craſſiore, quamuis nō quę cute maximè ita conſtant, magis ita habeant pilū, propter eas, quas modò diximus cauſas, vt generi ſuum prę bubus, & elephantis, & multis aliis vſu euenit. Nam & ſi cutem craſſiorem boues, *elephanti*, & pleráque alia habent, quàm ſues, tamen pilo tenuiore teguntur. Eadem cauſa eſt cur hominum capilli craſſiſſimi ſint. Capitis enim cutis craſſiſſima eſt, & humoris

D plurimum continet. Rara etiam admodum eſt. Quinetiam vt pili longiores breuioréſve ſint, cauſa eſt, quòd humor, qui euaporetur, non facilè exiccari poteſt. Cauſa verò, ne facilè exiccetur, duplex eſt, ſcilicet quantitate & qualitate. Nam ſi humor aut multus aut pinguis eſt, non facilè exiccari poteſt. Ideóque hominum capilli longiſſimi ſunt. Cerebrum enim quod humidum & frigidum eſt, largam humoris copiam præbet. Simplex autem criſpúſve oritur pilus exhalatione pilorum. Nam ſi fumoſa eſt præ ſua caliditate, & ſiccitate, criſpum efficit pilum. Inflectitur enim, quoniam duplici delatione feratur. Terrenum enim deorſum, calidum ſurſum

E fertur: cúmque præ ſua imbecillitate inflecti facilè poſſit, intorquetur: quod pili criſpitudo eſt. Aut igitur ita cauſa reddenda eſt, aut quoniam parum humoris, multum autem portionis terrenæ ineſt, efficitur vt pili reſiccati ab aëre ambiēte contrahātur. Inflectitur enim quod rectū eſt, ſi euaporatur, & contrahitur, atque conuellitur pilus, quēadmodum cum igne aduritur, vtpote cum criſpitudo conuulſio ſit ob humoris inopiā ab aëris continentis calore. Indiciū rei eſt, quòd & duriores sūt pili criſpi, quàm recti: durum enim quod ſiccū eſt. Simplici autem pilo ſunt, quę humore abundant:

fluit

fluit enim humor in iis, non ſtillat. Quocirca Scythæ incolæ Ponti, & Thraces, pilo ſunt promiſſo, & ſimplici. Nam & ipſi humidi ſunt, & aër ambiens eos, humidus eſt. Æthiopes contrà, qui loca incolunt calida, criſpo ſunt pilo: ſiccum eſt enim & cerebrum eorum, & cœlum ambiens. Sed ſunt quæ quamuis cutem habeant craſſiorem, tamen tenuiori ſunt pilo, ea videlicet cauſa, quam antè expoſui. Quo enim meatus tenuiores ſint, eo pilos enaſci tenuiores neceſſe eſt. Quapropter ouium generi tales ſunt pili: vellus enim multitudo pilorum eſt. Sunt etiam, quæ mollem quidem habeant pilum, ſed minùs tenuem, vt lepores, contrà quàm oues: leporum enim pilus per ſumma cutis enaſcitur: quamobrem longitudine caret, & ſimile accidit, vt in iis quæ lino decerpuntur, quæ quamuis mollia ſint, tamen nullam longitudinem habent, nec implexum vllum recipiunt. Oues frigidi tractus contrà, quàm homines, afficiuntur. Scythæ enim molli ſunt pilo: at oues Sauromaticæ duro. Cauſa eadem, quæ in omnibus feris eſt. Frigus enim indurat propterea quòd cogendo exiccat. Cùm enim calor eximitur, humor vnà euaporatur. Itaque non ſolùm pilus, ſed etiam cutis terrena duráque euadit. Cauſa in feris vita agreſtis eſt, in cicuribus autem his loci frigiditas. Indicium vel echini pelagici faciunt, quorum vſus contra vrinæ ſtillicidia eſt: quippe qui frigiditate maris præalti, in quo degunt (ſexaginta enim atque etiam amplius paſſuum gurgite oriuntur) ipſi quidem exigui ſint, ſed aculeos grandes duróſque gerant. Cauſa magnitudinis eſt, quòd incrementum corporis diuerſum eo eſt. Cùm enim parum caloris obtineant, neque concoquere poſſint, multum ob eam rem habent excrementi. Aculei autem, & pili, & reliqua generis eiuſdem excremento naſcuntur. Duri verò & rigidi modo penè lapidis conſtant, propter frigus, & gelu: eodémque modo cætera, quæ terra gignit, duriora & terroſiora, lapidoſioráque gignuntur locis Aquiloniis, quàm Auſtrinis, & vento expoſitis, quàm concauis, & quietis: frigent enim omnia magis, humórque euaporatur. Indurat igitur tum calor, tum frigus. Namque euenit vt ab vtriſque humor euaporetur: ſcilicet à calore, per ſe; à frigore, per accidens. Vnà enim cum calore humor abſtrahitur: nullus enim humor ſine calore eſt. Sed frigus non modò indurat, ſed denſat etiam, calor verò laxat, rarioráque facit. Eadem cauſa eſt vt natu grandibus duriores & pili, & pennæ, & ſquamæ reddantur. Cutes enim duriores craſſioréſque efficiuntur ſeneſcente ætate: reſiccantur enim: & quidem ſenectus ipſa, vt nomen ſignificat, terrena eſt, quoniam ſine calore eſt, & cum calore humor defluit. Calui omnium maximè animalium homines apertè efficiuntur. Quod genus affectionis generale quodam modo eſt. Nam & plantarum aliæ ſemper frondent, aliæ frondem amittunt. Et aues, quæ certo tempore ſe abdunt, & latent, pennas amittunt. Qualis affectus caluitium in hominibus eſt, quibus accidit vt calueſcant. Cùm enim paulatim & frondes, & pennæ, &

A pili defluant, vbi vniuerſim hic affectus euenerit, vocabula accipit hæc, caluéſcere, defrondeſcere, depenneſcere. Cauſa autem huius affectus, inopia humoris calidi eſt, qualis præcipuè eſt humor pinguis. Quocirca plantæ, quæ pingues ſunt, fronde perpetua virent. Sed de his aliàs. Sunt enim iis vel aliæ cauſæ huius comites affectionis. Euenit hoc plantis hyberno tempore. Mutatio enim hæc potior, quàm ætas earum eſt. Animalibus etiam, quæ latent, idem tempus iacturæ eſt. Sunt enim minùs, quàm homines, natura humida atque calida. Homines autem ſuis ætatibus hyemem æſtatémque agunt. Quamobrem nemo antè quàm coire incipiat, B caluéſcit, ſed à Venereo coitu potiùs id euenit, ſcilicet iis qui ſua natura ſint eò propenſiores. Cùm enim cerebrum frigidiſſimum omnium corporis partium ſit, tum rei Venereæ vſus refrigerat. Caloris namque ſynceri naturaliſque ſecretio eſt. Itaque cerebrum ſentit meritò priùs. Quæ enim imbecilla vitioſaque ſunt, cauſa parua exiguóque momento immutantur. Quapropter ſi quis cogitet, vt & ipſum cerebrum parum calidum eſt, magiſque talem eſſe obductam cutem neceſſe eſt, atque etiam magis naturam pilorum, videlicet quanto plus ipſa caloris origine diſtet, rectè id ita euenire exiſtimabit, vt qui ſemen ferant, ea ipſa ætate caluéſcant, qua ſemen C emittant. Eadem cauſa eſt & vt priore capitis parte caluéſcant, & vt hominibus ſolis omnium animalium id eueniat. Quòd enim parte priore cerebrum continetur, hinc ea parte caluéſcimus. Quòd autem homo maximum humidiſſimúmque cerebrum habet, hinc ſolus animalium ita afficitur. Mulieres non caluent, quoniam natura earum ſimilis puerorum naturæ eſt. Vtraque enim ſterilis ſeminalis excrementi eſt. Spadones etiam non caluéſcunt, quoniam in fœminam mutantur, & pilos, qui poſtea gignuntur, aut non producunt, aut amittunt, ſi fortè habent, præterquam pubem quam mulieres etiam habent, cùm cæteris illis careant. Oblæſio enim hæc, muD tatio de mare in fœminam eſt. Cauſa verò, vt quæ latent, rurſus pennas recipiant, quæque frondem amiſerint, denuo frondeſcant, caluis autem nunquam redeat pilus, quòd anni tempora illis mutationem corporis magis afferunt. Itaque pro temporum mutatione viciſſitudo gignendi amittendique ſequitur, vt animalia pennas piloſve, plantæ frondes aut dimittant, aut recipiant. At verò hominibus per ætatem euenit, ver, æſtas, autumnus, hyems. Itaque cùm ipſæ ætates non permutentur, fit, ne affectus, qui ob eas accidunt, permutentur. Quanquam ſimilis cauſa eſt, ac de cæteris pilorum affectionibus diximus fere.

E

CAPVT IV.

Quam ob cauſam homines caneſcant.

Colorum autem cauſa cæteris quidem animalibus cutis natura eſt, vt vnicolora ſint, & varia. Sed hominibus nihil cauſæ cutis affert, niſi ad canitiem, videlicet eam, quæ morbo, non quæ ſenio accidat. Nam eo vitio corporis, quod vitiligo vocatur, pili efficiuntur albi. Sed ſi albi ſunt pili, cutem albedo non ſequitur. Cuius rei cauſa eſt,

quòd pili è cute exeunt. Itaque ſi cutis ægrotat, extenuatáque eſt, pilus quoque ægreſcit. Ægritudo autem pili, canities eſt: ætatis verò illa canities inopia & exilitate caloris contrahitur. Omnis enim ætas labitur in frigiditatem, cùm iam corpus inclinatur, & conſeneſcit. Senectus enim frigida eſt, & ſicca. De alimento autem, quod quamcumque partem corporis ſubeat, ita intelligendum eſt, vt calore proprio concoquatur, qui cùm agere nequeat, deprauetur altio, & aut repletio ſequatur, aut ægritudo. Sed de eiuſmodi cauſa poſtea differemus, cùm de incremento & alimento agemus. Quibus igitur hominibus natura pilorum parum calida eſt, plúſque humoris ſubit, calor proprius nequit concoquere: atque ita humor putreſcit, calore aëris ambientis. Fit enim putredo quæque à calore, ſed non ſuo, natiuóque, vt alio loco expoſui. Putredo autem & aquæ, & terræ, & quorumuis eiuſmodi corporum fieri poteſt. Quamobrem terreni etiam vaporis putredinem nouimus, quæ ſitus vocatur: etenim ſitus, caries vaporis terreni eſt. Itaque in pilis quoque alimentum tale, cùm non concoquitur, putreſcit, atque ita efficitur ea quæ canities appellatur: quæ alba propterea eſt, quòd & ſitus vnus carioſorum fere albus eſt: cuius rei cauſa eſt, quòd multum aëris continet. Omnis enim vapor terrenus vim habet aëris craſſioris. Situs enim quaſi reſpondens pruinæ exiſtimatur. Nam ſi vapor ſe efferens concreſcit, pruina fit: ſin putreſcit, ſitus. Quapropter vtraque per ſumma hærent. Vapor enim per ſumma eſt: & rectè à poëtis in comœdiis transfertur conuitio in caniciem, cùm ſenectutis ſitum, pruinam nominant: alterum enim genere idem eſt. Vapor namque vtrumque eſt. Alterum, id eſt ſitus, ſpecie idem eſt. Putredo enim vtrumque eſt. Hoc ita eſſe indicium eſt,* quòd pleriſque per ægritudinem pili canuerint, mox valetudini reſtitutis nigruerint. Cauſa eſt, quòd per ægritudinem, vt totum corpus inopia caloris naturalis laborat, ſic partes etiam minimæ eadem participant labe. Multum autem excrementi conſiſtit in partibus corporis: quamobrem in pilis etiam cruditas eſt, quod canitiem faciat: pòſt verò cùm conualuerint, & vires receperint, denuò mutantur, & quaſi iuuenes ex ſenibus redduntur: affectionéſque proinde mutantur. Rectè etiam dixeris, morbum, eſſe aduentitiam ſenectutem: ſenectutem autem, eſſe morbum naturalem. Itaque morbi nonnulli idem faciunt quod ſenectus. Tempora autem primò caneſcunt, quòd occiput vacat humore, cùm non contineat cerebrum: ſinciput verò habet multum humoris. Quod autem multum eſt, difficilè id putreſcit. At in temporum pilis, nec tam parum humoris eſt, vt concoqui poſſit, nec tam multum, vt putreſcere nequeat. Cùm enim is locus medius inter vtroſque ſit, extra vtrumque affectum eſſe poteſt. Cauſa caniciei humanæ dicta iam eſt.

Διὰ τί τὰ ἄλλα ζῷα οὐ πολιοῦ.

ΤΟῖς δὲ ἄλλοις ζῴοις τοῦ μὴ γίνεσθαι διὰ τὴν ἡλικίαν ταύτην τὴν μεταβολὴν ἐπιδήλως, τὸ αὐτὸ αἴτιον,

ὥσπερ εἴρηται καὶ ἐπὶ τῆς φαλακρότητος. ὀλίγον γὰρ ἔχουσι καὶ ἧττον ὑγρὸν τὸν ἐγκέφαλον· ὥστε μὴ ἐξαδυνατεῖν τὸ θερμὸν πρὸς τὴν πέψιν. τοῖς δ' ἵπποις [αὐτῶν] ἐπισημοτάτη μάλιστα ὧν ἴσμεν ζῴων, ὅτι λεπτότατον τὸ ὀστοῦν (ὡς κατὰ μέγεθος) ἔχουσι περὶ τὸν ἐγκέφαλον, τῶν ἄλλων. τεκμήριον δ', ὅτι καίριος ἡ πληγὴ ἡ εἰς τὸν τόπον τοῦτον γίνεται τούτοις. διὸ καὶ Ὅμηρος οὕτως ἐποίησεν·

ἵνα τε τρίχες ἵππων
Κρανίῳ ἐμπεφύασι· μάλιστα δὲ καίριόν ἐστι.

ῥᾳδίως οὖν ἐπιρρεούσης τῆς ὑγρασίας διὰ λεπτότητα τοῦ ὀστοῦ, τῆς δὲ θερμότητος ἐπιλειπούσης διὰ τὴν ἡλικίαν, ἐπιπολιοῦνται αἱ τρίχες αὗται· καὶ αἱ πυῤῥαὶ θᾶττον πολιοῦνται τρίχες τῶν μελαινῶν. ἔστι γὰρ καὶ ἡ πυῤῥότης ὥσπερ ἀῤῥωστία τριχός· τὰ δ' ἀσθενῆ γηράσκει πάντα θᾶττον. μελαντέρας δὲ γίνεσθαι γηρασκούσας λέγουσι τὰς γεράνους. αἴτιον δ' ἂν εἴη τοῦ πάθους, τὸ φύσει λευκοτέραν αὐτῶν εἶναι τὴν τῶν πτερῶν φύσιν, καὶ πλέον τε γηρασκόντων εἶναι τὸ ὑγρὸν ἐν τοῖς πτεροῖς, ἢ ὥστε εὐσηπτότερα εἶναι. ὅτι δὲ γίνεται ἡ πολιὰ σήψει τινὶ, καὶ ὅτι οὐκ ἔστιν (ὥσπερ οἴονταί τινες) αὔανσις, σημεῖον τὸ προτέρου ῥηθέντος, τὸ τὰς σκεπαζομένας τρίχας πίλοις ἢ καλύμμασι, πολιοῦσθαι θᾶττον (τὰ γὰρ πνεύματα, κωλύει τὴν σῆψιν· ἡ δὲ σκέπη, ἀπνοίας ποιεῖ) καὶ τὸ βοηθεῖν τὴν ἄλειψιν τοῦ ὕδατος καὶ τοῦ ἐλαίου μιγνυμένων. τὸ μὲν γὰρ ὕδωρ, ψύχει· τὸ δ' ἔλαιον μιγνύμενον, κωλύει ξηραίνεσθαι ταχέως. τὸ γὰρ ὕδωρ εὐξήραντον. ὅτι δ' οὐκ ἔστιν αὔανσις, οὐδ' ὥσπερ ἡ ἀπαυαινομένη πόα λευκαίνεται, οὕτω καὶ ἡ θρὶξ, σημεῖον ὅτι φύονται εὐθὺς ἔνιαι πολιαί· αὖον δ' οὐδὲν φύεται. λευκαίνονται δὲ καὶ ἐπ' ἄκρου πολιαί. ἐν γὰρ τοῖς ἐσχάτοις καὶ λεπτοτάτοις ἐλαχίστη θερμότης ἐγγίνεται. τοῖς δ' ἄλλοις ζῴοις ὅσαι γίνονται λευκαὶ τρίχες, φύσει, ἀλλ' οὐ πάθει συμβαίνει γίνεσθαι τοῦτο. αἴτιον δὲ τῶν χρωμάτων τὸ δέρμα τοῖς ἄλλοις (τῶν μὲν γὰρ λευκῶν, λευκὸν τὸ δέρμα· τῶν δὲ μελάνων, μέλαν. τῶν δὲ ποικίλων καὶ γινομένων ἐκ συμμίξεως, τῇ μὲν, λευκὸν, τῇ δὲ, μέλαν φαίνεται ὄν) ἐπὶ δὲ τῶν ἀνθρώπων οὐδὲν αἴτιον τὸ δέρμα. καὶ γὰρ οἱ λευκοὶ σφόδρα, μελαίνας ἔχουσιν. αἴτιον δὲ, ὅτι λεπτότατον πάντων δέρμα ἔχει ὁ ἄνθρωπος, ὡς κατὰ μέγεθος. διόπερ οὐδὲν ἰσχύει πρὸς τὴν τῶν τριχῶν μεταβολὴν. ἀλλὰ διὰ τὴν ἀσθένειαν, τὸ δέρμα καὶ μεταβάλλει αὐτὸ τὴν χρόαν, καὶ γίνεται ὑπὸ ἡλίων καὶ πνευμάτων μελάντερον· αἱ δὲ τρίχες οὐδὲν συμμεταβάλλουσιν. ἐν δὲ τοῖς ἄλλοις, τὸ δέρμα χώρας ἔχει δύναμιν, διὰ τὸ πάχος. διὸ αἱ μὲν τρίχες κατὰ τὰ δέρματα συμμεταβάλλουσι· τὰ δὲ δέρματα, οὐδὲν, κατὰ τὰ πνεύματα καὶ τὸν ἥλιον.

Περὶ τῶν χρωμάτων τῶν ζῴων.

Τῶν δὲ ζῴων τὰ μέν εἰσι μονόχροα (λέγω δὲ μονόχροα, ὧν τὸ γένος ὅλον ἓν χρῶμα ἔχει· οἷον οἱ λέοντες πυῤῥοὶ πάντες· καὶ τοῦτο καὶ ἐπ' ὀρνίθων καὶ ἰχθύων ἐστὶ, καὶ τῶν ἄλλων ζῴων) τὰ δὲ, πολύχροα μὲν, ὁλόχροα δέ· (λέγω δὲ, ὧν τὸ σῶμα ὅλον τὴν αὐτὴν ἔχει χρόαν· οἷον ἐπὶ βοὸς, ὅλος λευκὸς, καὶ ὅλος μέλας) τὰ δὲ, ποικίλα. τοῦτο δὲ διχῶς· τὰ μὲν, τῷ γένει, ὥσπερ πάρδαλις καὶ ταὼς, καὶ τῶν ἰχθύων ἔνιοι, οἷον αἱ καλούμεναι θρᾶτται. τῶν δὲ, τὸ γένος μὲν ἅπαν οὐ ποικίλον, γίνονται δὲ ποικίλοι, οἷον βόες, αἶγες· καὶ ἐν τοῖς ὄρνισιν, οἷον αἱ περιστεραί· καὶ ἄλλα δὲ γένη τὸ αὐτὸ πάσχει τῶν ὀρνίθων.

A quam de caluitio diximus. Parum enim cerebri, idque minùs humidum habent, vt calor ad concoquendum ſufficiat. Equis maximè omnium, quæ nouerimus, animalium, canities innoteſcit: quòd os, in quo cerebrum, tenuius quàm cætera, pro magnitudine habeant. Argumentum eſt, quòd ictus in eo loco periculoſus eſt. Vnde illud Homeri:

Et quà ſetæ hærent capiti, lethaléque vulnus
Præcipuè fit equis.

Cùm igitur præ tenuitate oſſis affluat humor, & per ætatem calor deficiat, pili iſti caneſcunt. Ruſi etiam celeriùs quàm nigri, caneſcunt. Nam ru- B ſitas, quaſi imbecillitas pili eſt. Imbecilla autem quæque celeriùs ſeneſcunt. Grues ſeneſcentes effici nigriores aiunt. Cuius affectus cauſa eſſe poteſt, quòd pennarum natura earum albicet, plúſque humoris ſeneſcentibus iis conſtituitur in pennis, quàm vt faciliùs putredini pateat. Canitiem autem effici putredine quadam, nec eſſe, vt quidam putant, ariditatem, indicium eſt, quòd pili, qui vel pileo, vel alio tegmine operiuntur, celeriùs caneſcunt. Flatus enim putredinem prohibent: operimentum autem flatum arcet. Iuuat etiam olei aquæ miſti perunctio. Aqua enim re- C frigerat: oleum verò ne celeriter exſiccetur, prohibet: aqua enim facilè reſiccatur. Canitiem autem non eſſe ariditatem, nec pilum, vt herbam exiccatum albeſcere, indicium eſt, quòd pili nonnulli cani illico oriuntur: at nullum oritur aridum. Multi etiam ſuo extremo albeſcunt: in vltimis enim ac tenuiſſimis calor minimus habetur. Cæteris animalibus, quibus pili albi gignuntur, natura, non affectu, id euenit. Cauſa autem colorum in ceteris cutis eſt. Alborum enim alba eſt cutis, nigrorum nigra: variorum permiſtorúmque partim alba partim nigra eſſe conſpicitur. *At in homine cutis nulla cauſa eſt.* Qui enim ſunt albi admodum, nigros habent capil- D los. Cauſa eſt, quòd homo omnium maximè tenuem cutem habet. Pro magnitudine itaque nihil ad pilorum mutationem cutis valet, imò præ ſua imbecillitate ipſa mutatur, & vel à ſole, vel à flatu redditur nigrior, nec pili vllo pacto cum ea mutantur. At verò in cæteris, cutis vim loci præ ſua craſſitudine obtinet. Itaque fit vt pili pro cute immutentur, cutis autem ipſa nihil à flatu aut à ſole afficiatur.

CAPVT VI.

E *De coloribus animantium.*

Animalium verò alia vnicolora ſunt, (appello vnicolora, quorum genus totum vnum habet colorem, quomodo leones fului ſunt omnes. Idémque in auibus, & piſcibus, & reliquis animalibus omnibus intelligi volo) alia verſicolora ſunt. Sed toticolora ea dico, quorum corpus totum quidem eundem habet colorem: ſed non omnium eundem, vt bos totus albus eſt, aut totus eſt niger. Alia varia ſunt, idque dupliciter: aut enim genere, vt panthera, vt pauo, & piſcium nonnulli, vt quæ thraſſæ vocantur: aut non genere toto, ſed parte, vt boues, vt capræ interdum variæ generantur. In auium etiam genere columbæ, & alia pleraque.

Tranſeunt verò toticolora multo magis quàm vnicolora, tum in colorem ſui generis ſimplicem, vt ex albis nigra, & ex nigris alba reddantur, tum verò in miſtum ex iis, quoniam in totius generis natura ineſt, ne vnum habeat colorem. Hinc enim facilè vtroque verſus mouetur, vt viciſſim mutetur, & varium efficiatur. Vnicolora contrà: nunquam enim mutantur, niſi per affectum, idque rarò. Iam enim perdix viſa eſt alba, & coruus, & paſſer, & vrſa. Accidunt hæc cùm in generatione peruertuntur: facilè enim moueri deprauarique poteſt, quod paruum eſt. Tale autem, quod gignitur, eſt. Principium enim iis quæ gignuntur, in paruo conſiſtit. Aquis etiam immutantur ea potiùs quæ ſua natura toticolora, genere autem verſicolora ſunt. Calidæ enim aquæ pilum faciunt album, frigidæ nigrum: quomodo plantis etiam euenit. Cauſa eſt, quòd calida plus aëris habent, quàm aquæ. Aër autem perlucens, albedinem facit, quemadmodum ſpumam quoque effici certum eſt. Vt igitur cutes per affectum albæ differunt ab iis quæ tales natura ſunt: ſic pili inter ſe differunt, qui morbo, aut ætate, quique natura albuerint, ſcilicet eo quòd cauſa eſt diuerſa. Alteri enim calore naturali, alteri alieno albi efficiuntur. Albedinem verò omnibus aër vaporoſus præbet incluſus. Quamobrem quæ vnicolora non ſunt, ventre omnia pleniùs albent. Calidiora etiam ſuauioráque ſunt omnia alba ferè eadem de cauſa: concoctione enim dulce efficitur: concoctio autem calore. Eadem cauſa vnicoloribus quoque, ſed aut nigris aut albis reddenda eſt. Caliditas enim atque frigiditas cauſam habent naturæ cutis, & pilorum: membrum enim vnumquodque ſuum habet calorem. Quinetiam linguæ ſimplicium ac variorum inter ſe differunt, atque etiam ipſorum ſimplicium, ſed verſicolorum, vt alborum & nigrorum. Cauſa verò eſt, quod antè dixi, quòd variorum cutes variæ ſunt, alborum albæ, nigrorum nigræ: linguam autem perinde ac partem aliquam eſſe exteriorem putandum, qualis manus, aut pes eſt, quanquam ore operiatur. Itaque cùm variorum cutis non ſit vnicolor, cutis quoque linguam ambientis ea ipſa cauſa eſt. Mutant colores auium nonnullæ, atque etiam quadrupedum ſylueſtrium aliquæ per tempora anni. Cuius rei cauſa eſt, quòd vt homines per ætatem mutantur, ſic illa per tempora. Plus enim diſcrimen hoc in iis poteſt, quàm mutatio ætatis. Varia etiam magis ſunt, quæ vario magis cibo veſcuntur. Quod parte plurima dixerim, idque rectà ratione, vt apes vnicolores ſunt magis quàm crabrones, aut veſpæ. Nam ſi cibi cauſæ ſint mutationis, meritò ciborum varietas facit vt magis euarient motus, & alimenti excrementa, ex quibus & pili, & pennæ, & cutes gignuntur. Ac de coloribus & pilis ſatis definitum ſit ad hunc modum.

* Hiſtor. lib. 5. c. 4.

A rigiditate diſcrepent, conſiderandum quas ob cauſas hæc ſingula habeantur. Igitur acuminis grauitatiſque cauſam eandem eſſe arbitrandum, quam mutationis, cùm minora maioráque natu mutantur. Cætera enim omnia, cùm natu minora ſunt, vocem mittunt acutiorem: vituli autem bubuli, grauiorem. Quod idem maribus etiam & fœminis eius generis euenit. Cùm enim in cæteris generibus fœmina vocem mittat quàm mas acutiorem (quod maximè in homine patet: hanc enim facultatem natura homini potiſſimùm tribuit, quoniam oratione ſolus animalium homo vtitur, orationis autem materia vox eſt) cùm, B inquam, cæteræ fœminæ acutiùs ſonent, contrà in bubus eſt. Vaccæ enim grauiùs quàm tauri, ſonant. Sed cuiuſnam gratia vocem animalia habeant, & quid vox ſit, & omnino quid ſonus, & ſtrepitus, partim in iis quæ de ſenſu, partim in iis quæ de anima diſſeruimus, explicatum eſt. Cùm autem graue in tarditate motus conſiſtat, acutum verò in velocitate, vtrùm quod moueat, an quod moueatur, cauſa ſit tardi, aut velocis, quærendum eſt. Quidam enim quod multum eſt, tardè moueri: quod parum, velociter id moueri aiunt: eámque eſſe C cauſam, vt alia vocem grauem emittant, alia acutam. Quod rectè aliquatenus dicitur, ſed non rectè in totum. Genere enim rectè dici videtur, graue in magnitudine quadam eſſe eius quod mouetur. Nam ſi hoc ita eſſet, paruam, candémque grauem emittere vocem non facilè liceret: nec magnam, & eandem acutam. Videtur etiam grauitas vocis naturę generoſioris eſſe: necnon in modulatu grauis modulus præſtantior incitato eſt: perfectum enim in ſuperantia conſiſtit. Grauitas autem ſuperantia quædam eſt. *Sed cum acutum & graue in voce diuerſa ſunt à magnitudine vocis, & paruitate,* (eſt enim & acuta magna, & parua grauis) ſimi- D li modo medius eorum tenor ambigit, quonam alio definienda ſit magnitudo vocis, & paruitas, niſi multitudine ejus quod mouetur, & paucitate. Quòd ſi definitione illa ſtatuendum ſit acutum, & graue, accidet vt eadem ſint grauis magnæque vocis, & acutæ paruæque vocalia. Sed enim cauſa eſt, quòd magnum, & paruum, & multum, ac paucum, non eodem accipiuntur modo: ſed altera ſimpliciter, altera reſpectu quodam. Magniuoca enim ſunt, eo quòd multum ſimpliciter eſt, quod mouetur: paruiuoca, eo quòd parum: grauiuoca autem & acutiuoca eo quòd E reſpectu inter ſe habito differentiam hanc recipiunt. Nam ſi quod mouetur, ſuperat vires eius quod mouet, tardè quod fertur, ferri neceſſe eſt: ſi ſuperatur, velociter. Itaque quod valet, interdum multum pro viribus mouens, tardum efficit motum: interdum velocem, ſi ſuperat. Eademque ratione, quod debile eſt, ſi plus mouet quàm vires patiuntur, tardum efficit motum: ſi parum præ ſua imbecillitate, velocem. Cauſæ contrarietatum hæ ſunt, ne aut omnia minora natu vocem mittãt acutã, aut maiora grauẽ, neque mares & fœminæ æquè omnes aut grauem aut acutam. Ad hæc, vt ægri acutũ ſonent, & qui bene valent, atque etiã vt ſeneſcẽtes vocẽ mittant acutiorem, quanquã ſenilis ætas cõtraria iuuenili eſt, plurima tamẽ parte minora natu & fœminę, acutę ſunt vocis, cum prę ſua imbecillitate paucũ aëris moueãt:

fertur enim velociter, quod parum eſt: velocitas autem acumen in voce eſt. Vituli & vaccæ partem, quam mouent, non habent validam, alteri propter ætatem, alteræ propter fœminei ſexus naturam: cùm tamen moueant, multùm graue ſonant. Graue eſt enim quod grauiter mouetur, multúmque aëris tardè fertur. Multum autem ea mouent, cùm cætera moueant, quia vas, per quod primum ſpiritus fertur, amplum in iis eſt, multúmque aëris mouere cogitur. Cæteris anguſtius ac parcius eſt. Ætate autem procedente, vires ea pars recipit, quæ in vnoquoque moueat. Itaque in contrarium mutatur, vt quæ vocem acutam mittebant, grauiorem quàm prius mittant: quæ autem grauem, acutiorem: quamobrem tauri acutiùs ſonant, quàm vituli, & vaccæ. Vires autem omnium neruis continentur: quapropter cùm ætate florent, robuſtiora ſunt. Minus enim compacta, neruatáque ſunt, quæ minora natu adhuc ſunt. Item recentiorum nerui nondum intenduntur, ſeneſcentium iam laxantur: quamobrem ad motum quoque ſunt imbecilliora. Sed potiſſimùm tauri neruoſi ſunt, & eorum cor ita conſtat. Itaque contentiorem eam obtinent partem, qua ſpiritum mouent, quaſi fidiculam intentam. Talem cordis bubuli eſſe naturam ſignificant, vel eo oſſe, quod in nonnullis gignitur: oſſa enim naturam neruorum requirunt. Execta omnia in fœminam mutantur. Et quoniam vires neruoſæ in ſuo originali principio laxantur, ſimilem fœminis mittunt vocem. Laxatio verò ſimilis fit, vt ſi quis fides intendens adhibuerit pondus, quod annexum reddat contentiores; quomodo textrices faciunt, quæ cùm ſtamina diſtenderint, annectunt quas leuas vocant. Ita enim natura quoque teſtium annexa meatibus ſeminalibus dependet, qui meatus ex vena tendunt, cuius origo ex corde eſt, iuxta ipſum principium, quod vocem moueat. Quamobrem meatibus ſeminalibus immutatis, ad eam, qua ſemen excernere poſſint, ætatem, pars illa quoque vnà cum iis immutatur, qua immutata, vox etiam mutatur, maximè ſcilicet maribus. Sed fœminis etiam idem accidit, quanquam obſcuriùs: quod quidam hircire appellant, cùm vox mittitur inæqualis: pòſt verò reſtituitur in ſequentis ætatis grauitatem, aut acumen. Sublatis igitur teſtibus, tentio quoque meatuum laxatur, quomodo in fidicula, & ſtamine, ſublato pondere. Laxatis his, principium, quod moueat vocem, eadem ratione laxatur. Cauſa hæc eſt quamobrem execta mutentur in fœminam, tum voce tum etiam reliqua forma: quoniam ita accidit vt principium laxetur, ex quo intentio corporis eſt, non, vt quidam exiſtimant, quòd teſtes ipſi copula ſunt multorum principiorum. Sed paruæ mutationes cauſam afferunt magnarum mutationum, non ſui ratione, ſed cùm euenit vt principium vnà cum iis ipſis mutetur. Principia enim quamuis magnitudine parua ſint, tamen facultate ſunt magna. Hoc eſt enim principium eſſe, vt ipſum quidem cauſa ſit multorum, ſed ipſius nulla ſit ſuperior cauſa. Caliditas etiam aut frigiditas loci confert eodem, vt natura tale conſtruatur animal, quod aut grauem aut acutam vocem emittat. Spiritus enim calidus craſſitudine ſua grauitatem efficit vocis:

frigidus præ ſua tenuitate contrarium facit: quod vel in tibiis patet. Qui enim calidiore vtuntur ſpiritu, & talem emittunt, qualem tibicines, & lamentantes, grauiorem ſonum inſpirant tibiis. Aſperioris autem vocis, aut læuioris, omnis denique huiuſmodi inæqualitatis cauſæ eſt, membrum, inſtrumentúmque, per quod vox fertur, cùm aut aſperum eſt, aut læue: denique aut æquale, aut inæquale. Conſtat hoc ita eſſe, cùm aliquid humoris in materia ineſt, aut aſperitas affectu aliquo fit: tunc enim vox redditur inæqualis. Flexibilis autem vocis, inſtrumentum molle cauſa eſt, vt rigidæ durum. Molle enim parciùs diſpenſari poteſt, & varium fieri, durum non poteſt. Et molle quidem tam magnam quàm paruam reddere vocem poteſt, & proinde tum grauem, tum acutam. Facilè enim ſpiritum diſpenſat, ipſúmque de facili magnum paruúmque fit. Quod autem durum eſt, indiſpenſabile eſt. De voce igitur, quæ non antè diſſeruimus, cùm de ſenſu aut de anima ageremus, hunc habeant modum.

CAPVT VIII.

Quare dentes à natura conſtituti ſint, & cur partim decidant, denuóque naſcantur, partim autem non.

DE dentibus, non rei vnius aut eiuſdem gratia animalia eos habere omnia, ſed alia ad cibum, alia ad vocis orationem, dictum antea eſt. Sed cur priores gignantur primò, maxillares poſt, & hi non decidant, illi decidant, ac denuo naſcantur, hanc rationem diſputationi de generatione cognatam eſſe putandum eſt. Diſſeruit igitur de his & Democritus, ſed non benè. Non enim omnibus conſideratis, cauſam reddidit vniuerſim. Ait enim decidere, quoniam properant, & ante tempus oriuntur. Nam ad ætatem penè florentem enaſci per naturam debere. Cauſam autem vt ante tempus gignantur, vſui tribuit lactis. Et ſus lactet, qui tamen dentes non amittit. Et quæ dentes habent ſerratos, omnia lactent: quanquam nonnulla eorum non amittunt niſi caninos, vt leones. Hoc igitur ille errauit, exponens vniuerſim, cùm id non animaduertiſſet, quod in omnibus eueniret. At agere ita oportet. Qui enim differit vniuerſim, de omnibus dicat, neceſſe eſt. Sed cùm naturam ita ſubiiciam, ſcilicet ratione ducta ex iis quæ cernimus, vt neque deficiat neque fruſtrà agat quicquam in ſingulis, quoad eius fieri poteſt: quæ autem cibum aſſumere debent poſt lactis vſum, inſtrumenta habeant neceſſe ſit ad cibum conficiendum: ſi ita eueniret, vt ille dicit, ad pubertatem natura profectò deficeret, agendo rem quam facere poſſet, atque opus naturæ fieret præter naturam. Violentum enim præternaturam eſt. Generationem autem dentium euenire violenter aſſeuerat. Sed hoc verum non eſſe apertum ex his aliiſque huiuſmodi rationibus eſt. Oriuntur autem priùs ij quàm lati, quod & officium eorum prius eſt. Secatur enim prius quàm molitur, quod comeditur. Sunt autem illi molendi officio delegati, hi verò ſecandi: tum etiam quòd res minor, etſi ſimul inchoatur, tamen celeriùs ſolet perfici quàm maior.

Minores autem primores, quàm maxillares ſunt: necnon maxillæ os à latere latum, in ore anguſtum eſt. Itaque ex ampliore plus alimenti affluere neceſſe eſt, ex arctiore minus. Lactis autem vſus ipſe nihil confert, quanquam lactis calor faciat vt dentes ij oriantur. Indicium eſt, quòd & ipſorum lactentium infantes, qui calidiore vtuntur lacte, ocyus dentiunt. Calor enim vim obtinet agendi. Decidunt qui prodierint primi, tum notæ melioris gratia, tum neceſſariò. Melioris ratione, inquam, quòd citò hebeteſcit, quod acutum eſt. Itaque alteros ſuccedere in officium oportet. Lati autem non hebetantur: ſed tempore duntaxat attriti læuigantur. Neceſſariò verò decidunt, quòd maxillarium radices in lata mittuntur maxilla, & valido oſſe continentur: primorum autem in tenui. Vnde fit vt infirmi & mobiles ſint. Naſcuntur autem denuò, quòd in oſſe adhuc naſcente oriuntur, & cùm tempus adhuc eſt ad dentium generationem idoneum. Cuius rei indicium, quòd maxillares diu oriuntur. Vltimi enim vigeſimo anno exeunt. Nonnullis etiam ſeneſcentibus omnino prodierunt, qui loco vltimo habentur: quoniam multum alimenti in amplitudine oſſis continetur. At verò prior pars oſſis præ ſua tenuitate citò perficitur, nec excrementum in eo fit, ſed in debitum incrementum abſumitur alimentum. Democritus verò miſſa ratione, cuius cauſa agatur, omnia referenda cenſet ad ea quibus natura vtitur. Quæ talia quidem ſunt, ſed alicuius cauſa, & notæ melioris gratia ſumuntur. Itaque nihil prohibet, quominus ita dentes fiant, & decidant: ſed non propterea, ſed propter finem. Hæc autem ipſa cauſæ ſunt, vt mouentia inſtrumenta & materia. Nam & ſpiritu magna ex parte agere conſentaneum, vt inſtrumento, eſt. Vt enim nonnulla artium *inſtrumenta vtilia ſunt ad plura*, verbi gratia in excuſoria, malleus & incus: ſic in rebus à natura inſtitutis ſpiritus varium exhibet vſum. Simile dici videtur, cùm cauſas neceſſariò eſſe dicunt: vt, ſi quis propter cultellum tantummodo aquam exiiſſe iis qui intercute laborant, nō etiam propter ſanitatem, cuius cauſa ſecuit cultellus, exiſtimet. Sed de dentibus cur partim decidant, ac denuò naſcantur, partim non: & omnino quam ob cauſam fiant, dictum eſt. Dixi etiam de cæteris membrorum affectibus, qui non alicuius cauſa, ſed neceſſariò veniant, & quam ob cauſam, videlicet eam cui motum tribuimus.

Δημόκριτος δὲ, C τὸ οὗ ἕνεκα ἀφεὶς λέγειν, πάντα ἀνάγει οἷς χρῆται ἡ φύσις, οὖσι μὲν τοιούτοις, οὐ μὴν ἀλλ' ἕνεκά τινος οὖσι, καὶ τοῦ περὶ ἕκαστον βελτίονος χάριν. ὥστε γίνεσθαι μὲν οὐδὲν κωλύει οὕτω, καὶ ἐκπίπτειν· ἀλλ' οὐ διὰ ταῦτα, ἀλλὰ διὰ τὸ τέλος. ταῦτα δ' ὡς κινοῦντα, καὶ ὡς ὄργανα, καὶ ὡς ὕλης αἴτια. ἐπεὶ τὸ τῷ πνεύματι ἐργάζεσθαι τὰ πολλὰ εἰκὸς ὡς ὀργάνῳ, εἶναι γὰρ ἔνια πολύχρηστα ὥσπερ τῶν περὶ τὰς τέχνας, ὥσπερ ἐν τῇ χαλκευτικῇ ἡ σφῦρα καὶ ὁ ἄκμων, οὕτως καὶ τὸ πνεῦμα ἐν τοῖς φύσει συνεστῶσιν. ὅμοιον δὲ ἔοικε τὸ λέγειν τὰ αἴτια ἐξ ἀνάγκης, κἂν εἴ τις διὰ τὸ μαχαίριον μόνον οἴοιτο τὸ ὕδωρ ἐξεληλυθέναι τοῖς ὑδρωπιῶσιν, D ἀλλ' οὐ διὰ τὸ ὑγιαίνειν οὗ ἕνεκα τὸ μαχαίριον ἔτεμε. περὶ μὲν οὖν ὀδόντων, διότι οἱ μὲν ἐκπίπτουσι καὶ γίνονται πάλιν, οἱ δ' οὔ, καὶ ὅλως διὰ τίν' αἰτίαν γίνονται, εἴρηται. εἴρηται δὲ καὶ περὶ τῶν ἄλλων τῶν κατὰ τὰ μόρια παθημάτων, ὅσα γίνεσθαι συμβαίνει μὴ ἕνεκά του, ἀλλ' ἐξ ἀνάγκης, καὶ διὰ τὴν αἰτίαν τὴν κινητικήν.

Ceruos Achaicos, aiunt, cornua amiſſuros, loca difficilia, & quà inueniri nequeāt, petere,

propterea quòd armis deſtituti, tueri ſe nequeant, tum ob dolorem, quem ex auulſorum cornuum veſtigiis ſentiunt: vbi & enatam gerentes hederam plurimos viſos eſſe. In Armenia venenum quoddam naſci aiunt, quod pardalium vocant, id venatores lanæ illitum, vbi viſus eſt pardus, abiiciunt. Qui ſi ex eo deguſtauerit, humana excrementa remedio quærit. Quocirca venatores, vaſculo impoſita, ex arbore ſuſpendunt, vt aſſultatione frequenti, fracta viribus laſſatáque beſtia domari queat. In Ægypto aiunt, crocodilis hiantibus, trochilos aues, dentes expurgare, carunculis, quę in roſtris hærent, exeſis, atque hoc velut gratum officium cum voluptate admittere, nec vllo pacto nocere. In Cephalenia non bibunt capræ diebus ſingulis, vt videtur, pro reliquorum quadrupedum more, ſed ad flantem auram conuerſæ, hiantéſque, hauſto vento reficiuntur.

In Syria, inquiunt, inter ſylueſtres equos, vnum præire armento, vbi ſi iunior aliquis equam inituus conſcenderit, ducem indignari, & hunc tantiſper, dum comprehendat, perſequi, defixóque morſu verenda euellere. Teſtudines aiunt, quando ſerpentem deglutiuerunt, mox origanum inſuper vorare, id niſi promptum ſtatim inueniant, interire. Multóſque ruri agentes cùm id experiri vellent, captata opportunitate, origanum euulſam quærenti præripuiſſe, eóque animans in ipſorum conſpectu ſubitò interiiſſe.

Viuerris aiunt genitalia eſſe, reliquis animalibus plurimùm abſimilia, quòd ipſis quomodocumque affectis ſint inſtar oſſium firma, duráque. Singulare ſtranguria laborantibus remedium, ſi raſa tritáque exhibeantur. Picum martium, arbores ſcandere ferunt, quemadmodum aſcalaphum, tam reſupinum, quàm pronum, depaſcique vermiculos, quos adeo veſtigat auidè, vt totos ſtipites tundendo perforet. Pelecanos aiunt, conchas fluuiatiles vorare, multitudinémque ingeſtam mox vomere, ac eo, quod eſui eſt, veſci, cæterum à teſta abſtinere. Circa Cyllenen Arcadiæ, merulas candidas gigni tradunt, quod alibi nuſquam contingat, vocéſque varias ſonare. Luna lucente progredi, interdiu verò quantolibet ſtudio advigiletur, deprehendi non poſſe. A quibuſdam fertur, mel Anthinum, vt vocant, circa Melum Cnidúmque naſci, odore quidem ſuaui, ſed neutiquam durabile id erithacam fieri. Circa Cappadociam aiunt locis quibuſdam mella citra fauos comportari, olei inſtar craſſa. In Trapezunti vrbe, ea quæ in Ponto ſita eſt, mel ferunt è buxis produci graueolentiſſimum, quod ſanos quidem mentis loco moueat, ægros verò perculſóſque eiuſmodi ſtupore ſanet. In Lydia aiunt ex arboribus mella copioſa colligi, vnde paſtillos abſque cera indigenæ conficiunt, duritia tanta, vt niſi vehementiore attritu nihil demi inde poſſit. Fit & in Thracia mel non perinde ſolidum, ſed arenoſum. Cæterùm mella omnia concreta eandem craſſitiem ſeruant, diuerſa ab aqua, & liquidis reliquis. [Reliqua enim omnia concreta nonnihil ſicceſcunt, attenuantúrque.]

A ποιεῖν, διὰ τὸ μὴ ἔχειν ᾧ * ἀμυνῶνται, καὶ διὰ τὸ ποιεῖν τοὺς τόπους ὅθεν τὰ κέρατα ἀπέβαλον· πολλάκις δὲ κισσὸν ἐπιπεφυκότα ἐν τῷ τῶν κεράτων τόπῳ ἑωρᾶσθαι. * Ἐν Ἀρμενίᾳ φάρμακόν τι φασὶ φύεσθαι, ὃ καλεῖται παρδάλειον. τοῦτο οὖν, ὅταν ὀφθῇ πάρδαλις, χρίσαντες, τὸ ἱερεῖον ἀφιᾶσιν. ἡ δέ, ὅταν ἅψηται αὐτοῦ, ζητεῖ, ὡς ἔοικε, τὴν τοῦ ἀνθρώπου κόπρον. διὸ καὶ οἱ κυνηγοὶ εἰς ἀγγεῖον αὐτὴν * ἐμβάλλοντες, ἔκ τινος δένδρου κρεμῶσιν, ἵνα περιαλλομένη καὶ ὑπερκόπτος γινομένη, ὑπ' αὐτῶν παραλυθῇ καὶ ὑποχείριος γένηται. * Ἐν Αἰγύπτῳ δὲ τοὺς τροχίλους φασὶν εἰσπετομένους εἰς τὰ στόματα τῶν κροκοδείλων, καθαίρειν αὐτῶν τοὺς ὀδόντας, τὰ σαρκία τὰ ἐξερχόμενα τοῖς ῥύγχεσιν ἐξέλκοντας· τοὺς δὲ ἥδεσθαι, καὶ μηδὲν B βλάπτειν αὐτούς. Αἱ ἐν Κεφαλληνίᾳ αἶγες οὐ πίνουσιν, ὡς ἔοικεν, ὥσπερ καὶ τὰ ἄλλα τετράποδα, καθ' ἑκάστην ἡμέραν· ἀλλὰ πρὸς τὸ πνεῦμα αἰτία τὰ πρόσωπα ποιήσασαι, χάσκουσιν εἰσδεχόμεναι τὰ πνεύματα. Φασὶν ἐν Συρίᾳ τῶν ἀγρίων ἵππων ἕνα ἀφηγεῖσθαι τῆς ἀγέλης. ἐπειδὰν δέ τις νεώτερος ὢν τῶν ἄλλων, ἐπὶ τὴν θήλειαν ἀναβῇ, τὸν ἀφηγούμενον θυμοῦσθαι, καὶ διώκειν τέως τοῦτον, ἕως ἂν καταλάβῃ τὸν πῶλον· καὶ * ὑποκύψαντα ἀπὸ τῶν ὀπισθίων σκελῶν τῷ στόματι ἀποσπᾶσθαι τὰ αἰ- C δοῖα. Τὰς χελώνας φασίν, ὅταν ἔχεως φάγωσιν, ἐπεσθίειν τὸ ὀρίγανον· ἐὰν δὲ μὴ θᾶττον εὕρῃ, ἀποθνήσκειν. πολλοὺς δὲ ἀποπειράζοντας τῶν ἀγραυλούντων, εἰ τοῦτ' ἀληθές ἐστιν, ὅταν ἴδωσιν αὐτὴν τοῦτο πράττουσαν, ἐκτίλλειν τὸ ὀρίγανον. τοῦτο δὲ ὅταν ποιήσωσι, μετὰ μικρὸν αὐτὴν ὁρᾶσθαι ἀποθνήσκουσαν. Τὸ τῆς ἰκτίδος λέγεται αἰδοῖον εἶναι οὐχ ὅμοιον τῇ φύσει τῶν λοιπῶν ζώων, ἀλλὰ στερεὸν διὰ παντὸς εἶναι ὀστοῦν, ὅπως ἄν ποτε διακειμένη τύχῃ. φασὶ δὲ στραγγουρίας αὐτὸ φάρμακον εἶναι ἐν τοῖς ἀρίστοις, καὶ δίδοσθαι ἐπιξυόμενον. Τὸν δρυοκολάπτην τὸ ὄρνεον ἐπὶ τῶν δένδρων βαδίζειν φασίν, ὥσπερ τοὺς ἀσκαλα- D βώτας, καὶ ὕπτιον καὶ ἐπὶ τὴν γαστέρα. νέμεσθαι δὲ λέγεται καὶ τοὺς ἐκ τῶν δένδρων σκώληκας, καὶ οὕτως σφόδρα κατὰ βάθους ὀρύττειν τὰ δένδρα ζητοῦντα τοὺς σκώληκας ὥστε καὶ καταβάλλειν αὐτά. * Φασὶ τοὺς πελεκᾶνας τὰς ἐν τοῖς ποταμοῖς γινομένας κόγχας ὀρύττοντας καταπίνειν· ἔπειτα ὅταν πλῆθος * εἰσφορήσωσιν αὐτῶν, ἐξεμεῖν· εἶθ' οὕτως τὰ μὲν κρέα ἐσθίειν τῶν κογχῶν, τῶν δὲ ὀστράκων μὴ ἅπτεσθαι. Ἐν Κυλλήνῃ φασὶ τῆς Ἀρκαδίας, τοὺς κοσσύφους λευκοὺς τίκτεσθαι, ἄλλοθι δὲ οὐδαμῇ, καὶ φωνὰς ποικίλας προΐεσθαι, ἐκπορεύεσθαί τε πρὸς τὴν σελήνην. τὴν δὲ ἡμέραν εἴ τις ἐπιχειροίη, σφόδρα δυσθή- E ρατος εἶναι. Λέγεται δὲ ὑπό τινων μέλι τὸ καλούμενον ἀνθινὸν περὶ Μῆλον καὶ Κνίδον γίνεσθαι· καὶ εὐώδες μὲν τῇ ὀσμῇ, ὀλιγοχρόνιον δὲ κατὰ τὴν ἐριθάκην γίνεσθαι. Περὶ Καππαδοκίαν ἔν τισι τόποις ἄνευ κηρίου φασὶν ἐργάζεσθαι τὸ μέλι, γίνεσθαι δὲ τὸ πάχος ὅμοιον ἐλαίῳ. Ἐν Τραπεζοῦντι τῇ ἐν τῷ Πόντῳ γίνεται τὸ ἀπὸ τῆς πύξου μέλι, βαρύοσμον· καί φασι τοὺς μὲν ὑγιαίνοντας ἐξιστάναι, τοὺς δὲ ἐπιλήπτους, καὶ τελέως ἀπαλλάττειν. Φασὶ δὲ καὶ ἐν Λυδίᾳ ἀπὸ τῶν δένδρων τὸ μέλι γίγνεσθαι πολύ, καὶ ποιεῖν ἀπ' αὐτοῦ τοὺς ἐνοικοῦντας ἄνευ κηροῦ τροχίσκους, καὶ ἀποτέμνοντας χρῆσθαι διὰ τρίψεως σφοδροτέρας. γίνεται μὲν οὖν καὶ ἐν Θρᾴκῃ, οὐχ οὕτω δὲ στερεόν, ἀλλ' ὡσανεὶ ἀμμῶδες. ἅπαν δὲ μέλι πηγνύμενον, τὸν ἴσον ὄγκον ἔχειν φασίν, οὐχ ὥσπερ τὸ ὕδωρ καὶ τὰ ἄλλα ὑγρά.

Περὶ Θετταλίαν μνημονεύουσιν ὄφεις ζωογονηθῆναι τοσούτους, ὥστε εἰ μὴ ὑπὸ τῶν πελαργῶν ἀνῃροῦντο, ἐκχωρῆσαι ἂν αὐτούς. διὸ καὶ τιμῶσι τοὺς πελαργούς, καὶ κτείνειν οὐ νόμος· καὶ ἐάν τις κτείνῃ, ἔνοχος τοῖς αὐτοῖς γίνεται οἷσπερ καὶ ὁ ἀνδροφόνος.

Ὡσαύτως δὲ καὶ ἐν Λακεδαίμονι κατά τινας χρόνους μνημονεύεται γενέσθαι τοσοῦτον πλῆθος ὄφεων, ὥστε διὰ τὴν ἀσιτίαν, καὶ τροφῇ τοὺς Λάκωνας χρῆσθαι αὐτοῖς. ὅθεν καὶ τὴν Πυθίαν φασὶ προσαγορεύεσθαι αὐτοὺς ὀφιοδείρους.

Ἐν Κύπρῳ τῇ νήσῳ λέγεται τοὺς μῦς τὸν σίδηρον ἐσθίειν. Φασὶ δὲ καὶ τοὺς Χάλυβας ἔν τινι ὑπερκειμένῃ αὐτοῖς νησιδίῳ τὸ χρυσίον συμφορεῖσθαι παρὰ πλειόνων. διὸ καὶ ἐν τοῖς μετάλλοις ἀναιροῦσιν, ὡς ἔοικεν.

Ἐν δὲ Λιπάρᾳ τῇ νήσῳ λέγουσιν εἶναί τινας γῆν, εἰς ἣν ἐὰν κρύψωσι χύτραν, ἐμβάλλοντες ὃ ἐθέλουσιν, ἕψουσιν.

A Chalcidica herba, & amygdala ad mella conficienda vſum præbent maximum. Tum etiam augere fœtum vehementer dicuntur. Apes aiunt ex vnguentis inebriari, neque odorem ferre poſſe. Itaque redolentes vnguenta à cæteris vapulaſe. Illyrios ferunt, quos Taulantios vocant, ex mellis vina reddere. Fauos enim aqua ſuperfuſa exprimunt, ac ſimul aheno ad mediam vſque partem incoctam, primùm fictilibus infundunt, iam tum dulciſſimam: dehinc vaſis ligneis reſeruant in multa tempora, donec per omnia vini ſapprem contrahat, cætera potus dulcis, & ſyncerus. Ea verò induſtria, in Græcia aliquando paratum ferunt, vt à vino vetere nihil differret. Verùm B miſtionem deinceps perquiſitam explorari non potuiſſe. Circa Theſſaliam tantam ſerpentum copiam generari memorant, vt à ciconiis niſi tollantur, inhabitabilis deſertáque reddatur regio: quocirca & has venerantur incolæ, & lege, ne quis noceat, cauetur, homicidij pœna tranſgreſſori conſtituta. Eodem pacto Lacedæmonem ferunt, ſerpentibus adeo refertam quondam, vt ob annonæ penuriam, his vice alimentorum vterentur Lacones: vnde & à Pythia ὀφιοδείρους vocatos. In Cypro inſula Metas aiunt ferrum deuorare. Aiunt & Chalybas, in iuxtà ſita parua inſula aurum comportatum conſtruere peculiari præ aliis omnibus ſtuC dio: quocirca in metallis, vt videtur, effoſſum ſecant. Fertur ex Suſis in Mediam iter facientibus ſtatione altera, immenſam ſcorpionum multitudinem generari. Quocirca tranſiens aliquando iſthac Perſarum rex triduò ibidem hæſit, ſuiſque omnibus ſcorpionum venationem imperauit, præmio iis qui captorum numero excellerent, propoſito. In Cyrene aiunt non vnum tantùm muſcarum genus reperiri, ſed plura, formiſque & colore diſtincta: *latifrontes enim alias velvt muſtelas*, alias viperis ſimiles eſſe, quas & echidnas vocant. In Sicilia ferunt aquæ verticem eſſe, in quem merſæ aues, reliquáve animantia ſuffocata, vitæ reſtituanD tur. In Scythis, quos Gelonas vocant, Tarandus reperitur, haud frequens, colorem mutat pro locorum, in quibus extiterit, varietate, & proinde rarò capitur. Nam & arborum & locorum, & in vniuerſum omnium quibus adpropinquarit, colorem reddit. Et, quod admiratione cum primis dignum eſt, habitus non ſolùm corpori tam varius, quod etiam cum Chamæleone illi commune eſt, ſed etiam *villo* datur. Magnitudo ei quæ boui, caput ceruino ſimile. Ferunt in Abydo quendam mente deſtitutum, in theatrum progreſſum vacuum, multóſque dies illic diligenter, tanquam in eo eſſent hiſtriones, applauſiſſe, acclamaſſéque adE mirabundè: cæterùm mente recepta dixit ſuauiùs ſe nunquam, atque eo tempore, vixiſſe. Tarenti aiunt cauponem noctu quidem inſaniiſſe, interdiu verò vina vendidiſſe: ſed & clauiculam domus ſuæ in zona ita conſeruaſſe, vt quamlibet multis ſurripere conantibus, nunquam tamen amiſerit. In Lipara inſula, aiunt quidam terram reperiri, qua ſi ollam obruas, quicquid inicias, lixetur.

In Media Pſittacine, regione Perſidis, ignes quidam iugiter æſtuant, illi quidem modicè, hi autem vehementer, flamma pura lucentéque efflagrantes, locis vtique planis, non accliuibus. Quamobrem & rex Perſarum iſtic coquinas extruxit. Conſpicui ſunt hi quidem diu, noctúque, alij verò in Pamphylia noctu tantùm. Aiunt, circa Atitaniam, iuxta colles Apolloniatidis petram eſſe, in qua latens ignis non appareat quidem, ſed ſuperinfuſo oleo exardeſcat. Ferunt, ex columnis Herculis incendia, alia quidem iugi flamma, omníque tempore flagrare, alia autem noctu tantùm, vt Periplus ſcribit: ſimilem & in Lipara, conſpicuum quidem ignem lucentémque, ſed noctu tantùm. Aiunt & in Pithecuſis inſulis æſtuaria eſſe, ignea quidem vi, feruentique ſupra modum ardore, nec tamen flammam mittere. Porrò alterum in Lipara, inquit Xenophanes, interdum annis ſexdecim prorſus extingui, decimo ſeptimo rurſum redire. Illum quoque ignis fauillam quæ ex monte Ætna ſolet erumpere, aiunt eſſe nec flammeam, nec continuam: ſed poſt multos annos redire. Ferunt, circa Lydiam ignes emergere immenſos, diebúſque ſeptem ardere. Cùm primis verò admiratione dignum eſt, quod circa Siciliæ craterem inquiunt, ignium emicantium latitudinem ſtadia quadraginta patere, altitudine autem vix ad tria vſque tolli. In Thracia aiunt, lapidem, quem ſpinum vocant, diſſectum ardere, compoſitúmque rurſus, quemadmodum & Smarillem aqua perfuſum accendi, vtrinque non abſimilem. Maritham quoque oſtendere.

Circa Philippos in Macedonia, ferunt metalla inueniri, quorum ramenta creſcant diſiecta, aurúmque manifeſtò producant.

Aiunt & in Cypro, circa Tyrrhiam quam vocant, ferrum natura æquè miranda prouenire; quod in minuta fruſta conciſum ſeritur, deinde aqua perfuſum augetur, ſurgitque vt colligi queat. In Melo inſula ferunt, effoſſas terræ cauernas, aliâ ſuccreſcente humo rurſum compleri. Circa Pæoniam dicunt, crebris imbribus terra liquefacta, aurum, quod apyrum vocant, inueniri. In Pæonia ferunt, adeò fertile auro ſolum eſſe, vt plurimis pondus minam excedens repertum ſit. Ex eo regi exhibêt glebas duas, quarum altera duas, altera tres libras appendat, atque eas aiunt menſæ principali apponi, primúmque ex iis cibum deguſtari. Aiunt & in Bactris, Ozum fluuium glebulas auri plurimas ferre, ſimiliter & in Theodoronte, circa litora ebullire aurum, & alueo quoque deferri. In Pieria Macedoniæ fertur aurum non ſignatum, in quatuor terræ hiatus defoſſum eſſe à regibus priſcis, ex quorum vno auri lamina palmi magnitudine excreuerit. Fertur autem peculiaris quædam generatio eſſe ferri Chalybici Myſinique, vt quod ex ſabulo fluuiorum comportatum. alij ſimpliciter lotum in fornace excoqui, alij illam etiam ex lotura frequentiore ſubſidentem hypoſtaſin inijci, ſimúlque igni purgari tradunt, adiecto Pyrimacho lapide, qui iſthic plurimus reperitur. Hoc genus ferri, alis eſt multo nitidius:

Ἔστι δὲ καὶ ἐν Μηδίᾳ καὶ ἐν Ψιττακήνῃ τῆς Περσίδος πυρὰ καιόμενα, τὰ μὲν ἐν Μηδίᾳ, ὀλίγον, τὰ δὲ ἐν Ψιττακήνῃ, πολὺ καὶ καθαρὸν τῇ φλογί. διὸ καὶ μαγειρεῖα πρὸς αὐτῷ κατεσκεύασεν ὁ Περσῶν βασιλεύς. ἄμφω δὲ ἐν ὁμαλοῖς τόποις καὶ οὐκ [ἐν] ἀνωμάλοις. ἐνταῦθα δὲ νύκτωρ καὶ μεθ' ἡμέραν φανερά· * τὰ δ' ἐν Παμφυλίᾳ, νύκτωρ μόνον. Περὶ Φιλίππους τῆς Μακεδονίας εἶναι λέγουσι μέταλλα, ἐξ ὧν τὰ ἐκβαλλόμενα ἀποσύρματα αὐξάνεσθαί φασι καὶ φύειν χρυσίον, καὶ τοῦτο εἶναι φανερόν. Φασὶ καὶ ἐν Κύπρῳ περὶ τὸν λεγόμενον Τυῤῥίαν χαλκὸν ὅμοιον γίνεσθαι. κατακόψαντες γὰρ, ὡς ἔοικεν, εἰς μικρὰ, σπείρουσιν αὐτόν· εἶτα ὑδάτων ἐπιγινομένων, αὐξάνεται καὶ * ἀνίεται, καὶ οὕτως συνάγεται. Φασὶ δὲ καὶ ἐν Μήλῳ τῇ νήσῳ ἐν τοῖς ἐξορυσσομένοις τόποις τῆς γῆς, πάλιν ἀναπληρώματα γίνεσθαι. Περὶ Παιονίαν λέγουσιν, ὅταν συνεχεῖς οἱ ὄμβροι γίνωνται, εὑρίσκεσθαι, περιτηκομένης τῆς γῆς, χρυσὸν τὸν καλούμενον ἄπυρον.

Λέγουσι δ' ἐν τῇ Παιονίᾳ οὕτω χρυσίζειν τὴν γῆν, ὥστε πολλοὺς εὑρηκέναι καὶ ὑπὲρ τὴν μνᾶν χρυσίου ὁλκήν. τῷ δὲ βασιλεῖ φασιν εὑρόντας ἀνενεγκεῖν δύο βώλους, τὸν μὲν, τρεῖς μνᾶς ἄγοντα, τὸν δὲ πέντε. οὕς φασιν ἐπὶ τῆς τραπέζης αὐτῷ παρακεῖσθαι, καὶ ἐπ' ἐκείνων πρῶτον, εἴ τι ἐσθίει, ἀπάρχεσθαι. Φασὶ δὲ καὶ ἐν Βάκτροις τὸν * Ὦζον ποταμὸν καταφέρειν βώλια χρύσια πολλά. καὶ ἐν Ἰβηρίᾳ δὲ τὸν καλούμενον Θεόδωρον ποταμὸν ἐκβράσσειν τε πολὺ περὶ τὰ χείλη χρυσίον, ὁμοίως δὲ καὶ καταφέρειν. Λέγεται δὲ καὶ ἐν Πιερίᾳ τῆς Μακεδονίας ἄσημόν τι χρυσίον κατορωρυγμένον ὑπὸ τῶν ἀρχαίων βασιλέων, χασμάτων τε τεττάρων ὄντων, ἐξ ἑνὸς αὐτῶν ἀναφῦναι χρυσίον, τὸ μέγεθος σπιθαμιαῖον.

Λέγεται δὲ ἰδιωτάτην εἶναι γένεσιν σιδήρου τοῦ Χαλυβικοῦ καὶ * τοῦ Μισηνοῦ. συμφύεται γὰρ, ὥς γε λέγουσιν, ἐκ τῆς ἄμμου τῆς καταφερομένης ἐκ τῶν ποταμῶν. ταύτην δὲ οἱ μὲν ἁπλῶς φασι * πλύναντας καμινεύειν· οἱ δὲ, τὴν ὑπόστασιν τὴν γινομένην ἐκ τῆς * πλύσεως πολλάκις πλυθεῖσαν συγκάειν· παρεμβάλλειν δὲ τὸν πυρίμαχον καλούμενον λίθον. εἶναι δὲ ἐν τῇ χώρᾳ πολύν. οὗτος δ' ὁ σίδηρος πολὺ τῶν ἄλλων γίνεται καλλίων.

A εἰ δὲ μὴ ἐν μιᾷ καμίνῳ ἐκαίετο, οὐδὲν ἂν, ὡς ἔοικε, διέφερε τοῦ ἀργυρείου. μόνον δέ φασιν αὐτὸν ἄμικτον· οὐ πολὺν δὲ γίνεσθαι. Φασὶ δὲ καὶ ἐν Ἰνδοῖς τὸν χαλκὸν οὕτως εἶναι λαμπρὸν καὶ καθαρὸν καὶ ἀνίωτον, ὡς μὴ διαγινώσκεσθαι τῇ χρόᾳ πρὸς τὸν χρυσόν· ἀλλ' ἐν τοῖς Δαρείου ποτηρίοις *βατιακάς εἶναί τινας καὶ πλείους, ἃς εἰ μὴ τῇ ὀσμῇ, ἄλλως οὐκ ἦν διαγνῶναι πότερον εἰσὶ χαλκαῖ ἢ χρυσαῖ.

Τὸν κασσίτερον τὸν Κελτικὸν τήκεσθαί φασι πολὺ τάχιον μολύβδου. σημεῖον δὲ τῆς εὐτηξίας, ὅτι τήκεσθαι δοκεῖ καὶ ἐν τῷ ὕδατι. χρώζει γοῦν, ὡς ἔοικε, ταχύ. τήκεται δὲ καὶ ἐν τοῖς ψύχεσιν, ὅτε γίνοιτο πάγη, ἐγκατακλειομένου ἐντὸς (ὥς φασι) καὶ συνωθουμένου τοῦ θερμοῦ τοῦ ἐνυπάρχοντος αὐτῷ, διὰ τὴν ἀσθένειαν. Ἐν τῷ Πανθείῳ ἐστὶν ἐλαία, καλεῖται δὲ B καλλιστέφανος· ταύτης δὲ πάντα τὰ φύλλα ταῖς λοιπαῖς ἐλαίαις ἐναντία πέφυκεν. ἔξω γὰρ [ἀλλ'] οὐκ ἐντὸς ἔχει τὰ χλωρά· ἀφίησί τε τοὺς πτόρθους ὥσπερ ἡ μύρτος εἰς τοὺς στεφάνους συμμέτρως. ἀπὸ ταύτης δὲ φυτὸν λαβὼν ὁ Ἡρακλῆς ἐφύτευσεν Ὀλυμπίασιν, ἀφ' ἧς οἱ στέφανοι τοῖς ἀθληταῖς δίδονται. ἔστι δὲ αὕτη παρὰ τὸν Ἰλισσὸν ποταμὸν, σταδίους ἑξήκοντα τοῦ ποταμοῦ ἀπέχουσα. περιῳκοδόμηται δὲ, καὶ ζημία μεγάλη τῷ θιγόντι αὐτῆς ἐστίν. ἀπὸ ταύτης δὲ τὸ φυτὸν λαβόντες ἐφύτευσαν Ἠλεῖοι ἐν Ὀλυμπίᾳ, καὶ τοὺς στεφάνους ἀπ' αὐτῆς ἔδωκαν. Ἐν τοῖς περὶ Λυδίαν μετάλλοις τοῖς περὶ Πέργαμον, ἃ δὴ καὶ Κροῖσος εἰργάσατο, πολέμου τινὸς γενο- C μένου, κατέφυγον οἱ ἐργαζόμενοι ἐπ' αὐτά· τοῦ δὲ στομίου ἐποικοδομηθέντος, ἀπεπνίγησαν· καὶ ὕστερον χρόνῳ πολλῷ τῶν μετάλλων ἀνακαθαρθέντων, εὑρέθη οἷς ἐχρῶντο ἀγγείοις πρὸς τὰς ὑπὸ χεῖρα χρείας ἀπολελιθωμένα, οἷον ἀμφορεῖς καὶ τὰ τοιουτότροπα. ταῦτα δὴ πεπληρωμένα οὗ τινος ἔτυχον ὑγροῦ, ἐλελίθωτο, καὶ προσέτι τὰ ὀστᾶ τῶν ἀνθρώπων.

Ἐν τῇ Ἀσκανίᾳ λίμνῃ οὕτω νιτρῶδές ἐστι τὸ ὕδωρ, ὥστε τὰ ἱμάτια οὐδενὸς ἑτέρου ῥύμματος προσδεῖσθαι· κἂν πλείω χρόνον ἐν τῷ ὕδατι ἐάσῃ τις, διαπίπτει. Περὶ τὴν Ἀσκανίαν λίμνην Μυθόπολίς ἐστι, κώμη ἀπέχουσα Κίου ὡς σταδίους ἑκατὸν εἴκοσι· ἐν ᾗ τοῦ χειμῶνος ἀναξηραίνεται πάντα τὰ φρέατα, ὥστε μὴ ἐνδέχεσθαι βάψαι τὸ ἀγγεῖον· τοῦ δὲ θέρους πλη- D ροῦται ἕως τοῦ στόματος. Ὁ πορθμὸς ὁ μεταξὺ Σικελίας καὶ Ἰταλίας αὔξεται καὶ φθίνει ἅμα τῇ σελήνῃ· καὶ διότι ἐπὶ τῆς ὁδοῦ τῆς εἰς Συρακούσας κρήνη ἐστὶν ἐν λειμῶνι οὔτε μεγάλη, οὔτε ὕδωρ ἔχουσα πολύ· συναπαντήσαντος δὲ εἰς τὸν τόπον ὄχλου πολλοῦ, παρέσχεν ὕδωρ ἄφθονον. Ἔστι δὲ καὶ κρήνη τις ἐν Παλικοῖς τῆς Σικελίας, ὡς δεκάκλινος· αὕτη δὲ ἀναρρίπτει ὕδωρ εἰς ὕψος ἓξ πήχεις, ὥστε ὑπὸ τῶν ἰδόντων νομίζεσθαι κατακλυσθήσεσθαι τὸ πεδίον· καὶ πάλιν *εἰς ταὐτὸ καθίσταται. ἔστι δὲ καὶ ὅρκος, ὃς ἅγιος αὐτόθι δοκεῖ εἶναι· ὅσα γὰρ ὄμνυσί τις, γράψας εἰς πινακίδιον, ἐμβάλλει εἰς τὸ ὕδωρ. ἐὰν μὲν οὖν εὐορκῇ, ἐπιπολάζει τὸ πινακίδιον· ἐὰν δὲ μὴ εὐορκῇ, τὸ μὲν πινακίδιον, βαρὺ γενόμενον, ἀφανίζεσθαί φασι, τὸν δὲ ἄνθρωπον E πίμπρασθαι. διὸ δὴ λαμβάνειν τὸν ἱερέα παρ' αὐτοῦ ἐγγύας ὑπὲρ τοῦ καθαίρειν τινὰ τὸ ἱερόν. Δημόνησος ἡ Καρχηδονίων νῆσος, ἀπὸ Δημονήσου τοῦ πρώτου ἐργασαμένου, τὴν ἐπωνυμίαν εἴληφεν· ἔχει δὲ ὁ τόπος κυανοῦ τὸ μέταλλον, καὶ χρυσοκόλλης. ταύτης δ' ἡ καλλίστη πρὸς χρυσίον εὑρίσκεται τιμίαν. καὶ γὰρ φάρμακον ὀφθαλμῶν ἐστιν. ἔστι δὲ αὐτόθι χαλκὸς κολυμβητὴς ἐν δυεῖν ὀργυαῖς τῆς θαλάσσης· ὅθεν ὁ ἐν Σικυῶνι ἐστὶν ἀνδριὰς ἐν τῷ ἀρχαίῳ ναῷ τοῦ Ἀπόλλωνος,

A & niſi vnis tantùm ignibus, vnáque fornace purgetur, argento ſimile redditur. Solum hoc eſt impermiſtum, cæterùm minimè prouenit copioſè. Aiunt & apud Indos, æs adeò ſplendidum, purum, ſyncerúmque reperiri, vt colore & ſpecie nequaquam ab auro diſcerni queat: vnde & inter Darij pocula cados quoſdam eſſe, qui niſi olfactus iudicio ab auro diſtare non cognoſcantur. Stannum ferunt Celticum, multo quàm plumbū, citiùs liquefieri: argumento eſt, quòd etiam in aquis ſoluatur, & colore inficiat quæcunque attingit.

Sed & ex frigoribus liqueſcit, calore ſcilicet ex congelatione intrinſecus ob mollitiem incluſo & coacto. In Pantheo olea eſt, quam B Calliſtephanum vocant, omnia folia reliquis oliuis contraria forma producens. Quippe quæ ſupinam non pronam partem habeat viridiorem: ramos mittit quemadmodum myrtus. vnde & ſumpta plantula Hercules in Olympiis oleam plantauit, athletis coronas ſuppeditātē. Diſtat ab Iliſſo fluuio ſtadiis ſexaginta, muro circuniecto munita. Ac ne quis tangat, grandi pœna cauetur. Hinc & Elei decerptum ſurculum, in Olympio campo plantarunt, vt victores inde coronis donarentur.

In metallis Lydiæ circa Pergamum, quæ quondam extruxerat Crœſus, accidit, vt cùm bello orto opifices in ea confugiſſent, obſtru- C cto ab hoſtibus exitu, ſuffocati ſint, verùm longo pòſt temporum interuallo, apertis rurſum repurgatíſq; metallis, inuentæ ſunt amphoræ, aliáq; id genus vaſa, quæ ad manuarios vſus adhibuerant, repleta humore quodam, & in lapides indurata, & iuxta etiam oſſa humana.

Lacus Aſcanij aquas ferūt adeo nitroſas eſſe, vt veſtibus in hunc intinctis alia lotione nulla ſit opus, diffluere verò, ſi quis diutius paulò immerſerit. Fretum inter Siciliam & Italiam vnà cū Luna intumeſcit & ſubſidet. Porro in prato iuxta viam quæ Syracuſas ducit, fons eſt, neq; amplus, neque aqua larga ſcaturiens, ad quem cùm turba numeroſa conflu- D xiſſet, auctus ſubitò præbuit aquarum abundè liberalem copiam. Eſt & fons in Palice Siciliæ, amplitudine decaclini. Aquas ad ſex cubitorum altitudinem eiicit, vt inundaturus planitiem omnem videatur, verùm eodem loco diffluens conſiſtit: porro iuriiurando hic ſacer haberi ſolet. Quæ enim cunque libet, tabellæ inſcribunt, inque fontem abiiciunt: ea ſi vero iureiurando confirmentur, natans in ſuperficie tabula teſtabitur: ſin ſecus, velut pondere depreſſa eripitur ex oculis, ignéque corripitur periurus. Quocirca fideiuſſorē capit Sacerdos, qui iuſta numinis vindicta ſacrum execrandúmque, ſi peierarit, aſportet.

Demoneſus Carthaginienſium inſula à E Demoneſo primo cultore nomen traxit, vbi cæruleum metallum reperitur, & chryſocolla ad auri venas pulcherrima; oculiſque medicandis cùm primis vtilis. Sed & æs natans ibidem eſt, ſtagno paſſibus duobus in mare porrecto, vnde conflatæ ſtatuæ ſunt, in Sicyone vetuſto Apollinis templo:

inque Pheneo, orichalcei appellantur, inſcriptione eiuſmodi inſignitæ, Hercules Amphitryoniades Heli capta conſtituit. Eadem duce fœmina, cuius parentem necarat, Augiam occupauit. Foſſores metalli huius viſu redduntur acutiſſimo, & ſi palpebris fortè careant, tum naſcuntur. Quapropter ſimul æs, cinerémque Phrygium oculis medicandis adhibent. Eodem loco ſpelunca eſt, quam Glaphyram vocant, in qua columnæ ex guttis deſtillantibus excreuerunt, id quod apparet, quæ ex imo pauimento tolluntur, vbi ſpatium etiam anguſtiſſimum. Ex aquilarum paribus alternis haliæetus & aquila naſcuntur, quoad par eiuſdem generis coniugabile naſcatur. Ex haliæetis fulica, ex his accipitres vulturéſque generantur. Verùm vultures non diuerſum genus, ſed grandes rurſum vultures gignunt, eóſque ſteriles: indicio eſt, quòd vulturis magni nidus nemini mortalium viſus ſit. Stupenda vis apud Indos plumbi conſpecta eſt: liquefactum enim ſi aquæ frigidæ infundatur, exilire traditur.

Æs Moſſynœcum ſplẽdidiore candore eminere ferunt, non adiecto ſtanno, ſed terra quadam iſthic naſcente ſimul incoctum. Atque eius adtemperaturæ primum inuentorem celata arte neminem docuiſſe, & proinde priorum temporum æramenta iis in locis poſterioribus longè præſtantiora deprehenſa. Aiunt in Ponto auium quoddam genus reperiri, quę non egerant, ſinéque ſenſu doloris non deplumentur ſolùm, ſed obeliſco etiam ſuffigantur. Verùm ex ignis admoti calore ſenſum cieri.

Apes ſolſtitia denuntiare videntur, ſuo ad labores egreſſu, quod & melitopolis ſiue apiariis certo argumento eſt, quippe quæ tum quietem agant. Videntur & cicadæ poſt ſolſtitia demum canere. Echinum à cibo abſtinere ad annum vſque euolutum tradunt.

Stellionem cùm exuuias more ſerpentum reiicit, mox conuerſum deuorare aiunt: obſeruari enim à medicis ſolitum, ob vſum, quem in epilepſiæ curatione præclarum habent.

Vrſæ adipem aiunt hyeme, quo tempore ſomno indulgent, frigore concretam excreſcere, ſupráque vaſa, quibus repoſita fuerit, tolli. *In Cyrene ranas mutas, & ſine voce aiunt eſſe, & in Macedonia Ematheoticis ſuibus ſolidas vngulas eſſe. In Cappadocia ferunt mulas fœcundas eſſe, & in Creta alnos fructum ferre. In Seripho ranas aiunt eſſe mutas: quæ ſi aliò transferantur, canere incipiant. Piſciculos eſſe ferunt in eo quod Ceras vocant apud Indos, qui per ſiccos locos oberrent, ac mox in flumen ſe recipiant.

Circa Babylonem, aiunt quidam in cauernis aquoſis piſciculos latere: verùm arefacto flumine ad areas paſtum prodire, alarum ſubſidio, caudæque motu, cæterùm fugere perſequentes, capútque humo merſum, reliquo corpore tegere, quod multi inſequendo, irritandóque, explorarunt. caput habent ranæ marinæ ſimile, reliquum corpus gobio, branchias verò piſcibus aliis. Heracleæ piſcium genus aiunt eſſe, intra terræ cauernulas defoſſum, maximè circa flumina locáque humidiora.

Λέγεται δὲ περὶ τὴν Ἰταλίαν ἐν τῷ Κιρκαίῳ ὄρει φάρμακόν τι φύεσθαι θανάσιμον, ὃ τοιαύτην ἔχει τὴν δύναμιν, ὥστε ἂν προσρανθῇ τινι, παραχρῆμα πίπτειν ποιεῖ, καὶ τὰς τρίχας τὰς ἐν τῷ σώματι ἀπομαδᾶν, καὶ τὸ σύνολον τοῦ σώματος διαρρεῖν τὰ μέλη, ὥστε τὴν ἐπιφάνειαν τοῦ σώματος εἶναι τῶν ἀπολλυμένων ἐλεεινήν. τοῦτο δέ φασι μέλλοντας διδόναι Κλεωνύμῳ τῷ Σπαρτιάτῃ Παῦλον τὸν Πευκέστιον καὶ Γάιον φωραθῆναι, καὶ ἐξετασθέντας ὑπὸ* Ταραντίνων θανατωθῆναι. Ἐν τῇ Διομηδείᾳ νήσῳ, ἣ κεῖται ἐν τῷ Ἀδρίᾳ, φασὶν ἱερόν τι εἶναι τοῦ Διομήδους θαυμαστόν τε καὶ ἅγιον. περὶ δὲ τὸ ἱερὸν κύκλῳ περικαθῆσθαι ὄρνιθας μεγάλους τοῖς μεγέθεσι, καὶ ῥύγχη ἔχοντας μεγάλα καὶ σκληρά. τούτους λέγουσιν, ἐὰν μὲν Ἕλληνες ἀποβαίνωσιν εἰς τὸν τόπον, ἡσυχίαν ἔχειν· ἐὰν δὲ τῶν βαρβάρων τινὲς τῶν περιοίκων, ἀνίπτασθαι, καὶ αἰωρουμένους καταράσσειν αὐτοὺς εἰς τὰς κεφαλὰς αὐτῶν, καὶ τοῖς ῥύγχεσι τιτρώσκοντας ἀποκτείνειν. μυθεύεται δὲ τούτους γενέσθαι ἐκ τῶν ἑταίρων τοῦ Διομήδους, ναυαγησάντων μὲν αὐτῶν περὶ τὴν νῆσον, τοῦ δὲ Διομήδους δολοφονηθέντος ὑπὸ τοῦ Αἰνέου τοῦ τότε βασιλέως τῶν τόπων ἐκείνων γενομένου. Παρὰ τοῖς Ὀμβρικοῖς φασὶ τὰ βοσκήματα τρὶς τίκτειν τοῦ ἐνιαυτοῦ, καὶ τοὺς καρποὺς αὐτοῖς τὴν γῆν πολλαπλασίους ἀποδιδόναι τῶν καταβαλλομένων. εἶναι δὲ καὶ τὰς γυναῖκας πολυγόνους, καὶ σπανίως ἓν τίκτειν, τὰς δὲ πλείστας δύο καὶ τρία. Ἐν ταῖς Ἠλεκτρίσι νήσοις, αἳ κεῖνται ἐν τῷ μυχῷ τοῦ Ἀδρίου, φασὶν εἶναι δύο ἀνδριάντας ἀνακειμένους, τὸν μὲν, κασσιτέρινον, τὸν δὲ, χαλκοῦν, εἰργασμένους τὸν ἀρχαῖον τρόπον. λέγεται δὲ τούτους Δαιδάλου εἶναι ἔργα, ὑπόμνημα τῶν πάλαι, ὅτε Μίνω φεύγων ἐκ Σικελίας καὶ Κρήτης, εἰς τούτους τοὺς τόπους προσέβαλε. Ταύτας δὲ τὰς νήσους φασὶ προσκεχωκέναι τὸν Ἠριδανὸν ποταμόν. ἔστι δὲ λίμνη ἔοικε πλησίον τοῦ ποταμοῦ, ὕδωρ ἔχουσα θερμόν· ὀσμὴ δ' ἀπ' αὐτῆς βαρεῖα, καὶ χαλεπὸν ἀποπνεῖ· καὶ οὔτε ζῷον οὐδὲν πίνει ἐξ αὐτῆς, οὔτε ὄρνεον ὑπερίπταται, ἀλλὰ πίπτει καὶ ἀποθνήσκει. ἔχει δὲ τὸν μὲν κύκλον σταδίων διακοσίων, τὸ δὲ εὖρος, ἕως δέκα. μυθεύουσι δὲ οἱ ἐγχώριοι Φαέθοντα κεραυνωθέντα πεσεῖν εἰς ταύτην τὴν λίμνην. εἶναι δ' ἐν αὐτῇ αἰγείρους πολλάς, ἐξ ὧν ἐκπίπτειν τὸ καλούμενον ἤλεκτρον. οἱ δὲ λέγουσιν ὅμοιον εἶναι κόμμι, διὰ τὸ ἀποσκληρύνεσθαι ὡσανεὶ λίθον, καὶ συλλεγόμενον ὑπὸ τῶν ἐγχωρίων διαφέρεσθαι εἰς τοὺς Ἕλληνας. Εἰς ταύτας οὖν τὰς νήσους Δαίδαλόν φασιν ἐλθεῖν, καὶ κατασχόντα αὐτὰς, ἀναθεῖναι ἐν μιᾷ αὐτῶν τὴν αὐτοῦ εἰκόνα, καὶ τὴν τοῦ υἱοῦ Ἰκάρου ἐν τῇ ἑτέρᾳ.

* ἴσ. Ταρκυνίων

A Verùm areſcentibus iis locis, primùm contrahi aiunt, mox inualeſcente ſiccitate humorem in ſyluas vſque perſequi, donec eo quoque deſtituantur. Itaque latibulis vel mediocriter vdis ferarum inſtar hærere, immotóſq; defixóſque, cæterùm ſi ante ſuperuenientes aquas effodiantur, moueri.

In Paphlagonia piſces altè in terram defoſſos aiunt, virtute præſtantes, etiam ſi nec aquæ in proximo appareant, neque illabantur flumina, ſed ſola nudáque terra pariantur.

Ceruos in Epiro dextrum cornu abiicientes aiunt defodere, rebus multis vtile.

Phocam aiunt captum vomere coagulum, efficax epilepticis pharmacum. Ligiam B ferunt caudam ſtudioſè contegere, cùm ad alios vſus, tum maximè ſphragidis conficiendis idoneam. Fertur, circa Italiam, in Cyrceo monte lethale venenum naſci, tanta vi vt ſumptum mox pilis corpus totum nudet, ac ſoluat adeo membra cuncta, vt velut liqueſcentia cadauerum ſpeciem miſerabilem tota ſuperficie præbeant. Hoc ferunt Pemeſtium Gaiúmque, Cleonymo Spartiatæ inſidiatores eſſe, verùm deprehenſos examinatóſque, à Tarquiniis ſupplicio affectos. In Diomedæa inſula maris Adriatici, ferunt templum quoddam & admirandum, & religione ſacrum, ab auibus in circulum obſideri, ma- C gnitudine vaſtis, roſtris & prælongis, & turgidis. Qui Græcis quidem accedentibus quietem agant, cæterùm Barbaris, qui accolunt, venientibus, ſubuolent, ac pedibus roſtriſque capita eorum lacerent, inflictiſque multis vulneribus interimant. Fabulantur has quondam ex ſociis Diomedis extitiſſe, circáq; eam inſulam facto naufragio, ducem amiſiſſe ab Æneo gentium illarum rege dolo necatum.

In Ombricis inſulis aiunt pecora annis ſingulis ternos partus edere, terrámque multiplicem ſerentibus frugem reddere. Sed & mulieres fœcundas vehementer, vt quæ rarò vnos, ſed plerunque geminos aut ternos eni- D tantur. In Electridis inſulis maris Adriatici ſinu duæ ſtatuę recumbentes videntur, ad formam priſcam elaboratæ, ſtannea altera, altera verò ærea, Dædali opus, vt exiſtimatur, monumentúmque rerum iis temporibus geſtarum, quibus ipſe, Minoa ex Sicilia Cretáque fugiens, ad hæc loca appulit. Inſulæ ab Eridano præterlabente effuſæ traduntur.
Præterea & lacus iuxta flumen eſt, aqua calida feruens, tum odorem adeò exhalãs fœtidum, vt & armentis aquandis inutilis ſit, & aues etiã ſuperuolãtes necet. In hunc & Phaethonta fulmine ictum delapſum fabulantur incolæ. Ambitus eſt in circulum haud minor ducentorum ſtadiorum. Tum populi arbores in eo E frequentes. Vnde (quod vocamus) electrũ diſtillat, gummi ſimile, eo quòd ad inſtar lapidis indureſcat. Collectum autem ab incolis in Græciã deportatur. In has ergo inſulas deueniſſe Dædalum, occupaſſéq; ferunt, & imaginem in vna ſuã, in altera Icari filij conſtituiſſe.

Verùm ſoluentibus iam Græcis, Argóque excidentibus, Dædali ſtatuam velvt fuga ſibi conſulentem, in Icarum inſulam miraculosè abiiſſe. In Ætna Siciliæ monte eſt, vt inquiunt, ſpelunca, quam circa florum omnigena copia creſcit omni tempore, tum violis immenſum quoddam ſpatium obtegitur. Quæ finitima loca adeo fragrantia ſua replent, vt occupati hac ſuauitate odoris, venatici canes, lepores veſtigare nequeant. Ac ſub eodem hiatu obſcurum quoddam antrum latet, quò Proſerpinam rapuiſſe Pluto fertur: triticúmque reperitur nec domeſtico, quo vtuntur, neque alij importato ſimile, ſed peculiari proprietate inſigne. Quo argumento contendunt illic primum omnium triticum conſpectum eſſe: & proinde Cererem etiam ſibi, vt apud ſe natam, vendicant. In Creta lupos, vrſos, viperas, aliáſque id genus noxias feras nullas naſci dicunt, Iouis beneficio, qui iſtic natus perhibetur. Extra columnas Herculis aiunt in mari à Carthaginienſibus inſulam fertilem deſertámque inuentam: vt quæ tam ſyluarum copia, quàm fluminibus nauigationi idoneis abundet, cùm reliquis fructibus floreat vehementer, diſtans à continente plurium dierum itinere: in qua cùm Carthaginienſes quidam ob ſoli fertilitatem connubia agitare, ac habitare cœpiſſent, ferunt, præſides, ne quis deinceps inſulam ingrederetur, pœna capitis interdixiſſe, incoláſque eieciſſe, ne coitione (ſi habitare iſtic pergerent) facta, inſulæ principatum conſequerentur, & Carthaginienſes ea felicitatis parte priuarent. Ex Italia ferunt viã advſq; Celtas Gallos & Celtiberos protendi, Heracleam vocant, in qua & Græci & indigenæ tranſeuntes, ab incolis obſeruantur, ne quid iis malè fortè accidat, quippe quòd pœnas ij pendunt, damnúmque lege ſarciunt, in quorum finibus datum fuerit. Apud Celtas venenum reperiri tradunt, quod Xenicum ipſi appellant, tanta celeritate inficiens necánſque, vt venatores Celtæ cùm ceruum iaculo tincto percuſſerint, feſtinatò adcurrant, carnémque vulneratam excent, ne veneno promeante animal putreſiat, alimentóque inutilis caro reddatur. Verùm inuentum eſſe huic antipharmacum corticem quercinam, aut, vt volunt alij, folium quod κοράκιον ab ipſis appellatur, inde nimirum quòd obſeruatione compertum ſit, coruum ex guſtato veneno malè affectum herbam eam adiiſſe, móxque vt glutiuiſſet, doloribus liberatum eſſe. In Iberia aiunt combuſtis aliquando à paſtoribus ſyluis, calentéque ex ignibus terra, manifeſtum argentum defluxiſſe. Cúmque poſtmodum terræmotus ſuperueniſſent, eruptis hiatibus magnam copiam argenti ſimul collectam, atque inde etiam Maſſilienſibus prouentus non vulgares obtigiſſe. In Gymnaſiis inſulis, quæ ad Iberiam ſitæ ſunt, poſt ſeptem illas, maximæ, aiunt oleum non ex oliuis, ſed è terebintho magna copia reddi, ad vſus omnes accommodatum. Porrò ipſos Iberos in mulieres adeò pronos, vt pro vno fœmineo corpore, quatuor aut quinque maſcula cum mercatoribus commutent.

A Quocirca Carthaginienſibus militantes ſtipendia in fœminarum coemptionem tantùm impendunt, quum poſſidere iſthic argentum non liceat. Hinc orta receptáque lege, quòd Hercules aliquando bellum Hiſpaniæ intuliſſet, diuitiis incolarum inuitatus. In finibus Maſſilienſium circa Ligyſticam, lacus eſſe fertur, qui ebulliens effuſúſque, piſcium multitudinem immenſam, veriq; fidem ſuperantẽ, eiiciat. Cæterùm flantib. Quidam Ligyſtorum adeò dextrè ſolertérq; fundam agitare feruntur, vt conſpectis auib. ſingulas ictib. ſingulis deſtinent, tanquam certi momento omnes caſuras. Peculiare autem eſt huic genti, quòd mulieres opus facientes, pariunt, lotóq; infante, ad ſarculum mox foſſionémq; redeunt, ac alia obeunt munia puerperis [illegible]. Admiratione & hoc apud [illegible] dignum eſt, quòd fluuius quidam fertur curſu in ſublime attolli, adeò vt ex oppoſito ſtantes nequeant conſpici. In Hetruria ferunt inſulam eſſe, quam Æthaliam hodie vocant, in qua æriſodina eſt, vnde ęs eruitur, omne ſcilicet illud, ex C quo iſthic ærea vaſa conflantur: deficere autẽ, nec reddere quicquam aliquandiu, cæterùm temporũ procurſu, non æs, vt antè, ſed ferrum prouenire, id nempe quo etiamnum vtuntur, Poponiũ incolæ vocant. In Hetruria, vrbem ferunt, quam Cenarcam vocant, ſupra modũ munitã eſſe: quippe cuius mediũ tumulus occupat ad triginta ſtadiorum altitudinem ſurgens, & omnigena materie, & aquis abundãs. Vnde metuẽs ſibi à tyrannide populus, ſeruos manumiſſos ſummæ rerum in annũ præficit, quo euoluto alios eiuſdem ſortis ſurrogat. In Cuma circa oram Italiæ ferunt thalamum ſubterraneum Sibyllæ fatidicæ eſſe, eius ſcili- D cet, quæ ætate quamlibet prouecta virginitatẽ ſeruaſſe impollutam traditur. Erythræa fuit hæc, ſed à quibuſdam Italiæ incolis Cumana, ab aliis verò Melacræna nuncupatur. Locum hunc à Leucadiis occupatum aiunt. Porro circa Cumam fluuium eſſe inquiũt (Cetes ab ipſis appellatur) in quem iacta quæcunq; fuerint, enaſcantur, ac poſtremo in lapidem indureſcant. Alciſtheni Sybaritæ veſtem tradunt tanta magnificentia confectam eſſe, vt cùm in Laciniæ Iunonis panegyri, ad quam tota confluere ſolet Italia, propoſuiſſet ſpectandam, omnium oculos à reliquis in ſe conuerterit. Hanc aiunt Carthaginienſibus emptã à Dio- E nyſio ſeniore tum regnante, centum viginti talentorum pretio. Purpurea erat tota, amplitudine quindecim cubitorum animalculis intertextis diſtincta, ſupernè quidem Suſis, infernè verò Perſicis. In medio autem Iupiter, Iuno, Themis, Minerua, Apollo, Venus, elucebant, ad latera Antiſthenes, vtrinque autem Sybaris.

A Circa Iapygiam promontorium, vbi inter Herculem Gigantéſque depugnatum fabulæ teſtantur, fontem eſſe tradunt, qui cruore defluens ea parte mare innauigabile reddat fœtoris grauitate. Ferunt & paſſim etiamnũ in Italia Herculis monumenta extare, iuxta vias, quas ille tranſiuit, & circa Iapygiæ Pandoſiam veſtigia eius apparere, quæ nequeas pedibus calcare. Sed & in eadẽ inſula lapis inuenitur plauſtrali magnitudine, quem Hercules ſublatum transtuliſſe fertur: digito vno mobilis. In Orchomenia Bœotiæ vrbe vulpeculam viſam tradunt, quæ cùm canem perſequentem fugiens ad ſubterraneum meatum decurriſſet, ſimul ingreſſus ille latránſque ſonitum edidit, perinde vt in patenti campo reſonan- B tem. In Sardinia inſula ſtructuras ferunt eſſe antiquarum, vetuſto Græcorum more compoſitas, & cùm alia plura eximia, tum tholos rhythmis innumeris exornatos. Exiſtimantur ab Iolao Iphiclis filio omnes extructæ, qui Theſpiadis Herculis nepotibus aſſumptis ad ea loca traiecit occupaturus, quippe qui ob cognationem Herculis, cui tum totus parebat Occidens, ea iure aliquo ad ſe pertinere arbi- C trabatur. Ichnuſa primùm appellata eſt, à veſtigij, vt videtur, humani ſimilitudine. Felicem olim rebus omnibus, & fertilem maximè fuiſſe perhibent. Ariſtæum enim, quem agri colendi peritiſſimum fuiſſe ſcriptores rerum teſtantur, præfuiſſe primum tradunt, antea à multis magniſque auibus occupatæ. Verùm hodie non eſt ea fertilitate ampliùs, quòd Carthaginienſes rerum potiti, omnes fructus alimento idoneos extirparunt, capitiſque pœna cauerũt ne quis incola rurſum ſerere fruges tentaret. In Lipara inſula Æolica ſepulchrum aiunt eſſe, circa quod cùm etiam alia prodigioſa eueniant, tum id, quòd ea loca ſe- D curè tutóque nemini accedere liceat, vno ore perhibent. Sonitum enim tympanorum, cymbalorúmque, & riſum cum ſtrepitu, plauſuque manuum audiri manifeſtò. Quæ etſi ad fabulam propiùs, quàm veri fidem accedere videantur, non potui tamen E de locis his ſcribens, tacitus præterire. Circa Cumam Italiæ, lacum eſſe ferunt, quem Aornon vocant, forma circulari, profunditatéque immenſa, tumulis vndequaque ſeptum, trium ad minus ſtadiorum altitudine. Φασὶ τὰς Σειρηνούσας νήσους κεῖσθαι μὲν ἐν τῇ Ἰταλίᾳ περὶ τὸν πορθμὸν ἐπ' αὐτῆς τῆς ἄκρας, ὃς κεῖται πρὸ τοῦ προπεπτωκότος τόπου, καὶ διακυμαίνοντος τοῖς κόλποις, τόν τε περιέχοντα τὴν Κύμην, καὶ τὸν διειληφότα τὴν καλουμένην Ποσειδωνίαν· ἐν ᾧ καὶ νεὼς αὐτῶν ἵδρυται, καὶ τιμῶνται καθ' ὑπερβολὴν ὑπὸ τῶν περιοίκων θυσίαις ἐπιμελῶς· ὧν καὶ τὰ ὀνόματα μνημονεύοντες, καλοῦσι τὴν μὲν, Παρθενόπην, τὴν δὲ, Λευκωσίαν, τὴν δὲ τρίτην, Λίγειαν.

A ratione dignum, mirandum tamen hoc fortaſſe, quòd circumpoſitis vndequaque & ſuperincumbentibus denſiſſimis arboribus non cernas vllum in lacu natans folium, qua puritate ſui admirationem meritò ciet. Circa Epirum autem iſthinc non ita procul diſtantem calidas aquas paſſim ſcaturire ferunt, vnde locus Pyriphlegethon appellatur. Cæterùm auem nullam iſthac tranſuolare vanò aſſeritur, cùm cygnos eo loci haud paucos agere compertum ſit.

Circa Italiam Syrenes inſulæ ſunt, in ſummo freti vertice, eius nempe quod ſitum eſt ad porrectum in mare locum, inter alluentes ſinus, qui & Cumam cingit, & Poſſidoniam B diuidit. Vbi ab accolis ſtudioſè muneribus ſacrificiiſque coluntur, & ſacra quoque ipſarum ædes monſtratur. Porrò nomina recenſentes, Parthenopen vnam, alteram Leucoſiam, tertiam Ligiam vocant. Iuxta Mentoricen & Iſtram mons fertur eſſe, quem Delphium vocant, faſtigio altiſſimo, quod aſcendentes qui ad Adriam habitant, pontum, ac media interualla, quæque in illis geruntur, contueri poſſunt, quò mercatum confluentes paſſim mercatores, Pontici Thaſia, Chia, ac Lesbia vina, Adriatici verò Corcyrenſes amphoras coëmunt.

C Ferunt & Iſtrum ex Hercynia ſylua profluentem diuidi, partimque in Pontum, partim verò in Adriam decurrere. cuius rei argumentum non hoc tempore primùm, ſed à priſcis vſque ſeculis extat. Aras enim eò loci ab Iaſone poſitas oſtendunt. Ferunt & inſuper hoc indicio eſſe, quòd ea loca innauigabilia ſint, quando Iaſoni iuxta Cyaneas ingreſſum, exitum verò è Ponto fuiſſe per Iſtrum compertum eſt. Et quod ſimul memoratur, prætemauigare Planctas, vt appellant, inſulas, niſi iſthinc ſoluiſſet, non potuiſſe. Cæterū in Æthalia ad mare Tyrrhenum, cùm alia monumenta principum illius D expeditionis virorum, tum id quod de calculis memorant, monſtratur. Nam ad litus calculos inueniri perhibent coloris varii, tum ſcilicet ex deſtillationibus liquorum, quibus vngebantur, coloratos. Tales enim nec ante, nec poſt ea tempora inuentos. Sed enim & alia ſunt non obſcura indicia, non fuiſſe tranſitum illis per Symplegadas: teſtante ſcilicet id poëta. Nam, cùm periculi magnitudinem exprimere contenderet, declarat hæc loca nauigationi minimè peruia extitiſſe:

Quoniam ſimul tabuláſque nauium & corpora virorum
Maris vndæ rapiunt, & ignis pernicioſi procellæ.

Circa igitur Cyaneas non videtur ignis emitti, ſed iuxta fretum, quo Sicilia ab Italia diſtin- E guitur, ab vtraque parte euaporatio, tum quòd inſula continuè ipſa flagrat, tum quòd flammæ Ætnæ ſæpe totam regionem permeant. In Tarento ſolent interdum parentare Atridis, Æacidis, Tydidiſque, & Laërtiadis:

Agamemnoniadis autem, ſeorſimq; die conſtituta alia ſacrificia agere, quibus mulieribus immolata tangere lege interdicitur. Eſt & templum apud ipſos Achillis. Ferunt hunc locum olim Ionibus obtinẽntibus Plion vocatum eſſe. Verùm poſtquam à Tarentinis inhabitari cœptus eſt, Heracliam. cæterùm jam inde remotiùs à primis incolis Sigium appellatum. Apud Sybaritas aiunt Philoctetem coli, qui ex Troia profugus inhabitauit quæ vocantur mollia Crotoniadis, diſtantia à Troia, vt ferunt, centum viginti ſtadiis: ac Herculis arcus in Apollinis Halij templo conſecrauit, quos per vim à Crotoniatis in Apollonium translatos ferunt. Aiunt iis in locis mortuum eſſe auxilia ferentem Rhodiis, qui cum Tlepolemo ad ea loca delati, contra incolas depugnarant. Circa Italiam, quam Calabriam vocant, iuxta Metapontum aiunt Mineruæ Græcæ templum extare, inque eo Epei, qui & nomen impoſuit, inſtrumenta re[illegible]d equi Duriani fabricam comparatat: Mineruam enim in ſomnis viſam hæc vt opera conſecraret, flagitaſſe, cúmque exitus difficultate impediretur, loca implicitum enauigare non potuiſſe. Vnde Mineruæ Græcæ hodie fanum appellatur. Ferunt & circa Dauniæ locum templum eſſe Mineruæ Achaicæ, in quo ſecures æreæ, armáque cùm Diomedis, tum ſociorum eius collocata ſint. Aiunt & iſthic canes eſſe, qui venientes Græcos iniuria nulla impetant, ſed tanquam familiariſſimis blandiantur. Porro omnes Daunij accolæque tam viri quàm fœminæ atratis tantùm veſtibus vtuntur, ea nimirum de cauſa, quòd Troianæ mulieres dum captiuæ ad ea loca eſſent traductæ, metuentes ne grauem ſeruitutem ſub mulieribus Græcis experirentur, (nam tum ea loca inhabitabant) naues incenderunt, tum vt iugum ſeruile effugerent, tum vt viros, manendi neceſſitate impoſita detinerent. Vnde rectè à Poëta dictum eſt, Pepla trahentes, profundiſque ſinibus illas videre, vt apparet, iſthic licet.

In Peucetinis Dianæ templum eſt, in quo locatum eſt celebre illud æreum ſertum, inſcriptione hac inſignitum, Diomedes Dianæ. Id fabulantur ab eo collo ceruino applicitum accreuiſſe, itaque deinceps hoc pacto inuentum ab Agathocle Siculorum rege, in Iouis templo locatum. In Peloro Siciliæ promontorio tanta copia prouenit crocus, vt à quibuſdam etiam inquilinis Græcis flos cuiuſmodi ſit haud internoſcatur: curribus magnis hunc comportant, quibus libitum eſt. Tum verò ſtrata ex eo ſcenâſque conſtruunt.

Sic legendũ ex Stephano qui hunc locũ citat.

Hiſtor. l. 9. c. 36.

A ſed turbulentiore nonnihil: in quem ſi quis lauandi gratia ingrediatur, in latum extendi. quòd ſi iteret, ampliùs dilatari, adeo vt amplificatum ſpatium quinquaginta etiam viros capiat. verùm ad eam iam menſuram diffuſum ex imo intumeſcere, corporáque lauantum in ſublime rapta foras in pauimentum ſternere, ac mox ad veteris anguſtiæ ſpatium contrahi. Atque id non ſolùm humanis corporibus, ſed quadrupedibus etiam ingreſſis vſu venire perhibent. In Carthaginenſium ditione ferunt montem Comium cùm omnigena rerum materia, tum in primis variegatis floribus refertum eſſe. Vnde contigua loca ſuaueolentia participantes, viatoribus reſpirationem B gratiſſimam reddunt. Iuxta autem fontem oleo fluentem eſſe, ac odore, cedri guttis non abſimili. Verùm, vt inquiunt, tantùm imperitos naturæ eius oportet accedere: quibus adeò copioſè ſcaturit oleũ vt hauriri etiam queat. Iuxta eum fontem ſponte natam petram ferunt iuſta magnitudine, ex qua fertur caloribus æſtiuis, ignis flammam exilire, hyeme autem aquæ voraginem effundi. * * Sic & duos coruos ad Iouis templum aſſiduos extitiſſe, neque aliò vſpiam euolaſſe tradunt. Fertur & circa Scythas Medóſque, Thraciæ fluuium, C quem Pontum vocant, lapides deferre ardentes, contraria omnino natura prunis ligneis, quippe qui agitati ſufflatique reſtinguantur, aquis autem reſperſi exardeſcant reſplendeántque. Cæterùm vſtis, quemadmodum bitumini, adeò grauis fœtor eſt, vt reptilia penitus omnia è locis iis abigat. Eſſe aiunt apud illos locum quendam non exiguum, ad minus ſtadiorum viginti amplitudine, vbi hordeum prouenit, quod nulli animantium generi, niſi homini tantùm, ſit eſui. Nam equi bouéſque ab eo abſtinent, tum etiam canes & ſues vitant: vt ne excrementa quidem hominum hordeo veſcentium deguſtent, quippe quæ ipſis vorata certum interitum adferant. In D Scotuſis Theſſaliæ fonticulum eſſe aiunt, vnde aqua defluens vulnera conuulſionéſque cùm hominum tum iumentorum ſanat, lignáque iniecta, ſi fiſſa, non etiam confracta, fuerint, glutinat, & coniungit. Circa Thraciam quæ ſupra Amphipolim ſita eſt, rem monſtroſam & mirabilem iam antè ignaris videri tradunt. Egredientes enim pueri ex pagis agríſque finitimis, ope accipitrum aucupantur; locum enim opportunum nacti, accipitres nomine appellatos aduocant, qui ſtatim ad vocem auditam parent, prædamque agentes in vepres iuxta irruunt, vbi fuſtibus ligneis aues percutiũt pueri, & apprehendunt. Quin etiam, quod magis fortaſſis mirere, accipitres, comprehenſas à ſe aues aucupibus deiiciunt. E Viciſſim tamen partem prædæ aliquam ipſis pueri impartiuntur.

Porrò mirandum & hoc, quod circa Venetias euenire narratur. Cùm enim

regionem innumerabiles graculorum myriades frequenter infeſtent, ſementem iactam ex agris depaſcentes, ferunt Venetos ſub aduentum horum ad confinia loca omnis generis frugum ſemina, velvt diuûm donaria proiicere, quibus deguſtatis graculi velvt hoſtium incurſu mox ſuperuenturo ſubſiſtunt.

In Chalcide Thraciæ vrbe iuxta Olynthum aiunt locum eſſe, quem Cantharolethron vocant, paulò area maiorem, quem reliqua quidem animantia ingrediuntur illæſa: cancri verò nequaquam, quippe qui ingreſſi oberrantes in eo fame exanimantur.

Apud Cyclopas Thracenſes fons eſt aqua conſpectui quidem limpida, aliiſque ſimilis, B verùm hauſtus ab animante ſubitò necat.

Aiunt & in Biſaltorum regione bina iecinora in captis leporibus oſtendi, locúmque iugeri magnitudine eſſe, in quem animantia ingreſſa pereunt. Eſt & templum iſthic Dionyſij ornatu, magnitudinéque eximium, in quo dum feſta ſolemnia, ſacrificiáque celebrantur, ſi fertilitatem eius anni polliceatur Deus, fulgorem ignis emicare ingentem, ac circa templum agentibus conſpicuum fieri. Cæterùm ſterilitatem venturam denuntiari, ſi tenebræ, quemadmodum & reliquis noctibus, locum occupent. In Elide ædificium eſt (vt ferunt) ſtadiis diſtans octo ab vrbe, in C quo collocantur tres Dionyſio lebetes vacuæ: vocatiſque peregrinis, quibus ſcrutari hæc libeat, ianuarum clauſtra ſigillis obſignant, quæ deinde reſerant. Porrò ingreſſi lebetes vino plenas cernunt, pauimento, parietibus, omnibus integris, & illæſis, vt artis doloſæ ſuſpicio facilè abeſſe videatur. Aiunt & apud eos ipſos miluos eſſe, qui carnes quidem in foro rapiant, cæterùm inuiolatas non tangunt.

In Coronea Bœotiæ vrbe, talpæ nec viuere, nec terram fodere poſſunt, magna alioqui copia per totam Bœotiam redundante. In Colubris Arcadiæ ferunt fontem eſſe, in quo mures terreſtres natare, vitámque degere ſoleant, D atque idem etiam in Lampſaco contingere.

In Cranone Theſſaliæ vrbe duos eſſe tantùm coruos ferunt, qui ſe ipſos quidem aliò transferunt. Cæterùm alios totidem ex ſe natos relinquunt. In Apollonia, quæ iuxta regionem Taulanticam ſita eſt, naſci aiunt bitumen, picémque inſtar aquarum è terra ſubſilientium: ſolô eô, quòd atra magis denſiórque proueniat, Macedonicæ abſimilem.

Nec procul iſthinc ferunt accolæ ignem iugiter ardere, loco minimè amplo, vt qui pentaclini ſpatium complectatur, vnde odor ſulphuris aluminiſque redditur: creſcitque & circa hunc herba altiſſima, &, quod magis mirere, arbores excelſæ non plus quatuor paſſibus iſthinc diſtantes. Flagrat autē continuè circa Lyciam & Megaram Peloponneſi vrbem.

Abducta boue Geryonis, pulchráque Erythia,
Hæc luco Alcides Perſephonæ poſuit.
Victorem & deſiderio Dea candida vicit,
Nympharum vero de genere vna Erythe.
Hic puerum fago complexa Erythonta ſub alta,
Concubitus ſola hæc dat monumenta ſui.

Hoc epigrammate patet, eum locum Erythum appellatum, quòd iſthinc boues, non ex Erythia deduxerit. Neque enim vſpiam vel iuxta Libyam vel Hiſpaniam, nomen Erythia extare ferunt.

In Vtica Libyæ naſci fimum foſſilem aiunt trium paſſuum profunditate, aſpectu album, [illegible] firmum, ſed ſimilem viſcoſiſſimo glutino, qui in Solem prolatus adeò indureſcit, vt nihil à Pario lapide differat, quo cum animalcula & vaſcula poliuntur.

Primos Phœnices ferunt, cùm Tarteſſum nauigaſſent, tantam argenti vim oleo aliíſque nauticis ſordibus commutaſſe, vt nec capere naues, nec ferre poſſent: quocirca coactos ſub diſceſſum, cùm cætera, quibus vtebantur, tum anchoras etiam ex argento conflare.

Phœnices aiunt, qui Gadiram inhabitant, dum vltra columnas Herculis nauigarent, vento Subſolano impulſos ad regiones quaſdam applicuiſſe, vlua algâque plenas, quæ æſtibus maris rigantur, exundationibus verò prorſus obruuntur aquis. Thunnorum copiam iſthic innumerabilem inueniri tradunt, magnitudine denſitatéque incredibili, quos ſalſos vaſis impoſitos Carthaginem deportant, vnde ſoli non euehuntur, ſed ob ſingularem bonitatem planè abſumuntur.

In Pedaſia Cariæ vrbe Ioui ſacrificium peragitur, quò aiunt capram miſtam (quod admiratione dignum) ſtadiis ſeptuaginta ex Pedaſo per turbam frequentem, quæ ſpectare ſolet, progredi, neque interturbari, aut à via declinare. quódque reliquis gentibus magis ſtupendum eſt, cornua heminas quatuor capere.

In Illyriis, qui Ardiæi vocantur, iuxta Autoritarum confinia montem magnum, & in propinquo vallem eſſe inquiunt, vnde aqua proſilit copiòſa, non equidem omni tempore, ſed vêre tantùm, quã interdiu vaſi infuſam ſeruant, noctu ſub dio conſtituũt. Quod dum ita fit ſex diebus, vltimò cõgelatur, ac ſal omnium præſtantiſſimum efficitur. Studioſe hoc ob pecorum copiam potiſſimũ facere obſeruant.

Κατὰ δὲ Συρίαν εἶναί φασί τι ζῷον ὃ καλεῖται λεοντοφόνον. ἀποθνήσκει γὰρ ὁ λέων ὡς ἔοικεν, ὅταν αὐτοῦ φάγῃ. ἑκὼν μὲν τοῦτο οὐ ποιεῖ, ἀλλὰ φεύγει τὸ ζῷον. ὅταν δὲ συλλαβόντες αὐτὸ οἱ κυνηγέται, καὶ ὀπτήσαντες ὥσπερ ἄλφιτα λευκὰ περιπάσωσιν ἄλλῳ ζῴῳ, τὸ γευσάμενον ἀπόλλυσθαί φασι παραχρῆμα. κακοῖ καὶ προσουρούμενον τὸν λέοντα τοῦτο τὸ ζῷον.

Λέγεται καὶ τοὺς γῦπας ὑπὸ τῆς τῶν μύρων ὀσμῆς ἀποθνήσκειν, ἐάν τις αὐτοὺς χρίσῃ ἢ δῷ τι μεμυρισμένον φαγεῖν· ὡσαύτως δὲ καὶ τοὺς κανθάρους ὑπὸ τῆς τῶν ῥόδων ὀσμῆς.

Καὶ ἐν Σικελίᾳ δέ φασι καὶ ἐν Ἰταλίᾳ τοὺς γαλεώτας θανάσιμον ἔχειν τὸ δῆγμα, καὶ οὐχ ὥσπερ τοὺς παρ᾽ ἡμῖν, ἀσθενὲς καὶ μαλακόν. εἶναι δὲ καὶ μυιῶν γένος ἐφιπτάμενον, ὃ ὅταν δάκῃ, ἀποθνήσκειν * ποιεῖ. A Neque enim ad eos ſal importatur, tum quod à mari longiùs habitant, & à commerciis ſunt alieniores. qui tamen ob pecora cùm primis opus habent: interitura, niſi bis in ſingulos annos eo reficiantur. In Argo genus locuſtæ ferunt eſſe (Scorpiomachum vocant) quod viſo ſcorpione ſtatim pugnæ accingitur, ipſo viciſſim ſe opponente. Itaque vndequaque circumcurrens ſtridore aſſultat: contrà aculeum ille eodem loco velvt in gyrum actus, vbique obtendit, donec auidiùs fortè ac nimis eductum totum amittat. Quocirca aduolans beſtiola velvt exarmatum iam deuorat. Scorpionum ictibus, hæc ſtatim comeſta, medetur.

B Veſpas ferunt in Naxo, ſi ſerpente guſtato, quorum caro pergrata eſt illis, aculeum infixerint alicui, tantos dolores excitare, vt tolerabiliores videantur ictus ſerpentum.

Scythicum venenum, quo ſagittæ inficiuntur, ex vipera parari aiunt. Obſeruant enim Scythæ parientes, & captas mox diebus aliquot liquefaciunt: cúmque ſatis computruiſſe videntur, infundunt ollulæ humanum ſanguinem, quam in ſterquilinio defoſſam cooperiunt. Ac vbi putridus iam is quoque apparet, liquorem ſupernatantem aquoſum, miſcent cruore viperæ, præſenſque & lethale hoc pacto venenum reddunt. In Curio Cypri vrbe, C ſerpentum quoddam genus eſſe vim habens aſpidi Ægyptio non abſimilem, niſi quòd hyeme morſus huius ſunt inefficaces, ſiue ob aliam quampiam cauſam, ſiue quòd ad motum languidum ex frigore redditur, & poſtremo prorſus collabitur, niſi calore reficiatur.

In Ceo aiunt genus eſſe acherdi, cuius ſpina, qui vulnerantur, intereunt. In Myſia verò vrſorum quoddam genus album eſſe aiunt, quod inter venandum canes flatu infectos putrefacit, eodemque modo & reliquarum ferarum carnem eſui inutilem reddit. Verùm vbi iam inſtant canes, & venatores, phlegmate vtrorumque faciem conſpuunt, quod pertina- D citer hærens ſuffocat & excæcat. Aiunt in Arabia hyænarum genus eſſe quoddam, quod ſimul ac feram aliquam viderit, aut ſuper hominis vmbram ingredi cœperit, vocem illis aufert, & conſternationem ſtuporémque tantum infert vt corpus mouere nequeant. Idem aiunt & canibus vſuuenire. In Syria animal eſſe aiunt, quod leonicidum vocant: eo enim ingeſto leones exanimantur. Volentes non tangunt, ſed fugiunt. Verùm venatores vt farinam candidam decoctam animalib. reliquis aſpergunt, quæ guſtata ſubitò necant, vrinam leonibus grauant. Feruntur & vultures ex vnguentorum odore exanimari, ſi qui vel vngantur ipſi, vel vncta vorent, & ſcarabeis E ex roſarum odore itidem euenire. Et in Sicilia, & in Italia aiunt felium morſum lethalem, nec vt apud nos & leuem, & imbecillem: & muſcarum genus, quod morſu necet, ad quæ deuolarit. In Meſopotamia Syriæ, & in Iſtrunte aiunt ſerpentes quoſdam exiguos naſci, qui indigenas non lædant, aduenas verò vehementer infeſtent.

A Circa verò Euphratem fluuium maximè id accidere inquiunt, vbi plurimi circa fluminis litora conſpiciuntur, qui in partem vtramque deuolui ſolent, vt cùm veſpere citerius litus occupent, illuceſcente luce vltra flumen videantur, ac Syros quidem non lædunt, ſed Græcis minimè parcunt.

In Theſſalia ferunt ſacrum ſerpentem non ſolùm morſu, ſed etiam contactu reliquos omnes perdere. Quocircà cùm apparet, aut vox tantùm auditur (quod rarò contingit) ſerpentes, ac viperæ, tum reliquæ etiam feræ omnes diffugiunt. Magnitudine eſt non perinde vaſta, ſed moderata.

B Aiunt, in Teno vrbe ipſum à muliere è medio ſublatum in hunc modum. Primum circulum deſcripſit fœmina, quem incantationibus habitis vnà cum filio ingreſſa, ac vocem beſtiæ imitata eſt: qua recinente, accedenteque, obdormiſcere cœpit, magiſque iam ad propinquante, ſomno abſtinere non potuit: quocirca filius matrem pulſauit (ita præcipiente ipſa) minatus, ſi obdormiret, vtrique C certum imminere interitum, verùm ſi periret, ac beſtiam abducere poſſet, ſaluos fore. Itaque circulum ingreſſus ſerpens ſtatim exanimatus eſt.

ἐρῶνται. Αἱ ἐν Κρήτῃ αἶγες, ὅταν τοξευθῶσι, ζητοῦσι τὸ δίκταμον τὸ ἐκεῖ φυόμενον· ὅταν γὰρ φάγωσιν, εὐθὺς ἐκβάλλουσι τὰ τοξεύματα. Αἱ ἐν Κεφαλληνίᾳ αἶγες οὐ πίνουσιν, ὡς ἔοικεν, ὥσπερ καὶ τἄλλα τετράποδα, καθ᾽ ἑκάστην ἡμέραν· ἀλλὰ πρὸς τὸ πνεῦμα αὐτίκα τὰ πρόσωπα ποιήσασαι, χάσκουσιν εἰσδεχόμεναι τὰ πνεύματα. Φασί τινας ἐν Ἀχαΐᾳ τῶν ἐλάφων, ὅταν ἀποβάλωσι τὰ κέρατα, εἰς τοιούτους τόπους ἔρχεσθαι ἐν οἷς οὐκ ἔστι ῥᾴδιον εὑρεθῆναι. τοῦτο δὲ ποιεῖν, διὰ τὸ μὴ ἔχειν ᾧ ἀμυνοῦνται, καὶ διὰ τὸ πονεῖν τοὺς τόπους ὅθεν καὶ τὰ κέρατα ἀπέβαλον. πολλαῖς δὲ κισσὸν ἐπιπεφυκότα ἐν τῷ τῶν κεράτων τόπῳ ὁρᾶσθαι. Ὄθρυς ὄρος ἐστὶ Θετταλίας, ὃ φέρει ὄφεις τοὺς λεγομένους σῆπας, οἳ οὐκ ἔχουσι μίαν χροιάν, ἀλλ᾽ ἀεὶ ὁμοιοῦνται τῷ χώρῳ ἐν ᾧ οἰκοῦσι. τινὲς δὲ αὐτῶν ὅμοιον ἔχουσι τὸ χρῶμα τοῖς κόχλοις τῆς γῆς· ἄλλοις δὲ χλοάζουσα ἐστὶν ἡ φολίς. ὅσοι δὲ αὐτῶν ἐν ψαμμάθοις διατρίβουσι, ταύταις ἐξομοιοῦνται κατὰ τὸ χρῶμα. δάκνοντες δέ, ἐμποιοῦσι δίψος. ἔστι δὲ αὐτῶν τὸ δῆγμα, οὐ τραχὺ καὶ ἔμπυρον, ἀλλὰ κακόηθες. Τοῦ ἄρρενος ἔχιος τῇ ἐχίδνῃ συγγινομένου, ἡ ἔχιδνα ἐν τῇ συνουσίᾳ τὴν κεφαλὴν ἀποκόπτει· διὰ τοῦτο καὶ τὰ τέκνα, ὥσπερ τὸν θάνατον τοῦ πατρὸς μετερχόμενα, τὴν γαστέρα τῆς μητρὸς διαρρήγνυσιν. Ἐν τῷ Νείλῳ ποταμῷ γεννᾶσθαι λίθον φασὶ κυάμῳ παρόμοιον· ὃν αἱ κύνες ἰδοῦσιν, οὐχ ὑλακτοῦσι. συντελεῖ δὲ καὶ τοῖς δαιμονί τινι γενομένοις κατόχοις· ἅμα γὰρ τῷ προστεθῆναι ταῖς ῥισίν, ἀπέρχεται τὸ δαιμόνιον. Ἐν δὲ τῷ Μαιάνδρῳ ποταμῷ τῆς Ἀσίας λίθον φασὶν σώφρονα καλούμενον κατ᾽ ἀντίφρασιν· ὃν ἐάν τις εἴς τινος ἐμβάλῃ κόλπον, ἐμμανὴς γίνεται, καὶ φονεύει τινὰ τῶν συγγενῶν. Ἐν δὲ Εὐβοίᾳ δύο ποταμούς εἶναι· ὧν ἀφ᾽ οὗ μὲν πίνοντα τὰ πρόβατα, λευκὰ γίνονται· ὃ ὀνομάζεται Κέρβης, ὁ δέ, Νηλεύς, ὃς μέλανα ποιεῖ. Παρὰ [τῷ] Λύκῳ ποταμῷ γεννᾶσθαι βοτάνην λόγχῃ παρόμοιον, συντελοῦσαν πρὸς ἀμβλυωπίας. Τὴν ἐν Συρακούσαις τῆς Σικελίας πηγὴν Ἀρέθουσαν, διὰ πενταετηρίδος κινεῖσθαι λέγουσιν. Ἐν ὄρει Βερεκύνθῳ γεννᾶσθαι λίθον καλούμενον μάχαιραν, ὃν ἐὰν εὕρῃ τις, τῶν μυστηρίων τῆς Ἑκάτης ἐπιτελουμένων, ἐμμανὴς γίνεται, ὡς Εὔδοξός φησιν. Ἐν ὄρει δὲ Τμώλῳ γεννᾶσθαι λίθον παρόμοιον κισσήρει, ὃς τετράκις τῆς ἡμέρας ἀλλάσσει τὴν χρόαν· βλέπεσθαι δὲ ὑπὸ παρθένων τῶν μὴ τῷ χρόνῳ φρονήσεως μετεχουσῶν. Ἐν Ἀρτέμιδος Ὀρθωσίας βωμῷ ταῦρον ἵστασθαι χρύσεον, ὃς κυνηγῶν εἰσελθόντων φωνὴν ἐπαφίησιν. Ἐν Αἰτωλοῖς φασὶν ὁρᾶν τοὺς ἀσπάλακας ἀμυδρῶς, καὶ οὐδὲ σιτεῖσθαι γῆν, ἀλλ᾽ ἀκρίδας. Τοὺς ἐλέφαντάς φασι κύειν ἔτη δύο· οἱ δέ, μῆνας ὀκτωκαίδεκα· ἐν δὲ τῷ ἐκτίκτειν δυστοκεῖν. Τημάρατον Τιμαίου τοῦ Λοκροῦ, ἀκουστὴν νοσήσαντα, ἄφωνόν φασιν ἐπὶ δέκα γενέσθαι ἡμέρας· ἐν δὲ τῇ ἑνδεκάτῃ αἰσθήσας βραδέως ἐκ τῆς παρακοπῆς, ἔφησεν ἐκεῖνον αὐτῷ ἥδιστα τὸν χρόνον βεβιῶσθαι. Ἐν Τήνῳ τῇ νήσῳ φασὶν εἶναι φιάλιον σύγκραμα ἔχον, ἐξ οὗ πῦρ ἀνάπτουσι (πάνυ) ῥᾳδίως. Καὶ ἐν Βιθυνίᾳ δὲ τῆς Θρᾴκης ἐν τοῖς μετάλλοις γίνεται ὁ καλούμενος ἄσπιος, ἐξ οὗ φασι πῦρ ἀνάπτεσθαι.

Liber, incerto interprete.

CAPVT I.

Probat Phyſiognomoniam eſſe: hoc eſt, coniecturam de moribus ex lineamentis corporis fieri poſſe. Deinde phyſiognomoniæ modos explicat.

A QVOD animæ ſequuntur corpora, & ipſæ ſecundùm ſe ipſas non ſunt impaſſibiles à motibus corporis, id manifeſtum fit valde in ebrietatibus & ægritudinibus. multum namque animæ mutatæ videntur à paſſionibus corporis. Et econtrario quòd corpus B compatitur paſſionibus animæ, manifeſtum circa amores, & timores, & triſtitias, & delectationes. Ampliùs autem & in iis quæ natura fiunt, magis vtique aliquis conſpiciet, quòd corpus & anima ita ſe habent connaturalia, vt fiant cauſæ plurimarum paſſionum ad inuicem. Nunquam enim animal factum vel generatum eſt tale, quod formam haberet alterius animalis, animam verò alterius, ſed ſemper eiuſdem corpus & animam. Quare neceſſarium eſt conſequi tali corpori talem formam. Ampliùs autem & ſcientes circa vnumquodque C animalium ex forma poſſunt conſiderare: equites equos; & venatores, canes. Si autem hæc vera fuerint, (ſemper autem hæc vera ſunt,) erit ſanè ars quæpiam phyſiognomoniæ. Priores itaque phyſiognomones, iuxta tres modos adgreſſi ſunt hanc diſciplinam, quique iuxta vnum. Alij quidem ex generibus animalium phyſiognomonizant, ponentes ſecundùm vnumquodque genus figuram quandam animalis & ſpeciei animam. Alij autem in talibus corpori ſimilem habenti corpus & animam ſimilem putabant. Alij autem quidam hoc D quidem faciebant, non ex omnibus autem animalibus experiebantur, ſed diſtinguebant ex ipſo genere hominum ſecundùm gentes, quæcunque differunt ſecundùm vſus, & mores: vt Ægyptij, & Thraces, & Scythæ. Similiter electionem ſignorum faciebant. Quidam autem ex moribus à parentibus, quales mores diſpoſitionem ſequantur. Sequitur autem vnicuique mos, iracundo, timido, coeunti, & in vnaquaque aliarum paſſionum.

* κ. οἱ δ', ἐπὶ τούτοις σῶμά τι, εἶτα τὸν ὅμοιον τῷ τοιοῦτον σῶμα ἔχοντι

ἔστι δὲ κατὰ πάντας τούτους τοὺς τρόπους φυσιογνωμονεῖν, καὶ ἔτι κατ' ἄλλους, καὶ τὴν ἐκλογὴν τῶν σημείων ἀνομοίως ποιεῖσθαι. οἱ μὲν οὖν κατὰ τὰ ἤθη μόνον φυσιογνωμονοῦντες ἁμαρτάνουσιν ἄν, πρῶτον μέν, ὅτι ἔνιοι οὐχ οἱ αὐτοὶ ὄντες, τὰ ἐπὶ τῶν προσώπων ἤθη τὰ αὐτὰ ἔχουσιν, οἷον ὅ,τε ἀνδρεῖος καὶ ὁ ἀναιδὴς τὰ αὐτὰ ἔχουσι, τῆς διανοίας πολὺ κεχωρισμένοι. δεύτερον δέ, ὅτι κατὰ χρόνους τινὰς τὰ ἤθη οὐ τὰ αὐτά, ἀλλὰ ἕτερα ἔχουσι. δυσαρέστοις τε γὰρ οὖσιν, ἐνίοτε συνέβη τὴν ἡμέραν ἡδέως διαγαγεῖν, καὶ τὸ ἦθος λαβεῖν τὸ τοῦ εὐθύμου· καὶ τοὐναντίον εὔθυμον λυπηθῆναι, ὥστε τὸ ἦθος τὸ ἐπὶ τοῦ προσώπου μεταβαλεῖν. ἔτι πρὸς τούτοις περὶ ὀλίγων ἄν τις τοῖς ἐπιφαινομένοις τεκμαίροιτο. οἱ δὲ ἐκ τῶν θηρίων φυσιογνωμονοῦντες, οὐκ ὀρθῶς τὴν ἐκλογὴν τῶν σημείων ποιοῦνται. οὐ γὰρ δὴ ἑκάστου τῶν ζώων τὴν ἰδέαν διεξελθόντα ἔστιν εἰπεῖν, ὅτι ὃς ἂν ὅμοιος τούτῳ τὸ σῶμα ᾖ, καὶ τὴν ψυχὴν ὅμοιος ἔσται· πρῶτον μὲν γὰρ (ὡς ἁπλῶς εἰπεῖν οὕτως) ὅμοιον θηρίῳ ἄνθρωπον οὐδεὶς ἂν εὕροι, ἀλλὰ προσεοικότα μέν τι. ἔτι πρὸς τούτοις τὰ ζῷα ὀλίγα μὲν τὰ ἴδια ἔχει σημεῖα, πολλὰ δὲ τὰ κοινά· ὥστε ἐπειδὰν ὅμοιός τις ᾖ μὴ κατὰ τὸ ἴδιον, ἀλλὰ κατὰ τὸ κοινόν, τί μᾶλλον ἐστὶ λέοντι ἢ ἐλάφῳ ὁμοιότερος; εἰκὸς γὰρ τὰ μὲν ἴδια τῶν σημείων, ἴδιόν τι σημαίνειν· τὰ δὲ κοινά, κοινόν. τὰ μὲν οὖν κοινὰ τῶν σημείων, οὐδὲν ἂν διασαφηνείη τῷ φυσιογνωμονοῦντι. εἰ δέ τις τὰ ἴδια ἑκάστου τῶν θηρίων ἐκλέξειεν, οὐκ ἂν ἔχοι ἀποδοῦναι οὗ ἐστι ταῦτα σημεῖα· εἰκὸς γὰρ τοῦ ἰδίου. ἴδιον δὲ οὐδενὸς οὐδὲν τῶν ζώων τῶν φυσιογνωμονουμένων, ἔν γε τῇ διανοίᾳ ἔχοι ἄν τις λαβεῖν· οὔτε γὰρ ἀνδρεῖον μόνον ὁ λέων ἐστίν, ἀλλὰ καὶ ἄλλα πολλά· οὔτε δειλὸν ὁ λαγωός, ἀλλὰ καὶ ἄλλα μυρία. Εἰ οὖν μήτε τὰ κοινὰ σημεῖα ἐκλέξαντι σαφὲς γίνεται, μήτε καὶ τὰ ἴδια, οὐκ ἂν εἴη καθ' ἕκαστον τῶν ζώων σκέπτεσθαι· ἀλλ' ἐξ ἀνθρώπων τὴν ἐκλογὴν ποιητέον τῶν τὸ αὐτὸ πάθος παρόντων· οἷον, ἂν μὲν ἀνδρείου ἐπισκοπῇ τις τὰ σημεῖα, τὰ ἀνδρεῖα τῶν ζώων εἰς ἓν λαβόντα δεῖ ἐξετάσαι, ποῖα παθήματα τούτοις μὲν ἅπασιν ὑπάρχει, τῶν δὲ ἄλλων ζώων οὐδενὶ συμβέβηκεν. Εἰ γὰρ οὕτω τις ἐκλέξειεν, ὅτι ταῦτά ἐστι τὰ σημεῖα ἀνδρείας τοῖς προκειμένοις ζῴοις, μὴ μόνον ἀνδρείας κοινὸν ὑπάρχειν πάθημα τῶν [ἐν] τῇ διανοίᾳ, ἀλλὰ καὶ ἄλλο τι· οὕτω δὴ ἂν ἀπορήσειε πότερον ἀνδρείας ἢ θατέρου τὰ σημεῖά ἐστιν. ἀλλὰ δεῖ ἐκ πλείστων τε ἐκλέγεσθαι ζῴων, καὶ μηδὲν πάθος κοινὸν ἐχόντων ἐν τῇ διανοίᾳ ἄλλο τι, οὗ ἂν τὰ σημεῖα σκοπῇ. ὅσα μὲν οὖν τῶν σημείων μόνιμά ἐστι, μόνιμον ἄν τι καὶ σημαίνοι· ὅσα δὲ ἐπιγινόμενα, καὶ ἀπογινόμενά τε καὶ ἀπολείποντα, πῶς ἂν τὸ σημεῖον ἀληθὲς εἴη, τοῦ ἐν τῇ διανοίᾳ μὴ μένοντος; Εἰ μὲν γὰρ μόνιμον, ἐπιγινόμενόν τι καὶ ἀπολεῖπον σημεῖόν τις ὑπολάβοι, ἐνδέχοιτο μὲν ἂν αὐτὸ ἀληθὲς εἶναι, οὐ μὴν ἐπιεικὲς ἂν εἴη, μὴ ἀεὶ τῷ πράγματι συνεπόμενον· ὅσα δὲ παθήματα ἐγγινόμενα τῇ ψυχῇ μηδέν τι ἐνδιαλλάττει τὰ σημεῖα τὰ ἐν τῷ σώματι, οἷς χρῆται ὁ φυσιογνώμων, οὐκ ἂν εἴη τὰ τοιαῦτα γνωρίσματα τῇ τέχνῃ;

A Eſt autem ſecundùm omnes modos hoc phyſiognomizare. Et adhuc ſecundùm alios, & electionem ſignorum diſſimiliter fieri. Hi quidem igitur iuxta mores ſolùm phyſiognomizant: primum quidem quòd quidam non iidem cùm ſint, mores, qui ſunt in facie, eoſdem habent, vt fortis & inuerecundus eoſdem habent, animabus vel intellectibus multum ſeparantur. Secundò autem, quòd ſecundùm quædam tempora, mores non eoſdem, ſed aliorum habent: triſtibus enim exiſtentibus, quandoque contingit diem delectabiliter ducere, & morem accipere, qui eſt hilaris: & econtrario hilarem contriſtari, vt mos qui erat in facie permutetur. Adhuc cum his, de paucis vtique ſem-
B per apparentibus coniecturam quis accipiat. Qui autem ex feris phyſiognomizant, non rectè electionem ſignorum faciunt: non enim eſt vtique dicere percurrentem formam vniuſcuiuſque animalium, quòd quicunque vni ſimilis huic corpore erit, & anima ſimilis erit. Primùm enim, vt ſimpliciter dicam, nullus vtique videbis hominem ita ſimilem beſtiæ, ſed aſſimilantem in aliquo. Adhuc autem cum his, animalia pauca quædam propria habent ſigna, multa verò communia. Quare ſi quis ſimilis fuerit non ſecundùm proprium ſed ſecundùm commune aliquid, quo pacto magis ille leoni quàm ceruo ſimilior dicetur? Meritò enim propria ſigna proprium quid ſignificare, commu-
C nia autem commune. Communia ergo ſigna nihil vtique manifeſtabunt phyſiognomonizanti. Si autem aliquis propria vniuſcuiuſque ferarum elegerit, non vtique habebit aſſignare cuius ſunt hæc ſigna. Meritò enim proprij, proprium. Nihil autem proprium animalium phyſiognomonizatorum, in anima habebit vtique aliquis accipere: neque enim forte ſolùm leo eſt, ſed alia multa: neque timidum lepus, ſed & alia infinita. *Si ergo neque communia eligenti, manifeſtum aliquid fit,* neque ſecundùm propria, non vtique erit vnumquodque animalium aſpicere, ſed ex hominibus electionem facere oportet patientibus eandem paſſionem: vt ſi fortis inſpiciat aliquis ſigna, fortia
D animalium in vnum accipientem oportet perſcrutari, quæ paſſiones his quidem omnibus inſunt, aliorum autem animalium nulli accidant. Si enim ita quis elegerit, quòd eadem ſunt ſigna fortitudinis, prædictis animalibus non ſolùm fortitudinis communem ineſſe paſſionem eorum, quæ ſunt in intellectu, ſed & alia quædam, ſic vtique dubitabit, vtrùm fortitudinis aut alterius ſigna ſint. Sed oportet ex pluribus eligi animalibus, & non habentibus vllam paſſionem communem manifeſtam, cuius vtique ſigna reſpicias. Quæcunque itaque ſignorum manſiua ſunt, aliquid manſiuum ſignant. Quæ autem adueniunt, atque diſcedunt, & deficiunt, quomodo vtique ſignum ve-
E rum erit non manentis in anima? Siquidem enim manſiuum adueniens, & deficiens ſignum quis ſuſcipiet: contingeret vtique ipſum quidem verum eſſe, non tamen conueniens, ſi non perpetuò ſequatur rem. Quæcunque autem paſſiones factæ in anima non in aliquo permutant ſigna, quæ ſunt in corpore, quibus vtitur phyſiognomon, non erunt huiuſmodi cognitiones artis

vt quæ ſunt circa oppoſitiones, & ſcientias, medicum, aut citharœdum non contingit cognoſcere. Nam addiſcens aliquam diſciplinam, nullum mutat ſignorum, quibus vtitur phyſiognomon.

CAPVT II.

Phyſiognomonia circa quæ verſetur: & ex quibus generibus ſigna accipiantur.

OPortet ergo determinare circa qualia quædam eſt phyſiognomonia, quoniam non circa omnia, & ex quibus ſingula ſigna accipiantur: deinde conſequenter de manifeſtiſſimis circa vnumquodque manifeſtare. Phyſiognomonia ergo eſt, ſicvt & nomen ipſius dicit, de naturalibus paſſionibus, quæ ſunt in anima, & accidentibus, quæcunque adueniunt, & tranſmutant ſigna phyſiognomonizata. Qualia autem hæc ſint, poſterius declarabitur. Nunc autem dicam ex quibus generibus ſigna accipiuntur, & ſint omnia. Ex motibus enim phyſiognomonizant, & ex figuris, & coloribus, & ex moribus apparentibus in facie, & ex leuitate, & ex voce, & ex carne, & ex partibus, & ex figura totius corporis. Vniuerſaliter quidem huiuſmodi ſunt, quæ dicunt phyſiognomones de omnibus generibus, ſigna. Siquidem igitur immanifeſtus, aut non deſignatiuus foret talis tranſitus, ſufficiebant prædicta. Nunc autem fortaſſe melius eſt vnumquodque de ſingulis, quæcunque manifeſta de phyſiognomonizatis, certiùs explanare, enumerantem cuiuſmodi ſigna referantur ad ſingula, quæcunque ſcilicet ex prædictis manifeſta non fuere. COLORES ergo ſignificant, acuti quidem calidum & ſanguineum, albi cum rubore, bonam indolem, quando in læui corpore accidit hic color. PILI autem molles quidem, timidum: duri autem, fortem: Hoc autem ſignum ſumptum eſt ex omnibus animalibus. Timidiſſimum enim eſt ceruus, lepus, ouis, & pilum molliſſimum habent: fortiſſimum autem, leo, aper, & pilum duriſſimum habent. Eſt autem & in auibus hoc idem videre. Vniuerſaliter enim quæcunque quidem habent duram pennam, fortes: quæcunque autem mollem, timidæ. Et particulariter eſt hoc quidem videre in coturnicibus, & in gallis: ſimiliter autem & in generibus hominum hoc idem accidit. Quicunque enim apud Septentrionem habitant, fortes ſunt, & durorum pilorum. Qui autem apud meridiem, timidi, & mollem pilum habent. Piloſitas autem, quæ eſt circa ventrem, loquacitatem ſignificat: hoc autem refertur ad genus auium. Proprium enim auis eſt eorum quæ ſunt circa corpus, piloſitas quæ circa ventrem eſt: eorum autem quæ ſunt circa intellectũ, loquacitas. CARO autem, dura quidem, & habitus boni, inſenſibilem ſignificat: mollis autem & ingenioſum, & inſtabilem, niſi in forti corpore, & habenti extremitates fortes hoc accidit. MOTVS autem tardi quidem, mollem intellectum: acuti verò, calidum. In VOCE autem grauis quidem & intenſa fortem: acuta autem, & remiſſa, timidum.

A δεῖ τὰ περὶ τὰς δόξας καὶ τὰς ἐπιστήμας, ἰατρὸν ἢ κιθαριστὴν οὐκ ἐνδέχεται γνωρίζειν· ὁ γὰρ μαθὼν ὅ,τι μάθημα, οὐδὲν ἐξήλλαξε τῶν σημείων οἷς χρῆται ὁ φυσιογνώμων.

ΚΕΦΑΛ. β.

Περὶ ἃ ἔστιν ἡ φυσιογνωμονία· καὶ ἐξ ὧν γενῶν τὰ σημεῖα λαμβάνεται.

ΔΕῖ δὲ οὖν ὁρίσαι περὶ ποῖα ἄττα ἐστὶν ἡ φυσιογνωμονία, ἐπεὶ οὐ περὶ πάντα καὶ ἐκ τίνων ἕκαστα σημεῖα λαμβάνεται· ἔπειτ᾽ ἐφεξῆς καθ᾽ ἓν ἕκαστον περὶ τῶν ἐπιφανεστέρων δηλῶσαι. B ἡ μὲν οὖν φυσιογνωμονία ἐστί, καθάπερ καὶ τοὔνομα αὐτῆς λέγει, περὶ τὰ φυσικὰ παθήματα τῶν ἐν τῇ διανοίᾳ, καὶ τῶν ἐπικτήτων, ὅσα παραγινόμενα μεθίστησι τῶν σημείων τῶν φυσιογνωμονουμένων. ὁποῖα δὲ ταῦτά ἐστιν, ὕστερον δηλωθήσεται. ἐξ ὧν δὲ γενῶν τὰ σημεῖα λαμβάνεται, νῦν ἐρῶ, καὶ ἔστιν ἅπαντα. ἔκ τε γὰρ τῶν κινήσεων φυσιογνωμονοῦσι, καὶ ἐκ τῶν σχημάτων, καὶ ἐκ τῶν χρωμάτων, καὶ ἐκ τῶν ἠθῶν τῶν ἐπὶ τοῦ προσώπου ἐμφαινομένων, καὶ ἐκ τῶν τριχωμάτων, C καὶ ἐκ τῆς λειότητος, καὶ ἐκ τῆς φωνῆς, καὶ ἐκ τῆς σαρκὸς, καὶ ἐκ τῶν μερῶν, καὶ τοῦ τύπου ὅλου τοῦ σώματος· καθόλου μὲν οὖν τοιαῦτά ἐστιν, ἃ λέγουσιν οἱ φυσιογνώμονες περὶ ὅλων τῶν γενῶν σημεῖα. εἰ μὲν οὖν ἀσαφὴς, ἢ μὴ εὔσημος ἦν ἡ τοιαύτη διέξοδος, ἀπέχρησεν ἂν τὰ εἰρημένα. νυνὶ δὴ ἴσως βέλτιόν ἐστι καθ᾽ ἕκαστον περὶ πάντων, ὅσα ἐπιφανῆ * παρὰ τῶν φυσιογνωμονουμένων, ἀκριβέστερον φράσαι, τά τε σημεῖα λέγοντα, οἷά τ᾽ ἐστὶν ἕκαστα [καὶ ἐπὶ τί] διαφέρεται, ὅσα μὴ ἐν τοῖς προειρημένοις δεδήλωται. αἱ μὲν οὖν χροιαὶ σημαίνουσιν, αἱ μὲν ὀξεῖαι, θερμὸν καὶ ὕφαιμον· αἱ δὲ λευκέρυθροι, εὐφυΐαν, ὅταν ἐπὶ λείου χρωτὸς D συμβῇ τοῦτο τὸ χρῶμα. τὰ δὲ τριχώματα, τὰ μὲν μαλακὰ, δειλόν· τὰ δὲ σκληρὰ, ἀνδρεῖον. τοῦτο δὲ τὸ σημεῖον εἴληπται ἐξ ἁπάντων τῶν ζώων. δειλότατον μὲν γάρ ἐστιν ἔλαφος, λαγωὸς, πρόβατα, καὶ τὴν τρίχα μαλακωτάτην ἔχει· ἀνδρειότατον δὲ ὁ λέων, καὶ ἄγριος, καὶ τρίχα σκληροτάτην φέρει. ἔστι δὲ καὶ ἐν τοῖς ὄρνισι τὸ αὐτὸ τοῦτο ἰδεῖν. καθόλου τε γὰρ ὅσοι μὲν σκληρὸν τὸ πτερὸν ἔχουσιν, ἀνδρεῖοι· ὅσοι δὲ μαλακὸν, δειλοί. καὶ κατὰ μέρη ἐστὶ ταὐτὸ τοῦτο ἰδεῖν, ἔν τε τοῖς ὄρτυξι, καὶ ἐν τοῖς ἀλεκτρυόσιν. ὁμοίως δὲ καὶ ἐπὶ τῶν γενῶν τῶν ἀνθρώπων ταὐτὸ τοῦτο συμπίπτει. οἱ μὲν γὰρ ὑπὸ ταῖς ἄρκτοις οἰκοῦντες, ἀνδρεῖοί τε εἰσὶ καὶ σκληρότριχες· οἱ δὲ πρὸς μεσημβρίαν, δειλοί τε καὶ E μαλακὸν τρίχωμα φέρουσιν. ἡ δὲ δασύτης ἡ περὶ τὴν κοιλίαν, λαλιὰν σημαίνει. τοῦτο δὲ ἀναφέρεται εἰς τὸ γένος τῶν ὀρνίθων. ἴδιον γὰρ ὄρνιθος τῶν περὶ τὸ σῶμα, ἡ δασύτης ἡ περὶ τὴν κοιλίαν· τῶν δὲ περὶ διάνοιαν, ἡ λαλιά. Η δὲ σὰρξ, ἡ μὲν σκληρὰ καὶ εὐεκτικὴ φύσει, ἀναίσθητον σημαίνει· ἡ δὲ λεία, καὶ εὐφυέα καὶ ἀβέβαιον, ἐὰν μὴ ἐπὶ ἰσχυροῦ σώματος καὶ τὰ ἀκρωτήρια ἐγκρατῆ ἔχοντος τοῦτο συμβῇ. Αἱ δὲ κινήσεις, αἱ μὲν νωθραὶ, μαλακὴν διάνοιαν· αἱ δὲ ὀξεῖαι, ἔνθερμον. Ἐπὶ δὲ τῆς φωνῆς ἡ μὲν βαρεῖα καὶ ἐπιτεινομένη, ἀνδρεῖον· ἡ δὲ ὀξεῖα καὶ ἀνειμένη, δειλόν.

Τὰ δὲ σχήματα, καὶ τὰ παθήματα τὰ ἐπιφαινόμενα A ἐπὶ τοῦ * προσώπου, κατὰ τὰς ὁμοιότητας λαμβάνεται τῶν παθῶν. ὅταν γὰρ πάσχῃ τι, γίνεται δὴ εἰ τοιοῦτον ἔχοι. ὅταν τις ὀργίζηται, ὀργίλου τὸ σημεῖον τοῦ αὐτοῦ γένους. τὸ δὲ ἄρρεν τοῦ θήλεος μεῖζον καὶ ἰσχυρότερον· καὶ τὰ ἀκρωτήρια τοῦ σώματος, ἰσχυρότερα, καὶ λιπαρώτερα, καὶ ἕξιν ἔχοντα, καὶ βελτίω κατὰ πάσας τὰς ἀρετάς. Ἰσχυρότερα δὲ τῶν ἐπὶ τοῖς μέρεσι σημείων ἐστὶ, τὰ ἐν τοῖς ἤθεσι * τοῖς ἐν τοῖς ἐπιφαινομένοις λαμβανόμενα· καὶ [τὰ] κατὰ τὰς κινήσεις καὶ τὰ σχήματα. ὅλως δὲ τὸ ἑνὶ μὲν πιστεύειν τῶν σημείων, εὔηθες· ὅταν δὲ πλείω συμφωνοῦντα καθ' ἑνὸς λάβῃ, μᾶλλον ἤδη κατὰ τὸ εἰκὸς ἄν τις ὑπολαμβάνοι ἀληθῆ εἶναι τὰ σημεῖα. Ἔστι δὲ ἄλλος τρόπος, B καθ' ὃν ἄν τις φυσιογνωμονοίη· οὐδεὶς μέντοι ἐπικεχείρηκεν. εἰ ἀνάγκη ἐστὶ τὸν ὀργίλον καὶ τὸν δυσκόλον καὶ * μικρὸν τὸ ἦθος, φθονερὸν εἶναι, εἰ καὶ μή ἐστι * φθονεροῦ σημεῖα, ἐξ ἐκείνων δὲ τῶν προτέρων ἐνδέχοιτο ἂν τῷ φυσιογνώμονι καὶ τὸν φθονερὸν εὑρίσκειν· μάλιστα μὲν, ὅταν ὁ τοιοῦτος ἴδιος τρόπος εἴη τοῦ πεφιλοσοφηκότος. τὸ γὰρ διωρίσθαι τινὰ τῶν ὄντων * ἀναγκαῖον εἶναι, ἴδιον ὑπολαμβάνομεν φιλοσοφίας· ὃ γάρ ἐστιν ὅτε ἐναντιοῦται τοῦ τῷ κατὰ τὰ πάθη φυσιογνωμονεῖν καὶ τὰ κακά. Περὶ φωνῆς κατὰ μὲν τὸ πάθος ἐπιχειρῶν, ὀξεῖαν οἰηθείη ἄν τις δυεῖν ἕνεκεν τίθεσθαι τοῦ θυμοειδοῦς. ὁ γὰρ ἀγανακτῶν, καὶ ὀργι- C ζόμενος, ἐπιτείνειν εἴωθε τὸν φθόγγον καὶ ὀξὺ φθέγγεσθαι· ὁ δὲ ῥᾳθύμως διακείμενος, τόν τε τόνον ἀνίησι, καὶ βαρὺ φθέγγεται. τῶν δ' αὖ ζώων τὰ μὲν ἀνδρεῖα, βαρύφωνά ἐστι· τὰ δὲ δειλὰ, ὀξύφωνα· λέων μὲν καὶ ταῦρος, ὥσπερ καὶ κύων ὑλακτικὸς, καὶ τῶν ἀλεκτρυόνων οἱ εὔψυχοι, βαρύφωνοι φθέγγονται· ἔλαφος δὲ καὶ λαγωὸς, ὀξύφωνά ἐστι. ἀλλ' ἴσως καὶ ἐν τούτοις κρεῖττόν ἐστι μὴ ἐν τῷ βαρεῖαν ἢ ὀξεῖαν εἶναι τὴν φωνὴν αὐτῶν, ἀνδρεῖον, ἢ δειλὸν τίθεσθαι, ἀλλ' ἐν τῷ τὴν μὲν ἐρρωμένην, ἀνδρείου· τὴν δὲ ἀνειμένην καὶ ἀσθενῆ, δειλοῦ ὑποληπτέον εἶναι. ἔστι δὲ κράτιστον, ὅταν τὰ σημεῖα μὴ ὁμολογούμενα, ἀλλ' ὑπεναντιούμενα, μηδὲν τίθεσθαι, εἰ μή ἐστι τῶν εἰρημένων ποῖα ποίων πιστότερα· καὶ μάλιστα μὲν εἰς εἴδη, ἀλλὰ μὴ εἰς ὅλα τὰ γένη ἀναφέρειν. ὁμοιότερα γάρ ἐστι τοῖς ζητουμένοις. οὐ γὰρ ὅλον τὸ γένος τῶν ἀνθρώπων φυσιογνωμονοῦμεν, ἀλλά τινα τῶν ἐν τῷ γένει.

Figvræ autem & paſſiones, quæ apparent in facie, ſecundùm ſimilitudines accipiuntur paſſionis: quando enim dum patitur, aliquid fit, vt ſi hoc habet, quando aliquis iraſcitur, iraſcibile ſignum eiuſdem generis. Mas autem fœmina maior eſt, & fortior, & extrema corporis fortiora, & craſſiora, & habitus melioris, & potiora ſecundùm omnes virtutes. Signis autem, quæ ſunt in partibus corporis, fortiora ſunt ea quæ accipiuntur manifeſta in moribus: & ſecundùm motus, & figuras. Omnino autem vni quidem ſignorum credere ſtultum eſt. Quando autem plura conueniunt, quæ ſunt in vno, magis vtique conueniet vt quis accipiat vera eſſe ſigna. Eſt autem alius etiam modus, ſecundùm quem aliquis phyſiognomonizet. Nullus tamen aggreſſus eſt. Vt ſi neceſſe ſit iracundum, & triſtem, & paruum, ſecundùm morem inuidum eſſe, & ſi non ſint inuidi ſigna: ex illis autem prioribus contingat vtique phyſiognomoni & inuidum inuenire. Maximè quidem quando talis proprius modus fuerit philoſophantis. Poſſe enim quibuſdam exiſtentibus neceſſarium eſſe, proprium putamus philoſophiæ. Quod contrarium eſt huic quandoque, iuxta paſſiones phyſiognomonizare & mala. Secvndvm paſſionem intendens quiſpiam acutam putarit duplicem ob cauſam iracundi vocem ponendam eſſe. Indignatus enim, & iratus, diſtinguere conſueuit vocem, & acutè loquitur: qui autem remiſſus ſtat, remittit vocem, & grauiter loquitur. Rurſus autem animalium fortia quidem, grauis vocis ſunt, timida autem, acutæ vocis. Leo quidem, & taurus, & canis lattrabilis, & gallorum, qui ſunt boni animi, grauiter vociferantur. Ceruus autem, & lepus acutæ vocis ſunt. Sed fortè & in his melius eſt, non eo quòd ipſorum vox eſt acuta, & grauis, fortem aut timidum ponere: ſed arbitrandum eſt, fortem quidem fortis, remiſſam autem & imbecillem timidi. Eſt autem potiſſimum, quando ſigna non ſunt confeſſa, ſed ſubcontrariantia, nihil ponere, niſi ſint diſcrepantium inter ſe, alia credibiliora aliis. Et maximè quidem in ſpeciem, D ſed non in tota genera referre decet: ſimiliora enim ſunt quæſito. Non enim totum genus hominum phyſiognomonizamus, ſed quædam ſunt in genere.

CAPVT III.

Signa affectionum animi ſigillatim.

Signa fortis corporis. Pili duri, figura corporis erecta, oſſa, & coſtæ, & extrema corporis fortia, & magna, & venter amplus, & contractus E ad ſe, armi lati, & diſtantes, nec valde colligati, nec omnino diſſoluti, collum forte, nõ vehementer carnoſum, pectus carnoſum, & lätũ, coxa contracta, pecten deorſum contractũ, oculus charopus, nec valde expanſus, nec omnino clauſus, ſquallidior color in corpore, acuta frõs, recta, non magna: gena, neque læuis, neque omnino rugoſa.

Signa TIMIDI. Pili molles, corpore inclinatus, non erectus, quæ ſunt ſub vmbilico ſurſum tracta, circa faciem ſubcroceus, oculi imbecilles, & mobiles, & extrema corporis imbecilla, & crura parua, manus longæ, & ſubtiles: lumbi autem parui, & imbecilles, figura contenſa in motibus, non vehemens, ſed ſupinus, & ſtupefactibilis: mos, qui eſt in facie, mobilis, ſolicitus. INGENIOSI ſigna. Caro humidior, & mollior, non boni-habitus, neque valde pinguis: quæ ſunt circa muſculos ſcapularum, & collum, macriora, & quæ ſunt circa faciem, incolligata: quæ ſunt circa muſculos ſcapularum, & inferiora, remiſſa: bene ſoluta, quæ ſunt circa coſtas: & ſecundùm dorſum non carnoſus: corpus album miſto rubore, & purum: cutis ſubtilis: pili non valde duri, nec valde nigri: oculus charopus, humidus. INSENSATI ſigna. Quæ ſunt circa collum & crura, carnoſa complexa, & colligata: cotyle rotunda: muſculi ſcapularum, ſurſum expanſi: frons magna, circularis, carnoſa: oculus croceus: crura circa talum groſſa, carnoſa, rotunda: mandibulæ magnæ, carnoſæ, lumbi carnoſi, crura longa, collum groſſum, facies carnoſa, ſublonga ſatis: motus autem & figuram & morem, qui apparet in facie, ſecundùm ſimilitudines accipit. INVERECVNDI ſigna. Oculus apertus, & ſplendidus, palpebræ ſanguineæ, & craſſæ, & parum curuus, muſculi ſcapularum ſurſum eleuati, figura non recta, ſed parum prona. In motibus autem acutus, rubeus corpore, color ſanguineus, facies rotunda, pectus ſurſum tractum. MODERATI ſigna. In motibus tardus, & loquens tardè: vox tarda, plena, ſpiritus mitis, oculus hilaris, non ſplendidus, niger, neque valde apertus, neque omnino clauſus, palpebrizans tardè. Oculorum enim, qui celeriter palpebrizant, hi quidem timidum, hi verò calidum ſignant. ANIMOSI ſigna. Frons bene magna, & carnoſa, & læuis, quæ ſunt circa oculos, videntur humiliora, & facies ſomnolentior, neque intenſè aſpiciens, neque remiſſè: in motibus tardus erit, & remiſſus figura, & more, qui eſt in facie, non præceps, ſed videtur bonus. INANIMOSI ſigna. Rugoſa facies; & macri oculi confracti, ſimul autem & confracta oculorum duo ſignificant, hoc quidem molle, & fœmininum, aliud verò demiſſum & pauidum: in figura humilis, & motibus remiſſus. Signa CINAEDI. Oculus confractus, genu flexibilis, inclinatio capitis ad dextram, motus manuum ſupini, & diſſoluti, & ambulationes duplices. Hæc quidem circumclinantis, alia verò tenentis lumbos, & oculorum circunſpectiones, qualis vtique fuerit Dionyſius ſophiſta. Signa AVARI. CAPVT IV.

De ſignis particulariter.

Videtur autem mihi anima & corpus compati ad inuicem, & animæ habitus alteratus ſimul alterat corporis formam, & iterum forma corporis alterata ſimul alterat animæ habitum. Quando enim animæ eſt triſtari & lætari, manifeſtum eſt quòd triſtes obſcuræ faciei ſunt, gaudentes autem hilaris. Siquidem igitur anima diſſoluta, formam, quæ eſt in corpore, adhuc exiſtere contigerit, ſanè & ita anima & corpus compatibilia forent, quamuis conferentes ad inuicem non forent. Nunc autem manifeſtum, quòd vtrunque ſeſe conſequitur. Maximè id ex hoc manifeſtum fiat: Mania videtur eſſe circa animam, & medici medicinis purgantes corpus, & diætis vtentes in ipſis, permutant animam à mania. Curationibus autem corporis, ſimul & corporis forma ſoluitur, & anima à mania permutatur. Quoniã igitur vtraque ſoluuntur, palam fit quoniam conferunt ad inuicem.

Manifeſtum inſuper eſt, quòd virtutibus animæ, ſimiles corporis formæ fiunt: quare erunt omnia ſimilia in animalibus, eiuſdem cuiuſpiam declaratiua. Multa autem animalia ſunt, & quæ operantur, hæ quidem propriæ paſſiones vniuſcuiuſque ſexus animalium ſunt, aliæ verò communes. in propriis igitur operibus animæ, propriæ paſſiones ſecundùm corpus, in communibus autem communes. Communes quidem ſunt, iniuria, & qui eſt circa Venerea exceſſus: laceratarum, & vilium, communis eſt iniuria: porcorum, & aſinorum, habitus qui eſt circa Venerea: maſticando coeunt. Proprium autem eſt, in canibus quidem contumelioſum: in aſinis autem non triſte. Quomodo igitur commune quidem & proprium conuenit diſtingui, dictum eſt. Opus autem eſt multa conſuetudine, ſi quis debet eſſe ſufficiens ad dicendum ſingula de his. Quoniam enim ea quæ videntur in corporibus, dicuntur referri ad ſimilitudines, quæ fiunt ab animalibus, & ab actibus: & differentiæ quidem aliæ à caliditate, & frigiditate fiunt. Sunt enim horum quædam apparentium in corporibus parua differentia vtentia, & eodem nomine appellata: vt pallores, qui fiunt à timoribus, & qui à laboribus: hi enim eodem nomine vtuntur, & differentiam paruam habent inter ſe: parua autem differentia exiſtente, non facile eſt cognoſcere, ſed ex conſuetudine formæ, apparentem quidem aſſumere conuenientiam oportet. Eſt autem optimus modus, & citiſſimus, qui eſt ab apparente conuenientia: & contingit ita eo modo vtentem multa cognoſcere: & non ſolùm vniuerſaliter vtile eſt, ſed ad electionem ſignorum ſingularium. Electorum enim quodque decere oportet tale, vt quod eligitur, vult. Amplius autem ſecundùm electionem ſignorum, & ſyllogiſmo, quo vti opus eſt, vbicunque contingat, adiungentes conuenientibus conuenientia: vt ſi inuerecundus erit, & paruiloquus, & fur vtique erit, & illiberalis: & fur quidem conſequens inuerecundiam, & paruiloquium, illiberalis. In talibus igitur quibuſque oportet hoc modo ſecundùm conuenientiam fieri methodum.

CAPVT V.

Diſtinctio maris & fœminæ ad phyſiognomoniam.

NVnc autem primum tentabo genera animalium diſtinguere, & quæ ipſorum conuenit permutari, vt ſint fortia, & timida, & iuſta, & iniuſta. Diſtinguendum autem animalium genus in duas formas, in maſculinam & in fœmininam, adiungentem paſſiones conuenientes vnicuique formæ. Sunt enim ſimilia. Et quæ conamur nutrire, ferarum manſuetæ magis, & molliores ſecundùm animas fœminæ maribus ſunt, minùs autem fortes, verùm nutrimenta, & aſſuetudinem manuum recipientes magis. Quare exiſtentes tales, erunt alicubi minùs iracundæ maribus. Manifeſtum autem id ex nobis alicui eſt:

Talis eſt ſecundùm ea quæ ſunt circa corpus. Quæ autem circa animam, datiuum & liberale, magnanimum, & amans victoriæ, & manſuetum & iuſtum, & amans eorum, cum quibus verſetur. PARDALIS autem, fortibus eſſe viſis, fœmineæ formæ magis eſt, niſi ſecundùm crura: his autem operatur, & aliquod opus fortitudinis facit. Habet faciem paruam, os magnum, ocu- E los paruos, albos, concauos, eoſdem autem ſuperficiales: frontem longam, aures rotundas magis quàm planas, collum longum valde, pectus expers laterum, & longum dorſum: femora carnoſa, & coxas: quæ verò ſunt circa illa, & ventrem, læuia magis. Color autem varius, & totum non articulatum, & abſque menſura eſt.

Forma

Forma corporis talis eſt. In his autem, quæ ſecundùm animam, puſillum eſt, & fraudulentum, & omnino dicere, doloſum. Animalium igitur, quæ videntur fortia, conuenientia aſſumpta animalia, maſculinæ formæ & fœmininæ dicta ſunt. Alia autem qualia ſint, facile eſt vtique pertranſire. Quæcunque autem ad phyſiognomonizandum inſpicere conueniet ab animalibus, in electione ſignorum dicetur.

CAPVT VI.

De electione ſignorum in hominibus.

ELectio autem ſignorum, quæ eſt ſecundùm homines, ſic accipitur. Quibuſcunque PEDES bene nati, magni, articulati, & neruoſi, fortes ſunt: ſecundùm ea quæ ſunt in anima, reducentur ad maſculinum genus. Quicunque autem pedes paruos, ſtrictos, inarticulatos habent, delectabiliores autem viſu, quàm fortiores, molles ſunt ſecundùm ea quæ ſunt in anima: referuntur ad fœmininum genus: quibus pedum digiti curui, inuerecundi, & quibus vngues curui, referuntur ad aues curuorum vnguium: quibus pedum digiti coniuncti ſunt, ſtercoroſi, referuntur ad ortygas ſtrictorum pedum in lacubus degentes. Quibuſcunque ea quæ circa TALOS ſunt, neruoſa, & articulata, fortes ſecundùm animam, referuntur ad maſculinum genus. Quicunque autem ſunt talis carnoſi, & inarticulati, molles ſecundùm animam, referuntur ad fœmininum genus. Quicunque CRVRA habent articulata, & neruoſa, & robuſta, fortes ſecundùm animam, referuntur ad maſculinum genus: quicunque crura ſubtilia neruoſáque habent, luxurioſi, referuntur ad aues. Quicunque crura ſuperflua habent, & ſunt parum dirupta, odibiles & inuerecundi, referuntur ad apparentem decentiã. Qui ſunt ſecundùm genua plani, cinædi, referuntur ad apparentem conuenientiam. Qui habent COXAS oſſeas, & neruos, fortes ſunt, referuntur ad maſculinum genus: qui habent coxas oſſulentas, & ſuperfluas, molles ſunt, & referuntur ad fœmininum genus. Quicunque PECTEN oſſeum, acutum habent, ſunt fortes: qui carnoſum & pingue habent, molles: Qui autem habent modicam carnem, ſiccam, deſiccatam, mali moris ſunt: referuntur ad ſimias. Quicunque autem bene LVMBOSI ſunt, amatores ferarum: referuntur ad canes & leones. Videbit vtique aliquis & canes valde venaticos lumboſos eſſe. Quibus ea, quæ ſunt circa VENTREM, pinguia, bene fortes: referuntur ad maſculinum. quicunque autem non pingues, molles: referuntur ad indecentiam. Qui SPINAM magnam, & bene fortem habent, fortes ſunt anima: referuntur ad maſculinum. Qui autem ſpinam ſtrictam, & imbecillem habent, molles, referuntur ad fœmininũ genus. Quicunque autẽ robuſtis LATERIBVS, fortes ſunt ſecundùm animam: referuntur ad maſculinum genus: qui autem non bene coſtati, molles ſunt ſecundùm animam: referuntur ad fœmininum genus: Quicunque ex lateribus circumducti ſunt, ſicvt inflati, loquaces, & ſtultiloqui, referuntur ad boues, vel ranas.

A Quicunque autem maius habent quod ab VMBILICO eſt vſque ad extremum pectoris, eo quod eſt ab extremitate pectoris vſque ad collum, voraces & inſenſibiles. Voraces quidem, quoniam ventrem magnum habent, quo appetunt cibum. Inſenſibiles autem, quia anguſtum locum habent ſenſus, atque in arctum redactum, ab eo, qui recipit cibum, ita vt ſenſus grauentur propter repletiones ciborum, aut indigentiam. Quicunque autem PECTVS magnum habent, & articulatum, fortes ſunt ſecundùm animam: referuntur ad maſculinum genus. Quicunque autem METAPHRENON habent magnum, & bene carnoſum, & articulatum, fortes ſunt ſecundùm animam: referuntur ad maſculinum. Quicunque autem imbecille, & non carnoſum, & B inarticulatum, molles ſunt ſecundùm animam: referuntur ad fœmininum. Quibuſcunque autem metaphrenon curuum eſt valde, muſculique ad pectus coacti, mali moris ſunt: referuntur ad apparentem conuenientiam, quia pereunt antrorſum, conuenientia videri. Quicunque autem metaphrenon eminens habent, glorioſi, & non intelligentes: referuntur ad equos. Quoniam autem neque curuum vehementer oportet eſſe, neque concauum metaphrenon, medium quærendum bene nati. Quibuſcunque CERVIX articulis eminentibus, & ſcapulæ, fortes ſunt ſecundùm animam: referuntur ad maſculinum: quibus ceruix C imbecillis, & inarticulata, molles ſunt ſecundùm animam: referuntur ad fœmininum. Hæc dico, quæ dixi de pedibus & coxis. Quibuſcunque autem SCAPVLÆ bene ſolutæ ſunt, liberales ſunt ſecundùm animam: referuntur ad apparentem, quia conuenit apparenti formæ liberalitas: quibus verò difficulter ſolubiles, conuulſæ, illiberales: referuntur ad apparentem conuenientiam. Quibuſcunque autem ea quæ ſunt circa CLAVEM colli, bene ſolubilia, ſenſibiles: nam bene ſolubilibus exiſtentibus, quæ ſunt circa clauem facilè motum ſenſuum recipiunt: quibus verò quæ circa claues ſunt, concluſa ſunt, inſenſibiles: difficulter enim ſolubilibus exiſtentibus his, quæ circa cla- D uem, impotentes ſunt recipere motum ſenſuum. Qui COLLVM groſſum habent, fortes ſunt ſecundùm animam, referuntur ad maſculinum, qui autem habent ſubtile, imbecilles ſunt: referuntur ad fœminas. Quibuſcunque collum groſſum, & carnoſum, iracundi: referuntur ad iracundos tauros. Quibuſcunque autem eſt bene magnum, non valde groſſum, magnanimi: referuntur ad leones. Quibus eſt longum, ſubtile, timidi ſunt: referuntur ad ceruos. Quibus autem breue valde, doloſi, & inſidiatores: referuntur ad lupos. Quibus ſunt LABIA ſubtilia, & in extremitatibus laxa, ita vt ſuperius labium ad inferius protendatur ad coniunctionem labiorum, magnanimi ſunt, referuntur ad leones. Videbit vtique aliquis hîc & in E magnis & fortibus canibus, quibus labia ſubtilia, dura circa dentes caninos, ſupereminentes: qui ita habent, ignobiles: referuntur ad ſues. Qui autem groſſa labia habent, & ſuperius inferiori propendens, fatui: referuntur ad aſinos. Quicunque autem ſuperius labium & gingiuas præeminentia habent, amatores ſunt contumeliarum: referuntur ad canes. Quicunque autem NASVM extremũ groſſum habent, rathymi ſunt, id eſt, facilem animum habent ad concupiſcendum: referuntur ad boues.

Qui autem naſum in extremitate groſſum habent, A inſenſibiles ſunt: referuntur ad ſues. Qui naſum extremum acutum habent, difficulter iraſcibiles ſunt: referuntur ad canes. Qui naſum habent rotundum, & obtuſum, magnanimi: referuntur ad leones. Qui verò naſum extremum ſubtilem habent, auiculares. Qui habent à fronte mox curuum, inuerecundi ſunt: referuntur ad coruos. Quicunque autem aquilum habent, articulatum à fronte, magnanimi: referuntur ad aquilam. Quicunque naſum concauum habent, & frontem rotundam, & ruſum eminens rotundum, luxurioſi: referuntur ad gallos. Qui verò ſimum, luxurioſi: referuntur ad ceruos. Quibuſcunque nares ſunt apertæ, iracundi: referuntur ad paſſionem, quæ fit in ira. Quicunque FACIEM carnoſam habent, ra- B thymi, id eſt,* facilè concupiſcibiles ſunt: referuntur ad boues. Qui faciem macilentam habent, ſoliciti. Qui autem carnoſam, timidi: referuntur ad facies aſino & ceruo ſimiles. Qui valde paruam habent, puſillanimi: referuntur ad catum, & ad ſimiam. Quibus facies magna, tardi: referuntur ad aſinos, & boues. Qui verò neque paruam, neque magnam, oportet eſſe medios: habitus vtique horum medius erit conueniens. Quibus autem facies videtur paruifica, illiberales ſunt: referuntur ad apparentiam. Quibus autem ab OCVLIS tanquam veſiculæ dependent, amatores vini C ſunt: referuntur ad paſſionem. Quibus vehementer cadunt, quæ ante oculos apparent, vt veſiculæ, amatores ſomni, referuntur ad paſſionem, item ex ſomno ſurgentibus dependent quæ ſunt in oculis. Quicunque oculos paruos habent, puſillanimi: referuntur ad apparentiam, & ſimiam. Quicunque verò habent oculos magnos, referuntur ad boues. Igitur bene natum oportet neque magnos neque paruos habere oculos. Qui verò concauos habent, malefici: reducuntur ad ſimiam. Quicunque habent oculos eminentes, fatui: referuntur ad apparentiam, & aſinos. Quoniam autem neque eminentium oculorum, neque concauorum oportet eſſe, medius vtique habitus præſtabit. Quibuſcunque autem oculi ſunt parum concaui, ma- D gnanimi: reducuntur ad leones. Quibus verò plus, manſueti: referuntur ad boues. Quicunque FRONTEM paruam habent, indiſciplinabiles: referuntur ad ſues. Qui autem magnam valde, tardi: referuntur ad boues. Qui rotundam habent, inſenſati: referuntur ad aſinos. Qui autem minùs planam habent, ſagaces: referuntur ad canes. Quicunque quadratam & moderatam frontem habent, magnanimi: referuntur ad leones. Quicunque autem collectam habent, adulatores, referuntur ad paſſionem, quæ fit. Id in canibus videbit quiſpiam, qui cùm blandiuntur, contractam habent frontem. Quicunque autem nebuloſam, audaces: referuntur ad taurum, & leonem. Quando autem nebuloſus habitus, audaciam ſi- E gnificat: tranquillitas autem adulationem: medius habitus vtique horum bene decenter ſe habet. Quicunque triſtem habent frontem, mœſti: referuntur ad paſſionem, quoniam mœſti triſtem habent faciem.

Οἷς τὸ χρῶμα ἐρυθρόν, ὀξεῖς· ὅτι πάντα τὰ κατὰ τὸ σῶμα ὑπὸ κινήσεως ἐκθερμαινόμενα, ἐρυθραίνεται. Οἷς δὲ τὸ χρῶμα φλογοειδές, μανικοί· ὅτι τὰ κατὰ τὸ σῶμα σφόδρα ἐκθερμανθέντα, φλογοειδῆ χροιὰν ἴσχει. οἱ δὲ ἄκρως θερμανθέντες, μανικοὶ ἂν εἴησαν. Οἷς δὲ περὶ τὰ στήθη ἐπιφλεγὲς ἐστὶ χρῶμα, δυσόργητοι· ἀναφέρεται ἐπὶ τὸ πάθος. τοῖς γὰρ ὀργιζομένοις ἐπιφλέγεται τὰ περὶ τὰ στήθη. Οἷς τὰ περὶ τὸν τράχηλον καὶ τοὺς κροτάφους αἱ φλέβες κατατεταμέναι εἰσί, δυσόργητοι· ἀναφέρεται ἐπὶ τὸ πάθος, ὅτι τοῖς ὀργιζομένοις ταῦτα συμβαίνει. Οἷς τὸ πρόσωπον ἐπιφοινίσσον ἐστίν, αἰσχυντηλοί εἰσιν· ἀναφέρεται ἐπὶ τὸ πάθος, ὅτι τοῖς αἰσχυνομένοις ἐπιφοινίσσεται τὸ πρόσωπον. Οἷς αἱ γνάθοι ἐπιφοινίσσουσιν οἰνόφλυγες· ἀναφέρεται ἐπὶ τὸ πάθος, ὅτι τοῖς μεθύουσιν ἐπιφοινίσσουσιν αἱ γνάθοι. Οἷς δὲ οἱ ὀφθαλμοὶ ἐπιφοινίσσουσιν, ἐκστατικοὶ ὑπὸ ὀργῆς· ἀναφέρεται ἐπὶ τὸ πάθος, ὅτι οἱ ὑπὸ ὀργῆς ἐξεστηκότες, ἐκφοινίσσονται τοὺς ὀφθαλμούς. Οἷς δὲ ὀφθαλμοὶ ἄγαν μέλανες, δειλοί. ἡ γὰρ ἄγαν μελαίνη χρόα, ἐφάνη δειλίαν σημαίνουσα. εἰ δὲ μὴ ἄγαν μέλανες, ἀλλὰ κλίνοντες πρὸς τὸ ξανθὸν χρῶμα, εὔψυχοι. Οἷς δὲ οἱ ὀφθαλμοὶ γλαυκοί, ἢ λευκοί, δειλοί· ἐφάνη γὰρ τὸ λευκὸν χρῶμα δειλίαν σημαῖνον. Οἱ δὲ μὴ γλαυκοί, ἀλλὰ χαροποί, εὔψυχοι· ἀναφέρεται ἐπὶ λέοντα καὶ ἀετόν. Οἷς δὲ * οἰνωποί, μῶροι· ἀναφέρεται ἐπὶ τὰς αἶγας. Οἷς δὲ * πυρώδεις, ἀναιδεῖς· ἀναφέρεται ἐπὶ τοὺς κύνας. Οἱ ἀχρώματοι, ἐντεταραγμένους ἔχοντες τοὺς ὀφθαλμούς, δειλοί· ἀναφέρεται ἐπὶ τὸ πάθος· ὅτι οἱ φοβηθέντες, ἔνωχροι γίνονται χρώματι οὐχ ὁμαλῷ. Οἱ δὲ τοὺς ὀφθαλμοὺς στιλπνοὺς ἔχοντες, λάγνοι· ἀναφέρεται ἐπὶ τοὺς ἀλεκτρυόνας καὶ κόρακας. Οἱ δασείας ἔχοντες τὰς κνήμας, λάγνοι· ἀναφέρεται ἐπὶ τοὺς τράγους. Οἱ δὲ περὶ τὰ στήθη καὶ τὴν κοιλίαν ἄγαν δασεῖς ἔχοντες, οὐδέποτε πρὸς τοῖς αὐτοῖς διατελοῦσιν· ἀναφέρεται ἐπὶ τοὺς ὄρνιθας, ὅτι ταῦτα τὰ στήθη καὶ τὴν κοιλίαν δασύτατην ἔχουσιν. Οἱ τὰ στήθη ψιλὰ ἄγαν ἔχοντες, ἀναιδεῖς· ἀναφέρεται ἐπὶ τὰς γυναῖκας. Ἐπειδὴ οὖν οὐδὲ ἄγαν δασέα δεῖ εἶναι, οὔτε ψιλά, ἡ μέση ἕξις κρατίστη.

A Qui autem demiſſam, lamentabundi ſunt: referuntur ad paſſiones, quia lugentes demiſſæ ſunt frontis. Quicunque autem habent magnum CAPVT, ſenſati: referuntur ad canes. Qui verò paruum, inſenſati: referuntur ad aſinos. Qui habent capita pineata, inuerecundi: referuntur ad habentes vngues curuos. Quicunque AVRES paruas habent, ſimiales ſunt. Quicunque autem magnas, aſinini. Videbit vtique aliquis & canum optimos moderatas aures habere. Qui valde nigri ſunt: timidi: referuntur ad Ægyptios, & Æthiopes: valde autem albi, timidi ſunt: referuntur ad mulieres. Colorem autem, qui confert ad fortitudinem, medium horum oportet eſſe. Flaui, magni animi ſunt: referuntur ad leones. Rubei, valde B aſtuti: referuntur ad vulpes. Pallidi, colore turbati, timidi ſunt: referuntur ad paſſionem, quæ fit ex timore. Qui autem ſunt mellei coloris, ſunt frigidi: frigida autem mobilia difficulter: mobilibus autem difficulter exiſtentibus iis quæ iuxta ſunt corpus, erunt vtique tardi. Quibus color ruber eſt, acuti ſunt, quoniam omnia, quæ ſunt ſecundùm corpus, à motu calefacta erubeſcunt. Quibus color flammeus eſt, maniaci: quia ea, quæ ſunt in corpore vehementer calefacta, flammeum colorem habent. Qui autem ſunt extremè calefacti, maniaci vtique ſunt. Quibus autem eſt flammeus color circa pectus, difficilis iræ ſunt: referuntur ad paſſionem. Iratis namque ſuperacce- C duntur ea quæ ſunt circa pectus. Quibus autem circa collum & tempora venæ diſtenſæ ſunt, difficilis iræ: referuntur ad paſſionem, quia iratis hæc accidunt. Quibus facies ſupererubeſcens eſt, verecundi ſunt: referuntur ad paſſionem, quia verecundatis ſupererubeſcit facies. Quibus genæ ſupererubeſcunt, amatores ſunt vini: referuntur ad paſſionem, quia ebriis ſupererubeſcunt genæ. Quibus autem oculi ſupererubeſcunt, extra ſe feruntur ob iram: referuntur ad paſſionem, quia qui ab ira efferuntur, erubeſcunt oculis. Quibus autem oculi valde nigri, timidi: niger enim color valde, videtur timiditatem ſignificare. Qui autem non ſunt valde nigri, ſed declinant D ad flauum colorem, boni animi ſunt. Quibus autem oculi glauci, aut albi, timidi ſunt: viſus eſt albus color timiditatem ſignificare. Qui autem non ſunt glauci, ſed charopi, boni animi ſunt: referuntur ad leones, & aquilas. Qui autem vino colore ſimiles ſunt, ſtolidi ſunt: referuntur ad capras. Quibus ignei ſunt oculi, inuerecundi: referuntur ad canes. Qui autem oculos diſcoloratos habent, & turbatos, timidi: referuntur ad paſſionem: quia qui timuerint, pallidi fiunt colore non æqualiter. Quicunque oculos lucentes habent, luxurioſi: referuntur ad coruos & gallos. Qui tibias piloſas habent, Venerei ſunt: referuntur ad hircos. Qui autem ea quæ ſunt circa pectus, & ventrem, valde piloſa E habent, nunquam in eiſdem perſeuerant: referuntur ad aues: quia ea pectus & ventrem valde piloſa habent. Qui pectora habent valde nuda, vel non piloſa, inuerecundi ſunt: referuntur ad mulieres. Quoniam igitur non oportet valde piloſa eſſe, neque nuda, medius habitus eſt optimus.

Quicunque humeros piloſos habent, nunquam in eidem perſeuerant: referuntur ad aues. Qui dorſum habent piloſum valde, inuerecundi ſunt, referuntur ad beſtias. Quicunque autem collum retrò piloſum habent, liberales ſunt: referuntur ad leones. Qui autem mentum habent acutum, boni animi: referuntur ad canes. Quicunque habent ſupercilia coniuncta, triſtes ſunt: referuntur ad ſimilitudines paſſionis. Qui ſupercilia diuulſa habent ante naſum, & extenſa vſque ad tempora, fatui ſunt: referuntur ad porcos. Qui erectos pilos habent in capite, timidi: referuntur ad paſſiones: quia timentibus eriguntur. Qui capillos multum criſpos habent, timidi: referuntur ad Æthiopas. Quoniam igitur rigentes, & vehementer criſpi, timiditatem ferunt, qui in extremitate ſunt criſpi, ad bonum animum referuntur: referuntur autem & ad leonem. Qui id frontis, quod eſt ante caput, eleuatum habent, liberales ſunt: referuntur ad leones. Qui in capite adnatos habent capillos ad frontem iuxta naſum, ſunt liberales: referuntur ad decentem apparentiam. De manus, & cubiti, & brachij motu, eadem referuntur. Qui humeris rectis, tenſis, inſultant, galeangones: referuntur ad equos. Qui ſcapulis mouentur curui, ſunt elati: referuntur ad leones. Qui pedibus inuerſis ambulantes, & cruribus, fœminini: referuntur ad mulieres. Qui verò corporibus circuntorquentes ſe, & fricantes, adulatores ſunt: referuntur ad paſſiones. Inclinati autem ad dextram in ambulando, cinædi ſunt: referuntur ad apparentem decentiam. Quicunque oculos habent bene mobiles, acuti, rapaces: referuntur ad accipitres. Qui palpebrizant, timidi:, quia in oculis prima mouentur.

ARISTOTELIS STAGIRITÆ QVÆSTIONES MECHANICÆ.

Nicolao Leoniceno interprete.

MIRACVLO ſunt ea quidem quæ natura contingunt, quorum ignorantur cauſæ: illa verò quæ præter naturam, quæcunque ad hominum vtilitatem arte fiunt. In multis enim natura ei quod nobis vſui eſſe poteſt, contrarium facit. Natura etenim eundem ſemper habet modum, & ſimpliciter: vtile autem multifariam commutatur. Quando igitur quippiam præter naturam oportuerit facere, difficultate ſua hæſitationem præſtat, artéque indiget. Quamobrem eam artis partem, quæ huiuſmodi ſuccurrit difficultatibus, mechanicam appellamus. Quemadmodum enim Antipho ſcribit poëta; ſic ſe res habet. Arte enim ſuperamus ea à quibus Natura vincimur. Huiuſmodi autem ſunt, in quibus & minora ſuperant maiora, & quæcunque momentum paruum habent, magna mouent pondera: & omnia ferè illa, quæ mechanica nuncupamus problemata. Sunt autem hæc neque naturalibus omnino quæſtionibus eadem, neque ſeiugata valde: verùm mathematicarum contemplationum naturaliúmque communia. De numero autem eorum quæ hoc in genere dubitantur, illa eſſe dicuntur, quæ circa vectem fiunt. Abſurdum enim eſſe videtur, magnum moueri pondus ab exigua virtute, cum pluri præſertim pondere. Quòd enim ſine vecte quiſpiam mouere non poteſt, idipſum ponderis citiùs mouet vectis ad illud pondus adiungens. Omnium autem huiuſmodi cauſæ principium habet circulus. Iſtud verò ratione contingit. ex admirabili etenim mirandum accidere quippiam non eſt abſurdum. Maximè autem eſt admirandum, ſimul contraria fieri. Circulus verò ex huiuſmodi eſt conſtitutus. Statim ex commoto effectus eſt, & manente, quorum natura ad ſe inuicem eſt contraria. Quamobrem iſthæc cernentes minùs admirari conuenit contingentes in illo contrarietates. In primis enim lineæ illi quæ circuli orbem amplectitur, nullam habenti latitudinem, contraria quodammodo ineſſe apparent, concauum ſcilicet, & curuum. Hæc autem eo à ſe inuicem diſtant modo, quo magnum & paruum. Illorum etenim medium eſt æquale: horum verò rectum. Qua-

Τέχνῃ γὰρ κρατοῦμεν, ὧν φύσει νικώμεθα.

τοιαῦτα δέ ἐστιν, ἐν οἷς τὰ ἐλάττονα κρατεῖ τῶν μειζόνων, καὶ τὰ ῥοπὴν ἔχοντα μικρὰν, κινεῖ βάρη μεγάλα, καὶ πάντα σχεδὸν ὅσα τῶν προβλημάτων μηχανικὰ προσαγορεύομεν. ἔστι δὲ ταῦτα τοῖς φυσικοῖς προβλήμασιν οὔτε ταὐτὰ πάμπαν, οὔτε κεχωρισμένα

διὰ τὸ μεταβάλλοντα εἰς ἄλληλα, τὰ μὲν ἀναγκαῖον ἴσα γίνεσθαι πρότερον, ἢ τῶν ἄκρων ὁποτερονοῦν· τὴν δὲ γραμμὴν εὐθεῖαν, ὅταν ἐκ κυρτῆς εἰς κοῖλον ἢ πάλιν ἐκ ταύτης γίνηται κυρτὴ καὶ περιφερής. ἓν μὲν οὖν τοῦτο τῶν ἀτόπων ὑπάρχει περὶ τὸν κύκλον. δεύτερον δέ, ὅτι ἅμα κινεῖται τὰς ἐναντίας κινήσεις. ἅμα γὰρ εἰς τὸν ἔμπροσθεν κινεῖται τόπον, καὶ τὸν ὄπισθεν· ἥ τε γὰρ γράφουσα γραμμὴ τὸν κύκλον, ὡσαύτως ἔχει. ἐξ οὗ γὰρ ἄρχεται τόπου τὸ πέρας αὐτῆς, εἰς τὸν αὐτὸν τοῦτον ἔρχεται πάλιν. συνεχῶς γὰρ κινουμένης αὐτῆς, τὸ ἔσχατον πάλιν ἀπῆλθε πρῶτον. ὥστε καὶ φανερὸν ὅτι μετέβαλεν ἐντεῦθεν. διὸ, καθάπερ εἴρηται πρότερον, οὐδὲν ἄτοπον, τὸ πάντων εἶναι τῶν θαυμάτων αὐτὸν ἀρχήν. τὰ μὲν οὖν περὶ τὸν ζυγὸν γινόμενα, εἰς τὸν κύκλον ἀνάγεται· τὰ δὲ περὶ τὸν μοχλόν, εἰς τὸν ζυγόν· τὰ δ' ἄλλα πάντα σχεδὸν τὰ περὶ τὰς κινήσεις τὰς μηχανικὰς εἰς τὸν μοχλόν. ἔτι δέ, διὰ τό, μιᾶς οὔσης τῆς ἐκ τοῦ κέντρου γραμμῆς, μηδὲν ἕτερον ἑτέρῳ φέρεσθαι τῶν σημείων τῶν ἐν αὐτῇ ἰσοταχῶς, ἀλλ' ἀεὶ τὸ τοῦ μένοντος πέρατος, πορρώτερον ὄν, θᾶττον, πολλὰ τῶν θαυμαζομένων συμβαίνει περὶ τὰς κινήσεις τῶν κύκλων· περὶ ὧν ἐν τοῖς ἑπομένοις προβλήμασιν ἔσται δῆλον. διὰ δὲ τὸ τὰς ἐναντίας κινήσεις ἅμα κινεῖσθαι τὸν κύκλον, καὶ τὸ μὲν ἕτερον τῆς διαμέτρου τῶν ἄκρων, ἐφ' οὗ τὸ α, εἰς τοὔμπροσθεν κινεῖσθαι, θάτερον δὲ ἐφ' οὗ τὸ β, εἰς τοὔπισθεν, κατασκευάζουσί τινες ὥστε ἀπὸ μιᾶς κινήσεως πολλοὺς ὑπεναντίους ἅμα κινεῖσθαι κύκλους, ὥσπερ οὓς ἀνατιθέασιν ἐν τοῖς ἱεροῖς, ποιήσαντες τροχίσκους χαλκοῦς τε καὶ σιδηροῦς. εἰ γὰρ εἴη τοῦ α β κύκλου ἁπτόμενος ἕτερος κύκλος ἐφ' οὗ γ δ, τοῦ κύκλου ἐφ' οὗ α β κινουμένης τῆς διαμέτρου εἰς τοὔμπροσθεν, κινηθήσεται ἡ γ δ εἰς τοὔπισθεν τοῦ κύκλου, τοῦ ἐφ' ᾧ α, κινουμένης τῆς διαμέτρου περὶ τὸ αὐτό. εἰς τοὐναντίον ἄρα κινηθήσεται ἐφ' οὗ ὁ γ δ κύκλος, τῷ ἐφ' οὗ τὸ α β· καὶ πάλιν αὐτὸς τὸν ἐφεξῆς ἐφ' οὗ ε ζ, εἰς τοὐναντίον αὐτῷ κινήσει διὰ τὴν αὐτὴν [ταύτην] αἰτίαν. τὸν αὐτὸν δὲ τρόπον κἂν πλείους ὦσι, τοῦτο ποιήσουσιν ἑνὸς μόνου κινηθέντος. ταύτην οὖν λαβόντες ὑπάρχουσαν ἐν τῷ κύκλῳ τὴν φύσιν οἱ δημιουργοὶ κατασκευάζουσιν ὄργανον κρύπτοντες τὴν ἀρχήν, ὅπως ᾖ τοῦ μηχανήματος φανερὸν μόνον τὸ θαυμαστόν, τὸ δ' αἴτιον, ἄδηλον.

ΚΕΦΑΛ. β.

Πρῶτον μὲν οὖν τὰ συμβαίνοντα περὶ τὸν ζυγὸν ἀπορεῖται, διὰ τίνα αἰτίαν ἀκριβέστερά ἐστι τὰ ζυγὰ τὰ μείζω τῶν ἐλαττόνων. τούτου δὲ ἀρχή, διὰ τί ποτε ἐν τῷ κύκλῳ, ἡ πλεῖον ἀφεστηκυῖα γραμμὴ τοῦ κέντρου τῆς ἐγγὺς τῇ αὐτῇ ἰσχυῒ κινουμένης, θᾶττον φέρεται τῆς ἐλάττονος; τὸ γὰρ θᾶττον, λέγεται διχῶς. ἄν τε γὰρ ἐν ἐλάττονι χρόνῳ ἴσον τόπον διεξέλθῃ, θᾶττον εἶναι λέγομεν, καὶ ἐὰν ἐν ἴσῳ πλείω. ἡ δὲ μείζων, ἐν ἴσῳ χρόνῳ γράφει μείζονα κύκλον. ὁ γὰρ ἐκτός, μείζων τοῦ ἐντός. αἴτιον δὲ τούτων, ὅτι φέρεται δύο φοράς, ἡ γράφουσα τὸν κύκλον. ὅταν μὲν οὖν ἐν λόγῳ τινὶ φέρηται, ἐπ' εὐθείας ἀνάγκη φέρεσθαι τὸ φερόμενον, καὶ γίνεται διάμετρος αὐτὴ τοῦ σχήματος, ὃ ποιοῦσιν αἱ ἐν τούτῳ τῷ λόγῳ συντεθεῖσαι γραμμαί.

A propter cùm ad ſe inuicem commutantur, illa quidem priùs æqualia fieri neceſſe eſt, quàm extremorum vtrumlibet: lineam verò, rectam, quando ex curua concaua, aut ex huiuſmodi rurſum curua fit, & circularis. Et ea quæ circulum deſcribit, linea, eodem ſe habet modo. Ex quo enim incipit loco illius extremum, ad eundem rurſus redit: illa enim continuò commota, extremum rurſus efficitur primum. Quamobrem manifeſtum quod inde mutatum eſt: quapropter (vt dictum eſt priùs) non eſt inconueniens B ipſum miraculorum omnium eſſe principium. Ea igitur quæ circa libram fiunt, ad circulum referuntur: quæ verò circa vectem, ad ipſam libram: alia autem ferè omnia, quæ circa mechanicas ſunt motiones, ad vectem. Præterea etiam, quoniam vnica exiſtente, quæ ex centro eſt, linea, nullum aliud alij, quæ in illa ſunt punctorum, æqua velocitate feratur, ſed citiùs ſemper quod à manente termino eſt remotius, pleraque miraculorum accidunt in circuli motionibus: de quibus in iis quæ poſthac adducentur, quæſtionibus, erit manifeſtum. Quoniam autem ſecundùm contrarias ſimul motiones mouetur circulus, & alterum quidem diametri extremum, vbi A, in antè mouetur: alte- C rum verò, vbi B, ad retro, efficiunt nonnulli vt ab vnica motione multi contrariò ſimul moueantur circuli: quemadmodum ſunt illi quos in locis proponunt ſacris, æneos & ferreos fabricantes orbiculos. Si enim A B circulum alter contigerit circulus, in quo C D: mota circuli, in quo A B, diametro in antè, mouebitur C D ad retro, diametro circuli vbi eſt A, circa idem mota. In contrarium igitur mouebitur circulus, vbi C D, ad illum vbi A B. Et rurſus ipſe contiguum, vbi E F, in contrarium ſibiipſi mouebit, propter eandem cauſam. Eodem etiam modo ſi plures fuerint, idem facient vno ſolo commoto. Hanc igitur in circulo exiſtentem animaduertentes D naturam architecti, inſtrumentum fabricant, celantes principium, vt machinæ ſolum manifeſtum ſit illud, quod admirationem præſtat, cauſa verò lateat.

CAPVT II.

IN primis igitur, quæ accidunt circa libram, dubitare faciunt, quamnam ob cauſam exactiores minoribus maiores ſunt libræ. Huius autem rei principium eſt, quamobrem in ipſo circulo quæ plus à E centro diſtat linea, eadem vi commota citiùs fertur, quàm illa quæ minùs diſtat. Citiùs enim bifariàm dicitur. Siue enim in minori tempore æqualē pertranſit locum, citiùs feciſſe dicimus: ſeu in æquali maiorem. Maior autem in æquali temporo maiorē deſcribit circulū. Qui enim extra eſt, maior eo qui intus eſt. Horum autē cauſa, quoniam duas fertur lationes ea quæ circulum deſcribit, linea: quandoquidem igitur in proportione fertur aliqua, id quod fertur, ſuper rectam ferri neceſſe: & hæc diameter efficitur figuræ, quam faciunt illæ, quæ in huiuſmodi proportione coaptantur, lineæ.

Sit enim proportio, ſecundùm quam latum fertur, quam habet A B ad A C: & A quidem feratur verſus B, A B verò ſubter feratur verſus M C. latum autem ſit A quidem ad D. vbi autem eſt A B, verſus E. Quoniam igitur lationis erat proportio, quam A B habet ad A C, neceſſe eſt, & A D ad A E hanc habere proportionem. Simile igitur eſt proportione paruum quadrilaterum maiori: quamobrem & eadem illorum eſt diameter: & A erit ad F. Eodem etiam oſtendetur modo vbicunque latio deprehendatur. Semper enim ſupra diametrum erit. Manifeſtum igitur, quòd id, quod ſecundùm diametrum duabus fertur lationibus, neceſſariò ſecundùm laterum proportionem fertur. Si enim ſecundùm aliam quampiam, non feretur ſecundùm diametrum. Si autem in nulla feratur proportione ſecundùm duas lationes nullo in tempore, rectam eſſe lationem eſt impoſſibile. Sit enim recta. Poſita igitur hac pro diametro & circùm repletis lateribus, illud quod fertur, ſecundùm laterum proportionem ferri neceſſe eſt. hoc enim demonſtratum eſt priùs. Non igitur rectam efficiet id quod ſecundùm nullam proportionem in nullo fertur tempore. [Si autem ſecundùm quampiam feratur proportionem, & in tempore quopiam, hoc neceſſe eſt tempus rectam eſſe lationem, per ea quæ retrò ſunt dicta.] Quamobrem circulare eſt id quod ſecundùm nullam proportionem nullo in tempore duas fertur lationes.

Quòd quidem igitur ea quæ circulum deſcribit, duas ſimul feratur lationes, manifeſtum eſt cùm ex iſtis tum quia ſecundùm rectum lata, ad perpendiculum peruenit, vt ſit rurſus ipſa à centro perpendiculum. Sit circulus A B C D: extremum autem, vbi eſt B, feratur ad ipſum D. peruenit ſanè aliquando ad ipſum C. Siquidem igitur in proportione feratur, quam habet B C, E C: fertur vtique ſecundùm diametrum, vbi B C. Nunc autem quoniam in nulla proportione, in circumferentia certè fertur vbi B E C. Si autem duobus ab eadem potentia latis, hoc quidem plus repellatur, illud verò minùs, rationi conſentaneum eſt tardiùs moueri id quod plùs repellitur, eo quod repellitur minùs: quod videtur accidere maiori & minori illarum quæ ex centro circulos deſcribunt. Quoniam enim propius eſt manenti, eius quæ minor eſt, extremum, quàm id, quod eſt maioris, velvti retractum in contrarium ad medium, tardiùs fertur minoris extremum. Omni quidem igitur circulum deſcribenti iſthuc accidit: ferturque eam, quæ ſecundùm naturam eſt, lationem ſecundùm circunferentiam: illam verò, quæ præter naturam, in tranſuerſum & ſecundùm centrum: maiorem autem ſemper eam quæ præter naturam eſt, ipſa minor fertur. quia enim centro eſt vicinior, quod retrahit, vincitur magis. Quòd autem magis, quod præter naturam eſt, mouetur ipſa minor quàm maior illarum, quæ ex centro circulos deſcribunt, ex iis eſt manifeſtum. Sit circulus, vbi B C D E: & alter in hoc minor, vbi M N O P, circa idem centrum A. & proiiciantur diametri in magno quidem, in quibus C D B E. in minori verò ipſæ M O N P, & altera parte longius quadratum ſuppleatur D K R C. ſi quidem A B. circulum deſcribens, ad id perueniet vnde eſt egreſſa, manifeſtum eſt quòd ad ipſam fertur A B. Similiter etiam A M ad ipſam A M perueniet. Tardiùs autem fertur A M, quàm A B, quemadmodum dictum eſt: quia maior fit repulſio, & magis retrahitur A M.

A Ducatur igitur ipſa A L F, & ab ipſo L perpendiculum ad ipſam A E, ipſa L Q in minore circulo. Et rurſum ab L ducatur iuxta A B, L S, & S T, ad ipſam A B perpendiculum, & ipſa F X. Ipſæ igitur vbi ſunt S T & L Q æquales: ipſa ergo B T minor eſt quam M Q. æquales enim rectæ lineæ in æqualibus coniunctæ circulis perpendiculares diametro, minorem diametri reſecant ſectionem in maioribus circulis. Eſt autem ipſa S T æqualis ipſi L Q. In quanto autem tempore ipſa A L ipſam M L lata eſt, in tanto temporis ſpatio in maiori circulo maiorem, quàm ſit B S, latum erit extremum ipſius B A. Latio quidem igitur ſecundùm naturam æqualis: ea autem, quæ præter naturam eſt, minor, vi-
B delicet B T, quàm M Q. Oportet autem proportionabiliter eſſe, ſicut quod eſt ſecundùm naturam, ad id quod eſt ſecundùm naturam: ita quod eſt præter naturam, ad id quod eſt præter naturam. Maiorem igitur circunferentiam pertranſiuit, quàm ſit ipſa S B. Neceſſe eſt autem ipſam F B in hoc tempore pertranſiſſe. Hic enim erit quando proportionabiliter vtrinque accidit quod eſt præter naturam, ad id quod eſt ſecundùm naturam. Si igitur maius eſt quod eſt ſecundùm naturam in maiori: & quod eſt præter naturam, magis vtique hic coincidet vno modo: ita quòd B ſit latum per ipſam B F in tanto tempore, in quo M punctum per ipſam M L. Hic enim ſecundùm naturam quidem ſigno B fit
C X F. Eſt enim ab ipſo F perpendiculum. Præter naturam verò ad ipſam X B. Eſt autem quemadmodum F X ad X B, ſic L Q ad M Q. Manifeſtum autem, ſi coniunguntur ab ipſa B M ad F L. Si autem minor aut maior quàm ſit F B, erit illa quàm latum eſt B, non ſimiliter erit, neque proportionabile in vtriſque quod eſt ſecundùm naturam, ad id quod eſt præter naturam. Quam igitur ob cauſam ab eadem potentia celeriùs fertur id quod plus à centro diſtat, punctum, ex iis quæ dicta ſunt, eſt manifeſtum. Cur autem maiores libræ exactiores ſunt minoribus, palam eſt ex iis. Spartum enim fit centrum: id namque manet. quod autem libræ vtrinque eſt, exeuntes à centro. Ab eodem igi-
D tur pondere citiùs moueri neceſſe eſt extremum libræ, quo plus à ſparto diſceſſerit. Et nonnulli quidem in paruis libris impoſita non manifeſta ſenſi ſunt pondera: in magnis autem manifeſta. Nihil enim prohibet minorem moueri magnitudinem, quàm vt viſioni ſit manifeſta. In magna autem libra idem pondus viſibile efficit magnitudo. Quædam verò manifeſta quidem ſunt in vtriſque, ſed multò magis in maioribus, quoniam multo maior inclinationis fit magnitudo ab eodem pondere in maioribus. Si igitur in ipſo B ponatur onus, B quidem erit vbi E, C autem vbi H. quamobrem ea quæ biſariàm libram ſecat, primò quidem erit D M ipſius perpendiculi: incumbente autem onere erit D G. quare libræ ipſius, vbi E H, quod extra perpendiculum eſt A M, vbi eſt P Q, maius eſt dimidio. Si igitur amoueatur onus ab ipſo E, neceſſe eſt deorſum ferri H. minus enim eſt E. Siquidem igitur ſurſum habuerit ſpartum, rurſum propter hoc aſcendit libra. Si autem deorſum fuerit id quod ſubſtat, contrarium facit. Plus enim dimidio fit libræ, quæ deorſum eſt pars, quàm quod perpendiculum ſecet: quapropter non aſcendit. Eleuata enim pars leuior eſt. Sit libra recta vbi N G: perpendiculum autem K L M. Biſariàm igitur ſecatur K G. Impoſito autem onere in ipſo N, erit quidem N vbi O, ipſum autem G vbi R, K L autem vbi L P. Quare maius eſt K O, quàm L R, ipſo P K L. Et ablato igitur onere, neceſſe eſt manere. incumbit enim ceu onus exceſſus medietatis eius vbi eſt F.

CAPVT IV.

CVr exiguæ vires (quemadmodum à principio dictum eſt) vecte, magna mouent pondera, vectis inſuper onus accipientes? cùm facilius ſit minorem mouere grauitatem. minor autem eſt ſine vecte. an quoniam ipſe vectis eſt in cauſa, libra exiſtens, ſpartum infernè habens, in inæqualia diuiſa; hypomochlion enim eſt ſpartum: ambo namque ſtant vt centrum. Quoniam autem ab æquali pondere celeriùs mouetur maior earum, quæ à centro ſunt: duo verò pondera, quod mouet, & quod mouetur: quod igitur motum pondus ad mouens, longitudo patitur ad longitudinem, ſemper autem quanto ab hypomochlio diſtabit magis, tanto faciliùs mouebit. Cauſa autem eſt, quæ retro commemorata eſt: quoniam quæ plus à centro diſtat, maiorem deſcribit circulum: quare ab eadem potentia plus ſeparabitur mouens illud, quod plus ab hypomochlio diſtabit. Sit vectis vbi A B, pondus vbi C, quod mouet autem, vbi D. hypomochlion, vbi E, quod autem vbi eſt D, mouens, vbi F. motum autem vbi, C. pondus, vbi G.

CAPVT V.

CVr ij qui in nauis medio ſunt remiges, maximè nauem mouent? an quia remus vectis eſt, hypomochlion autem fit ſcalmus? ſtat enim ille: pondus verò mare eſt, quod propellit remus: vectem autem mouens ipſe eſt remex. Semper autem plus mouet ponderis, quanto magis ab hypomochlio diſtabit quicunque id mouet. maior enim ita fit, quæ ex centro.

Scalmus autem hypomochlion exiſtens, c[entrum] eſt. In medio autem nauis plurimum re[mi] interiu[s] eſt: illa enim parte latiſſima eſt nauis: qua[re] maior vtrinque remi pars vtrorumque nauis parie[tum] intrinſecus eſt. Mouetur autem nauis, quoniam impellente ad mare remo, extremum illius quod intus eſt, in antè promouetur: nauem verò ſcalmo alligatam ſimul promoueri contingit, quò remi extremum. Vbi enim plurimum maris diuidit remus, eò maximè propelli neceſſe eſt.

Plurimum autem diuidit, vbi pars plurima remi à ſcalmo eſt. Et eam ob cauſam remiges, qui in media ſunt naui, mouent illam maximè. Maxima enim remi pars à ſcalmo in nauis medio intus eſt.

CAPVT VI.

CVr paruum exiſtens gubernaculum, & in extremo nauigio tantas habet vires, vt ab exiguo temone, & ab hominis vnius viribus alioqui modicè vtentis, magnæ nauigiorum moueantur moles? an quoniam gubernaculum vectis eſt, onus autem mare, gubernator verò mouens eſt? Non autem ſecundùm latitudinem, velut remus, mare accipit gubernaculum: non enim in ante nauigium mouet, ſed ipſum commotum mare accipiens inclinat obliquè. Quoniam enim pondus eſt mare, contra innixum modo nauem inclinat. Hypomochlium enim in contrarium verſatur: mare verò anterius, & illud exteriùs: illud autem ſequitur nauis, quoniam illi eſt alligata. Et remus quidem ſecundùm latitudinem onus propellens, & ab eodem repulſus, in rectum propellit: gubernaculum autem vt obliquum iacet, hinc inde in obliquum motionem facit. In extremo autem, & non in medio iacet, quoniam mouenti facillimum eſt ab extremo motum mouere. *Prima enim pars celerrimè fertur: & quoniam quemadmodum in iis quæ feruntur, in fine* deficit latio, ſic ipſius continui in fine imbecilliſſima eſt latio. Imbecilliſſima autem ad expellendum eſt facilis. Propter hæc igitur in puppi gubernaculum ponitur: nec minus, quoniam parua ibi motione facta, multo maius interuallum fit in vltimo. Quia æqualis angulus ſemper maiorem ſpectat: tantóque magis quanto maiores fuerint illæ quæ continent. Ex iis etiam manifeſtum eſt, quam ob cauſam magis in contrarium procedit nauigium, quàm remi ipſius palmula: eadem enim magnitudo iiſdem mota viribus, in aere plus quàm in aqua progreditur. Sit enim A B remus, C verò ſcalmus: A autem in nauigio ſit remi principium, B verò in mari palmula. Si igitur A vbi D tranſlatum fuerit, non erit B vbi E. æqualis enim B E ipſi A D. æquale igitur tranſlatum erit: ſed erat minus: erit igitur vbi eſt F. minor enim B F ipſa A D, quare ipſa G F, ipſa D G. Similes enim ſunt trianguli. Stans autem erit medium, vbi eſt C. In contrarium enim ipſi quod in mari eſt, extremo videlicet B procedit, vbi extremum in nauigio eſt A. Non procederet autem vbi eſt D, niſi commoueretur nauigium, & eò transferretur, vbi remi eſt principium. Id ipſum etiam facit gubernaculum, niſi quòd (vt dictum eſt retro) nihil nauigio ad id quod in ante eſt, confert, ſed ſolùm

puppim

puppim in obliquum pellit, vbicunque fuerit. in contrarium enim eo modo vergit prora. Vbi igitur applicatum eſt gubernaculum, id oportet rei motæ ceu quoddam intelligere medium: & quemadmodum ſcalmus remo. Medium autem procedit ſecundùm quod gubernaculum transfertur. Siquidem introrſus agit, & puppis eò transfertur: prora verò ad contrarium vergit. In eodem enim exiſtente prora, totum transfertur nauigium.

CAPVT VII.

Cvr quanto antenna ſublimior fuerit, iiſdem velis & vento eodem celeriùs feruntur nauigia? An quia malus quidem fit vectis, hypomochlion verò mali ſedes, in qua collocatur: pondus autem quod moueri debet, ipſum nauigium: mouens verò is, qui vela tendit, ſpiritus? Si igitur quantò remotius fuerit hypomochlion, faciliùs eadem potentia, & citiùs idem mouet pondus, altiùs certè ſublata antenna velum à mali ſede, quæ hypomochlion eſt, remotius faciens, id efficiet.

CAPVT VIII.

Cvr quando ex puppi nauigare voluerint, non flante ex puppi vento, veli quidem partem, quæ ad gubernatorem vergit, conſtringunt; illam verò quæ proram verſus eſt, pedem facientes relaxant? An quia retrahere quidem multo exiſtente vento gubernaculum non poteſt: pauco autem poteſt, quem conſtringunt? Propellit quidem igitur ipſe ventus: in puppim verò illum conſtituit gubernaculum retrahens, & mare compellens: ſimul & nautæ ipſi cum vento contendunt: in contrariam enim ſe reclinant partem.

CAPVT IX.

Cvr ex figurarum genere quæcunque rotundæ ſunt & circinatæ, faciliùs mouentur? Trifariàm autem circulum rotari contingit. Aut enim ſecundùm abſidem centro ſimul moto, quemadmodum plauſtri vertitur rota: aut circa manens centrum: velvti trochleæ ſtante centro: aut in pauimento manente centro, ſicvt figuli rota conuertitur, an celerrima quidem huiuſmodi ſunt, quoniam parua ſui parte planum contingunt, velvti circulus ſecundùm punctum, & quoniam non offenſant? A terra enim ſemotus eſt angulus. Præterea etiam cui obuiam fiunt corpori, id rurſum ſecundùm puſillum tangunt. Si autem rectilineum eſſet, rectitudine ſua multum plani contingeret. Ad hæc, quo nutat pondus, eo motor mouet. Cùm igitur ad rectum ſuper plano circuli fuerit diameter, planum ſecundùm punctum contingente circulo æquale vtrinque pondus diſterminat diameter. Cùm autē mouetur, plus illico, ad quod mouetur, ceu inde nutans, ab impellente faciliùs in antè mouetur. Quò enim vnumquodque vergit, mouetur ex facili. Siquidem difficulter ad contrarium nutus ſui mouetur modum. Præterea nonnulli autumant quod circuli linea in perpetuo verſatur motu, quemadmodum manentia propter contrarium nixum manent: ſicvt maioribus contingit circulis ad minores. Celeriùs enim ab æquali mouentur potentia

CAPVT XXIII.

CVr nuces abſque ictu facilè confringunt inſtrumentis, quæ ad eum fiunt vſum. Multum enim aufertur virium, motionis ſcilicet, & violentiæ. Præterea, duro & graui comprimens inſtrumento citiùs confringet, quàm ligneo, & leui. An quia ſic vtrinque à duobus comprimitur vectibus ipſa nux: à vecte autem facilè diuiduntur onera? Id enim inſtrumentum ex duobus componitur vectibus, idem habentibus hypomochlion, connexionem videlicet ipſam, vbi eſt A. Quemadmodum igitur fuere diductæ ſecundum extrema motis CD, ipſæ FE: ſic à parua faciliter potentia conducuntur. Quod igitur cum percuſſione feciſſet pondus, id valentiores illa EC & FD vectes efficiunt. Eleuatione enim in contrarium elati, & comprimentes, frangunt vbi eſt K. Hanc etiam ob cauſam quanto vicinius fuerit K ipſum A confringitur celeriùs. Quanto enim ab hypomochlio plus diſtat vectis, faciliùs & plus mouet ab eadem potentia. Eſt igitur A quidem hypomochlion: ipſa autem DAF vectis. & item ipſa CAE. Quanto igitur ipſum k vicinius fuerit angulo ipſius A, tanto vicinius fit connexioni, vbi eſt A. Hoc autem eſt hypomochlion. Ab eadem igitur potentia applicante, FE plus extolli neceſſe eſt. Quam ob rem quoniam ex contrario eſt eleuatio, neceſſe eſt magis comprimi: quod autem comprimitur magis, citiùs frangitur.

CAPVT XXIV.

CVr ſi duo extrema in rhombo puncta duabus ferantur lationibus, haudquaquam æquale vtrumque eorum pertrãſit rectam, ſed multò plus alterum? Idem autem eſt ſermo, cur quod ſuper latus fertur, minùs pertranſit, quàm ipſum latus. Illud enim diametrum minorem, hoc verò maius latus. Et hoc quidem vnica, illud verò duabus fertur lationibus. Feratur enim ex ipſa AB, A quidem ad ipſum B, B verò ad ipſum D, eadem celeritate. Feratur autem & ipſa AB in ipſa AC iuxta CD eadẽ celeritate cum illis. Neceſſe igitur eſt A quidẽ in ipſa AD diametro ferri, B verò in ipſa BC, & vtramque ſimul pertranſiſſe, & ipſam AB ipſum latus AC: latum enim ſit ipſum A ipſam AE, AB autem ipſam AF, & proiecta ſit FG iuxta ipſum AB, & ab ipſo E ſimiliter repleatur. Simile igitur fit quod repletum eſt, ipſi toti: æqualis igitur AF ipſi AE. Ipſa autem AB ipſam AF lata erit: in diametro igitur erit ſecundum k. Et ſemper neceſſe eſt ipſum ferri ſecundùm diametrum: & ſimul AB latus pertanſit latus AC, & ipſum A diametrum pertranſit AD. Similiter etiam demonſtrabitur & ipſum B in ipſa BC diametro latum: æqualis enim eſt ipſa BE ipſi BG. Repleto igitur ab ipſo G quod intus eſt, toti eſt ſimile: & ipſum B in ipſa diametro erit ſecundùm laterum connexionem. Et ſimul latus pertranſit latus, & B ipſum BC diametrum. Simul igitur multò plus ipſa AB pertranſit, & ipſum latus minus latus eadem lata celeritate: & ipſum latus maiorem quàm B pertranſiuit vna latum latione. Quanto enim acutior fuerit rhombus,

diameter quidem minor fit, A C autem maior: [latus verò ipſius B C minus.] Abſurdum eſt enim [vt dictum eſt] id quod duabus fertur lationibus, aliquando ferri tardiùs illo quod fertur vnica: & vtriſque poſitis æquali velocitate punctis, alterum pertranſire maiorem. Cauſa autem eſt, quoniam ei quod ab obtuſo fertur angulo, ambæ ferè contrariæ fiunt lationes, & illa ſecundùm quam ipſum fertur, & illa ſecundùm quam ipſum à latere defertur. Ei autem quod ab acuto fertur, accidit vt ad idem feratur. Coadiuuat enim quæ ipſius eſt lateris, illam quæ eſt ſuper diametrum. Et quanto hunc quidem acutiorem feceris, illum verò obtuſum magis: hæc quidem tardior erit, illa verò celerior. Hæ quidem igitur magis contrariæ fiunt, quoniam obtuſior fit angulus: illæ verò ad idem magis, quoniam lineæ coarctantur. Ipſum enim A ferè ad idem fertur ſecundùm ambas lationes. Coadiuuatur igitur altera: & quanto ſanè acutior fuerit angulus, tanto magis ipſum A ad contrarium. Ipſum enim ad B fertur. Latus autem defert ipſum ad D. Et quanto ſanè obtuſior fuerit angulus, magis contrariæ fiunt lationes. Rectior enim efficitur linea. Si autem omnino recta fieret, penitus vtique eſſent contrariæ. Latus verò ſecundùm vnicam latum lationem, à nullo præpeditur. Rationabiliter igitur maiorem pertranſit.

CAPVT XXV.

DVbitatur quam ob cauſam maior circulus æqualem minori circulo conuoluitur lineã, quando circa idem centrum fuerint poſiti: ſeorſum autem reuoluti, quemadmodum alterius magnitudo ad magnitudinem ſe habet alterius, ſic & illorum ad ſe inuicem fiunt lineæ. Præterea vno etiam & eodem vtriſq; exiſtente centro, aliquãdo quidem tanta fit linea, quam conuoluuntur, quantam minor per ſe conuoluitur circulus, quandoq; vero quantam maior. Quòd quidem igitur maiorem conuoluitur maior, manifeſtum eſt. Angulus enim ſenſu videtur eſſe cuiuſq; circunferẽtia propriæ diametri, maioris circuli maior, minoris minor: quamobrem eandem habebũt proportionem ſecundùm ſenſum ad ſe lineæ, ſecũdùm quas fuerint conuoluti. Verumenimvero quod etiã æqualem conuoluuntur, quando circa idem fuerint poſiti centrum, manifeſtum eſt: & ſic fiunt aliquando quidem æquales lineæ, ſecundùm quam maior conuoluitur circulus, aliquando vero ſecundùm quam minor. Sit enim circulus maior quidem vbi D F G, minor vero vbi E G B, vtriſque autem centrum A. Et quam quidem per ſe magnus conuoluitur, ſit vbi F I, quam vero per ſe minor, vbi G K, æqualis A F. Si igitur minorem mouero, idem mouens centrum, vbi maior autem ſit annexus: quando igitur A B fuerit recta ad ipſam G K, ſimul & A C fit recta ad ipſam F I: quamobrem æqualem ſemper tranſlata erit, ipſam quidam G K, vbi eſt G B circunferentia: ipſam vero F L, quæ eſt vbi F C. Si autem quarta pars æqualem conuoluitur, manifeſtum eſt quòd totus circulus toti circulo æqualem conuoluetur. Quare quando B G linea ad ipſum peruenerit K, & ipſa F C circunferentia erit in ipſa C L, & vniuerſus erit conuolutus circulus. Similique modo ſi magnum mouero, illi paruum annectens, eodem exiſtente centro: ſimul cum A C ipſa A B perpendiculum, & recta erit: hæc quidem ad ipſam F I:

A illa verò ad G M. Quamobrem quando hæc quidem æqualem ipſi G M pertranſiuerit, illa verò ipſi F I, & rurſum facta fuerit recta ipſa F A ad ipſam F L, & ipſa A B rurſum recta, velut à principio erunt in ipſis M I. Hoc autem neque aliqua intercedente mora maioris ad minorem, vt ſcilicet per aliquod temporis ſpatium ſtaret in eodem puncto, neque tranſiliente minore aliquod punctum, maiorem quidem æqualem minori pertranſire, hunc autem maiori, abſurdum eſt. Præterea vnica etiam ſemper exiſtente motione, centrum motum interdum quidem magnam, nonnunquam verò minorem conuerti, admirandum eſt. Idem enim celeritate eadem latum æqualem natum hoc eſt pertranſire: eadem autem celeritate vtro-
B que modo æqualem licet mouere. Principium autem ſumendum eſt circa iſtorum cauſam, quòd eadem potentia & æqualis hanc quidem tardiùs mouet magnitudinē, illam verò celeriùs. Si enim fuerit quippiam, quod à ſe ipſo moueri natum non ſit, ſi ſimul & illud mouerit, quod natum eſt moueri, tardiùs mouebitur quàm ſi ipſum per ſe moueretur. Et ſi quidem natum fuerit moueri, non ſimul autem moueatur, ſimiliter ſe habebit. Et impoſſibile certè eſt, plus moueri, quàm mouens: non enim ſuam ipſius mouetur motionem. Sit igitur circulus maior vbi A, minor autem vbi B: ſi minor maiorem impellet non reuolutum ex ſe, manifeſtum eſt quòd tantum ipſius rectæ maior pertran-
C ſit, quantū eſt impulſus, quantū paruus eſt motus: æqualem igitur ipſius rectæ pertranſiuerunt. Neceſſe igitur eſt ſi reuolutus minor maiorem impellet, reuolui ſimul cum impulſione: tantum autem, quantū minor reuolutus eſt, ſi nihil ipſe ſui ipſius motione mouetur. Quomodo enim, & quantum mouit, tantum motum eſſe neceſſe eſt, quod mouetur ab illo. Sed profectò paruus circulus tantum ſeipſum circulariter mouit, quantum eſt pedalis quantitas (tantum enim ſit id, quod motus eſt) magnus igitur tantum motus erit. Similique modo ſi magnus paruum mouebit, motus erit paruus, quemadmodum maior. Per ſe autem motus illorum vtrumlibet, ſiue celeriter, ſeu tardè eadem
D velocitate, ſtatim quantum maior natus eſt circumferri lineam: quod difficultatem facit, quod non ſimiliter faciunt quādo fuerint connexi. Hoc autem eſt, ſi alter ab altero moueatur, non quam natus eſt, neque peculiarem motionem. Nihil enim refert circumponere, & annectere, aut coniungere vtrumlibet alteri. Similiter enim quando hic quidē mouet, ille verò mouetur ab iſto: quantum vtique mouerit alter, tantum alter mouebitur. Quando quidem igitur adiacens mouerit, aut propenſus, non ſemper conuoluitur: quando verò circa idem poſiti fuerint centrum, alterum ab altero ſemper conuolui neceſſe eſt. Sed nihilominus non ſuam ipſius motionem mouetur alter, ſed velut nullam haberet motionem: & ſi habuerit,
E illa autem non vtatur, tantundem accidit. Quando quidem igitur magnus mouerit ſibi alligatum paruum, paruus mouetur quantum ille: quando autem paruus, rurſus magnus quantum iſte: ſeparatus autem vterque ſe ipſum mouet. Quòd autem eodem exiſtente centro, & mouente eadem velocitate, accidit inæqualem illos pertranſire lineam, paralogiſmo ſophiſticè vtitur is qui dubitat. Idem enim ambobus eſt centrum, verùm per accidens, velut muſicum & album.

Eſſe enim vtriuſque circuli centro non eodem A vtitur. Quandoquidem igitur mouens fuerit paruus, vt illius centrum & principium: quando verò magnus, vt illius. Non igitur idem ſimpliciter mouet, ſed eſt quo modo.

Tardiùs autem minor circulus fertur. Non idem enim in tempore æquali magnus cum paruo reuoluitur circulus, quando circa idem fuerint medium. Quamobrem in minori circulo relinqui eſt neceſſe, donec ad medium perueniant. Quorumcunque autem ſuperior à principio fuerit latio, ea finiens idem efficiet. Oportet enim hunc quidem ſtatim, alterum verò celeritate ſuperare grauitatem: quamobrem ad interiorem ſemper circulum relinquetur quodcunque. Neceſſe enim eſt quod non ſuperatur, aut in exteriori aut in interiori moueri. In illo autem, in quo eſt, impoſſibile eſt ferri, quod non ſuperatur: adhuc verò minus in exteriori. Celerior enim exterioris circuli eſt latio. Reſtat igitur vt id quod non ſuperatur, ad interiorem transferatur. Semper autem vnumquodque proficit, vt non ſuperetur. Quoniam verò peruenire ad medium, finem quidem efficit vt quippiam moueatur, ſtat autem ſolummodo ipſum centrum, ad hoc ſanè omnia congregari neceſſe eſt.

VOCES omnes oriri ſolent & ſoni, aut corporibus, aut aëre in corpora incurrente: non quòd aër ipſe figuretur, vt quidam putant, ſed quòd ſimiliter ipſe contractus & extenſus & comprehenſus cieatur: prætereaque concuſſus ob ſpiritus & chordarum ictus. Nam cùm proximum aërem ſpiritus in eum incidens percuſſit, aër iam vi impulſus fertur, hærentem proximúmque ſibi deinceps præ ſe eodem modo ita agens, vt quoquouerſum vox eadem perueniat, quoad aëris agitatio peruadit. Vis enim & impetus motionis eius longiùs latiúſque diffunditur, vt & flatus à fluminibus & aliquo tractu ſpirans. Vocum autem quædam cææ & nubilæ ſunt, quæ illico ſtrangulantur: at claræ & limpidæ longe peruadunt, omnémque continentem implent locum. Cæterùm eundem omnes aërem ducimus & reſpiramus: ſpiritum tamen & voces diuerſas edimus, ob vaſorum ſubiectorum diſparem conditionem, qua cuiuſque ſpiritus foras commeat: ea ſunt guttur, pulmones, os. Ac magnam quidem vocis diſſimilitudinem efficiunt aëris ictus & oris conformatio: quod ex eo perſpicuum eſt, quia omnes ſonorum diſſimilitudines ob hanc cauſam exiſtunt: & eoſdem videmus imitari voces equorum, ranarum, luſciniarum, gruum, & aliarum ferè omnium animantium, eodem ſpiritu & gutture vtentes, quòd diſſimiliter ore ſpiritum emittant. ſed & pleræque auium, voces aliarum cùm audierint, imitantur, ob eam cauſam quam commemorauimus. Pulmones autem cùm ſunt parui, denſi, duri, neque in ſe multum aëris recipere poſſunt, neque viciſſim foras emittere, neque vehementi validóque ictu ſpiritum ferire. Nam cùm ſint duri, denſi & colligati, in magnum dilatari ſpatium non poſſunt: nec rurſum è magno interuallo ſeipſos contrahentes, ſpiritum validè extrudere: vt nec nos follibus, cùm duri ſunt, nec facilè poſſunt dilatari, aut comprimi.

A ΤΑΣ δὲ φωνὰς ἁπάσας συμβαίνει γίνεσθαι καὶ τοὺς ψόφους, ἢ τῶν σωμάτων, ἢ τοῦ ἀέρος πρὸς τὰ σώματα προσπίπτοντος, οὐ τῷ τὸν ἀέρα σχηματίζεσθαι, καθάπερ οἴονταί τινες, ἀλλὰ τῷ κινεῖσθαι παραπλησίως αὐτὸν συστελλόμενον καὶ ἐκτεινόμενον καὶ καταλαμβανόμενον· ἔτι δὲ συγκρούοντα, διὰ τὰς τοῦ πνεύματος καὶ τῶν χορδῶν γινομένας πληγάς. ὅταν γὰρ τὸν ἐφεξῆς ἀέρα πλήξῃ τὸ
B πνεῦμα τὸ ἐμπῖπτον αὐτῷ, ὁ ἀὴρ ἤδη φέρεται βίᾳ, τὸν ἐχόμενον αὐτοῦ προωθῶν ὁμοίως· ὥστε πάντη τὴν φωνὴν διατείνειν τὴν αὐτήν, ἐφόσον συμβαίνει γίνεσθαι καὶ τοῦ ἀέρος τὴν κίνησιν. διαχεῖται γὰρ ἐπὶ πλείονα ἡ βία τῆς κινήσεως αὐτοῦ γινομένης· ὥσπερ καὶ τὰ πνεύματα ἀπὸ τῶν ποταμῶν καὶ ἀπὸ τῆς χώρας ἀποπνέοντα. τῶν δὲ φωνῶν τυφλαὶ μέν εἰσι καὶ νεφώδεις, ὅσαι τυγχάνουσιν αὐτοῦ καταπεπνιγμέναι· λαμπραὶ δὲ οὖσαι, πόρρω διατείνουσι, καὶ πάντα πληροῦσι τὸν συνε-

D ρῶμεν μιμουμένους καὶ ἵππων φωνὰς καὶ βατράχων καὶ ἀηδόνων καὶ γεράνων, καὶ τῶν ἄλλων ζῴων σχεδὸν ἁπάντων, τῷ αὐτῷ χρωμένους πνεύματι καὶ ἀρτηρίᾳ, παρὰ τὸ τὸν ἀέρα διαφόρως ἐκπέμπειν αὐτοὺς ἐκ τοῦ στόματος. πολλὰ δὲ καὶ τῶν ὀρνέων, ὅταν ἀκούσωσι, μιμοῦνται τὰς τῶν ἄλλων φωνάς, διὰ τὴν εἰρημένην αἰτίαν. ὁ δὲ πνεύμων, ὅταν ᾖ μικρὸς καὶ πυκνὸς καὶ σκληρός, οὔτε δέχεσθαι δύναται τὸν ἀέρα πολὺν εἰς αὑτόν, οὔτε ἐκπέμπειν πάλιν ἔξω, οὐδὲ τὴν πληγὴν ἰσχυρὰν οὐδὲ εὔρωστον ποιεῖσθαι τὴν τοῦ πνεύματος. διὰ γὰρ τὸ εἶναι σκληρὸς καὶ πυκνὸς καὶ συνδεδεμένος, οὐ δύναται λαμβάνειν τὴν διάστασιν ἐπὶ πολὺν τόπον· οὐδὲ πάλιν ἐκ πολλοῦ διαστήματος συνάγων ἑαυτόν, ἐκθλίβειν βίᾳ τὸ πνεῦμα· καθάπερ οὐδ' ἡμεῖς ταῖς φύσαις, ὅταν ὦσι σκληραί, καὶ μήτε διαπίμπλεσθαι μήτε πιέζεσθαι δύνωνται ῥᾳδίως.

τοῦτο γάρ ἐστι τὸ ποιοῦν τὴν τοῦ πνεύματος πληγὴν εὔρωστον, ὅταν ὁ πνεύμων ἐκ πολλοῦ διαστήματος συνάγων αὐτὸν, ἐκθλίβῃ τὸν ἀέρα βιαίως. δῆλον δὲ τοῦτ᾽ ἐστίν. οὐδὲ γὰρ τῶν ἄλλων μορίων οὐθὲν ἐκ μικρᾶς ἀποστάσεως δύναται ποιεῖσθαι τὴν πληγὴν ἰσχυράν. οὔτε γὰρ τῷ σκέλει δυνατόν ἐστιν οὔτε τῇ χειρὶ πατάξαι σφοδρῶς οὔτε ἀπορρίψαι πόρρω τὸ πληγὲν, ἐὰν μή τις αὐτῶν ἑκατέρῳ ἐκ πολλοῦ λάβῃ τῆς πληγῆς τὴν ἀπόστασιν. εἰ δὲ μὴ, σκληρὰ μὲν ἡ πληγὴ γίγνεται διὰ τὴν συντονίαν, ἐκβιάζεσθαι δὲ οὐ δύναται πόρρω τὸ πληγέν. ἐπεὶ, οὐδ᾽ οἱ καταπέλται μακρὰν δύνανται βάλλειν, οὐδ᾽ ἡ σφενδόνη, οὔτε τόξον, ἂν ᾖ σκληρὸν, καὶ μὴ δύνηται κάμπτεσθαι· μηδὲ τὴν ἀναγωγὴν ἡ νευρὰ λαμβάνειν ἐπὶ πολὺν τόπον. ἐὰν δὲ μέγας ὁ πνεύμων ᾖ καὶ μαλακὸς καὶ εὔτονος, πολὺν τὸν ἀέρα δύναται δέχεσθαι, καὶ τοῦτον ἐκπέμπειν πάλιν, ταμιευόμενος ὡς ἂν βούληται διὰ τὴν μαλακότητα, καὶ διὰ τὸ ῥᾳδίως αὐτὸν συστέλλειν. ἡ δὲ ἀρτηρία μακρὰ μὲν ὅταν ᾖ καὶ στενὴ, χαλεπῶς ἐκπέμπουσιν ἔξω τὴν φωνὴν καὶ μετὰ βίας πολλῆς, διὰ τὸ μῆκος τῆς τοῦ πνεύματος φορᾶς. φανερὸν δέ ἐστι· πάντα γὰρ τὰ τοὺς τραχήλους ἔχοντα μακροὺς, φθέγγεται βιαίως· οἷον οἱ χῆνες καὶ γέρανοι καὶ ἀλεκτρυόνες· μᾶλλον δὲ τοῦτο καταφανές ἐστιν ἐπὶ τῶν αὐλῶν. πάντες γὰρ χαλεπῶς πληροῦσι τοὺς βόμβυκας, καὶ μετὰ συντονίας πολλῆς, διὰ τὸ μῆκος τῆς ἀποστάσεως. ἔτι δὲ τὸ πνεῦμα διὰ τὴν στενοχωρίαν, ὅταν ἐκτὸς θλιβόμενον εἰς τὸν ἔξω τόπον ἐκπέσῃ, παραχρῆμα διαχεῖται καὶ σκεδάννυται, καθάπερ καὶ τὰ ῥεύματα φερόμενα διὰ τῶν εὐρίπων. ὥστε μὴ δύνασθαι τὴν φωνὴν * συμβαίνειν, μηδὲ διατείνειν ἐπὶ πολὺν τόπον. ἅμα δὲ καὶ δυσταμίευτον ἀνάγκη πάντων τῶν τοιούτων εἶναι τὸ πνεῦμα καὶ μὴ ῥᾳδίως ὑπηρετεῖν. ὅσων δέ ἐστι μέγα τὸ διάστημα τῆς ἀρτηρίας, τῶν τοιούτων ἔξω μὲν περαιοῦσθαι συμβαίνει τὸ πνεῦμα ῥᾳδίως, ἐντὸς δὲ φερόμενον, διαχεῖσθαι διὰ τὴν εὐρυχωρίαν, καὶ τὴν φωνὴν γίνεσθαι κενὴν καὶ μὴ συνεστῶσαν· ἔτι δὲ μὴ δύνασθαι διαιρεῖσθαι τῷ πνεύματι τοὺς τοιούτους, διὰ τὸ μὴ συνερείδεσθαι τὴν ἀρτηρίαν αὐτῶν. ὅσων δέ ἐστιν ἀνωμάλως καὶ μὴ πάντοθεν ἔχει τὴν διάστασιν ὁμοίαν, τούτοις ἀναγκαῖον ἁπασῶν μετέχειν τῶν δυσχερειῶν. καὶ γὰρ ἀνωμάλως αὐτοῖς ἀνάγκη τὸ πνεῦμα ὑπηρετεῖν καὶ θλίβεσθαι, καὶ καθ᾽ ἕτερον τόπον διαχεῖσθαι πάλιν. βραχείας δὲ τῆς ἀρτηρίας οὔσης, ταχὺ μὲν ἀνάγκη τὸ πνεῦμα ἐκπέμπειν, καὶ τὴν πληγὴν ἰσχυροτέραν γίνεσθαι τὴν τοῦ ἀέρος, πάντας δὲ τοὺς τοιούτους ὀξύτερον φωνεῖν, διὰ τὸ τάχος τῆς τοῦ πνεύματος φορᾶς. οὐ μόνον δὲ συμβαίνει τὰς τῶν ἀγγείων διαφορὰς, ἀλλὰ καὶ τὰ πάθη πάντας τὰς φωνὰς ἀλλοιοῦν. ὅταν μὲν γὰρ ὦσιν ὑγρασίας πλήρη πολλῆς ὅ,τε πνεύμων καὶ ἡ ἀρτηρία, διασπᾶται τὸ πνεῦμα, καὶ οὐ δύναται περαιοῦσθαι εἰς τὸν ἔξω τόπον συνεχῶς, διὰ τὸ προσκόπτειν, καὶ γίνεσθαι παχὺ καὶ ὑγρὸν καὶ δυσκίνητον· καθάπερ καὶ ἐπὶ τοῖς κατάῤῥοις καὶ ταῖς μέθαις. ἐὰν δὲ ξηρὸν ᾖ τὸ πνεῦμα, παντελῶς σκληροτέρα ἡ φωνὴ γίνεται καὶ διεσπασμένη. συνέχει γὰρ ἡ νοτὶς, ὅταν ᾖ λεπτὴ, τὸν ἀέρα, καὶ ποιεῖ τινα τῆς φωνῆς ἁπλότητα. τῶν μὲν οὖν ἀγγείων αἱ διαφοραὶ καὶ τῶν παθῶν τῶν περὶ αὐτὰ γιγνομένων, τοιαύτας ἑκάστοτε τὰς φωνὰς ἀποτελοῦσι.

Scrib. συμμένειν.

A hoc enim eſt quod plagam ſpiritus validam reddit, cùm pulmones è magno interuallo ſe colligentes, violenter aërem expellunt. quod quidem ex eo perſpici poteſt, quia nulla aliarum partium è parua diſtantia validam poteſt plagam inferre. Nam neque crure neque manu vehementer fortitérque pulſare quis poſſit, & quod pulſarit eiicere: niſi vtroque eorum è magna diſtantia plagam deſtinauerit. ſin minùs dura quidem plaga ob contentionem & conatum infertur: longè tamen exturbare percuſſa non poterit: præſertim cùm nec catapultæ longè tela mittere poſſint, neque fundæ, nec arcus ſi durus ſit, neque flecti lentarique queat, neque neruus B longè reduci poſſit. Quòd ſi pulmones molles ſint & firmi, multum aëris concipere poſſunt, eúmque rurſum reddere eo temperamento & moderatione qua commodum eſt ob mollitudinem & facilem contractionem. At guttur longum & anguſtum cùm eſt, difficilem vox emiſſionem foras habet, & magnopere violentam, ob longitudinem commeatus ipſius ſpiritus: quod ex eo conſtat, quia omnia quæ procerum collum habent, violentum quiddam clangunt, vt anſeres, grues, galli gallinacei. Id tamen etiam clariùs patet in tibiis: omnes enim vix implent bombycas, magnáque contentione & negotio ob longitudinem ſpatij. quin & ſpiritus ob angu- C ſtias cùm foras pulſus extra eruperit, ſtatim diffunditur & diſſipatur, vt & aquæ quæ per euripos feruntur, vt vox conſequi non poſſit, neque in longum ſpatium peruenire. his quoque omnibus neceſſe eſt eueniat, vt ſpiritum non facilè regant & temperent ad vocis miniſterium. Quorum autem guttur valde ſpatioſum eſt, eorum facilè commeat ſpiritus, ſed ob laxitatem loci intus labens diffunditur, & vox quædam inanis & inconſtans oritur: neque poteſt in illis diuidi *ſpiritus*, cùm *ipſorum* guttur vndique non conitatur. Quorum autem inæqualis eſt, neque vndique paria habet ſpatia, eos omnes ſentire incommoditates neceſſe eſt. nam & inæquabili- D ter ſpiritum voci miniſtrare neceſſe eſt, & premi, & in vicem alia ex parte diffundi. Quòd ſi breue guttur ſit, celeriter ſpiritum emitti neceſſe eſt, & aëris plagam vehementiorem fieri: omnes tamen eos acutè loqui propter celeriorem ſpiritus impetum. Nec verò tantùm vaſorum diſſimilitudo, ſed & euenta omnia voces mutare ſolent. Nam cùm multo ſuffuſi ſunt humore pulmones & guttur, diſtrahitur ſpiritus, neque continenter perpetuóque foras exire poteſt, propter offenſionem & obicem, & quòd plenus & humidus & torpidus euadat, vt in diſtillatione & ebrietate vſuuenire ſolet. quòd ſi penitus ſiccus ſit ſpiritus, tunc vox durior diſtra- E ctáque exiſtit. Humor enim præſertim tenuis aërem continet & perpetuat, & quandam vocis efficit teneritatem & mollitudinem. Ac vaſorum quidem diſpar conditio & euentorum ipſis accidentium, huiuſmodi voces reddunt.

A Voces autem videntur eſſe in illis quæque locis vbi & naſcuntur : ſed eas omnes audimus, vbi ad aures acciderunt noſtras. Aër enim quem ictus pepulit, aliquem ad finem continens labitur, deinde paulatim magis atque magis ſubinde diuerſus abit & dilabitur : atque hoc ipſo cognoſcimus omnes longinquiores propinquioréſque ſonos. quod ex eo intelligi poteſt, quia ſi quis cornu aut tibiam aut tubam ſumat, per eáque alterius auri admota loquatur, omnes videntur voces proximè aurem mitti, quòd aëris impetus non diſſipetur, ſed ab inſtrumento complectente vox ſimilis conſeruetur. Vt igitur in pictura cùm quis coloribus hoc ſimile diſtanti longinquóque depinxit, illud propinquo: vna picturæ pars nobis videtur in receſſu poſita eſſe, altera eminere & extare, cùm vtrunque tamen ſit in eadem planitie : ſic & in vocum ſonis, cùm aliqua iam diſſoluta ad auditum accidit, alia continua, ambabus ad eundem locum venientibus, vna procul ab auribus diſtare videtur, altera è propinquo eſſe, propterea quòd hæc ſimilis eſt longinquæ & remotæ, illa vicinæ. Manifeſtæ autem diſertæque voces vel maximè euadunt ex ſonorum ſubtilitate. nam fieri non poteſt, niſi hi modis omnibus expreſſi articulatique ſint, vt voces manifeſtæ reddantur : vt nec annulorum gemmæ, niſi ſubtiliter ſcalptæ ſint. Proinde nec pueruli ſermocinantur manifeſtè, neque ebrij, neque ſenes, neque natura balbi, neque in ſumma quorum linguæ oráque impeditiora ſunt tardioráque. Nam vt æramenta & cornua reſonando inſtrumentorum ſonos reddunt manifeſtiòres : ſic & in ſermone magnam parit obſcuritatem ſpiritus ex ore elabens non perinde impreſſus. neque enim ſolum quandam ſui obſcuritatem oſtendit, ſed etiam articulatos ſonos impedit, cùm diſſimilis eorum impetus ad auditum accidat. Itaque melius vnum audientes intelligimus, quàm plures eadem loquentes : vt & in fidibus : multóque minùs cùm quis ad tibiam citharam pulſat, confuſis ab aliis vocibus : quod & in concentibus vel maximè patet, ambobus ſe mutuò ſonis abſcondentibus. Ob has igitur quas diximus cauſas minùs manifeſtæ voces redduntur. Claritas autem eis comparatur, vt & in coloribus. nam & illic qui maximè poſſunt aſpectum permouere, eos contingit eſſe colorum clariſſimos. eodem modo voces illas clariſſimas exiſtimandum, quæ ad ſenſum adpulſæ auram maximè mouere poſſunt : tales ſunt manifeſtæ, denſæ, puræ, & quæ longè peruadere poſſunt. Nam & aliis omnibus in rebus, quæ ſenſibus percipiuntur, quicquid validius, denſius & purius eſt, certiorem quoque manifeſtiorémque ſenſum efficit. idque ex eo notum eſt, quòd voces omnes ad extremum obſurdeſcunt, aëre tandem diſſipato : quod & perſpicitur in tibiis. nam quæ ſecundarum lingulas habent obliquas, molliorem illæ quidem vocem edunt : verùm minùs tamen claram.

A αἱ δὲ φωναὶ δοκοῦσι μὲν εἶναι καθ' οὓς αἰεὶ ἕκασται γίγνονται τόπους. ἀκούομεν δὲ πασῶν αὐτῶν, ὅταν ἡμῖν προσπέσωσι πρὸς τὴν ἀκοήν. ὁ γὰρ ὠσθεὶς ὑπὸ τῆς πληγῆς ἀήρ, μέχρι μέν τινος φέρεται συνεχής, ἔπειτα κατὰ μικρὸν ἀεὶ κινεῖται μᾶλλον· καὶ τούτῳ γιγνώσκομεν πάντας τοὺς ψόφους καὶ τοὺς πόρρω γιγνομένους καὶ τοὺς ἐγγύς. δῆλον δέ ἐστιν· ὅταν γάρ τις λαβὼν κέραμον ἢ αὐλὸν ἢ σάλπιγγα, προσθείς τι ἑτέρῳ πρὸς τὴν ἀκοήν, διὰ τούτων λαλῇ, πᾶσαι δοκοῦσιν αἱ φωναὶ παντελῶς εἶναι πλησίον τῆς ἀκοῆς, διὰ τὸ μὴ σκεδάννυσθαι τὸν ἀέρα φερόμενον, ἀλλὰ διατηρεῖσθαι τὴν φωνὴν ὁμοίαν ὑπὸ τοῦ περιέχοντος ὀργάνου. B καθάπερ οὖν καὶ ἐπὶ τῆς γραφῆς, ὅταν τις τοῖς χρώμασι τὸ μὲν, ὅμοιον ποιήσῃ τῷ πόρρω, τὸ δὲ, τῷ πλησίον, τὸ μὲν, ἡμῖν ἀνακεχωρηκέναι δοκεῖ τῆς γραφῆς, τὸ δὲ, προέχειν, ἀμφοτέρων αὐτῶν ὄντων ἐπὶ τῆς αὐτῆς ἐπιφανείας· οὕτω καὶ ἐπὶ τῶν ψόφων τῆς φωνῆς, ὅταν ἡ μὲν ἤδη διαλελυμένη προσπίπτῃ πρὸς τὴν ἀκοήν, ἡ δέ τις συνεχής, ἀμφοτέρων αὐτῶν ἀφικνουμένων πρὸς τὸν αὐτὸν τόπον, ἡ μὲν ἀφεστηκέναι πόρρω δοκεῖ τῆς ἀκοῆς, ἡ δὲ, εἶναι σύνεγγυς, διὰ τὸ τὴν μέντοι πόρρωθεν ὁμοίαν εἶναι, τὴν δὲ πλησίον.

C σαφεῖς δὲ μάλιστα αἱ φωναὶ γίγνονται παρὰ τὴν ἀκρίβειαν τὴν τῶν φθόγγων. ἀδύνατον γάρ, μὴ τελέως τούτων διηρθρωμένων, τὰς φωνὰς εἶναι σαφεῖς· καθάπερ καὶ τὰς τῶν δακτυλίων σφραγῖδας, ὅταν μὴ διατυπωθῶσιν ἀκριβῶς. διόπερ οὔτε τὰ παιδία δύναται διαλέγεσθαι σαφῶς, οὔτε οἱ μεθύοντες, οὔτε οἱ γέροντες, οὔθ' ὅσοι φύσει τραυλοὶ τυγχάνουσιν ὄντες, οὔθ' ὅλως ὅσων εἰσὶν αἱ γλῶτται καὶ τὰ στόματα δυσκίνητα. ὥσπερ γὰρ καὶ τὰ χαλκεῖα καὶ τὰ κέρατα συνηχοῦντα, ποιεῖ τοὺς ἀπὸ τῶν ὀργάνων φθόγγους σαφεστέρους, οὕτως καὶ ἐπὶ τῆς διαλέκτου πολλὴν ἀσάφειαν ἀπεργάζεται τὰ ἐκπίπτοντα τῶν πνευμάτων D ἐκ τοῦ στόματος, ὅταν μὴ διατυπωθῶσιν ὁμοίως. οὐ μόνον δὲ ἑαυτῶν τινα περιεμφαίνουσιν ἀσάφειαν, ἀλλὰ καὶ τοὺς διηρθρωμένους τῶν φθόγγων ἐμποδίζουσιν, ἀνομοίας αὐτῶν γιγνομένης τῆς περὶ τὴν ἀκοὴν κινήσεως. διὸ καὶ μᾶλλον ἑνὸς ἀκούοντες συνίεμεν, ἢ πολλῶν ἅμα ταὐτὰ λεγόντων· καθάπερ καὶ ἐπὶ τῶν χορδῶν· καὶ πολὺ ἧττον, ὅταν προσαυλῇ τις ἅμα καὶ κιθαρίζῃ, διὰ τὸ συγχεῖσθαι τὰς φωνὰς ὑπὸ τῶν ἑτέρων. οὐχ ἥκιστα δὲ τοῦτο ἐπὶ τῶν συμφωνιῶν φανερόν ἐστιν. ἀμφοτέρους γὰρ ἀποκρύπτεσθαι συμβαίνει τοὺς ἤ- E χους ὑπ' ἀλλήλων. ἀσαφεῖς μὲν οὖν φωναὶ γίγνονται διὰ τὰς εἰρημένας αἰτίας. λαμπραὶ δὲ γίνονται, καθάπερ ἐπὶ τῶν χρωμάτων· καὶ γὰρ ἐκεῖ τὰ μάλιστα δυνάμενα τὰς ὄψεις κινεῖν, ταῦτα εἶναι συμβαίνει τῶν χρωμάτων λαμπρότατα. τὸν αὐτὸν τρόπον, τῶν φωνῶν ταύτας ὑποληπτέον εἶναι λαμπροτάτας, ὅσαι μάλιστα δύνανται προσπίπτουσαι κινεῖν τὴν ἀκοήν. τοιαῦται δέ εἰσιν αἱ σαφεῖς καὶ πυκναὶ καὶ καθαραί, καὶ πόρρω δυνάμεναι διατείνειν. καὶ γὰρ ἐν ταῖς ἄλλαις αἰσθήσεσιν ἅπασι τὰ ἰσχυρότερα καὶ πυκνότερα καὶ καθαρώτερα σαφεστέρας ποιεῖ τὰς αἰσθήσεις. δῆλον δέ. τὸ γὰρ τελευταῖον αἱ φωναὶ πᾶσαι γίγνονται κωφαί, τοῦ ἀέρος ἤδη διακεχυμένου. δῆλον δὲ ἐστι κἀπὶ τῶν αὐλῶν. τὰ γὰρ ἔχοντα * τῶν δευτέρων τὰς γλώττας πλαγίας, μαλακωτέραν μὲν ἀποδίδωσι τὴν φωνήν, οὐχ ὁμοίως δὲ λαμπράν.

A labens enim aër protinus in ſpatioſam laxitatem incidit, neq. vlla contentione rapitur, neque collectus fertur, ſed diſperſus. In lingulis autem duriuſculis, vox & durior & clarior excitatur, ſi quis eas magis labris premat, quòd violentiore impetu ſpiritus feratur. Igitur ob eas quas diximus cauſas claræ redduntur voces: ex quo nec videntur deteriores eſſe candidis, quæ fuſcæ vocantur. nam & affectibus & grandioribus ætatibus aſperiores magis conueniunt, & paulum confuſæ, nec claritatem perinde inſignem habentes: ſed & ob contentionem & acrimoniam non perinde in poteſtate ſunt, nec facilè obtemperant. id enim quod impetu rapitur, arduum regere atque moderari. neque enim vt commodum eſt quiſquam facilè vel intendere
B vel remittere poteſt. In tibiis autem & aliis inſtrumentis voces exiſtunt claræ, cùm ſpiritus erumpens creber eſt atque contentus. nam & tales exterioris aëris pulſus conſequi neceſſe eſt, vocéſque vel maximè ſic ad ſenſum conſtantes tranſmitti, vt & odores, & lumen & calorem. omnia enim iſta rariora ſenſui occurrentia, minùs inſignia ſentiuntur vt & ſapores aqua diluti, & aliis ſaporibus. quod enim ſui ſenſum obiicit, cuiuſque obſcuras reddit vires & poteſtates. ex aliis autem inſtrumentis cornuum ſoni denſi & continentes in aerem incidentes voces non efficiunt
C claras. Itaque cornu oportet indolem accretionis ſuæ habere æquabilem & læuem, nec celeriter proſilientem. talia enim neceſſe eſt cornua molliora & laxiora eſſe: vt ſoni diſtrahantur, nec continentes ex eis efferantur, nec ſimiliter arguti clarique ſint, ob viarum mollitudinem & raritatem: neque rurſus oportet natura eſſe ad creſcendum maligna, neque concretione & coagmentatione eſſe denſa, rigida, tranſitu difficili. qua enim cunque offenderit illatus ſonus, ibi finem modúmque facit, nec extra perrumpit, vt ſurdi & inæquales ſoni ex huiuſmodi cornibus excidant. Quod autem recta regione & via eius impetus feratur, perſpicuum eſt in malis nauium,
D & in ſumma in omni prolixa materia, cùm eam probant. Nam ſi materia nihil læſa ſit, cùm ab vno extremo percuſſerint, ad alterum vſque continuus decurrit ſonus: ſin minùs, ad vitium vſque progreſſus, ibi interpellatus deſinit: ſed & nodos circunflectit, neque per eos rectà tranſire poteſt. Id autem etiam perſpicitur in ærariis officinis, cùm ſtatuarum ſtolas limant eas quæ ſeparatæ ſunt, aut alas, proptereáque conniuent comprimuntúrque. quocirca ſtridorem magnúmque ſtrepitum ſonitúmque edunt: ſed ſi quis ea faſcia obligarit, ſtrepitus deſinit. eò enim vſque progreſſus tremor, cùm ad molle offendit, ibi ceſſat. Multum autem & aſſatio cornuum ad bonitatem vocis confert: plus tamen iuſto aſſa, ſonum adipiſcuntur regulæ ſimilem, ex du-
E ritie & vſtione. ſin ea quis minus aſſet, ſonum quidem emittunt teneriorem ob mollitudinem, non tamen perinde arguta ſunt & canora. Itaque in his certæ ætatis delectus eſt. nam ſenum ſicca ſunt, meatus habent, laxa ſunt:

iuniorum tenera penitus, & in ſe magnam vim humoris habentia. Oportet autem eſſe cornu, vt dictum eſt, ſiccum, denſum, æquabiliter recti canalis & læue. ſic enim continget vt ſoni denſi, læues, æquabiles per ipſa ferantur, & pares ſimileſque ictus aër exterior excipiat. Nam & chordarum vt quæque læuiſſima eſt & omni ex parte æquabilis maximè, ita optima eſt, atque opere vndique ſimili & confectione conſtat, & neruorum commiſſuras latentes fallenteſque habet. Sic enim euenit vt aëris pulſus vndique perſimiles exiſtant. oportet autem & tibiarum lingulas denſas, læues & æquabiles eſſe, vt per eas ſpiritus læuis, æquabilis, nec diſtractus feratur. Itaque paria armamentorum iuga madefacta & ſaliua imbuta, vocaliora canoráque magis redduntur: ſicca deterius ſonant. Aër enim per humidum & lubricum mollis & æquabilis labitur: quod ex eo cerni poteſt, quia & ipſe ſpiritus, cum humorem aliquem habet, minus ad armamenta offendit, minúſque diſtrahitur. ſiccus autem cùm eſt, magis obhæreſcit & duriorem plagam infert ob violentiam. Igitur diſſimilitudines ſonorum ob eas quas diximus cauſas eueniunt. Cæterùm duræ ſunt voces quæcunque ad auditum violenter accidunt: proinde & ſuum maximè vigorem tenoremque præſtant. Tales ſunt quæ difficiliorem molitionem habent, & magna feruntur violentia. Nam quod celeriter cedit, ictum non moratur, ſed antè reſilit: quod hinc patet, quia tela grandiora vehementiſſimo feruntur impetu, & aquæ per euripos incitatæ. Nam hæ in anguſto luctantes, nec velociter cedentes, ſed magna vi impulſæ, vehementiſſimè incitantur: quod idem ſimiliter in vocibus & ſonis euenit. Cuius rei hinc fides eſt, quòd omnes violenti ſoni, iidem & duri euadunt, vt arcularum & cardinum cùm per vim aperiuntur, & aëris atque ferri. Nam & ex incudibus durus nec mollis reſonat, cùm iam refrigeratum & durum ferrum ducunt. præterea à lima, cùm ferramenta & ſerras limant & aſperant. quoniam & tonitrua, vt violentiſſima quæque, ita & duriſſima ſunt, & imbrium qui abrupti præcipiteſque vocantur ob violentiam. Nam celeritas ſpiritus reddit vocem acutam, violentia autem duram. itaque non tantùm vſuuenire ſolet, vt iiſdem interdum acutiorem, interdum grauiorem vocem mittant, ſed etiam duriorem & molliorem: & tamen nonnulli exiſtimant, ex arteriarum aſperitate voces dureſcere, non ſine errore, hoc enim paulum admodum confert, ſed ſpiritus violenta à pulmonibus percuſſio. Vt enim corpora horum humida ſunt & mollia, illorum dura atque contenta, eodem ſanè modo & pulmones. ita fit vt aliorum ſpiritus mollis exeat, aliorum durus atque coactus. Nam quòd arteria non magnum quoddam momentum adferat, facile eſt intellectu: nulla enim arteria tibiarum duritiam adæquat: attamen nihilo ſecius per arteriam & per tibias ſpiritu labente, alij molliter tibia canunt, alij duriter:

τὰ δὲ τῶν νέων, ἁπαλὰ παντελῶς καὶ πολλὴν ἔχοντα ἐν αὑτοῖς ὑγρασίαν. δεῖ δὲ εἶναι, καθάπερ εἴρηται, τὸ κέρας ξηρὸν καὶ πυκνὸν ὁμαλῶς καὶ εὐθύπορον καὶ λεῖον. οὕτω γὰρ ἂν μάλιστα συμβαίνοι καὶ τοὺς ἤχους πυκνοὺς καὶ λείους καὶ ὁμαλοὺς φέρεσθαι δι' αὐτῶν, καὶ τοῦ ἔξωθεν ἀέρος τὰς πληγὰς γίνεσθαι τοιαύτας· ἐπεὶ καὶ τῶν χορδῶν εἰσιν αἱ λειόταται, βέλτισται, καὶ τοῖς πᾶσιν ὁμαλώταται· καὶ τὴν κατεργασίαν ἔχουσι πάντοθεν ὁμοίαν, καὶ τὰς συμβολὰς ἀδήλους τὰς τῶν νεύρων. οὕτω γὰρ συμβαίνει καὶ ταύτας ποιεῖσθαι τὰς τοῦ ἀέρος πληγὰς ὁμοιοτάτας. δεῖ δὲ καὶ τῶν αὐλῶν εἶναι τὰς γλώττας πυκνὰς καὶ λείας καὶ ὁμαλάς, ὅπως ἂν καὶ τὸ πνεῦμα διαπορεύηται δι' αὐτῶν λεῖον καὶ ὁμαλὸν καὶ μὴ διεσπασμένον. διὸ καὶ τὰ βεβρεγμένα τῶν ζευγῶν καὶ τὰ πεπωκότα τοῦ σιάλου, εὐφωνότερα γίνεται, τὰ δὲ ξηρὰ, κακόφωνα. ὁ γὰρ ἀὴρ διὰ ὑγροῦ καὶ λείου φέρεται μαλακὸς καὶ ὁμαλός. δῆλον δέ. καὶ γὰρ αὐτὸ τὸ πνεῦμα, ὅταν ἔχῃ νοτίδα, πολὺ ἧττον προσκόπτει πρὸς τὰ ζεύγη καὶ διασπᾶται· τὸ δὲ ξηρὸν, μᾶλλον ἀντιλαμβάνεται, καὶ τὴν πληγὴν ποιεῖται σκληροτέραν, διὰ τὴν βίαν. αἱ μὲν οὖν διαφοραὶ τῶν ἤχων γίγνονται διὰ τὰς εἰρημένας αἰτίας. σκληραὶ δέ εἰσι τῶν φωνῶν, ὅσαι βιαίως πρὸς τὴν ἀκοὴν προσπίπτουσι· διὸ καὶ μάλιστα παρέχουσι τὸν τόνον. τοιαῦται δέ εἰσιν αἱ δυσκινητότεραι καὶ μετὰ πλείστης φερόμεναι βίας. τὸ γὰρ ὑπεῖκον ταχέως, οὐ δύναται τὴν πληγὴν ὑπομένειν, ἀλλ' ἀποπηδᾷ πρότερον. δῆλον δέ. τὰ γὰρ ὑπέρογκα τῶν βελῶν, βιαιοτάτην φέρεται τὴν φορὰν, καὶ τὰ ῥεύματα φερόμενα διὰ τῶν εὐρίπων· καὶ γὰρ ταῦτα γίνεται σφοδρότατα περὶ αὐτὰς τὰς στενοχωρίας, οὐ δυνάμενα ταχέως ὑπείκειν, ἀλλὰ ὑπὸ πολλῆς ὠθούμενα βίας. ὁμοίως δὲ τοῦτο συμβαίνει καὶ περὶ τὰς φωνὰς καὶ τοὺς ψόφους. φανερὸν δ' ἐστί. πάντες γὰρ οἱ βίαιοι, γίγνονται σκληροί· καθάπερ καὶ τῶν κιβωτίων καὶ τῶν στροφέων, ὅταν ἀνοίγωνται βιαίως, καὶ τοῦ χαλκοῦ καὶ τοῦ σιδήρου. καὶ γὰρ ἀπὸ τῶν ἀκμόνων γίγνεται σκληρὸς καὶ μαλακὸς, ὅταν ἐλαύνωσι κατεψυγμένον καὶ σκληρὸν ἤδη τὸν σίδηρον. ἔτι δὲ ἀπὸ τῆς ῥίνης, ὅταν ῥινῶσι καὶ χαράττωσι τὰ σιδήρια καὶ τοὺς πρίονας· ἐπεὶ καὶ τῶν βροντῶν αἱ βιαιόταται, γίγνονται σκληρόταται. καὶ τῶν ὑδάτων τὰ καλούμενα ῥαγδαῖα τὴν βίαν. ἡ μὲν γὰρ ταχυτὴς τοῦ πνεύματος, ποιεῖ τὴν φωνὴν ὀξεῖαν· ἡ δὲ βία, σκληράν. διόπερ οὐ μόνον συμβαίνει τοῖς αὐτοῖς ὁτὲ μὲν ὀξυτέραν, ὁτὲ δὲ βαρυτέραν, ἀλλὰ καὶ σκληροτέραν καὶ μαλακωτέραν. καίτοι τινὲς ὑπολαμβάνουσι, διὰ τὴν σκληρότητα τῶν ἀρτηριῶν, τὰς φωνὰς γίγνεσθαι σκληράς, διαμαρτάνοντες· τοῦτο μὲν γὰρ βραχύ τι συμβάλλεται παντελῶς· ἀλλ' ἡ τοῦ πνεύματος γινομένη πληγὴ βιαίως ὑπὸ τοῦ πνεύμονος. ὥσπερ γὰρ καὶ τὰ σώματα, τῶν μέν ἐστιν ὑγρὰ καὶ μαλακὰ, τῶν δὲ, σκληρὰ καὶ σύντονα· τὸν αὐτὸν τρόπον καὶ ὁ πνεύμων. διόπερ τῶν μὲν, μαλακὸν ἐκπίπτει τὸ πνεῦμα, τῶν δὲ, σκληρὸν καὶ βίαιον· ἐπεὶ, διότι γε τὴν ἀρτηρίαν αὐτὴν μικράν τινα συμβαίνει προσδέχεσθαι δύναμιν, ῥᾴδιον συνιδεῖν. οὐδεμία γὰρ ἐστὶν ἀρτηρία σκληρὰ τοῖς αὐλοῖς ὁμοίως· ἀλλ' οὐθὲν ἧττον δι' αὐτοῦ καὶ διὰ τούτων φερομένου τοῦ πνεύματος, οἱ μὲν μαλακῶς αὐλοῦσιν, οἱ δὲ, σκληρῶς.

A quod & ſatis in ipſo ſenſu patet. Nam & ſi quis violentiùs ſpiritum intenderit, vis ſtatim illa vocem duriorem reddiderit, etiamſi mollior ſit: idque eodem modo in tuba. Quocirca omnes cùm comeſſatum eunt, in tuba de ſpiritus contentione remittunt, vt quàm molliſſimum reddãt ſonitum: quod & in inſtrumentis perſpici poteſt. nam & pluſculum tortæ chordæ, vt dictum eſt, voces duriores faciũt, & cornua pluſculum aſſata. & ſi quis tangat chordas manibus violenter, non molliter, neceſſe eſt eas ſic quoque violentius reſpondere. at quæ minus tortæ ſunt, & cornua crudióra, molliores reddunt voces, & organa quoque maiora. Nam aëris percuſſiones, ob locorum ſpatium, & molliores & tardiores exiſtunt: minimorum in-
B ſtumentorum contrà duriſſimæ, ob chordarum tentionem: quod quidem ex eo perſpici poteſt, quia eiuſdem inſtrumenti voces duriores elici cõtingit, cùm quis ad medium chordas non tangit, quòd & ad iugum & chordarum tendiculam vehementius intenduntur. ſed & inſtrumenta è ferula voces habere ſolent teneriores, quod illati ſoni non pari impetu reſiliant. Aſperari autem ſolent voces, cùm aëris totius non vna plaga eſt: ſed multifariam in parua diſtracta. nam quæque aëris particula, per ſe ad aurem accidens, velut ab alia plaga quandam ſenſus diſtractionem facit, vt vox vna intermittat, altera violentius inferatur, & auditus tactus diſpar diſſimiliſque eueniat. vt ſolet
C nobis vſuuenire, cùm quid aſperum in corpus noſtrum cadit. quod in lima intelligi facilè poteſt: quia enim ſimul aër feritur in parua multifariã, vel in minuta & multa, ab eis ad auditũ aſperi ſoni feruntur. magiſq. adeo ſi ad duram materiã atteratur, vt & in tactu accidit. quæ enim dura & aſpera ſunt, violentius ſenſum mouent. idque ſatis in liquidorum fluxu patet. nam olei ex omni humorũ genere ſonus obſcuriſſimus eſt, ob particularum continuationem. Cæterum tenues ſunt voces, cùm exiguus eſt ſpiritus qui exit. quare & puerorũ tenues ſunt & mulierũ & eunuchorum, ſimiliter & morbo defectorum, aut labore, aut alimenti inopia. non enim poſſunt ob imbecillitatem mul-
D tum ſpiritus emittere: idque in neruis patet. nam è tenuibus voculæ tenues, graciles, & quadam pili gracilitate funduntur, propterea quod aëris plaga in anguſto ſit. Qualia enim cunque principia impulſionis aeris plagæ habuerunt, tales proinde voces ad aurem accidere ſolent: verbi gratia raræ aut denſę, molles aut durę, tenues aut craſſæ. Semper enim aër alius alium ſimiliter impellens vocem omnem ſimilem efficit, vt aſſolet in acumine & grauitate. nam & celeritates plagæ aliæ alias conſequentes, ſimiliter ac principia voces conſeruant. plagæ autem aëri à chordis multæ ſeparatæque inflictæ, propter medij temporis exiguitatem, cùm intermiſſiones auditus non

poſſit attendere, vna continénſq; nobis vox vidē-atur eſſe, vt & in coloribus. nam & hi interdum diſtantes diſiunctique inter ſe, tamen commiſſi continuique videntur, cùm celeriter mouentur: atque idem iſtud accidit in concentu, quia enim ſoni alij alios aſſequuntur, vnáque tandem deſinunt, interiectæ nos fallunt voces. Sæpius enim in omnibus concentibus ab acutioribus ſonis aër verberatur, ob celeritatem motionis, ſed poſtremum eorum ſonum contingit à nobis ſimul exaudiri, & ſonum grauioris concentus. Itaque cùm ſenſus perſentiſcere non poſſit, vt dictum eſt, medias voces, exiſtimamus nos ſimul perpetuò exaudire vtroſque ſonos. Plenæ contra voces exiſtunt, cùm multus crebérque excurrit ſpiritus: quo fit vt virorum ſint pleniores & craſſiores, perfectarúmque tibiarum: eóque magis ſi quis eas ſpiritu impleuerit. quod ex eo liquet, quia ſi quis iuga preſſerit, acutior & exilior vox editur: & ſi fiſtulas quis dilatet, vel ſi obturet, multiplex vocis magnitudo ob multitudinem ſpiritus exoritur, vt & è craſſioribus fidibus. Sunt & craſſæ hirquitallorum & raucorum, & poſt vomitum ob arterias, & quia non expedita labatur, ſed ibi offendens vox glomerata voluatur, magnitudinémque adipiſcatur, ídque vel maximè ob humorem corporis. Argutæ porrò ſunt voces tenues & crebræ, vt in cicadis & locuſtis & luſciniis, atque adeò illæ omnes quarum gracilitati nullus alienus ſonus conſequitur. Omnino enim neque in magnitudine vocis argutia poſita eſt, neque in tenoris remiſſione & grauitate, neque in phthongorum tactu, ſed potius in acumine, tenuitate, ſubtilitate. Itaque inſtrumenta tenuia contenta cornu carentia, voces habent argutiores. Nam ſonus aquarum, atque in ſumma cùm ab aliquo exortus proſequitur, phthongorum continuationem retinet. fragiles autem ſunt & interruptæ voces, quæ aliquandiu perpetuatæ diſtrahuntur: quod maximè perſpicitur in fictilibus, quæ ex ictu fracta ſonitum fragilem efficiunt: interrupta in ictu motione, vt non iam ſoni exeuntes continui ſint. Quod idem & vſuuenire ſolet in cornibus fractis, & in chordis neruos malè coagmentatos habentibus. horum enim omnium aliquem ad finem perpetuus ſonus fertur, deinde diſſipatur, vbicunque materia non continuata eſt, ita vt non vna fiat plaga ſed interpellata, & ſonus fragilis eſſe videatur. Ferè enim ſimiles exiſtunt aſperis, niſi quòd hæ aliæ ab aliis exiguis particulis diſtractæ ſunt: at fragiles pleræque principia continua habent, deinde in plures partes diuiduntur. Aſpiratæ autem voces ſunt, quibuſcum intus ſpiritum ſtatim anhelamus cum ſonitibus & emittimus. Leues contrà, quæcunque citra ſpiritus anhelitum eduntur. abrumpi autem ſolent voces, cùm iam non poſſunt aërem cum plaga emittere,

A γίνεσθαι τὰς διαλείψεις, μία καὶ συνεχὴς ἡμῖν ἡ φωνὴ
φαίνεται· καθάπερ καὶ ἐπὶ τῶν χρωμάτων. καὶ γὰρ τού-
των τὰ διεστηκότα, δοκεῖ πολλάκις ἡμῖν συνάπτειν ἀλ-
λήλοις, ὅταν φέρωνται ταχέως. τὸ δὲ αὐτὸ συμβαίνει τοῦ-
το καὶ περὶ τὰς συμφωνίας. διὰ γὰρ τὸ περισυγκατα-
λαμβάνεσθαι τοὺς ἑτέρους ἤχους ὑπὸ τῶν ἑτέρων, καὶ γί-
γνεσθαι τὰς καταπαύσεις τῶν ἅμα, λανθάνουσιν ἡμᾶς
αἱ μεταξὺ γιγνόμεναι φωναί. πλεονάκις μὲν γὰρ ἐν πά-
σαις ταῖς συμφωνίαις ὑπὸ τῶν ὀξυτέρων φθόγγων αἱ τοῦ
ἀέρος γίγνονται πληγαὶ διὰ τὸ τάχος τῆς κινήσεως· τὸν δὲ
τελευταῖον τῶν ἤχων ἅμα συμβαίνει προσπίπτειν ἡμῖν
B πρὸς τὴν ἀκοήν, καὶ τὸν ἀπὸ τῆς βραδυτέρας γιγνόμε-
νον. ὥστε τῆς ἀκοῆς οὐ δυναμένης αἰσθάνεσθαι, καθά-
περ εἴρηται, τὰς μεταξὺ φωνάς, ἅμα δοκοῦμεν ἀμφοτέ-
ρων τῶν φθόγγων ἀκούειν συνεχῶς. παχεῖαι δ' εἰσὶ τῶν φω-
νῶν τοὐναντίον, ὅταν ᾖ τὸ πνεῦμα πολὺ καὶ ἀθρόον ἐκ-
πίπτον. διὸ καὶ τῶν ἀνδρῶν εἰσι παχύτεραι καὶ τῶν τε-
λείων αὐλῶν, καὶ μᾶλλον ὅταν πληρώσῃ τις αὐτοὺς τοῦ
πνεύματος. φανερὸν δέ ἐστι· καὶ γὰρ ἂν πιέσῃ τὰ ζεύγη,
μᾶλλον ὀξυτέρα ἡ φωνὴ γίγνεται καὶ λεπτοτέρα. κἂν
κατασπάσῃ τις τὰς σύριγγας, κἂν δὲ ἐπιλάβῃ, παμ-
C πλείων ὁ ὄγκος γίγνεται τῆς φωνῆς διὰ τὸ πλῆθος τοῦ
πνεύματος· καθάπερ καὶ ἀπὸ τῶν παχυτέρων χορδῶν.
παχεῖαι δὲ γίγνονται καὶ τῶν τραχυνόντων καὶ τῶν βραγ-
χώντων, καὶ μετὰ τοὺς ἐμέτους, διὰ τὴν τῆς ἀρτηρίας.
καὶ διὰ τὸ μὴ ὑπεξάγειν, ἀλλ' αὐτοῦ προσκόπτουσαν
ἀνειλεῖσθαι τὴν φωνὴν καὶ λαμβάνειν ὄγκον, καὶ μάλι-
στα διὰ τὴν ὑγρότητα τοῦ σώματος. λιγυραὶ δέ εἰσι τῶν
φωνῶν, αἱ λεπταὶ καὶ πυκναί, καθάπερ καὶ ἐπὶ τῶν τετ-
τίγων καὶ τῶν ἀκρίδων καὶ τῶν ἀηδόνων, καὶ ὅλως ὅσαις
λεπταῖς οὔσαις μηδεὶς ἀλλότριος ἦχος παρακολουθεῖ.
ὅλως γὰρ οὐκ ἔστιν οὔτ' ἐν ὄγκῳ φωνῆς τὸ λιγυρόν, οὔτ'
ἐν τόνοις ἀνειμένοις καὶ βαρέσιν, οὔτ' ἐν ταῖς τῶν φθόγγων
D ἀφαῖς, ἀλλὰ μᾶλλον ὀξύτητι καὶ λεπτότητι καὶ ἀκρι-
βείᾳ. διὸ καὶ τῶν ὀργάνων τὰ λεπτὰ καὶ στενώτερα καὶ μὴ
ἔχοντα κέρας, τὰς φωνὰς ἔχει λιγυρωτέρας. ὁ γὰρ ἀπὸ
τῶν ὑδάτων ἦχος, ὅλως ὅταν ἀπό τινος γιγνόμενος πα-
ρακολουθῇ, συνέχει τὴν ἀκρίβειαν καὶ τῶν φθόγγων. σα-
θραὶ δέ εἰσι καὶ περιερρωγυῖαι τῶν φωνῶν, ὅσαι μέχρι τι-
νὸς φερόμεναι συνεχεῖς, διασπῶνται. φανερώτατον δὲ
τοῦτό ἐστιν ἐπὶ τοῦ κεράμου. πᾶς γὰρ ὁ ἐκ πληγῆς ῥα-
γεὶς, ποιεῖ τὸν ἦχον σαθρόν, διασπωμένης τῆς κινή-
σεως τὰ κατὰ τὴν πληγήν, ὥστε μηκέτι γίγνεσθαι τοὺς
E ἐκπίπτοντας ἤχους συνεχεῖς. ὁμοίως δὲ τοῦτο συμβαί-
νει καὶ ἐπὶ τῶν ἐρρωγότων κεράτων καὶ ἐπὶ τῶν χορδῶν
τῶν παρανενευρισμένων. ἐπὶ πάντων γὰρ τῶν τοιούτων
μέχρι μέν τινος ὁ ἦχος φέρεται συνεχής, ἔπειτα δια-
σπᾶται, καθ' ὅτι ἂν ᾖ μὴ συνεχὲς τὸ ὑποκείμενον,
ὥστε μὴ μίαν γίγνεσθαι πληγήν, ἀλλὰ διεσπασμέ-
νην, καὶ φαίνεσθαι τὸν ἦχον σαθρόν. σχεδὸν γὰρ παραπλήσιαι τυγχάνουσιν οὖσαι ταῖς τραχείαις. πλὴν ἐκεῖ-
ναι μὲν εἰσιν ἀπ' ἀλλήλων κατὰ μικρὰ μέρη διεσπασμέναι. τῶν δὲ σαθρῶν αἱ πλεῖσται τὰς μὲν ἀρχὰς ἔχου-
σαι συνεχεῖς, ἔπειτ' εἰς πλείω μέρη τὴν διαίρεσιν λαμβάνουσι. δασεῖαι δέ εἰσι τῶν φωνῶν ὅσαις ἔσωθεν τὸ πνεῦ-
μα εὐθέως συνεκβάλλομεν μετὰ τῶν φθόγγων. ψιλαὶ δέ εἰσι τοὐναντίον, ὅσαι γίγνονται χωρὶς τῆς τοῦ πνεύματος
ἐκβολῆς. ἀπορρήγνυσθαι δὲ συμβαίνει τὰς φωνάς, ὅταν μηκέτι δύνωνται τὸν ἀέρα μετὰ πληγῆς ἐκπέμπειν,

CAPVT I.

De ſimplicibus coloribus.

A

EX Coloribvs hi ſimplices ſunt, quicunque elementorum naturam conſequuntur, ignis puta, aëris, aquæ, terræ. Nam aër & aqua ſuopte ingenio alba ſunt: ignis contrà & Sol flauo colore cenſentur: terra rurſus natura ſua alba eſt: intinctionis autem cauſa ſeſe multicolorem oſtendit. B Id confeſſum facit cinis. Aduſto enim humido tincturæ opifice, albus redditur cinis: ſed non planè albus, quòd fumo ſcilicet intingatur, qui niger exiſtit. Ob id & lixiuium flauum efficitur, eo ſcilicet, quod flammeum eſt, & nigrum, in aquam colorem inuehente. Atqui niger color conſequitur elementa, quoties inuicem commutantur. Reliqui autem, medij ſcilicet colores, ex iis facilè intelligi poſſunt, reciproca admiſtione ſuperueniente. Lucis autem deliquio obſcuritas. Trib. C præterea modis niger color nobis occurrit: vel cùm planè quod videtur, ſua natura nigrũ eſt: vel cùm ab iis quæ viſilia ſunt, nulla omnino lux ad viſum defertur. Quod enim non videtur, cùm locus ambiens videatur, ſpeciem præbet nigri. Occurrunt & alia omnia huiuſmodi nigra, à quibus & rara, & exigua lux reſilit: ob id & nigræ apparent vmbræ. Eodem modo aqua nigreſcit, exaſperata, & fluctibus percita, cùm ſcilicet mare inhorruerit: laceſſita enim & incitata ſuperficie, paucis in eam radiis incidentibus, luce iam diuulſa, ac diſſipata, vmbroſum ipſum nigrum ſe offert. D Nubes etiam, cùm egregiè denſa eſt, eadem ratione nigra exiſtimatur. Ob hæc & cum iis aqua & aër, non penetrante omnino luce, nigræ itidem videntur, cùm profunditatem habeant, ob id quòd rari admodum replodantur radij: ſiquidem lucem, quæ in ipſis eſt, intercurrentes particulæ, omnes nigræ videntur obſcuritatis gratia. Quòd autem obſcuritas non ſit color, ſed lucis priuatio, haud ſanè difficile eſt ex aliis multis cognoſcere, tum ex eo præcipuè, quòd non eſt intelligi, quanta, aut quali forma obſcuritas ſub ſenſum cadat, ceu ſolent reliqua viſilia.

CAPVT II.

De coloribus aliis qui ex ſimplicium temperamento oriuntur.

At reliqui ex horum fiunt temperamento, provt maior minórve fuerit admiſtio. Atque ita multas variáſque reddunt colorum ſpecies ſecundùm plus & minus: id eſt, provt intenſiores remiſſioréſve fuerint admiſtiones, quale eſt puniceum, & purpureum. Dicti autem temperamenti exemplum ſit album & nigrum, quæ commiſta imaginem præbent medij illius, quod φαιὸν Græci, nos pullum, ſiue fuſcum appellare poſſu- D mus. Proinde, & nigrum, & vmbroſum luci permiſtum, puniceum oſtendit. Si enim nigrum ei admiſceatur, quæ à Sole, vel ab igne emanat, luci, puniceum ſemper reddi intuemur: & nigra omnia ſimul ac incenſa ſunt, in puniceum abeunt colorem. Nam & fumidæ flammæ, & carbones, donec accenſi ſunt, puniceum colorem habent. At purpureum illud, floridum, atque illuſtre euadit, ſi id medioctri albo vmbroſóque, tenues & iam fracti Solis radij contemperent. Proinde in orientua & occidua parte aër purpureum colorem induit, tunc cùm Sol vel occidit, vel emergit: quòd eo tempore infirmi admodum atque imbecilles radij, obſcurum aërem percellant. Quin & mare purpureum ſeſe offert, cùm ſublati fluctus ſecun- E dùm impulſum inclinationémque maris inumbrantur: infirmi enim Solis radij ad maris ſubſidentiam coniecti, purpureum colorem oculis obiiciunt. Idem hoc euenire in auium pennis animaduertitur: extenſæ enim atque explicatæ certo modo ad lucem, purpureum colorem reddunt. Quòd ſi minor lux affulſerit, in ζοφερὸν, id eſt, obſcurum, abit, quem & Græci ὄρφνινον, id eſt, opacum, appellant. Quod ſi liberaliter nigro primæ notæ conditum ferit, puniceum euadit. Quòd ſi floridum, & coruſcans fuerit, in flammeum tranſmutatur.

A Nam quod dicimus, ſecundùm mutuum temperamentum, colorum diuerſitatem effici: ita accipiendum eſt, ceu ſi dicamus, ex ſubiecto & aſpectui noſtro propoſito colore, miſtionem fieri. Nec tamen ob id parem omnium generationem fieri putandum eſt: eſt enim proprium colorum munus, non ſimpliciter, ſed ad aliquam miſtorum rationem habere. Habent ſiquidem ad quempiam commiſtorum reſpectum: quemadmodum ſimplicia, quatenus ſimplicia ſunt, inuicem atque atque inter ſe reſpectum habent. Neque clarum & perſpectum eſt eodem in omnibus vtendum eſſe apparatu. Cùm enim de purpurei vel punicei temperamento verba facimus, neceſſe eſt ex iis permiſtis, & diuerſum colorem facientibus, perſimilem generationem enarrare, nec tamen eandem ſpeciem & apparentiam tribuere. B Quapropter aſſumendum ac proſpiciendum eſt temperamentum ex eo qui præceſſit apparatu: ſicvti cùm color οἰνωπὸς, id eſt, vinoſus, efficitur, ſi ſplendor aëreus puro ac minimè diluto nigro, eodémque coruſcanti contemperetur: quales botryorum acini, quorum planè color œnopus, id eſt, vinoſus, agnoſcitur, cùm matureſcunt. Nam deinde nigreſcentes puniceum habent, quem poſtmodum in purpureum commutant. Dignum autem eſt obſeruatione, omnes colorum differentias ad eum modum fieri, quem ſubſcripſimus. Ex motu enim & tranſitu coloris in colorem dum commiſcentur, differentiæ variantur, & ſimilitudinem accipiunt ſecundùm id quod ſe offert aſpectui: atque ita in vnoquoque commiſtionem exæquant, ex multis vnum colorum concentum reddentes, ita C vt nullus cernatur, cernantur tamen omnes, per partes confuſas, ac permiſtas. Ex qua quidem concretione & contemperatione, vna ſpecies vnúſque proſpectus euadit, qui colorum multitudini in vnam imaginem coaleſcenti fidem facit. Oportet autem hæc omnia in diſquiſitionem vocare, non vt pictores vocant, hos colores ſimul atterentes, ſed ex iis quæ dicta ſunt, rationem habentes refractorum radiorum, qui ad inuicem iaciuntur, & collimant: ſic enim quiſpiam poſſit ex præſcripto naturæ colorum temperamenta ſpectare. Ad veritatem autem certáſque ſimilitudines deprehendendas, oportet habere cognitas ac perſpectas procreationes & colorum ipſorum natales. Atqui horum cauſam optimatem dicimus lucem Solis, lucem ignis, aërem præterea, & a- D quam. Nam hæc plus aut minùs contemperata, omnes, vt ita dicam, colores perficiunt. Eadem indagine & aliorum colorum, qui radiis permiſcentur, imaginem & ſimilitudinem explorari oportet: quandoquidē & carbones & fumus & ærugo & ſulphur & pennæ auium contemperatæ, hæ quidem cum radiis Solis, hæ verò cum ſplendore ignis multas ac varias faciunt colorum commutationes. Sunt & quæ à concoctione ac maturitate conſideranda ſunt: qualia quæ fiunt in plantis, in fructibus, in capillis, & pennis auium, & cæteris aliis huiuſmodi.

Τὸ πολυειδὲς καὶ τὸ ἄπειρον τῶν χρωμάτων διὰ πόσα συμβαίνει γίνεσθαι.

Δεῖ δὲ μὴ λανθάνειν τὸ πολυειδὲς καὶ τὸ ἄπειρον τῶν χρωμάτων, διὰ πόσα συμβαίνει γίνεσθαι. εὑρήσομεν γὰρ, ἤτοι διὰ τὸ τῷ φωτὶ καὶ ταῖς σκιαῖς ἀνίσως καὶ ἀνωμάλως τὰς κράσεις λαμβάνεσθαι· καὶ γὰρ αἱ σκιαὶ καὶ τὸ φῶς κατὰ τὸ μᾶλλον καὶ ἧττον, πολὺ διαφέρουσιν αὐτῶν. ὥστε καὶ καθ' αὐτὰς καὶ μετὰ τῶν

χρωμάτων μιγνύμεναι, ποιοῦσι μεταβολὰς χρωμάτων, ἢ τῷ τὰ κεραννύμενα, τῷ πλήθει καὶ ταῖς δυνάμεσι διαφέρειν, ἢ τῷ λόγους ἔχειν μὴ τοὺς αὐτούς. πολλὰς γὰρ καὶ τὸ ἁλουργὲς ἔχει καθ' αὑτὸ [τὰς] τὰς διαφοράς, καὶ τὸ φοινικοῦν, καὶ τὸ λευκόν, καὶ τῶν ἄλλων ἕκαστον, καὶ κατὰ τὸ μᾶλλον καὶ ἧττον, καὶ κατὰ τὴν πρὸς ἄλληλα μίξιν, καὶ εἰλικρίνειαν αὐτῶν. ποιεῖ δὲ διαφορὰν καὶ τὸ λαμπρὸν ἢ στίλβον εἶναι τὸ μιγνύμενον· ἢ τοὐναντίον, αὐχμηρὸν καὶ ἀλαμπές. ἔστι δὲ τὸ στίλβον, οὐκ ἄλλο τι ἢ ἡ συνέχεια φωτὸς καὶ πυκνότης. τὸ δὲ χρυσοειδὲς γίνεται, ὅταν τὸ ξανθὸν καὶ τὸ ἡλιῶδες πυκνωθὲν ἰσχυρῶς, στίλβῃ. διὸ καὶ οἱ τῶν περιστερῶν τράχηλοι, καὶ τῶν ὑδάτων οἱ σταλαγμοί, φαίνονται χρυσοειδεῖς, τοῦ φωτὸς ἀνακλωμένου. ἔστι δὲ ἃ λειούμενα τρίψει καὶ δυνάμεσί τισιν, ἀλλοίας ἴσχει καὶ ποικίλας χρόας, ὥσπερ καὶ ὁ ἄργυρος παρατριβόμενος, καὶ χρυσός, καὶ χαλκός, καὶ σίδηρος. καί τινα γένη λίθων διαφόρους ποιεῖ χρόας, [καθάπερ καὶ μέλαιναι οὖσαι, λευκὰς γράφουσι γραμμάς, διὰ τὸ πάντων τῶν τοιούτων, τὰς μὲν ἐξ ἀρχῆς συστάσεις, ἐκ μικρῶν εἶναι μορίων, καὶ πυκνῶν, καὶ μελάνων. ὑπὸ δὲ τῆς ἐν τῷ γίνεσθαι βαφῆς, ἁπάντων τῶν πόρων κεχρωσμένων, δι' ὧν διελήλυθεν αὐτῶν ἡ βαφή, ἄλλην ἐσχηκέναι τὴν τοῦ χρώματος φαντασίαν. ὁ δ' ἀποτριβόμενος ἀπ' αὐτῶν, οὐκέτι γίνεται χρυσοειδής, οὐδὲ χαλκοειδής, οὐδ' ἄλλην οὐδεμίαν [τοιαύτην] ἔχων χρόαν, ἀλλὰ πάντως μέλας, διὰ τὸ τοὺς μὲν πόρους παρατριβομένων αὐτῶν, διαρρήγνυσθαι, δι' ὧν ἡ βαφὴ διελήλυθε, φύσει δὲ καὶ τῶν αὐτῶν εἶναι.] τοῦ γὰρ προτέρου [τούτων] χρώματος οὐκέτι ὄντος ἡμῖν φανεροῦ, διὰ τὸ διασπᾶσθαι τὴν βαφὴν [ἐν τῇ τρίψει,] τὸ κατὰ φύσιν ὑπάρχον αὐτοῖς χρῶμα ὁρῶμεν. διὸ καὶ πάντα φαίνεται μέλανα. ἐν δὲ τῷ παρατρίβεσθαι πρὸς ὁμαλὲς καὶ λεῖον ἕκαστον τούτων, καθάπερ καὶ πρὸς τὰς βασάνους, ἀποβάλλοντα τὸ ἐνὸν αὐτοῖς χρῶμα, τὸ μέλαν δηλονότι, ἀπολαμβάνει πάλιν τὴν ἀπὸ γενέσεως χρόαν, [ἐν τῇ συναφῇ καὶ συνεχείᾳ, τὸ τῆς βαφῆς διαφαινόμενον.] ἔτι δὲ τῶν καυστῶν, καὶ διαλυομένων καὶ τηκομένων ἐν τῷ πυρί, ταῦτα πλείστας ἔχει χρόας, ὅσων ὁ καπνός ἐστι λεπτὸς καὶ ἀεροειδής, καὶ τὰ χρώματα σκιώδη· ὥσπερ ὅ,τε ἀπὸ τοῦ θείου, καὶ τῶν ἰωμένων χαλκείων, καὶ ὅσα ἐστὶ πυκνὰ καὶ λεῖα, καθάπερ ὁ ἄργυρος. ἔτι δὲ τῶν ἄλλων ὅσα σκιώδεις ἔχει τὰς χρόας, [καὶ] λειότητος μετέχει, ὥσπερ τὸ ὕδωρ καὶ τὰ νέφη, καὶ τὰ τῶν ὀρνίθων πτερώματα. καὶ γὰρ ταῦτα διά τε τὰς αὐγὰς τὰς προσπιπτούσας, καὶ τὴν λειότητα, ἄλλοτε ἄλλως κεραννυμένας, ποιεῖ διαφόρους τὰς χρόας, καθάπερ καὶ τὸ σκότος. τῶν δὲ χρωμάτων οὐδὲν ὁρῶμεν εἰλικρινὲς οἷόν ἐστιν, ἀλλὰ πάντα κεκραμένα ἑτέροις. καὶ γὰρ ἂν μηδενὶ τῶν ἄλλων, ταῖς γε τοῦ φωτὸς αὐγαῖς καὶ ταῖς σκιαῖς κεραννύμενα, ἄλλοια, καὶ οὐχ οἷά ἐστι, φαίνεται. διὸ καὶ τὰ ἐν σκιᾷ θεωρούμενα, καὶ ἐν φωτὶ καὶ ἡλίῳ, καὶ σκληρᾷ

A miſtæ coloribus, colorum commutationes efficiant: vel in eo quòd commiſta, & multitudine, & facultatibus differunt: vel quòd non habeant eaſdem rationes proportionéſque. Siquidem & ipſum purpureum ſecundùm ſe ipſum multas habet differentias: ſic & puniceum, & album, & aliorum vnumquodque. Item ſecundùm maius & minus, item ſecundùm mutuam inter ſe admiſtionem, eorúmque ſynceritatem. Facit prætera differentiam prout luminoſum, ac nitidum miſtum ipſum fuerit: aut ex contrario ſquallidum ac ſine lumine. Nihil enim eſt aliud τὸ στίλβον, id eſt, nitidum ac refulgens, niſi luminis quædam collectio, & denſitas.
B Species verò auri emergit, cùm xanthum, id eſt, flauum, & ſolare bene condenſatum eniteſcit. Ob id colla columbarum, & pluuiarum ſtillæ, colore viſuntur aureo tunc, cùm lux repercutitur. Sunt etiam quædam, quæ læuigata attritu & arcana quadam facultate, alios atque alios induunt colores: ſicut argentum perfrictum, & aurum, & æs, & ferrum. Quædam etiam lapidum genera differentes faciunt colores, ceu qui nigri exiſtentes albas inducunt lineas. Eius rei cauſa eſt, quòd iſtorum omnium conſtitutio ab ipſis incunabulis ex paruis adeò denſiſque, ac nigris conſtat par-
C ticulis. Ab ipſa autem, quæ fit, dum primùm generantur, tinctura, contingit aliam coloris ſpeciem admittere. Hic autem color ab his attritus ac deciduus, non amplius auream ſpeciem, aut aëream, aut omnino alium quempiam habet colorem, ſed planè niger eſt, quòd pori ac meatus illic perrumpantur, ac ſcindantur inter perfricandum, dum atteruntur, per quos tinctura penetrauit. Contingit & hanc ipſam diuerſitatem colorum natura fieri. Primogenio enim colore nondum nobis cognito, cùm tinctura in attritu conuellatur ac diſſipetur, euenit vt ipſum, qui ipſis ineſt, colorem perſpiciamus. Quapropter & omnia ſe offerunt nigra, dum
D perfricantur, prout horum quodlibet æquabile eſt ac læuigatum: ſicut in lapide, qui βάσανος à Græcis, à noſtris coticula dicitur, qui inſitum in ipſo colorem, nigrum videlicet, abiicit: aſſumit autem rurſus ingenitum ab ipſa vſque origine colorem, perſpicuum illud quod in tinctura eſt, ex contactu & continuatione. Cæterùm & quæ igni aduruntur, aut diſſoluuntur, aut liquefiunt, plures mutuantur colores: quorum fumus tenuis, & aëreus, horum & colores vmbroſi: ſicut cùm fumus exhalat à ſulphure, & æruginoſis æramentis, & ab iis quæcunque denſa ſunt, & læuigata: vt
E argentum. At in cæteris, quæcunque illa ſunt, quæ vmbroſos colores habent, eadem læuorem participant: ſicuti aqua, nebula, & auium pennæ: quippe hæc propter fulgores radióſve illabentes, & læuorem, aliter aliàs contemperatos, differentes colores inuehunt: ſicuti & obſcuritas varios colores inferre ſolet. At nos nullum colorem purum ſpectamus, qualis planè eſt: ſed omnes permiſtos, atque aliis confuſos. Nam etſi nulli aliorum colorum miſceantur, fulgoribus lucis & vmbris tamen confunduntur, & à ſe diuerſa, neque prorſus qualia ſunt, apparent. Ob id quæ in vmbra ſpectantur, quæque in luce, quæque in Sole,

quæque

quæque in intenſo, aut molli fulgore & ſecundùm varias inclinationes hoc aut illo modo ſe habentia, ſecundùm alias differentias diuerſa apparent. Fulgores etiam qui ab igne, Luna, lychniſque proueniunt, quòd hæc illave lux in vnoquoque variet, diuerſos colores imprimunt. Adde etiam, cùm varia ad inuicem facta eſt colorum permiſtio, ob mutuum illum inter ſe reſpectum, atque reſponſum, vario modo colorantur. Lux enim quando illapſa, ex nonnullis colorem mutuatur, & nunc punicei nunc herbacei fit coloris: & cùm temperamentū in alium quempiam colorem incidit, & ab eo rurſus contemperatur, aliam quoque quampiam coloris moderationem permiſtionémq. admittit. Et dum hoc patitur, continuè quidē id patitur, ſed ita, vt ſenſum fugiat. Interdum etiam ad ſenſus vſque peruenit, tunc ſcilicet cùm ex multis colorib. confuſis, vnus aliquis longè alios exuperans, ſenſum ipſum facit, & conciet. Quare & per aquam res aquea ſpecie plurimum apparent: & quæ in ſpeculis ſimiles habentia colores, colore ſpeculorum apparent. Id quod & circa aërem putandum eſt euenire. Ex tribus itaque miſtos colores omnes conſtare certum eſt: ex luce primùm, & ex iis per quæ lux apparet, ceu ex aqua, & aëre: tertio ex ſubiectis coloribus, à quibus lucem reflecti ac repercuti contingit. Atqui album & diaphanes, quod nos perſpicuum dicimus, quoties quidem rarum eſt, colore maxime aëreo ſe oſtendit. Quod ſi in iis eſt quæ denſa ſunt, in omnibus iis quædam occurrit obſcuritas, ſeu caligo, ſicvti in aqua, & vitro, aëre etiam, cùm denſior eſt. Radiis enim ob denſitatem & craſſitudinem vndequaque deficientibus, non poſſumus, quæ in ipſis penitiora ſunt, perſpicere. Aër quidem propè inſpectus, nullum videtur colorem habere: nam propter raritatem à fulgore peruincitur, ab eo diuiſus ac ſecretus. Eſt enim fulgor denſior, & per aërem perſpicuus: qui in profundo perſpectus, ex proximo colore videtur cyaneo, raritatis gratia. Qua enim parte lux deficit, eadem aër caligine diſiunctus, coloris cyanei repræſentatur. Denſatus autem in morem aquæ, albiſſimum omnium colorem contrahit.

CAPVT IV.

De iis quæ tincta colorem mutant.

OMnia verò quæ intinguntur, ab iis quę intingunt, colorē mutuātur. Multa autē floribus, multa terra naſcentibus, multa radicib. intinguntur: quin & corticibus, lignis, & foliis, & ſeminibus: multa etiam terra, multa ſpuma, multa & ſutorio atramento, quam Græci μελαντηρίαν vocant: nonnulla etiam, quę animalium liquore intinguntur, ſicvti purpureus color purpura, quæ inter murices cenſetur. His adde quædā vino, quędā fumo, quædā calce, quædā mari colorē trahere: ceu marinorum capillamenta. Hæc enim omnia mari ruſeſcūt, & in vniuerſum omnia, quæcunq; proprios ac vernaculos colores habent. Semper enim cùm hi omnes colores vi humidi & calidi ſimul coeūt, in eorum quæ intinguntur meatus exareſcentes, deinde ab illis colores aſſumunt. Ob id ſæpe colores florū eluuntur, ex poris ſeu meatibus effluentes. Multas etiam faciunt ipſę conſtipationes, & in intinctione differentias: multas etiam commiſtiones, & affectus intinctorum, quæ πάθη dicuntur:

CAPVT V.

De coloribus florum, fructuum, & aliorum quæ terræ fætu producuntur.

QVod autem capilli, & pennæ, & flores, & C fructus, & plantæ omnes vnà cum maturitate varias induunt mutationes, ex multis perſpicuum eſt. Sunt & nonnulla ſingulis plantarum, colorum principia, & qualia illa ſint, & ex qualibus mutationes ſuſcipiant, & quas ob cauſas talia patiantur, & ſi quas alias dubitationes contingat illa conſequi, de his omnibus ex ea quam inſtituimus, indagine conſiderandum eſt nobis. In omnibus autem plantis principium colorum eſt, qui herbaceus dicitur. Nam germina, & folia, & fructus, vel ſemina gignuntur in ipſis auſpiciis herbacea: id quod etiam animaduerti poteſt ex aquis compluentibus. Vbi enim pluſculum temporis conſiſtit aqua, rurſus exareſcens, colore fit herbaceo. Ratione autem D euenit, & hunc primum in omnibus ex terra naſcentibus colorem conſiſtere: ſiquidem omnes aquæ vetuſteſcentes à principio ſanè virides fiunt, Solis radiis admiſtæ: mox autem nigreſcunt: rurſus viridi permiſtæ, coloris fiunt herbacei. Nam humidum, vt præfati ſumus, ſponte naturæ ſuæ vetuſteſcens, & exareſcens, nigreſcit: ſicvt in ciſternis, ſeu aquarum conceptaculis tectoria: ex iis enim, quæcunque ſunt ſub aqua, hæc omnia atri coloris efficiuntur: quòd dum exareſcunt, humidum exhalet, & in aërem diſſipetur: quicquid autem exhauſtum Soli exponitur, in herbaceum colorem abit, ea cauſa, quòd flauum nigro permiſcetur. Hoc idem, humido magis, ac largiùs nigreſcente, herbacei fit coloris, eoque copioſiùs ſaturatur, & viridem E colorem concipit propè ad porri exemplum. Quod etiam eſt in cauſa vt in omnibus rami germina ætate confecta, multo nigrioris coloris viſantur, quàm quæ noua ſunt, & adhuc pubeſcentia: flauiores enim hi ſunt, quòd nondum in ipſis humidum nigreſcat. Horum enim cùm ſit tardius incrementum, inſideatque diutius humiditas, quoniam humidum ipſum exhalans vehementer nigreſcit, ex eo viride fit, & porracei coloris, vtpote nigro, eoque ſyncero permiſtum.

A At in iis omnibus, in quibus humidum non permiſcetur Solis radiis, albus color incolumis manet, niſi forte humidum diuturnitate temporis, & exareſactione prius nigrum euaſerit. Hæc ratio eſt cur plantarum omnium partes, quæ à terra extant, ab initio virides ſunt: quæ autem terræ proximæ, aut certè ſub terra, quales ſunt caules, ſeu ſcapi, & radices, albæ ſunt: ſic & germina, quæ terræ viciniora ſunt. Quòd ſi in ambitu terra moueatur, paſtinóque refodiatur, omnes quidem primò, vt dictum eſt, herbaceum colorem, quaſi à libero cælo fœnerantur, tum ob humorem, qui per germina in eas partes effluit, eámque coloris naturam imprimit, tum quòd celeriter idem humor in fructuum incrementum abſu-B matur. Cùm verò non ampliùs augentur, & increſcunt, ob id quòd calidum iam non queat peruinci alimento affluente, ſed vice verſa potiùs ab humido calor abſumatur, & fructus omnes maturentur, concocta humiditate, quæ in ipſis fructibus eſt, à Solis & aëris calore, ſic fructus aſſumunt à plantis colorem, ſicvti quæ intinguntur à floribus, propter id paulatim colorantur, eorúmque illi maximè, qui ad Solem ac teporem expoſiti ſunt: quare & eorum colores vnà cum tempore ac tempeſtiuitate permutant. Cùm enim primò ſint omnes herbacei coloris, ad maturita-C tem deinde prouecti variant in eum qui eorum naturæ conſentaneus eſt color. Nam & albi, & nigri, & phæi, id eſt, obſcuri, flaui etiam, & nigricantis coloris, quin & ymbratici efficiuntur, & propemodum omnia ſuſcipiunt colorum diſcrimina. Quoniam autem plurimi colores fiunt pluribus inuicem admiſtis, ita vt vnus fiat ex omnibus cinnus, illud quoque liquet, in plantis opus eſſe eadem fieri temperamenta. Nam propter earum humorem perfluentem, & per ſe ipſas corriuatum, omnes ſuſcipiunt colorum facultates, & hoc circa fructuum maturationes: & à Sole & ab aëris calore excocto, omnes pro ingenio ſuæ naturæ conſiſtunt colores, hi quidem ocyùs, illi verò tardiùs: velvt contingit circa tincturam D purpuræ, cùm illam atterunt, atque exprimunt, omnem ex ea humiditatem eliquant eliciúntque, quam deinde effuſam in cortinis percoquunt: & primò quidem nullus omnino certus color in tinctura perſpicitur. Eius rei cauſa eſt, quòd vnuſquiſque ipſorum colorum, cùm humor magis ac magis excoquitur, imò verò & illi ipſi, qui in cortinis permiſti ſunt, colores, multas paulatim ac varias ſuſcipiunt differentias: nam & nigrum, & album, & ὄρφνιον, id eſt, obſcurum, & aërium, denique omnes reddunt, qui vnà excocti ſunt. Propter temperamentum ergo nondum per ſe conE ſtitutum, nullus ex aliis coloribus certus eſt, atque perſpicuus. Atqui hoc idem quoque euenit in fructibus. In multis enim quia non omnes ſimul fiunt colorum maturitates, ſeu concoctiones, ſed alij priùs, alij poſteriùs conſiſtunt colores, idcirco ex alio in alium mutationes fiunt: ſicvt in botryis, & phœnicibus, id eſt, palmulis: iſti enim aliquando primò punicei apparent.

A ἐν ὅσοις δὲ τὸ ὑγρὸν μὴ μίγνυται ταῖς τοῦ ἡλίου αὐγαῖς, τούτων διαμένει τὸ χρῶμα λευκόν, ἐὰν μὴ χρονιζόμενον καὶ καταξηραινόμενον μελανθῇ πρότερον. διὸ καὶ τὰ μὲν ὑπὲρ γῆς, χλωρὰ πάντων [τῶν] φυομένων τὸ πρῶτόν ἐστι· τὰ δὲ κατὰ γῆς, [οἷον] καυλοὶ καὶ ῥίζαι λευκαί. καὶ οἱ βλαστοὶ κατὰ γῆς μὲν ὄντες, εἰσὶ λευκοί· περιαιρεθείσης δὲ τῆς γῆς, τὸ μὲν ἐξ ἀρχῆς (* ὥσπερ εἴρηται) πάντες γίγνονται ποώδεις, διὰ τὸ καὶ τὴν ὑγρασίαν τὴν διὰ τῶν βλαστῶν εἰς αὐτοὺς διηθουμένην, τοιαύτην ἔχειν τὴν τοῦ χρώματος φύσιν, καὶ ταχέως αὐτὴν εἰς τὴν αὔξησιν καταναλίσκεσθαι τὴν τῶν καρπῶν. B ὅταν δὲ μηκέτι αὐξάνωνται, διὰ τὸ μὴ κρατεῖν ἤδη τὸ θερμὸν τῆς ἐπιρρεούσης τροφῆς, ἀλλὰ καὶ τοὐναντίον ἀναλίσκηται τὸ ὑγρὸν ὑπὸ τῆς θερμότητος, καὶ πεπαίνωνται οἱ καρποὶ πάντες, συνεψομένης ὑπό τε τοῦ ἡλίου καὶ τῆς τοῦ ἀέρος θερμότητος, τῆς ἐν τοῖς καρποῖς ὑγρασίας, ἀπολαμβάνουσι τὰς ἀπὸ τῶν φυτῶν χρόας, καθάπερ καὶ τὰ βαπτόμενα τῶν ἀνθῶν. διὸ κατὰ μικρὸν χρώζονται, καὶ μάλιστα αὐτῶν τὰ πρὸς τὸν ἥλιον ἐστραμμένα, καὶ τὴν ἀλέαν. ὥστε καὶ τὰς χρόας αὐτῶν ἅμα ταῖς ὥραις μεταβάλλειν. A Nigro autem in ſe ipſo conſiſtente, tum in colorem vim tranſmutant, ac demum fiunt cyanei, ſiue cærulei, cùm iam puniceus multa ac pura nigredine permiſcetur: qui enim poſteriùs ſuccedunt colores, cùm exuperant, priſtinos colores immutant. Quod in nigris fructibus præcipuè manifeſtum eſt. Nam eorum pleríque fermè, vt ſuperiùs diximus, ab initio quidem ex herbaceo colore immigrantes, ſenſim in puniceum tranſeunt, fiúntque rufi: ſed ſeſtinè rurſus tranſmigrant ex rufo, & puro nigro, quod in huiuſmodi inſitum eſt. Declarant & hoc vites, & vellera, & folia: omnium enim huiuſmodi colores nigri, quòd plurimus inſit in ipſis huiuſmodi color. Nam & illud quo- B que confeſſum eſt, quòd ob id fructus nigri & vtrumque colorem participant: horum enim omnium ſuccus vinoſus eſt. Colores autem, qui ſunt in ipſis natalibus nigri, ſucceſſu temporis punicei fiunt: ſiquidem pauimenta, quæ ſtillis ac defluxionibus ſubiecta ſunt, & omnino vbi contingit vel mediocre aquarum profluuium fieri, locis præſertim opacis, omnia hæc, inquam, ex eo qui herbaceus primùm fuit, in puniceum colorem tranſeunt, pauimentúmque illud ita coloratur, ac ſi ſanguis recens in id perfluxerit, ſecundùm rationem loci, ſecundùm C quam herbaceus color maturitatem concoctionémque ſuſcipiat: demum & hic idem niger admodum fit, & cæruleus: quod in fructibus contingit. Quòd verò poſterioribus coloribus aduenientibus, priores exuperentur, & cedant, & color fructuum tranſmutetur, vel ex iis facile eſt cognoſcere. Nam & mali punicæ fructus, & roſarum folia, ab initio quidem alba ſunt: demum ſucco iam vetuſteſcente, ex maturitate palleſcunt, & rurſus commutant colorem in purpureum, ac puniceum: & hæc quoque plures in ſe ipſis colores habent, ſicvt & in papauere liquor, in olea amurca: ſiquidem hæc primùm fit alba, ceu mali punicæ fructus: cùm autem inalbere deſierit, rurſus in puniceum co- D lorem tranſmigrat: denique multo nigro permiſtus in cæruleum abit. Ob eam cauſam & papaueris folia, hæc quidem in ſuperiori parte ſunt punicei coloris, quòd in ipſis concoctio & maturitas ocyus fiat: hæc autem ab ipſis initiis nigra, hoc in eis colore iam exuperante, ſicvti & in fructu: nam poſtremò fit niger. In quibuſcunque autem plantis vnus eſt & ſingularis color, albus ſcilicet vel niger puniceus, vel purpureus, horum omnium fructus permanent, eandem ſemper coloris naturam ſeruantes, cùm ſemel ex herbaceo in alium colorem migrauerint. Atqui flores in nonnullis fructibus concolores eſſe contingit, ſicvt in malo punica videmus, in qua fructus æquè ac flos punicei coloris eſt. In nonnullis autem per- E multum inter ſe differunt colore: ſicvt in lauro, atque hedera: vtriuſque enim flos xanthus, id eſt, flauus eſt, fructus verò niger. Puniceus autem eſt & fructus mali, quam μηλέαν vocant.

huius enim flos albus, non ſine admiſtione purpuræ: at eius fructus eſt flauus. Rurſus papaueris puniceus quidem flos eſt, at fructus hic quidem niger, ille autem albus, prout inſiti illis ſucci aliis atque aliis temporibus ad maturitatem peruenerint. Quod facilè ex multis cognoſci poteſt: etenim [illegible] atque alij fructus, vt dictum eſt, multas differentias capiunt vnà cum maturitate, & in colore, & in odore, & in ſucco. Hæc enim cauſa eſt cur varij ac differentes odores, & ſucci, & in floribus & in fructibus deprehendantur. Amplius hoc magis eluceſcit ipſis in floribus: in iis enim ipſis eiuſdem ſæpe folij pars nigra, pars punicea: quorundam etiam pars hæc alba, illa purpurea. Neque hoc minùs in iride planum eſt: multas enim habet & huius flos in ſe ipſo varietates: prout eius etiam variæ ſunt concoctionis differentiæ: ſicut & botryorum, cùm eos etiam miteſcere contingit: ob id & florum omnium faſtigia plurimum concoquuntur, & miteſcunt. Hæc autem initio multo minus coloris habent: propemodum enim quorundam quaſi aduritur humidum priùs, quàm ad iuſtam & propriam concoctionem perueniat.* Proinde quorundam florum colores permanent, fructus autem concocti tranſmutantur. Florum enim colores propter paucitatem alimenti citò miteſcunt, & maturitatem accipiunt: ac fructus ob multitudinem humoris, vnà cum maturitate in omnes transmutantur ſuæ naturæ conſentaneos colores. Id quod clarum & illuſtre eſt, prout antea dictum eſt, in tinctoriis floribus. (flores nunc appello optimam atque ardentiſſimam purpuræ partem.) Quum enim à principio tinctores αἱματίδας, hoc eſt, ſanguinarias purpuras, ex quibus pretioſus ille liquor tingendis veſtibus natus elicitur, ſummittunt, eas orphnias, id eſt, obſcuras, & nigras, & aërei coloris fieri videmus. Quum verò flos abundè concoctus fuerit, bene floridum illud purpureum, & ſplendidum efficitur. Proinde neceſſe eſt, florum colores ex æquo, & colores fructuum in varios habitus ſe commutare: & hos quidem colores, qui ſecundùm naturam ſunt, exuperare, hos autem deliquium pati, prout horum aut illorum perfecta aut imperfecta fit concoctio. Verè itaque colligimus, flores fructúſque differre. Cæterùm multi plurimarum arborum flores poſtremò xanthi, id eſt, flaui, fiunt. Deficiente enim alimento ad id perueniunt, vt exareſcant priùs, quàm commutent colorem in eum qui eorum naturæ proprius & vernaculus eſt. Ob id & quidam fructus defluentes, ac decidui, colore xanthi, id eſt, flaui, efficiuntur, ea cauſa quòd horum concoctio ac digeſtio primùm ab alimento deſtituatur. Eodem prætereà modo ſeſe habet frumentum, & reliqua quæ ex terra producuntur: nam hæc demum flaueſcunt. Humidum enim illis innatum non vltra nigreſcens, quoniam citò exareſcit, coloris immutationem efficit. Nigrum enim viridi confuſum, vt anteà diximus, herbaceum euadit. Quum verò nigrum ſemper exoleſcat, fiátque imbecillius, rurſus colorem paulatim tranſmutat in viride: poſtremò verò flauum efficitur. Eadem ratione ἀχράδος, id eſt raphani ſylueſtris, folia, & portulacæ, & aliorum quorundam ad maturitatem perducta, punicei coloris fiunt, præter nonnulla ex his quæ citò areſcunt, eadémque in flauum colorē abeunt.

CAPVT VI.

De pilorum, pennarum & his affinium in animalium corpore coloribus.

SEd non in his tantùm: nam & pili, & pinnæ, & coria equorum, boum, auium, & aliorum omnium animalium, modò alba, modò fuſca, modò rufa, nigra etiam aliquando, eandem ob cauſam fieri contingit. Alba quidem, quum adhuc B humidum ex maturitate proprium ac domeſticum habens colorem, arefactũ eſt. Nigra verò ex contrario, quando in ipſo ortu ſuperuacaneus color humidus, ſicvti in aliis omnib. iam antiquatus, & tempore confectus, ob humoris copiam nigreſcit. Cunctorum enim huiuſmodi & cutis & corium nigredinem accipit. Fuſca autem, & rufa, & flaua, aliiſque coloribus prædita, quotquot ad ariditatem perueniunt, priùs quàm humidum in ipſis abſolutè, & ex aſſe in nigrum colorem commutetur. In quibus autem hæc præter ordinem, & inconditè eueniunt, eorum etiam huiuſmodi colo- C res euariant. Propterea in vniuerſum videmus & coria & corpora mutuis vicibus ita ſe conſequi, vt colore reſpondeant. Nam & hominum ruforum τριχώματα λευκόπυῤῥα, hoc eſt, pili alborufi ſunt, id eſt, albo rufóque commiſti: nigrorum autem nigri: & particulatim quicquid in corpore album effloreſcit, ibidem ex natura loci omnes albi pili ſuffruticant: ſicvti in animalibus, quæ varia ſunt, eodem modo pili omnes omnéſque pinnæ coria conſequuntur: & hæc ſecundùm partem, hæc ſecundùm corpus tantùm eueniunt. Sed & ad eundem modum ſeſe habent vngulæ, chelæ, roſtra, & cornua. Nam hæc omnia in nigris nigra, in albis alba ſpectantur. Cuius rei cauſa eſt, quòd in his omni- D bus alimentum per corium in exteriorem ambitum profluit. Quòd autem hæc vera & legitima cauſa ſit, haud ſanè difficile eſt ex multis perſpicere. Siquidem puerorum omnium capita, dum parui ſunt, rufa exiſtunt ab initio: quod euenit ob paucitatem alimenti. Quod idem ex eo probatur, quòd ob eandem cauſam imbecilles rarique ſunt capilli. Quinetiam breues pueris omnib. ab initio gignuntur, procedẽte autẽ ætate nigreſcunt, tunc quum capilli rurſus colorẽ trahũt ex multitudine defluentis alimenti. Quod eodẽ modo contingit circa pubẽ & barbam, quando primùm incipiunt pubeſcere, & barbã emittere: quarũ vtraq. in ipſis exordiis citò rufeſcit ob paucitatem humiditatis, quæ & in pube exareſcit: quum autem eundem in locum copioſius alimentum demanare cœperit, E rurſus nigreſcunt. Sunt & pili, qui in corpore rufi plurimum temporis manent, ob inopiã alimenti: quoniam ſecundùm tempus, quo augentur, & hos ſimiliter contingit nigreſcere, ſicvt hoc idem euenit tam pilis pubis quàm capitis. Hoc autem ex eo liquet, quòd quæcunque longiores habent pilos, vt plurimùm ea parte quæ corpori proxima eſt, nigriores habent: qua parte autem in faſtigium exurgunt, flaueſcunt ma[illegible] males ouium, equo-

rum, & hominum. Illa enim pilorum pars ob alimenti paucitatem in eam defluentis, citò exareſcit. Eodem modo & nigrarum auium pinnæ, quæ corpori viciniores ſunt, cæteris omnibus ſunt nigriores: at quæ in ſummo, flauiores. Ad eundem modum ſe habent & quæ circa collum, & omnino quæcunque parcius habent alimentum. Quod hinc facilè patet, quòd omnia ſub perfectionis tempus, quúmque iam propè abſoluta ſunt, pilos tranſmutant, & rufa efficiuntur: quoniam alimento rurſus deficiente, celeriter ſiceſcunt: denique alba priùs fiunt, quàm humor nigreſcat, inſito in ipſis alimento iam excocto. Sed hoc maximè omnium in iumentis manifeſtum eſt: omniũ enim pili albi fiunt. Nam quum partes non poſſint ex æquo alimentum attrahere, ob caloris imbecillitatem humidum citò exareſcens fit album. Eadémque cauſa partes temporibus finitimæ omnium maximè caneſcunt: & in vniuerſum, circa loca infirma & laborantia hoc euenit. Præterea, & circa hæc loca in primis in hunc colorem fit mutatio, quum propriam naturam immutauerint. Nam & lepus iam factus eſt candidus: aliquando etiam niger viſus eſt: & ceruus, & vrſus, & cũ iſtis æquè coturnix, & perdix, & hirundo. Quando enim à primis natalibus huiuſmodi infirma gignuntur, ob inopiam alimenti intempeſtiuè ac præproperè matureſcentia, alba fiunt. Sic & pueri quidam protinus capita habent albicantia, & cilia, & ſupercilia, quod cæteris appetente ſenio contingit: idque indubitatò propter infirmitatem paucitatémque alimenti. Hoc enim illud eſt, quod canitiem inuehit. Proinde animalia alba pleraque omnia infirmiora ſunt, quàm nigra. Nam hæc antè quàm abſolutum incrementum capeſſant, propter paucitatem tenuitatémque alimenti iam matura, alba efficiuntur, eo more quo ſolent fructus, quotquot laborare & ægrotare contigerit: hi enim multum ante tempus ob imbecillitatem matureſcunt. Quæcunque autem fiunt alba, multùm à cæteris differunt: ſicvt equi, & canes. Huiuſmodi autem omnia tranſmutant eum qui ſecundùm naturam eſt, colorem in album. Quod non aliunde quàm ab inopia alimenti, prouenit. Humidum enim in huiuſmodi non vetuſteſcens, ſed abſumptum ab augmento, atrum efficitur. Plurima enim ſunt ex iis & humida, & infrugifera, ratione boni nutrimenti: ob id non commutant pilos in colorem album. Quod ex eo perſpectum eſt, quoniam nigra antè quàm caneſcant, rufa euadunt, alimento in illis deficiente, & plus nimio iam excocto: quæ demum poſtea exalbeſcunt. Sed enim nonnulli ſuſpicantur nigra omnia fieri, ea cauſa, quòd eorum alimentum à calido aduratur, ſicvti ſanguinem, & aliorum vnumquodque. qua in re falluntur. Quædam enim animalia protinus & ab ipſis vſque incunabulis nigra naſcuntur: ſicvt canes, capellæ, boues, & in vniuerſum omnia, quorum pili & coria à primis vſque initiis alimentum habent. Procedente autem ætate, minùs nigrum colorem defendunt. Quod non ſic decebat: ſiquidem omnium tales eſſe pilos in ipſo ætatis vigore par fuit tunc, quum in ipſis etiam plurimùm calor viget: atque ita omnia potiùs à principio caneſcere.

A Multo enim imbecillior ab initio omnium calor
eſt, quàm eo tempore, quo eorum pili incipiunt
inalbeſcere. Perſpicuum & hoc eſt in iis quæ al-
ba ſunt: ex iis enim quædam protinus ſunt colo-
re candidiſſimo, quæcunque ſcilicet colum plu-
rimum habent à principio alimentum, neque in-
ſitus illi humor ante tempus exareſcit, poſt pro-
greſſu deinde ætatis, ξανθὰ, id eſt, flaua, euadunt, par-
ciore ſcilicet alimento poſtmodum in iis defluen-
te. Quæ autem in ipſis quidem crepundiis flaua
fiunt, poſtquam ad ætatis ſummum vigorem per-
uenerunt, candidiſſima: ſicvt & auium colores
rurſus tranſmutantur, alimento in ipſis deficien-
te. Et id ſanè patet: omnia enim hæc circa col-
B lum etiam flaueſcunt, & omnino omnia, quæ in-
ipſis rareſcunt, alimento in ipſis deficiente. Sed
& hoc quoque planum eſt. Sicvt enim rufum in
album commutatur, & nigrum rurſus in rufum,
eodem pacto & album in flauum. Contingit au-
tem & hoc in plantis. Nonnullæ enim ex poſte-
riore concoctione iterum recurrunt in priorem.
Et hoc præcipuè in malo punica compertum eſt,
& hoc ipſum ab initio: acini enim fiunt puniceí:
item & folia, ob paucitatem concocti elementi:
poſteriùs autem rurſus in herbaceum colorem
tranſmutantur, mullo alimento defluente, quum
concoctio non poteſt eodem modo peruincere,
C poſtremò, alimento iam concocto, rurſus fit co-
lor puniceus. Vt autem in vniuerſum dicamus &
de aliorum pilis & pennis, omnia commutationes
accipiunt: hæc quidem (vt dictum eſt) alimento in
ipſis deficiente, hæc autem ex aduerſo redundan-
te, propter quod alia aliis temporibus ætatis can-
didiſſimos aut nigerrimos habent pilos. Siquidem
& coruorum pennæ poſtremo in colorem flauum
tranſmutantur, quum ſcilicet ab alimento deſti-
tuuntur. Ex pilis autem nullus neque puniceum
neque purpureum, neque praſinum, ſeu viridem,
neque omnino alium huiuſmodi colorem ha-
bent: quoniam omnes huiuſmodi colores fiunt,
admiſto ipſis Solis ſplendore. Pilis autem etiam-
D num humidis in carnis colore mutationes contin-
gunt, & ipſi nullam admiſtionem capiunt. Id au-
tem manifeſtum eſt: ex pennis enim quæ gene-
rantur à principio, nulla eo modo fit, quo pili
fiunt. Sed auium quæcunque variæ ſunt, omnes
(vt ita dicam) nigræ ſpectantur, ſicvt pauo & co-
lumba, & hirundo. Poſteriùs autem tales omnes
varietates aſſumunt, quum ipſarum concoctio
iam extra corpus fit, tum in pennis, tum in vagi-
nis. Quare euenit, ſicvt & ipſis plantis, horum
ſcilicet concoctionem extra corpus fieri. ſiquidem
& reliqua animalium, tam aquatilia quàm repti-
lia, conchylia etiam, omnifarias capiunt colo-
E rum formas, tunc quum multa in ipſis fit conco-
ctio. Et ex iis quidem, quæ dicta ſunt, poſſit quiſ-
piam colorum ſpeculationem agnoſcere.

ARISTOTELIS LIBER DE INSECABILIBVS LINEIS,

Iulio Martiano Rota interprete.

NVNQVID vllæ reperiuntur lineæ, quæ ſecari nequeunt: & vt in vniuerſum res iſta pertractetur, eſt ne in omni quantitate, ſicvt nonnulli ſtatuunt, aliquid carens partibus? An confitendum eſt lineas aliquas inſecabiles eſſe: nam, ſi vt paucum, ſic & paruum eſt aliquid in rerum natura: quod autem infinitas fere ſectiones ſuſtinet, neque paucum, neque paruum eſt, ſed potiùs & multum & magnum, quæ pauco & paruo ſunt oppoſita: ſtatim manifeſtum euadit, paucum & paruum finitas habere diuiſiones. Quòd ſi finitas diuiſiones habẽt, neceſſe eſt magnitudinem inſecabilem aliquam extare. Quare omni quantitati inſecabile quiddam inerit, modò reperiatur quippiam, quod paucum & paruum nuncupari debeat. Deinde ſi lineæ extat forma, atque idea, fatendum eſt lineam indiuiduam eſſe: nam conſtat ideam omnium, de quibus prædicatur, primam eſſe. At partes totum natura ſemper antecedunt. Quare diuidua erit ipſa linea. Et eodem modo ipſum quadratum, ipſe triangulus, & aliarum figurarum ideæ, ac denique ſuperficies ipſa, & corpus ipſum. Continget enim ideis, priùs alia quædam eſſe. Ampliùs ſi elementa ſunt corpora, & elementis nihil eſt prius, ſuntque partes toto natura priores: indiuiduum proculdubio ignis erit, & vniuerſaliter quicquid corporis alicuius eſt elementum. Quare non ſolùm in rebus quas cognoſcimus intellectu, verum etiam in his quæ ſenſu percipiuntur, quippiam erit, quod partes non habet. Præterea per Zenonis argumentationem neceſſe eſt aliquam extare magnitudinem, quæ partibus careat, ſi modò fieri nequit vt res aliqua per ſingula quæque tangenda decurrens finito in tempore tangat infinita. Nam oportet vt ad medium mobile priùs veniat: At rei quæ partibus non vacat, medium ſublime ſemper aliquod ſupereſt. Sin autem tangit infinita, finito in tempore; id quod ſuper lineam fertur, & mobile celeriùs æquali in tempore plus ſpatij tranſigit, cogitationiſque noſtræ velociſſimus eſt motus, cogitatio quoque finito tempore in ſingulis rerum motibus, tangit infinita. Quare ſi cogitationi in omni rerum progreſſu ſingula tangere, nihil aliud eſt quàm numerare; continget finito in tempore cogitationem infinita numerare: quod ſi hoc fieri nequit, indiuidua ſanè dabitur aliqua linea.

A Poſtremò & ex iis quæ tradunt Mathematicis imbuti diſciplinis, quiuis lineam aliquam inſecabilem eſſe concedet. Nam ſi, vt dicunt, illæ commenſurabiles ſunt lineæ, quæ eadem menſura dimetiri queunt: & quæcunque ſunt commenſurabiles, vt dimetiantur omnes, nihil impedit, dimitum longitudo aliqua extabit, qua menſurabuntur omnes, hanc autem neceſſe eſt indiuiduam eſſe. Nam ſi diuidua ſtatuatur, huius quoque menſuræ partes, menſuram aliam aliquam habebunt. partes enim toti commenſurabiles ſunt, ita vt partis portio, quæ dimidia fuerat, efficiatur dupla: quoniam verò hoc fieri nequit, indiuiſibilis eſſe menſura debet. Eodem modo & quæ ſemel ab ipſa menſura ſunt menſuratæ, ſicvt
B omnes ex menſura compoſitæ lineæ, ex indiuiduis componuntur. Idem etiam continget in figuris planis: nam omnes inter ſe ſunt à conſtitutis lineis procreatæ, commenſurabiles: quare ipſarum quoque menſura indiuidua erit. Cæterùm ſi quis menſuram diuidet, conſtitutam quandam & determinatam lineam, non erit amplius neque conſtituta, neque irrationalis linea, neque aliarum vlla, de quibus modò dictum eſt, velut quam ἀποτομὴν vocant ex duobus nominibus compoſitam. Verùm neque ſecundùm ſe aliquam definitam naturam habebunt, ſed collatæ ſibi ipſis & conſtitutæ, & irrationales erunt omnes. An primo quidem non oportet id quod infinitas habet
C diuiſiones, non eſſe paruum aut paucum? Nam locum, lineam, ſuperficiem, & ſummatim omne continuum, paruum dicimus, & in quibus conuenit paucum etiam, nec ob id tamen infinitis diuiſionibus ipſa carere affirmamus. Deinde ſi lineis hiſce indiuiduis, quæ ſunt in compoſito ex lineis, paruum dicitur, atque ipſis puncta inſunt infinita, fiatque diuiſio ſecundùm puncta, & in quibuſuis punctis æqualiter, poterit infinitas ſectiones ſuſcipere omnis linea, vt quæ non ſit inſecabilis. & quædam ipſarum in parua ſecari: eruntque infiniti puncti pauca: fieri verò poteſt vt omnis non indiuidua linea talibus ſoluatur diuiſionibus quibus coagmentata fuerit. Tertiò ſi ma-
D gnum ex paruis quibuſdam componitur, aut magnum nihil erit, aut quod finitas habet diuiſiones, non erit magnum. Nam totum qualecunque fuerit, magni ſectiones admittit. Eſt autem probabile, & paruum finitas & magnum infinitas habere diuiſiones, ſicque illi etiam arbitrantur. Quare manifeſtum euadit, non hac ratione paruum aut magnum quicquam dici, quia finitas aut infinitas ſectiones admittat. Quòd ſi quiſpiam propterea quod in numeris paucum definitas ſectiones habet, in lineis quoque putet finitas paruum habere, ſtolidum ſe prodit, eo quòd numerus è rebus partium expertibus procreatur, & ab initio quodam conſtituto originem ſumit. Hinc omnis numerus, modò infinitus non ſit, finitas diuiſiones
E habet, magnitudines autem tali ratione non conſiſtunt. Qui verò lineis indiuiduis ideam conſtituunt, minùs credibilia fortaſſe decernunt, quàm præſens affirmet opinio, quæ nunc in diſceptationem venit. Nam linearum ideam faciendo, modo quodam ideas tollunt, quibus demonſtrare quod inſtat, moliuntur. Hac enim ratione deſtruuntur ideæ. Rurſus quoque ſtultum eſt arbitrari elementa corporea partibus carere. nam etſi quidam ſic affirmant, tamen quantum ad præſentem quæſtionem attinet, principium petunt. Et quanto magis quod probandum eſt, aſſumere videntur, tanto plus diuiduam eſſe longitudine lineam, latitudine ſuperficiem, altitudine corpus, apparet. Zenonis autem ratio ſibi ipſa non conſonat, cum non ſic vno mo-

do velit finito in tempore rem motam tangere infinita. Atqui tempus & linea ſimili modo finita & infinita dicuntur, ac totidem vtraque diuiſiones ſuſcipiunt. Neque numerare eſt, ſingulas infiniti particulas animi cogitatione tangere, etiam ſi quis ita nos cogitatione ſingula infiniti puncta tangere concedat: quod quidem fortaſſe fieri non poteſt. Non enim in reb. cōtinuis & ſubſtractis cogitationis motus conſiſtit, ſicvt earū quæ feruntur rerum. Sed ſi quis animi cogitationem ſic etiam moueri conſentiat, non erit is motus numerus: numerare enim non niſi interpoſita quiete abſoluitur. Verùm abſurdum eſt fortaſſe quempiam præ ignauia ſuccumbere, propterea quòd non audeat oblatas argumentationes diſſoluere, atque ſic imbecillitatem ſuam fouendo, grauioribus inſuper fallaciis ſe decipere. Quod verò de commenſurabilibus lineis poſtremò dicunt, omnes vna quadam & eadem menſura oportere menſurari, falſum eſt admodum, & nequaquam Mathematicorum ſuppoſitionibus concordat. Non enim ita ſupponunt Geometræ, neque vtile ipſis illud foret, immo potiùs aduerſaretur, lineas omnes commenſurabiles eſſe, & omnium commenſurabilium linearum communem menſuram exiſtimare. Quamobrem ridiculum eſt, eos, qui dicunt ſe demonſtrare ex Geometrarum decretis, & ex quibus Mathematici docent, in contentioſam pariter atque fallacem diuertere argumentationem, præſertim tam inualidam: nam multis modis imbecillis eſt eiuſmodi ratio, & quouis modo licet euitare, ne aut inuſitata dicere, aut argui videamur. Præterea abſonum foret, ſi quis à Zenonis oratione vltra quàm par ſit, perſuaderetur, lineas indiuiduas concedere: quia ipſi reſpondere neſciat: ob rectæ verò lineæ motum in ſemicirculum diuiduas non credere: quam neceſſe eſt in rectum ita diuidere, vt infinitæ circumferentiæ, & interualla totidem interueniant. Rurſus quoque facile perſuaderi poteſt ex motu circulorum æqualium. Nam quiſquis horum moueatur, oportet per maius ſemicirculum moueri, & quæcunque alia eiuſmodi conſtituta ſunt de lineis, fieri non poſſe, vt talis vllus motus peragatur, quin priùs omnibus & ſingulis interiectis occurrat. atque hæc Mathematicorum ſcita multo magis ab omnibus conceſſa ſunt quàm iſtorum dicta. Quamuis autem ex confutatis nuper rationibus appareat, vt neque neceſſarium, neque probabile ſit lineas vllas indiuiduas extare, tamen ex iis etiam quę deinceps ſubiungam, multo magis perſpicuum euadet: & primo quidem per ea quæ Mathematici demonſtrant atque addiſcenda proponunt, quæ mutare non decet, niſi probabiliores rationes habeamus. Nam neque lineæ neque rectæ lineæ definitio cum inſecabili linea conſentit, vt quæ nec inter duo puncta extenſa ſit, nec medium vllum habeat: manifeſtum eſt igitur ex antedictis rationibus, quòd neque neceſſarium neque probabile

faciat quàm reliqua, minor erit latitudo quæ ab indiuidua prouenit. Quartò, ſi ex tribus datis rectis triangulus componitur, ex tribus quoque lineis indiuiduis componi poterit: in omni autem æquilatero perpendicularis in mediam baſim incidit. Quare & medium indiuiduæ diuidet. Quintò ſi quadratum ex quatuor inſecabilibus lineis conſiſtat, diametro protracta, & perpendiculari ducta, quadrati coſta potentia perpendicularem diametrumque dimidium æquat. Quare non erit minima, neque duplum erit ſpatium à diametro conſurgens illius; quod ab indiuiduo procreatur: nam æquali ablato reliquum erit minus indiuiduo. nam ſi æqualis diameter quadruplum deſcriberet, hæc atque huiuſmodi complura colligere quiſpiam poſſet, eo quod omnibus, vt ita dixerim, aduerſantur, quæ a Mathematicis traduntur, quorum nonnulla denuo ſubnectam. Eorum quæ partibus carent, vnus eſſe contactus poteſt, at linea duos habet: nam tota, totam & extremis vtrinque finibus tangit. Deinde hoc pacto vna linea alteri copulata non efficeret ex vtriſq; coniunctum maius, idcirco quia partibus carentia ſibi ipſis adiuncta maius non faciunt. Poſtea nihil continuum à duobus efficitur, quæ partes non habeant, propterea quòd omne continuum plures partes continet: omnis autem linea, præter indiuiduam, eſt continua; quamobrem linea non erit, quæ indiuidua fuerit. Amplius ſi quæuis linea, præter inſectilem, in partes diuidi poteſt, tum æquales tum inæquales, & non ſcindatur linea in tria fruſta, quæ non ex tribus inſecabilibus, & vniuerſaliter imparibus conſtet, diuidua fiet inſecabilis linea. Similiter autem ſi in duo diuidatur linea, quæ ex imparibus conſiſtit. Quòd ſi bifariàm quidem non omnis linea finditur, ſed quæ ſolùm ex paribus coagmentata fuerit, ſi iam in duas partes diuiſa in quæcunque diuidi poteſt, diuideretur, ſic quoque inſectilis linea diuidetur, quando ex paribus compoſita per inæqualia ſcindetur. Ruſus ſi mobile per totum ſpatium vna hora mouetur, horæ dimidio per medietatem ſpatij mouebitur, & in minori tempore per minus ſpatium, quàm ſit medietas: ergo ſiquidem ex imparibus indiuiduis ſpatium illud componitur, ſedibit inſectilium in medietates diuiſio: ſiquidem media hora, medium ſpatium, mobile pertranſit: ſimiliter enim tempus, & linea ſecabitur. Quare ſi nulla ex compoſitis lineis diuidetur in æqualia & inæqualia, neque ſicvti tempus ſcindetur, non erunt indiuiduæ lineæ. Eſt autem eiuſdem rationis, ſicvt dictum eſt ex indiuiduis omnia, vel affirmare, vel negare. Ad hæc, omnis linea modò non ſit infinita, duos fines habet, ſiquidem linea hiſce terminatur: at indiuidua linea non eſt infinita: fines igitur habebit: quare diuidua erit: finis enim aliud eſt, non illud cuius eſt finis: aut extabit aliqua linea præter iſtas, quæ neque finita ſit neque infinita. Præterea omnis linea vel eſt infinita vel fines habet: igitur inſecabilis linea non eſt infinita: fines ergo habebit atque diuidua erit: nam finis aliud eſt ab eo cuius eſt finis, vel erit aliqua linea, quæ neque finibus careat, neques fines habeat. Inſuper non erit in quauis linea punctus: non enim in indiuidua; nam ſi vnius punctus inſit, ipſa primùm linea ſola erit, & inde punctus: ſin plures inerunt, diuidua fiet: ergo ſi punctus indiuiduæ lineæ nullus ineſt, neque protſus inerit lineæ, cùm reliquæ ex indiuiduis, ſicvti dicunt, coaluerint. Poſtea, vel nihil inter duo puncta, vel linea, erit: quòd ſi linea, cùm in omnibus lineis puncta inſint, non erit inſecabilis vlla linea. Amplius non eſſet cuiuſuis lineæ quadratum: habebit enim longitudinem, & latitudinem: atque idcirco diuiſibi

uiſibile erit, cùm illa quidem aliquid, hæc autem aliquid aliud: quòd ſi quadratum diuiduum eſt, & linea vnde procreatur, diuiduum erit. Præterea finis lineæ, punctus eſt & non linea: finis enim extremum eſt: extremum verò, indiuiduum. igitur, ſi punctus eſt finis, indiuiduæ lineæ pars erit punctus: atque ita vna linea maior erit altera puncto: ſin indiuiduæ lineæ punctus ineſt, quia finis idem ſit continuatarum linearum, dabitur finis rei carentis partibus, & denium quid à linea punctus diſtabit, cùm proprium nihil habitura ſit indiuidua linea à puncto præter nomen. Adhuc etiam, vt linea, ſic & ſuperficies, & corpus erit impartibile: vno quippe indiuiduo exiſtente, cætera quoque conſequentur, idcirco quia vnum ad aliud diuiditur: at corpus indiuiduum non eſt, cùm in ſe latitudinem & altitudinem contineat. Quare nec linea poteſt eſſe indiuidua: corpus ſiquidem in ſuperficies; ſuperficies in lineas ſoluitur. Quoniam verò rationes, quib. iſti nituntur ſententiam ſuam perſuadere, debiles ſunt, & falſæ: aduerſæ autem opinionis omnes plurimum valēt ad fidem faciendam: vnicuique liquere iam arbitror quemadmodum nulla queat eſſe linea, quæ diuidi non poſſit. Ex his autem quæ ſubiicientur, manifeſtum euadit ne à punctis quidem componi lineam poſſe, quam inſecabilem affirmant: ad quod probandum illa mer pene quadrabunt argumenta, aut plurima ſaltem. Oportet enim punctum diuidi, quando linea, vel ex imparibus in æqualia ſecatur, vel ex paribus in non æqualia ſcinditur. Item lineæ partem non eſſe lineam, nec ſuperficiei ſuperficiē, & rurſus lineam puncto maiorem eſſe linea: ex quibus enim vnumquodq; componitur, his etiam quoduis aliud excedit. Atqui illud vnum eſt eorum quę nullo modo fieri queunt, & per ea quæ Mathematici docent, apertè falſum. Inſuper quoque contingit punctum eſſe illud, quod in tempore fertur, modò maior in longiori, æqualis in æquali tempore, motus fiat, exceſſúſq; temporis tempus ſit. Sed fortaſſe tempus quoque rem quandam eſſe ex inſtantibus compoſitam, ſuntque vtraque tempus & linea, ex ſuis quæque indiuiſibilib. compoſita, dicet aliquis. Atſi nunc eſt principium temporis & finis, itemque lineæ punctus: neque ſibi coniuncta ſunt principium & finis: ſed in medio ſemper aliquid habent: neque nunc neque puncta ſibi continua eſſe poterunt. Amplius ſi linea magnitudinem aliquam habet, punctorum autem iunctura magnitudinem nullam efficit, idcirco quia maiorem locum non occupant. Nam & quando linea, lineæ ſuperimponitur, eique coniungitur, nulla prouenit inde maior latitudo: ſunt autem in linea puncti, qui nec ipſi maiorem locum occupare queunt: proculdubio ſequetur, vt non poſſint longitudinem coniuncti facere. Præterea ſi res omnis, rem quamlibet aliam tangit, vel tota totam, vel pars partem, vel tota partem tangit: tanget & punctus vnus indiuiduus punctum alium indiuiduum, totus totum. At neceſſe eſt cùm totus tangit totum cum ipſo vnum fieri, nam ſi quid remanet, quod alteri non coniungatur, non tetigit totus totum: ſi nihil remanet, & ſimul ſunt hæc duo indiuidua puncta, eundem implebit locum id quod plura nunc eſt & prius vnum fuit. Duobus enim in vnum coeuntibus, quæ nullam ex ſe habeant extenſionem, idem locus ſufficit. Atque partibus carentia extenſionem non habent, quocirca nec ex indiuiduis vlla compaginabitur magnitudo: igitur neque è punctis linea, neque ex inſtantibus tempus componetur. Inſuper ſi qua ex punctis componitur linea, punctus tanget punctum: igitur ſi ex K ſigno protracta fuerit a B & g D, tanget ſe primum, & punctus, qui eſt in a K, & punctus qui eſt in K d.

A Quare & diuerſa parte tanget: nam res quæ partibus caret, tangit rem partibus carentem, tota totá. Ergo eundem locum poſſidebunt, quem K punctus obtinet, & ſeſe puncti coniungent in eodem loco: quòd ſi in eodẽ iuncti fuerint loco, ſe etiam tangent: quæ enim in eodem ſunt loco, primò ſe tangant oportet. Deinde hoc pacto recta rectam duob. punctis tanget: punctus enim in a, & punctus in K g alterũ etiam tangit punctum: quare linea ex g D plurib. tangit punctis. Eadem ratio fuerit, etiã ſi non ſe inuicẽ, ſed quouis alio modo lineã tetigerit. Quin etiã orbis circunferentia rectã lineã plurib. tanget pũctis: punctus enim cõtactus, quiq; eſt in circulo, quiq; in recta cõſiſtit, ſeſe mutuò tã-
B gunt; quòd ſi hoc fieri nõ poteſt, neq; punctus pũctum tangere valet; quòd ſi ſe tangere nequeunt, neq; linea punctis cõſtare poteſt: nam neq; punctũ tangere neceſſariũ eſt. Poſtea quonam pacto recta vlla eſt linea, & circularis: quãdo nihil differat cõtactus punctorũ in recta & circulari? Nam res quæ partib. careat, rem quæ partes nõ habeat, tota totá contangit, neque prorſus eo modo eſt tangere. Si ſunt ergo lineæ quidẽ differentes, cõtactus autem indifferentes, non fiet ex punctorũ contactu linea circularis, & recta: quare neq; è punctis conſtabit. Inſuper neceſſe eſt puncta vel ſeſe mutuò tangãt,
C vel non ſe inuicem tangant: ſi igitur id quod deinceps eſt, tangat oportet, eadem redibit ratio: ſin contingit quod deinceps eſt non tangere, non erit linea continuũ: nihil enim aliud cõtinuũ dicimus, quàm quod eſt ex ſe tangentib. compoſitũ. Quare oportebit, & hoc modo vel puncta ſeſe mutuò tangere, vel lineam continuam eſſe. Ampliùs ſi abſurdũ eſt puncto punctũ ſuperimponere, quo fiat linea, & lineæ lineã adiungere, quo fiat ſuperficies, impoſſibilia ſunt quæ ab eis dicta fuerũt: ſiue enim deinceps puncta, diuidetur linea per neutrũ ipſorum, ſed per id quod intercedit, ſiue ſe tangunt, linea erit vnius puncti ſpatiũ, hoc autem eſſe nõ poteſt. Poſtremò omnia diuiderentur, & reſoluerentur in puncta, corporiſq. pars pũctus eſſet, ſiquidẽ
D corpus è ſuperficieb. ſuperficies è lineis cõſiſtat, ſi verò illa, ex quib. primis inexiſtentib. ſingula cõſtãt, elementa ſunt, puncti corporũ elementa eſſe poterũt. Quare vniuocè corporum & linearũ elementa puncti erunt, non ſpecie diuerſa. Apparet itaq; ex dictis non eſſe lineam è punctis, neq; ab ea punctum auferri poſſe: nam ſi contingit punctum auferri, contingit & apponi: quoniam autem appoſito illud cui adiunctum eſt maius euadit quàm priùs fuerat: ſi tale ſit appoſitum, quale quod ſuſcipit, erat. Quare ex ambobus vnum totum facere licebit, & erit vna linea maior alia puncto: id quod fieri nequaquam poteſt. Verùm per ſe qui-
E dem non poteſt à linea punctus auelli, per accidens autem poteſt, eo quòd ablatum lineam ſequatur; cùm enim totum aufertur, totius & principium & finis auferatur oportet: at lineæ principium, & finis punctus erat; licet itaque partem de linea demere: quare & punctum auferre, ſed ea per accidens cenſebitur ablatio. Si verò finis tangit illud cuius eſt finis, vel ipſum vel aliquam eius partem, & punctus quatenus finis lineam tangit, ſequetur vt hæc quidem linea puncto maior alia ſit: hæc autem ex punctis nihil in medio comprehendentibus. Eadem ratio eſt, & in diuiſione. nam ſi diuiſio per punctum eſt, & diuiſio tangit aliquid tam in ſolido quàm ſuperficie.

Similiter enim & ſolidum è ſuperficiebus, & ſuperficies è linea conficitur. Non eſt autem verum dicere per punctum fieri diuiſionem, neque paruiſſimam aliquam lineam in minimum, quod inſit, diuidi: minimum quippe minus eſt etiam eorum quorum minimum dicitur: at lineæ nihil aliud quàm punctus ineſt, & linea, atque lineæ: linea verò puncto maior non eſt: nam neque ſuperficies eſt linea maior: quare punctus non erit in linea minimum. Si verò lineæ coniunctus eſt punctus, & minimum eſt quod à tribus faciebus, hoc eſt, à tribus partibus deficit, non erit punctus eorum quæ lineæ inſunt, minimum: nam & alia quædam inſunt longitudini præter puncta, & lineas. Non enim ex punctis longitudo conſiſtit. Si verò id quod eſt in loco, punctus eſt, longitudo quippe, ſuperficies & ſolidum, quædam ex iis compoſitæ res ſunt: illa ſiquidem ex quibus conſtat linea, ſunt in loco, etenim & linea eſt in loco, ac neque corpus, neque ſuperficies, neque ex his quippiam in linea ſunt, non aliquid penitus in longitudine præter puncta & lineas. Amplius ſi res, quæ maior dicitur eſſe, in loco eſt, vel longitudo, vel ſuperficies, vel corpus: eſt autem punctus in loco, nihilque longitudini prædictarum rerum inſit præter puncta, & lineas, ſic quoque non erit punctus rerum inexiſtentium minimum: præterea ſi vas aliquod, eorum quæ in domo ſunt, minimum appellatur, non domui comparatum, ſed per ſeipſum conſideratum, iſque & in aliis loquendi modus ſeruari ſolet, nihil eorum quæ ſunt in linea minimum erit ad lineam comparatum: quare puncto non conueniet minimi appellatio. Quoniam verò quod non eſt in domo, minimum eſſe non poteſt eorum quæ in domo ſunt, ita & in cæteris eſt iudicandum: contingit autem lineam ipſam per ſeipſam eſſe, non erit de puncto verum dicere, quod minimum ſit eorum quæ in linea ſunt. Poſtremo non eſt etiam punctus articulus indiuiduus, nam articuli ſemper duorum termini ſunt, punctus autem, & vnius lineæ terminus eſt. Inſuper punctus, finis; articulus, diuiſio potiùs eſt. Adhuc ſi lineam ſtatuamus articulos, ſuperficiem quoque articulos concedamus oportet, iccirco, quia proportionem inter ſe ſeruant. Præterea articulus quodammodo differentia eſt: quamobrem Empedocles in ſuis carminibus inquit:

Articuli ſemper conſtat iunctura duobus.

Punctus autem etiam inter immobilia collocatur: Poſtea verò nullus habet infinitos articulos in corpore, vel in manu, at puncta habet. Et denique lapidis articulus eſt nullus, neque ſaxum articulos vllos habet, puncta verò habet.

CAPVT I.

Argumentum huius commentarioli: Rationes aduerſariorum, qui aſtruebant eſſe lineas quaſdam inſecabiles.

CVM Parmenides ens vnum, & excepto ente reliquorum nihil eſſe, vt quæ non entia ritè appellari poſſint, diſputando aſſereret, eò videtur in hac ſententia perſtitiſſe, ne ſi ens multa concederet B exiſtere, ipſum quoque non ens, in rerum naturam induceret. Ita enim, ait, omnia, quæ ſunt, quoad eſſe dicuntur, vnum ſunt, cùm in ea ratione, qua ens dicuntur, conueniũt: multa verò eſſent, & non ens vnum, ſiquidem aliud quiddam, quàm ens, de his prædicaretur: atqui ab ente aliud diuerſumq; nihil eſt, excepto non ente. Ipſum igitur non ens exiſtere oportet, ſi præter ens aliud quiddam eſſe dicatur. Quamobrem ens cùm ratio eius ſit vna, ita de cæteris prædicabitur, vt cauſa ipſius omnia C vnum quiddam (ens ſcilicet) exiſtimentur, cùm excluſo ente nihil neq; eſſe neque cogitari poſſit. Proinde quò vacuum in rerum naturam ne induceretur, quod re vera non eſt ens, multitudinẽ ac numeroſitatem rerum inficiari maluerunt. Quò enim entia diſcernerentur, vacuum à phyſiologis, præſertim verò Pythagoricis, inducebatur antiquitus. Atque iſtius quidem hominis opinioni cùm Platonici Xenocraticique aſſenſi eſſent incogitanter admodum, his argumentis fidem dederunt, illis verò, qui ſectione indeſinenti, ac infi- D nita partitione eius quod eſt, atque vnum reputatur, multa eſſe demonſtrant, adeóq; planum facere videntur, ſimpliciter vnum non eſſe, quod ens appellatur, ſi ſecari illud, ac diuidi queat, quemadmodum Parmenides ac Zenon ſunt arbitrati, vt in Platonis Parmenide videre eſt, his, inquam, Plato, & Xenocrates contradicentes impartibiles quaſdam magnitudines confinxerũt, quibus vt eſſentiæ ratio propriè tribueretur, ita cum eſſentia impartibilis vnitas coniuncta foret, minimè verò diuiſionem, cùm eſſent ἑνάδες, admitterent. Ariſtoteles certè cùm multis in aliis libris hanc opinionem refellit, quòd ſcilicet inſecabiles nullæ ſunt magnitudines, ſed diuidi omnes ſine exceptione poſſe, vt in tertio φυσικῶν libro, cùm inquit, non difficile admodum eſſe lineas inſecabiles refutare: tum verò, atque in primis in libro, quem de generatione & corruptione, memoriæ prodidit, ex profeſſo illi opinioni contradicens, ſuam hac de re omnem opinionem expoſuit, qua ſtatuere videtur, quamlibet magnitudinẽ diuidi ad infinitum vſq; poſſe:

infinitum verò illud cuiuſmodi ſit, in Phyſicis oſtendit, cùm potentia non actu, infinitum hoc aſſerit: etenim diuiſio talis ſi finiri poſſit aliquando, eam conſiſtere aliquando ac ceſſare oportebit, nec quicquam, quod propterea diuidi poſſit, ſupereſſe. In hac quidem præſenti tractatione peculiari quadam & ſingulari diſputatione de hiſce rebus diſſerit, in primis more dialectico aduerſariorum argumenta proponens. Nam cùm ad alia vtilis dialectica ſit, tum verò aptiſſima eſt, qua diſſerens in vtramque partem, quod magis veriſimile exiſtat, indagare queat. *Suntne igitur,* inquit, *lineæ inſecabiles, aut magnitudines quæpiam? quarum ſunt quædam duplicem habentes protenſionem, vt ſuperficies: quædam tribus patent interuallis, vt corporeæ magnitudines.* Nam ſuperioribus duabus dimenſionibus tertia hæc ſpiſſitudinem addit: in ſumma magnitudo quæritur, an ſit aliqua inſecabilis, quemadmodum opinantur quidam.
Hac propoſita quæſtione primò argumenta in medium affert, quibus inſecabiles quantitates tueri quidam conantur, quorum illud primum eſt. Similiter in rebus vt paucitas cum paruitate, ita multitudo cum granditate deprehenditur: quapropter ſi in paruo ſectiones infinitæ (quemadmodum Ariſtotel. inquit) admittuntur, futurum eſt vt res ea pauca paruáque dici nequeat, ſed potiùs multa magnáque appelletur. Quomodo enim paucum illud dici queat, cùm infinitis partibus diſcerptum diſſectúmque ſit? Aut qui parua res erit, quæ infinitas ſectiones ſuſcipere poſſit? Quocirca pauca paruáque, aut nulla erunt, ſed magna omnia, & multa, aut quatuor hæc erunt eadem: aut ſi verum eſſe neutrum exiſtimandum ſit, magnitudines impartibiles eſſe neceſſe fuerit, quæ appellationem hanc ſortiantur, paruitatis ſcilicet paucitatiſque, vt quæ in exiliora ſe ipſis diuelli ampliùs nequeant, & in ſe ipſis plures diuiſiones admittere. Dicunt etiam aliter, quòd ſi infinitas ſectiones magnum pariter & paruum pati ſint idonea, nec magnum plures, pauciores verò paruum ac minores partes obtinebit, quid differre magnum & paruum inter ſe dicemus? Neceſſe igitur impertem magnitudinem exiſtere, cuius reſpectu magnum plures habeat eiuſmodi, paruum verò pauciores poſſideat, nec multitudine æquales cum his quæ in magno includuntur: Et quidem illud ab abſurdo ductum eſt argumentum. Attamen quòd ſi ideæ quædam ſunt, quemadmodum is, qui hæc aſſerere conatur, ſentit, & non hominis aut bouis ſolum, ſed lineæ etiam ac ſuperficiei, ac corporis erunt ideæ, neceſſe eſt, cùm lineæ quædam ſit idea, eam priorem reliquis numero differentibus lineis exiſtere, quæ nomen ac definitionem vniuocam obtinent, pro eo vt iſti etiam qui ideas aſtruunt, non inficiantur. At enim partes toto priores exiſtimantur; quocirca & hæc linea idea ſecabilis reputari debet, & ſi quidem non in partes infinitas, in numero certè finitas diuidi neceſſe erit; quod nec iſti negare in animum inducent. Priores igitur huiuſce lineæ partes fuerint, quæ idea ſtatuitur, quàm ſit ipſa linea, cuius partes eſſe dicuntur. Enimvero diuidi eam poſſe cùm ſit linea, omnes conſentiunt philoſophi, cùm quantitas omnis ſit ſecabilis. Erunt igitur huius lineæ partes priores, quàm ipſa tota ſit: at prima hæc linea, & non ex aliis enata, cùm idea ſit, dicitur. Mirari verò poſſet fortaſſe quiſpiam quid rationi huic authoritatis ex eo accedat, ſi primam lineam, quæ idea dicitur reliquarum, in partes non infinitas ſed finitas diuidi poſſe contendunt. An quòd conuenientiùs multóque aptiùs hoc dici videtur, ſi in partes finitas quantitatem ſecari concedant?

A Protinus enim ex his partibus finitis magis appoſiti continuam lineam architectari videbuntur. Nam is qui in partes infinitas lineam diuidi poſſe adſtipulabitur, eadem ratione ex infinitis etiam componi eandem affirmabit. Principia autem finita rerum omnium potiùs videntur conſtituenda, cùm infinitorum neque ſcientia ſit vlla, neque apta coagmentatio. Aut dicendum fortaſſe hoc modo eſt, hæc Ariſtotelis verba aduerſus ideas inſtituta, quibus eas generatim refelleret, vt ſi quantitatum ideæ ſint, eas inſtar linearum diuidi poſſe, ita quæ ex his coaleſcunt figuræ, ſcilicet τὸ αὐτοτρίγωνον & αὐτοτετράγωνον, nata ἐκ τῆς αὐτογραμμῆς, & omnino fore vt ſuperficies quælibet, corpuſque quodcunque ſecari poſſe videatur. Plato autem inſecabiles & ἀπαθεῖς ponit ideas. B Licet autem aliter etiam reſpondere: Platonicos, cùm ideas harum rerum ſtatuunt, eos voluiſſe eo ipſo quod nominarent, ideas non ſecabiles, ſed indiuiduas quantitates quaſdam conſtituere, vt τῆς αὐτογραμμῆς poſita idea, neceſſe illi non eſſet & hanc admittere, quòd diuidi apta eſſet, eóque facto immobilitas huius, & τὸ ἀπαθὲς, id eſt, patiendi carentia, tolleretur, quemadmodum de ideis omnibus ſentiunt: quóque magis primam hanc lineam inſecabilem repræſentarent, hoc argumento vſos arbitrandum, &, ſi hoc modo alterum argumentum intelligatur, non C omnino peſſimum videbitur. Tertium eſt, ſi corpora quædam ſunt elementa: elementis verò prius nihil, partes autem toto priores, inſecabilia ſanè erunt elementa, vt ignis, & reliqua, propterea ne priùs aliquid ipſis elementis ſtatuatur: nam ſi diuidi poſſent, partes priores elementorum quàm ipſa tota elementa, videri poſſent. Ex quo ſequitur illud, vt non modò res intelligibiles, quemadmodum Deus, & intelligentia, ſint indiuiduæ ſubſtantiæ, ſed in rebus etiam corporeis & ſenſibilibus quiddam ſit, quod diuidi nequeat, vt elementum, vt αὐτοτρίγωνον & αὐτοτετράγωνον. Et quorſum hæc, dicat fortaſſe aliquis, quid ad præſens pertinebunt, quod iſti probare moliuntur, magnitudines non infinita ſed finita ſectione diduci poſſe? D Quare dicatur illud, & cuius gratia hoc argumento vtantur, mox planum faciat. Iſti quidem non modò ideam indiuiduam inſecabilémque poſuerunt, ſed elementa quoque vt ignem, & reliqua, vel potiùs τὸ αὐτοτρίγωνον & αὐτοτετράγωνον, & ex eo conuincere voluêre, nō modò nō omne corpus infinita partitione diſſecari, ſed ſimpliciter quædā corpora inſecabilia. Elementa enim cùm ſint corpora, non diuidi poſſe, quò non primis his corporibus priora conſtituantur quædam, ſcilicet partes toto priores: ſyllogiſmus autem demonſtratiuus videtur. Principiorum non ſunt principia, vt partes totius: elementa ſunt principia: quare eorum alia non erunt principia, vt partes totius: quare in partes non diuidi poterunt vllas. Maior per hypotheſin ita ſumi queat cum disiunctione: Hæc E corpora diuidi poſſunt: aut non diuidi: ſi diuidi poſſunt, ergo partes toto priores, & ita primis erit prius aliquid: elementa autem prima ſunt: diuidi igitur in partes non poſſunt, inſecabilia igitur. Syllogiſmus eſt in tertio modo hypotheticῶν, qui ſublato altero, ſtatuit alterum. Quartum, Zenonis eſt, cùm inquit, fieri non poſſe vt tempore finito infinita quiſpiam attingat cùm mouetur: vt hora vna ſi quis ſtadium tranſeat: quòd ſi ſtadium ſecari in partes infinitas poſſit, attinget: qui ſtadium pertranſit tempore finito, puncta infinita. Aliter quoque hanc diuiſionem infinitam deſtruere conatur: Prius, inquit, neceſſe eſt, quàm totum tranſeas ſpatium, dimidium perambulare. Prius verò quàm

hoc dimidium abſoluas, huius rurſus dimidium permeabis antea, & iterum huius, ita vt diuiſio hæc in dimidia nunquam deſinat. Proinde cùm infinita pertranſeat, tempore finito, quod ſuper lineam mouetur, & celeriùs tempore æquali plus ſpatij conficiat. Pernicius enim quod mouetur (vt in Phyſicis expoſitum eſt) æquali tempore maius interuallum, minori tempore æquale, & interdum maius abſoluit: motus animi, qui velociſſimus eſt, quamlibet diuiſionem percipiēs numerabit. Nam ſi hoc modo moueri dici ſolet, futurum me hercle eſt, vt finito tempore infinita enumeret. At ſi impoſſibile hoc ſit, erit profectò linea inſecabilis quædam. Aliud argumentum à mathematicis ductum eſt. Etenim ſi detur ſymmetras, id eſt, commenſurabiles eſſe lineas, neceſſe fuerit inſecabilem quandam lineam exiſtere. Symmetræ enim lineæ dicuntur, quæ linea eadem menſurantur. Quæcunque igitur ſymmetræ, hæ menſuram talem capiunt omnes. Erit itaque longitudo quæpiam, qua menſurabuntur omnes, quam inſecabilem eſſe neceſſe eſt: ſiquidem ea ſecari poſſit, partes hæ menſuram admittent reſpectu totius. Nam partes ſymmetræ ſunt toti: habebunt igitur partes & totum menſuram communem ex definitione ſymmetri, & rurſus hæc ipſa menſura diuidetur, & ſimili ratione alia veſtigabitur menſura, & huius iterum alia: quæ progreſſio nunquam ceſſatura eſt. Quo fiet vt non vna menſura omnium ſymmetrarum linearum dari queat. Erunt enim hoc modo infinitæ menſuræ, ſed ſymmetras omnes habere vnam menſuram conſtat. Stabitur igitur in vna aliqua prima, quæ inſecabilis erit, & cuius multiplicatione omnes ſymmetræ compoſitæ erunt. Idem quoque, inquiunt, accidit in ſuperficiebus, non modò in lineis, ex quibus deſcribuntur figuræ. Omnes figuræ etenim huiuſcemodi ex rationalibus vt vocant, lineis progenerantur. Sunt autem rationales, ſiue, vt Græci vocant, ῥηταὶ, ad quas rectè ſi comparentur, innumerabiles, vel ſymmetræ, vel aſymmetræ nominantur, ad ſe ipſas: viciſſim vero vel ſymmetræ ſunt, vel non ſunt, vel potentia ſolùm ſymmetræ. Omnes autem figuræ ab eiuſmodi lineis productæ, ſymmetræ exiſtunt: quam ob cauſam & hæ communi quadam ſuperficie menſurabuntur, & ſimilis ratio in his erit, quæ in lineis ponitur eſſe, & eodem modo menſura indiuidua, vt non ſolùm oporteat lineam inſecabilem, ſed ſuperficiem quoque eiuſmodi exiſtere. Quòd verò omnia non omnibus ſymmetra ſint, ea diuiſio oſtendit, quæ eſt in binomiis: vt in 10. Euclidis, pro 42. oſtenditur dilucidè, quo in loco inquit geometra, binomium vno duntaxat puncto in nomina diuidi: quæ quomodo intelligi debeant, mox explicabimus. Inquiunt autem, ſi quæ menſura ſecundùm certam lineam & definitam diuiſa ſit, neque ῥητὴν, neque ἄλογον fore, quemadmodum ſit apotome ex binomiis ſumpta. Secundùm ſe ipſas enim nullam habituras eiuſmodi naturam: ad alias enim comparatas fore & dici conſueuiſſe ῥηταί, & ἄλογοι.

CAPVT II.

Explicat mathematicum theorema, cuius vi efficere nitebantur aduerſarij lineas eſſe inſecabiles.

IN primis verò declarandum hoc loco eſt, quid ῥητόν, quid ἄλογον, quid σύμμετρον, quæve ſymm. deinde argumenti vim demonſtrabimus. Symmetræ quantitates dicuntur, quæ quantitate eadem menſurantur, ſiue quæ proportionem obtinent inter ſe collatæ, ſicuti numerus ad numerum, vt 16. ad 24 communis enim menſura quaternarius eſt. Aſymmetræ verò nominantur, quarum nulla communis menſura conſtat, & in numeris quidem ἀσύμμετρον nullo modo ſecundùm latitudinem, quemadmodum in ſuperficiebus deprehenditur. Nam tametſi nullus eos numerus communis menſuret, vnitas tamen aliquoties repetita vtroſque menſurabit: quo fit vt eiuſmodi numeri cum reliquis omnibus reſpectu vnitatis dici queant σύμμετροι. Primi autem Pythagorici in magnitudine rationem, & modum τοῦ ἀσυμμέτρου repererunt, ob diuiſionem, quæ in his ad infinitum vſque pergit. Lineæ verò rectæ ſymmetræ dicuntur longitudine ſimul & potentia: vel potentia ſolùm, non autem longitudine. Siquidem longitudine commenſurari queant, potentia quoque ſymmetras eſſe neceſſe eſt: viciſſim autem & è regione non oportet. Res autem meliùs iſthoc exemplo liquebit. Eſto linea ſex vnitatibus deſignata, altera, quatuor, erunt ſanè duæ illæ ſymmetræ ſecundùm longitudinem. Metitur enim menſura communis, binarius ſcilicet numerus, vel linea, quæ duas vnitates in ſe continent. Illæ etiam lineæ efficere magnitudines ac ſuperficies poſſunt, ac potentia in ſe ipſis ſuperficies commenſurabiles includunt. Senarius enim in ſe reductus efficit xxxvi. quaternarius verò in ſe ipſum xvi. procreat. Atqui xxxvi. & xvi. ſymmetra eſſe conſtat, adeóque quaternario menſurari. Quæ verò potentia commenſurantur, non protinus longitudine etiam commenſurabiles exiſtunt, quam rationem diameter & coſta eiuſdem quadrati dilucidè oſtendunt. Eſto igitur ſecundùm nouenarium deſcriptum quadratum, quod ſanè diametrum obtinebit, vt quadratum ex ea deſcriptum duplam habeat proportionem ad quadratum, cuius eſt diameter, ſiue ad lateris quadratum: quocirca quadrata quidem ſymmetra habebuntur. Nam duplum ad dimidium duplum eſſe nemo inficiabitur. Lineas verò ipſas, latus ſcilicet ad diametrum, incommenſurabiles longitudine eſſe neceſſe fuerit, quanquam poteſtate ſint ſymmetræ. Poſſunt enim hæ lineæ in ſe ipſas ductæ ſymmetra quadrata producere, quorum vnum ad alterum ſe proportione dupla habeat. Si verò quiſpiam contentioſiùs aſſerens, dicat eas lineas non potentia duntaxat ſed longitudine etiam ſymmetras, is abſurditatem hanc vitare non quibit, quin imparem numerum, ix. ſcilicet æqualem ſtatuat pari, viij. ſcilicet. Nam nemo neſcius eſt, partem dimidiatam xvi. eſſe viij. Porrò ex latere in ſe ducto, vt antea diximus, quadratum alterum ſubduplum maioris creabatur. Minus itaque quadratum hoc dimidium maioris quadrati ſortietur, viij. ſcilicet: minus verò quadratum nouenario cenſebatur numero. viij. igitur, & ix. pro eodem, & æquales haberi debent: quod magna abſurditate laborare cernis. Quòd ſi diametri quadratum à coſta, quæ diametro commenſurabilis ſit, generari dicatur,

vt ſi latus ſit ternarius, diametros autem quaternarius: hoc etenim modo lineæ commenſurabuntur etiam longitudine: efficietur quod à diametro producitur tetragonum ſedecim: erit me hercle is numerus & duplus ad octo, & rurſus ad nouem duplus. Nam quadratum lateris nouenarius eſt, quo duplo maior ſuperficies quadrati ex diametro producta geometricis demonſtrationibus oſtenditur: rurſúſque fit vt par numerus æqualis impari neceſſariò ſtatuatur, quod vt abſurdum, ita impoſſibile eſſe videtur. Porrò autem propoſita vna quapiam linea, qualiſcunq; ea ſit, ad quam reliquæ ſi comparentur, vel ſymmetræ inueniantur longitudine, & potentia, aut potentia ſolùm, vel aſymmetræ: eiuſmodi linea à Geometricis ῥητὴ appelletur, quaſi ſignum propoſitum quoddam dicas, & confeſſum. Nam quæ confeſſa & definita ſunt, ῥητὰ vocare ſolemus, vt cùm dicimus ἐπὶ ῥηταῖς συμφωνίαις, id eſt, conſtitutis & deſcriptis concentibus. Illud tamen nomen ceu ſuum quoddam vſurpant Geometræ. Quæcunque igitur propoſita linea fuerit, hæc ῥητὴ dici conſueuit: & quæ illi ſymmetræ exiſtunt, ſiue longitudine, ſiue potentia, ſiue vtroque modo, ῥηταὶ appellantur. Quæ verò ad eam ſunt aſymmetræ, ἄλογοι, inquit Geometres, vocentur, & quod à propoſita rationali deſcribitur, quadratum rationale, vel, vt Græci, ῥητὸν: quæ verò illi quadrato commenſurantur alia quadrata reſpectu eiuſdem ῥητὰ dici ſolent: aſymmetra verò illi ἄλογα nominant. Symmetron igitur, & aſymmetron, in magnitudine natura exiſtunt, ῥητὸν verò, & ἄλογον poſitione, vt exempli gratia, propoſitæ cuiuſdam lineæ hanc ſtatuamus eſſe ῥητὴν, vt ſymmetron: illam verò, ἄλογον, vt aſymmetron: & rurſus hanc ῥητὴν reſpectu alterius ἄλογον eſſe, & ἄλογον reſpectu alterius ῥητὴν pronuntiamus. Inquit autem Geometres, linea ex duobus nominibus compoſita, ſiue ex duabus rationalibus, ſiue confeſſis, ſecundùm vnicum tantummodo punctum diuidi poteſt in ſua nomina. Eiuſmodi itaque ῥηταὶ potentia tantùm ſunt ſymmetræ, cuiuſmodi lineæ communẽ menſuram, qua vtræque menſurentur, non habent, cùm tantùm hoc aſſequantur, quæ longitudine quoque ſymmetræ exiſtunt, non ſolùm potentia. Quocirca non quælibet cuilibet commenſuratur, ſed hæc quidem oblatæ cuipiam & longitudine & potentia ſymmetros cernitur, alteri fortaſſe potentia ſolùm ſymmetros exiſtit, vt in ſectionibus binomiorum accidere conſueuit, & comparatione lateris ad diametrum. Eiuſmodi enim lineæ cùm longitudine ſint aſymmetræ, quadrata tamen earum ſymmetra eſſe conſtat, quas lineas Euclides ῥητὰς appellat. Quædam verò ad quaſdam collatæ, neque longitudine, neque potentia ſymmetræ ſunt, quas vocat ἀλόγους. Cùm itaque ex duobus nominibus compoſita linea vno tantum ſigno, aut puncto diuidi queat, ita vt ambæ ῥηταὶ dici poſſint, & potentia ſymmetræ: quolibet autem puncto alio ſecari nequeat, vt ῥηταὶ partes illius lineæ dicantur, ſequi videtur, binomium eiuſmodi ex inſecabilibus compoſitum, eiúſque vnam duntaxat diuiſionem exiſtere, qua lineæ efficiuntur duæ menſuræ eorum quadratorum quæ ex ipſis producuntur, quæ ipſa quoque ſymmetra exiſtunt. quorum menſuræ etiam ſunt inſecabiles, vt modò oſtendimus. Etenim ſi diuidatur menſura ſecundùm lineam certã & definitam,

A οὔτε ῥητὴ ἐκείνη, οὔτε ἄλογος ἔσται καθ' αὑτήν. ἐπεὶ δὲ τινὰ γὰρ καθ' αὑτὰς ἕξουσι φύσιν, ἀλλὰ καὶ ῥηταὶ καὶ ἄλογοι πρὸς ἄλλας λέγονται. συνάγουσι τοίνυν ἐκεῖνοι ἐκ τούτων οὕτω λέγοντες, ὡς ἐπεὶ σύγκειται μὲν γραμμὴ ἐκ δύο ὀνομάτων, καὶ καθ' ἓν μόνον σημεῖον τέμνεται, εἰς τὸ ποιῆσαι ῥητὰς καὶ δυνάμει συμμέτρους, κατ' ἄλλο δὲ οὔ, ἄρα ἐξ ἀμερῶν ἡ γραμμὴ συνετέθη. ἔστι δὲ ὁ λόγος σοφισματώδης. οὐ γὰρ εἰ οὐ δύναται γραμμὴ εἰς λόγους τινὰς διαιρεῖσθαι, ἤδη καὶ ἁπλῶς ἀμερὴς καὶ ἄτομος.

ea neque ῥητὴ neque ἄλογος erit, ſi ipſam per ſe contempleris. Dicuntur enim menſuræ ac lineæ hoc modo, nominationéſque tales obtinent reſpectu aliarum. Concludunt verò ex his, atque inferunt ita, cùm linea compoſita ex duobus nominibus in vno ſolùm puncto diuidi queat, quo lineæ efficiantur ῥηταὶ, & potentia commenſurabiles, alio verò puncto nullo diuidi poſſit, ſequitur binomium ex impertibus compoſitum ſit lineis. Argumentum hoc planè ſophiſticum eſt. Non enim ſi linea in rationes aliquas, aut proportiones, diuidi apta non ſit, propterea ſimpliciter etiam indiuidua reputari debet, aut inſecabilem eſſe neceſſe eſt omni ex parte.

CAPVT III.

Solutio primi aduerſariorum argumenti.

HÆc ſunt quæ philoſophus de aduerſariorum ſentétia expoſuit, cui contradicere, & quantum fieri poteſt, eadem refutare argumenta nititur. Primum omnium, inquit, id, quod infinitas ſectiones admittit, non eo modo magnum paruúmque dici debere, quo illi putant. Dicimus verò, & pronunciamus, locum & magnitudinem, & quæcunque de genere continuorum ſunt, parua: in nonnullis etiam paucitatis nomen C vſurpamus, vt his, quibus hoc nomen propriò quadret, quando ſcilicet determinatam quantitatem continuam oſtendere lubet, vt in tempore & paruum & paucum temporis dicere conſueuimus, vt paucum tempus duas horas, aut tres arbitrantes, non verò, inquit, excludimur propter paruitatem à diuiſione continui. Potentia enim, qua diuidi quantitas quælibet continuò poteſt, etiam illi paruo inerit. Præterea, ſi compoſitæ lineæ, quatenus lineæ exiſtunt, in puncto diuidi poſſe dicantur, quanquam paruum eſſe prædicetur de inſecabilibus, quod ſtatim obiiciunt, nihilominus puncta tamen huic infinita inſunt, potentia: quod neceſſe eſt, vt ipſi quoque fatean- D tur, cùm lineæ omni puncta ineſſe concedunt. Hæc verò atomos linea, ſit linea: qua igitur ratione linea exiſtit, ea non minùs habebit puncta potentia infinita, quàm quælibet aliarum, quæ compoſitæ dicuntur. Quòd ſi punctis prædita ſit, ſecundùm quamlibet etiam proportionem eam diuidere licet, quemadmodum quælibet non inſecabilis diuidi poteſt. Ad hæc, conſtat magnum ex paruis quibuſdam componi: vt autem ex his quibuſdam videtur, atoma & impertia parua nominari debent: vel vt alterius huius ſectæ hominibus arridet, paruum dicitur, quod ſectiones ſubit definitas. At quæſo ab illis, quid tandem magnum erit, ſi magnum aliquod in pauca quædam inſecabilia diuidi accidat, totũ autem quodlibet magni inſtar diuiditur, qualecunque tan- E dem totum iſtud appelletur? Ad partes enim ſuas comparatum magnum dicetur. Melius autem dici videtur magnum eſſe, quod infinitarum ſectionum ſit capax: paruum verò, quod finita diuiſione conſumatur: Infinita autem eiuſmodi impertia inſecabilia erunt parua: aliquando etiam non protinus in hæc atoma parua, ſed parua, quæ diuidi rurſus poterunt numero quidem illa finita, diſſecabitur: quarum partium quælibet pro natura eorum quæ parua dicuntur, rurſus ſecabitur in partes finitas. Nam paruum definitum ita eſt, quod ſecaretur in partes finitas.

Rurſus verò partes huius parui in alias, rurſus hæ A in alias. Neceſſe enim illud eſt: ſiquidem ſi in minima infinita magnum totum ſecari neceſſe ſit, parua autem per hypotheſin ſemper diuidentur, quoniam definita ſunt mediante diuiſione, & hoc modo etiam neceſſe fuerit diuiſionem infinitam non deſinere. Manifeſtum igitur eam rationem parui magnique in eo non conſtare, quòd paruum definitas obtineat partes, magnum verò indeſinentes ſubeat diuiſiones, ita vt prope illi, qui hoc pacto definiunt, minimum illud & inſecabile abiicere repudiaréque videantur, cùm ne paruum quidem hoc auſint appellare. Siquidem, quemadmodum oſtendimus, paruum omne ſecabile exiſtit (paruo enim minus quiddam eſſe ſemper poterit,) B etiam ſi paruum finitis ſectionibus diuidi concedatur, nihilo minus paruo ſi minus ſemper capiatur, diuiſio nunquam ceſſabit. At verò ſi quis propterea quod in numeris, quod paucum dicitur, finitam diuiſionem obtineat, eo modo definiendam quoque in lineis paruitatem exiſtimet, perridiculè is arbitrabitur. In numeris enim ex inſecabilibus vnitatibus coagmentatio fit, atque in his principium quoddam eſt, & paucitas: definita verò ſuper ſtadio, definito tempore quippiam, ſuper infinitis, infinitáque attingens res vt moueatur neceſſe fuerit: & præterea C ſi quod celeriùs mouetur tempore æquali maius ſpatium conficit quàm tardius, motio verò animi celerrima perniciosiſſimáque eſt, quæ aliud tamen nihil ſit, quàm numeratio: numerabit igitur tempore finito, infinita. Zenon id quod potentia eſt, in id quod actu dicitur, tranſmutans, abſurda hæc concluſit. Hoc ſophiſma Philoſophus ita diſſoluit, inquiens: Non finito tempore, infinitas partes ſtadij, id quod ſuper eo fertur, contingit, ſed fertur quoque tempore infinito. Nam quo pacto ſtadium, eodem tempus quoque infinitum dicitur, atque finitum: & quemadmodum tempus finitum eſt ob extrema D quibus clauditur, ita longitudo quoque ſtadij: & quemadmodum tempus diuiſionis gratia infinitum appellari conſueuit, ita magnitudo etiam infinita dicitur ob diuiſionem. Zeno ita paralogiſmo vſus, aliter finitatem têmporis aliter ſtadij accepiſſe videtur. Tempus enim quod eſt ab ortu Solis vſque ad occaſum, cùm quemadmodum longitudo, ſecabile ſit, in partes infinitas, finitum ſumit eſſe propter terminos, non verò ad modum ſimilem ſtadium quoque extremis finitum conſtituitur. Proinde etiam inquit philoſophus, numerare non eſt ita ſingulas percurrere partes magnitudinis percenſendo, ſi fortè quis putet animum quodlibet infinitarum partium attingere: qui enim poſſet fieri vt tantillo tempore actu infinita attingeret? Motio enim animi non ita continua eſt, neque in ſubiecto aliquo continuo, quemadmodum quod loco cietur: & tametſi concedatur animum moueri modo quodam, tamen motus is numeratio non eſſet, cùm ſit enumeratio non continua, ſed quiete etiam quadam intercedente progrediatur. Sed admodum ridiculum eſt, cùm rationem ſoluere quampiam non poſſis, ſe imbecillitati ingenij mancipare, & infirmitate animorum incitatos, in grauiores errores immergi. Quod verò dicitur de ſymmetris lineis: ternarium enim, niſi quis dualitatem fortè dixerit, vel vnitatem, non appellamus numeros, ſed principia numerorum, hanc imparium, illam verò parium. Numerus etiam quilibet finitas habet diuiſiones, in magnitudine verò res non ita habet. Nam eam partiri in partes infinitas poſſumus, quemadmodum numerum infinita accumulatione augere, vnde in numeris paucitas eſt definita, multitudo infinita, in magnitudine vaſtitas determinata. Nam cuiuſque rei certa & definita magnitudo eſt, neque maius corpus cælo eſſe poſſit, paruitas autem indefinita. Et hæc quidem philoſophi ſunt reſponſa aduerſus primum epicherema.

CAPVT IV.

Solutio ſecundi argumenti.

Alterum argumentum fuit, quod ſumebatur ratione idearum. Eas enim cùm magnitudines quaſdam eſſe dicunt, indiuiduas faciunt, quò principiis iſtis, & primis, prius nihil ſtatueretur, partes harum ſcilicet. Inquit igitur, eos qui inter ideas collocent inſecabiles lineas, exiliorem non minùs aſtruere inaniorémque ſententiam afferre propoſita, quam nos refellere conamur: nam eo ipſo, quo confirmare propoſitum nituntur, ea demoliri ipſa, & tollere è medio videntur. Nam ratione hac conſiſtere ideæ non poſſunt. Vocat autem ἔλαττον ἀξίωμα Ariſtoteles, quod incredibilius alicui videatur: putatur enim verius inſecabiles quaſdam magnitudines, quàm ideas eſſe. Velle igitur in credibiliore ſententia, quod veri ſimilius eſt aſtruere, perquam abſurdum videtur, & eo quidem magis, cùm per ea quæ aliquo modo probabilia exiſtunt, id quod impendio incredibile videatur, refellere nos exiſtimemus. Certè his quoque conceſſis, ideas tolli neceſſe eſt, quoniam quidem cùm ideæ magnitudines quædam ſint, diuidi poſſe neceſſarium fuerit eaſdem. Quam ob cauſam neque immobiles erunt, neque ἀπαθεῖς, quemadmodum idearum authores ſtatuunt.

CAPVT V.

Solutio tertij argumenti.

Contra argumentum tertium inſtat philoſophus, quod ita habet: Elementa magnitudines quaſdam eſſe: eas verò, ſi diſſecari poſſint, tum principiorum fore principia alia, nempe partes elementorum, totis elementis: atque horum opinionem hoc modo refutat Ariſtoteles, inquiens leuiculum eſſe corporeorum elementorum inſecabilia quædam ſtatuere. Tametſi verò nonnulli hoc modo declarare videantur moliri conarique, id tamen quod à principio eſt propoſitum, non probare, ſed petere videntur. Multo enim magis, quòd id petere videntur quod probandum eſſet, videntur propterea confirmare magnitudinem quamlibet, ac corpus ſecabile exiſtere vaſtitatis ratione, diſtentioniſque reſpectu. Quomodo autem quod à principio eſt, petere videntur? Quoniam illo quæſito propoſito, an corpus quodlibet ſecari queat, an verò quoddam ſit inſecabile, iſti homines, quaſi confeſſum ſit, confeſtim ad elementa confugiunt, dicentes, Ecce tibi elementa ſunt corpora, & ea indiuidua, quare & aliæ quædam magnitudines eſſe poſſint. Quæ cùm ita defendunt, nihil conſecuti videntur aliud eſſe quàm vt ea corpora, quæ ipſi vocant atoma, ſuo ipſorum argumento ſecabilia demonſtrent, cùm ad probationem ea aſſumant, quæ ſine controuerſia diuidua oſtendi poſſint ab iſtis. quibus corporibus ſecabilibus demonſtratis, eadem ratio in reliquis etiam haberi videatur infinita ſectionis in magnitudine. Nullo autem negotio inſecabilitas elementorum refellit, nec ratione, ſed ſenſu duntaxat fides quærẽda. Senſum enim deſerere, & eo relicto rationem quærere, vt abſurdum, ita perquam ridiculum apparet. Qua peruerſitate pleriq; capti, & viri, & eius, quod deceret, nullam rationem perceperunt: vt Parme-

vt Parmenides quoque, qui ens vnum aſſerebat, & Zenon, qui motum negabat: & complures alij ſunt hallucinati.

ὡς καὶ Παρμενίδης ὁ λέγων ἓν τὸ ὄν. καὶ Ζήνων ὅτι οὐκ ἔστι κίνησις· καὶ ἄλλοι πλεῖστοι.

CAPVT VI.

Solutio reliquorum argumentorum ſuprà expoſitorum.

QVartum epicherema Zenonis eſt, quo ipſe vſus eſt, motum reſpiciens. Si, inquit, diuidi ſtadium in partes infinitas queat, moueátque eas communi quadam menſura, vniuerſas dimetiri nos poſſe, admodum ſophiſticum videtur, nec hypotheſes, quæ in geometria ſtatuuntur, illud mehercle admittunt: neque enimvero ſupponunt ad hunc modum, neque commodum etiam eſt vt illud concedant. Adhæc contraria videntur, omnem lineam ſymmetram fieri, deinde ſtatuere quarumlibet non fieri, ſed eſſe menſurabilium linearum menſuram. Quocirca ridicula admodum ſunt, quæ ſentiunt, & quibus demonſtrationes conficere ſe putant. Nam his neque litigioſam neque ſophiſticam rationem effugiunt. Etenim propter infirmitatem probationum minimè poteſt oratio illorum hominum, vel abſurda, quæ contrà proferuntur, vel redargutiones contradictionéſque euitare. Mathematici ſanè linearum, quæ commenſurantur, communem ſtatuunt eſſe menſuram, ſed eam non indiuiduam concedunt, ſed eiuſmodi quampiam, quæ & ipſa poſſit alteri cuipiam commenſurabilis exiſtere, accepta alia communi quadam ambarum menſura. Etenim nouem cum triginta ſex menſuret, vnúmque & octoginta, priorem quidem ſecundùm quaternarium, alterum ſecundùm nouenarium, nihil impedit quominus ix. & cum xxi. commenſuretur, cùm ternarius vtrorumque communis exiſtat menſura, illius quidem ſecundùm ternarium, huius verò ſecundùm ſeptenarium. Linea verò quælibet ad quaſdam commenſurabilis, ad alias verò quaſdam aſymmetros reputatur; quapropter non verè dicitur, quaſlibet quibuſlibet commenſurabiles eſſe, aut omnes menſura communi inter ſe comparari, cùm hæ ad hunc modum ſymmetræ, aliæ ſint ad modum alium commenſurabiles. Ex his itaque conſtat, has rationes valere nihil, nec concludi ex his indiuiduas eſſe lineas.

Λύσις τῶν λοιπῶν ἐπιχειρημάτων.

Τέταρτον ἐπιχείρημα ἦν ἐκείνοις ἐπὶ τοῦ εἰς ἄπειρα ἀδιαίρετα τῶν μεγεθῶν, τὸ τοῦ Ζήνωνος, ὅπερ ἐκεῖνος ἰδίως ἐπὶ τῆς κινήσεως ἔλεγεν. εἰ γὰρ διαιρετὸν ἐπ᾽ ἄπειρον τὸ στάδιον, κινεῖται δέ τις αὐτὸ ἔν τινι ὡρισμένῳ χρόνῳ, ἄρα ἅψεται τῶν ἀπείρων ἐν πεπερασμένῳ χρόνῳ· καὶ εἰ τὸ θᾶττον ἐν ἴσῳ χρόνῳ πλεῖον διανύει, ἢ τὸ βραδύτερον. ταχίστη δὲ ἡ τῆς διανοίας κίνησις, κἂν ἡ διάνοια ἀριθμοίη τὰ ἄπειρα ἔν τινι πεπερασμένῳ χρόνῳ. Ζήνων μὲν οὖν τὸ δυνάμει εἰς τὸ ἐνέργεια ἐκλαμβανόμενος, ταῦτα δὴ τὰ ἄτοπα συνῆγεν. ἐνίσταται δὲ ὁ φιλόσοφος, ὡς καὶ ἐν ἄλλοις ἔλεγεν, ἐνίσταται πρὸς ταῦτα λέγων, καὶ σόφισμα τὸν λόγον ἀποδεικνύς. οὐδὲ γὰρ ἐν πεπερασμένῳ χρόνῳ, φησί, τῶν τοῦ σταδίου ἀπείρων ἅψεται τὸ φερόμενον, ἀλλὰ καὶ ἐν ἀπείρῳ αὐτῷ. ὁ γὰρ χρόνος ὡσαύτως καὶ τὸ μῆκος, ἄπειρον καὶ πεπερασμένον λέγεται· καὶ ὡς ὁ χρόνος πεπερασμένος τοῖς πέρασιν, οὕτω καὶ τὸ μῆκος πεπερασμένον τοῖς ἄκροις. ὡς δ᾽ αὖθις ὁ χρόνος ἄπειρος τῇ διαιρέσει, οὕτω καὶ τὸ μῆκος ἄπειρον τῇ διαιρέσει. Ζήνων οὖν παραλογιζόμενος, ἄλλως τὸ τοῦ χρόνου πεπερασμένον λαμβάνει, καὶ ἄλλως τὸ τοῦ σταδίου. τὸν γὰρ ἔξωθεν καὶ εἰς ἑκάτερα χρόνον, ἄπειρον ὄντα κατὰ τὴν διαίρεσιν, καθὼς καὶ τὸ μῆκός ἐστι κατὰ τὴν διαίρεσιν ἄπειρον, πεπερασμένον λαμβάνει κατὰ τὰ πέρατα, καὶ οὐ λαμβάνει. οὕτως καὶ τὸ στάδιον πεπερασμένον, κατὰ τὰ ἄκρα δηλαδή, ἀλλ᾽ ὅλως κατὰ τὴν διαίρεσιν. οὐδ᾽ αὖθις φησὶν ὁ φιλόσοφος, τὸ καθ᾽ ἕκαστον ἅπτεσθαι τῶν ἀπείρων τὴν διάνοιαν, οὐκ ἔστιν ἀριθμεῖν· εἰ ἄρα τις ἐννοήσειεν οὕτως ἐφάπτεσθαι τῶν ἀπείρων τὴν διάνοιαν, καθ᾽ ἕκαστον σημεῖον· ὅπερ ἴσως καὶ ἀδύνατον. πῶς γὰρ ἅψεται ἐνεργείᾳ καθ᾽ ἕκαστον τῶν ἀπείρων ἐν τοσῷδε χρόνῳ; οὐ γάρ ἐστιν ἐν συνεχέσι καὶ ὑποκειμένοις, φησίν, ἡ τῆς διανοίας κίνησις, ὥσπερ ἐπὶ τοῦ φερομένου. εἰ δ᾽ οὖν καὶ ἐγχωρεῖ κινεῖσθαι οὕτως, οὐκ ἔστι τοῦτο ἀριθμεῖν. τὸ γὰρ ἀριθμεῖν ἐστι τὸ μετ᾽ ἐπιστασίας. ἀλλ᾽ ἄτοπον ἴσως, τὸ μὴ δυναμένους λύειν τὸν λόγον, δουλεύειν τῇ ἀσθενείᾳ, καὶ προσεξαπατᾶν ἑαυτοὺς μείζους ἀπάτας, βοηθοῦντας τῇ ἀδυναμίᾳ. τὸ δ᾽ ἐπὶ τῶν συμμέτρων γραμμῶν, ὡς ὅτι αἱ πᾶσαι τῷ αὐτῷ τινι καὶ ἑνὶ μετροῦνται, κομιδῆ σοφιστικόν φησι, καὶ ἥκιστα κατὰ τὴν ὑπόθεσιν τὴν ἐν τοῖς μαθήμασιν. οὔτε γὰρ ὑποτίθενται οὕτως, οὔτε χρήσιμον αὐτοῖς ἐστιν. ἅμα δὲ καὶ ἐναντίωσιν ἔχει τό, πᾶσαν μὲν γραμμὴν σύμμετρον γίνεσθαι, πασῶν δὲ τῶν συμμέτρων κοινὸν μέτρον εἶναι ἀξιοῦν. ὥστε γελοῖον τὸ κατὰ τὰς ἐκείνων δόξας, καὶ ὅσ᾽ ὧν αὐτοὶ λέγουσι φάσκοντες δείξειν, εἰς ἐριστικὸν ἀμα καὶ σοφιστικὸν ἐκκλίνειν λόγον, καὶ ταῦθ᾽ οὕτως ἀσθενῆ· πολλαχῶς γὰρ ἀσθενής ἐστι καὶ πάντα τρόπον διαφυγεῖν καὶ τὰ παράδοξα καὶ τοὺς ἐλέγχους. ὑποτίθενται γὰρ οἱ μαθηματικοὶ κοινὸν μέτρον τῶν συμμέτρων μεγεθῶν, ἀλλ᾽ οὐκ ἄτομον τοῦτο, ἀλλὰ καὶ αὐτὸ δυνάμενον πρὸς ἄλλο σύμμετρον εἶναι, κατά τι ἄλλο κοινὸν μέτρον. καὶ γὰρ ὁ θʹ κοινὸν μέτρον ἐστί, τοῦ τε λϛʹ καὶ τοῦ παʹ, τοῦ μὲν κατὰ τὸ τετράκις, τοῦ δὲ κατὰ τὸ ἐννεάκις· ἔτι δὲ καὶ τοῦ μεʹ κατὰ τὸ πεντάκις. ἀλλ᾽ ἔστι καὶ αὐτὸς ὁ θʹ τῷ καʹ σύμμετρος. ὁ γὰρ γʹ, κοινὸν μέτρον καὶ ἀμφοτέρων, τοῦ μὲν κατὰ τὸ γʹ, τοῦ δὲ κατὰ τὸ ζʹ. καὶ γὰρ πᾶσα γραμμή, ἑτέρᾳ καὶ ἑτέρᾳ σύμμετρος, ἢ ἑτέρᾳ ἀσύμμετρος, πρὸς τὴν μὲν ἔχουσα τι κοινὸν μέτρον, πρὸς τὴν δὲ οὐκ ἔχουσα. ὥστε οὐ πᾶσαι τῷ αὐτῷ τινι καὶ ἑνὶ μετροῦνται; ἀλλ᾽ ἄλλαι μὲν τὰ οὕτως σύμμετρα, ἄλλαι δὲ τὰ ὡς ἐκείνας. ὅτι μὲν οὖν ἔκ γε τῶν εἰρημένων λόγων, οὔτε ἀναγκαῖον ἀτόμους εἶναι γραμμάς, οὔτε πιθανόν, φανερόν.

Ὅτι οὐκ ἔστι γραμμὴ ἄτομος καὶ ἀμερής, ἀλλὰ πᾶσα διαιρετή, καὶ εἰς ἄπειρα διαιρετὴ διὰ πλειόνων συμβιβάζει.

ΕΤι δὲ καὶ ἐκ τῶνδε γένοιτο ἂν φανερώτερον· πρότερον μὲν, ἐκ τῶν ἐν τοῖς μαθήμασι δεικνυμένων καὶ τιθεμένων, ἃ οὐ δίκαιον, ἢ πιστοτέροις λόγοις, κινεῖν. εἰ γὰρ ἡ ἄτομός ἐστι γραμμὴ καὶ εὐθεῖα, ἐφαρμόσειεν ἂν αὐτῇ ὅ τε τῆς γραμμῆς λόγος, καὶ ὁ τῆς εὐθείας. ἀλλ' οὐκ ἐφαρμόζουσι τῇ ἀτόμῳ, οὔτε ὁ τῆς γραμμῆς, οὔτε ὁ τῆς εὐθείας ὅρος, διὰ τὸ μήτε μεταξύ B τινων εἶναι, μήτε ἔχειν μέσον. ἡ γὰρ ἄτομος γραμμὴ πῶς ἔσται μῆκος καὶ ἀπλατές, ἐπεὶ ἄτομος οὖσα, μεταξὺ πλάτους οὐκ εἶναι πέφυκεν; ὡς γὰρ ἡ στιγμὴ μέση δύο γραμμῶν δυνάμει ἐστὶν, ἀδιαιρέτων μὲν οὐσῶν· ὅτε δὲ ἐνεργείᾳ διαιρεθῶσι, τότε ἡ στιγμὴ τοῖς * διχοτομήσασιν ἐνεργείᾳ διαίρεσις γίνεται· οὕτω καὶ γραμμὴ μέσον δύο δυνάμει ἐπιφανειῶν ἐστὶν, ἀδιαιρέτου καὶ μιᾶς τῆς ἐπιφανείας οὔσης. ὅτε δὲ ἐνεργείᾳ διαιρεθείη, καὶ γένοιντο δύο ἐπιφάνειαι, ἡ γραμμὴ ἐνεργείᾳ διαίρεσίς ἐστιν. ἄτομος δὴ οὖσα ἐκείνη, καὶ κατὰ τοῦτο C ἀδιάστατος, πῶς μέσον νοηθείη τῶν ἐπιφανειῶν τῶν κατὰ πλάτος διαιρουμένων; ἀνάγκη οὖν τῶν ἐπιφανειῶν κατὰ θάτερα διαιρουμένων, συνδιαιρεῖσθαι καὶ τὴν ἄτομον γραμμὴν, τὴν κατὰ θάτερα διαιροῦσαν, καὶ μέσον τῶν δύο ἐπιφανειῶν κειμένην. οὔτε γοῦν τινῶν ἐστι μεταξὺ εἰς τὸ τὴν φύσιν τῆς γραμμῆς δεικνύναι, οὔτε μέσον ἔχει ἄτομος οὖσα. καὶ πῶς ἐφαρμόσει ταύτῃ ὁ τῆς εὐθείας ὅρος; εὐθὺ γάρ ἐστιν, οὗ τὸ μέσον ἐπιπροσθεῖ τοῖς πέρασιν. ἔτι πᾶσαι αἱ γραμμαὶ σύμμετροι ἔσονται. τίς γὰρ ἡ ἀποκλήρωσις, τοῦ τὴν μὲν μετρεῖν, τὴν δὲ μὴ μετρεῖν, τὸ κοινὸν ἐκεῖνο καὶ ἄτομον μέτρον, τὴν ἄτομον δηλαδὴ γραμμήν; ἄτομος D γὰρ οὖσα καὶ ἀμερής, πάσαις ἐφαρμόσει, καὶ πᾶσαι ὑπὸ τῶν ἀτόμων μετρηθήσονται, αἵ τε μήκει σύμμετροι, καὶ αἱ δυνάμει· ἄτομοι δὲ οὖσαι καὶ αὐταὶ, σύμμετροι ἑαυταῖς ἔσονται μήκει, ἴσαι γάρ. ὥστε καὶ δυνάμει. τὰ γὰρ σύμμετρα μήκει καὶ δυνάμει σύμμετρα· οὐ μὴν δὲ τὸ ἀνάπαλιν, ὡς ἐλέγομεν. ἔτι εἰ ἐκ τριῶν δοθεισῶν εὐθειῶν συνίσταται τρίγωνον, καὶ ἐκ τῶν ἀτόμων συσταίη ἄν. ἐν ἅπαντι δὲ ἰσοπλεύρῳ, ἡ κάθετος ἐπὶ τὴν μέσην πίπτει. ἰσόπλευρον δὲ πάντως τὸ ἀπὸ τῶν ἀτόμων. ἴσαι γὰρ αἱ ἄτομοι. ὥστε καὶ ἐπὶ τὴν ἄτομον ἡ κάθετος πεσεῖται, E καὶ ἔσται μέση τῆς ἀτόμου· ὅπερ οὐ δύναται εἶναι. ἡ γὰρ ἄτομος μέσην οὐχ ἕξει. ἔτι γραμμὴ προστεθεῖσα γραμμῇ, οὐ ποιήσει μείζω τὴν ὅλην. τὰ γὰρ ἀμερῆ συντιθέμενα, οὐ ποιοῦσι μεῖζον τὸ πρότερον. ἔτι ἐκ δυοῖν ἀμερῶν μηδὲν γίνεσθαι συνεχές, διὰ τὸ πλείους ἔχειν ἁπλῶς τὸ συνεχές. ἅπασα δὲ γραμμὴ παρὰ τὴν ἄτομον, συνεχὴς οὐκ ἂν εἴη· ὥστε οὐκ ἄτομος.

CAPVT VII.

Sententiam Ariſtotelis, quæ eſt, omnes lineas eſſe ſecabiles, pluribus argumentis confirmat.

POrrò autem ex his, quæ à mathematicis dicuntur, demonſtrantúrque, liquere euidentiſſimè poterit, quas ipſorum rationes, niſi probabilioribus nos opponamus pugnemúſque argumentis, refellere non debemus. Si enim linea ſit inſecabilis, & recta, nimirum illi definitio vtriuſque quadrabit & lineæ & rectæ: definitio autem impartibili vtriuſque conuenire nequit, cùm propterea quòd ea neque medium quorundam eſſe queat, tum quòd neque ipſa in ſe medium poſſideat. Nam linea inſectilis quomodo tandem ſit longitudo, & ſine latitudine, cùm ipſa inſecabilis exiſtens intra ſuperficiem dari nequeat? Quemadmodum enim punctum in medio duarum linearum potentia eſt, cùm vna & continua linea adhuc exiſtunt duæ illæ potentia, cùm verò actu diuiſa in puncto fuerit, tum punctum actu ſecundùm diuiſionem conſtituitur: ita quoque linea duas continens ſuperficies, cùm actu ſuperficies diſſecta fuerit, & duæ ſuperficies actu conſtitutæ ſint, linea ſanè actu exiſtens, actu diuiſionem factam commonſtrabit: ea verò cùm poſita ſit atomos, & dimenſionis expers, quo pacto medium fuerit inter ſuperficies duas quæ ratione latitudinis diuiduntur? Neceſſe itaque fuerit cùm ſuperficies in partes duas cadat, eam diſſectionem propter lineam accidere, atque iſto modo ratione inſecabilis etiam lineæ diſſecabitur ſuperficies: aut ſi reſpectu atomæ lineæ ſuperficies non diuidi poſſit, ſequitur etiam vt ſuperficies duæ ne coniungi quidem ſecundùm illam poſſint: quod tamen cum primis lineæ naturam non obſcurè indicat, neque proinde diuiſionem ſuſtinebit ipſa etiam cùm ſit atomos: quæ conditioni linearum ambo repugnant. Definitio quoque huic non quadrabit, ſi indiuidua recta linea ſtatuatur. Recta enim eſt, cuius medium extremis adiunctum æquabiliter eſt. Præterea ſecuturum eſt, lineas omnes eſſe ſymmetras. Quæ enim ratio differentiæ aſſignabitur, hanc inſecabilem vnam menſurare, alteram verò non poſſe menſurare? Cùm enim impartibilis exiſtat, omnibus ceu menſura, ex æquo accommodabitur, ſiue actu, ſiue potentia ſolùm commenſurabiles ſint. Tertiò cùm ex datis tribus lineis triangulus conflari queat, etiam ex tribus atomis triangulus componetur: in quolibet verò æquilatero, cathetus ducta in mediam cadit, ac in partes duas diſſecat. Sed fieri hoc non poſſet, ſi impartibilis foret linea: intermediam enim lineam indiuidua non admittit. Quartò, linea eiuſmodi atomos addita alteri compoſitam maiorem non efficiet: nam inſecabilia accumulata molem non attollunt, nec granditatem efficiunt. Quintò, ex impartibilibus duobus continuum nullum procreatur, quoniam continua linea plura ſemper duobus inſecabilibus obtinet. Futurum autem eſſet, vt præter inſecabilem hanc, nulla etiam reliquarum penitus linea continua exiſteret: quod falſum cùm ſit, neceſſe etiam fuerit, indiuiduā lineam nullam ſtatuere.

Sextò, linea omnis aut finita aut infinita eſt: atomos certè vt ſit finita oportet: quare & fines poſſidebit. Finis autem nullus, quàm ipſamet ſibi, fuerit, quod abſurdum eſt: aut fines ſi obtineat, diuidi poterit. Aliud enim finis, & id, cuius finis dicitur. Aut profectò linea dicetur eſſe quædam, neque finita, neque infinita. Septimò, non qualibet in linea punctum erit: nam in ea quæ diuiſionem reſpuit, nullum inerit. Quòd ſi in indiuidua linea nullum inſit punctum, in nulla profectò aliarum punctum deſignari queat: nam reliquæ ex his componuntur. Octauò, aut nihil inter puncta duo, aut omnino lineam interuenire oportet. In linea verò qualibet plura vno puncta deſignari poſſunt: quare inter puncta duo atomos linea poni non poterit. Impartibilitas enim ſoli puncto vndiquaque propria videtur. Nonò, quadratum omne partibile: ex lineolis verò eiuſmodi quadratum impartibile conficietur: quod perquam abſurdum deprehenditur, cùm quadratum vt ſuperficies & ſecundùm latitudinem & longitudinem protendatur: quapropter diuidi poterit. ſed quod à quatuor impartibilibus lineolis circumſcribitur, quo pacto tandem partitionem ſuſtinebit? quare lineas etiam poſſe diuidi in hoc quadrato conſtat. Decimò, Finis ac terminus lineæ eſt punctum: quod terminatur autem, linea ipſa eſt: punctum quidem eo quòd finis impartibilis exiſtit. Quare lineam, cùm finis ipſa non ſit, ſed cui finis accidit, partibilem eſſe neceſſe eſt. Quòd ſi lineam finem lineæ alterius contendat quiſpiam, deprehendetur linea quæpiam maior altera, ratione ac reſpectu puncti: ſiquidem linea & hæc inſecabilis pro termino conſtituitur. Linea verò quælibet, altera quacunque ſi maior dicatur, ſecundùm lineam maior dicitur: ſi verò inſit illi quoque indiuiduæ (quæ vt terminus alterius lineæ poſita eſt) punctum quo terminatur (nam continuatum linearum terminus idem eſt) ſequitur vt finis ac terminus totius lineæ, non ſit impartibilis. Nam ſecundùm hypotheſin hæc inſecabilis terminus alterius, rurſus ipſa etiam puncto terminari aſſeritur. Quod me hercle tantum abeſt vt cum ratione conſentiat, vt nihil magis ab ea videatur abhorrere. Omnino autem his conceſſis, punctum à linea nihil differre videbitur: nam excepto nomine, peculiare linea eiuſmodi à puncti natura nihil obtinebit. Vndecimò, Mox ſecuturum eſt, vt & ſuperficies, & corpus quoddam inſecabile concedatur: quoniam altero conceſſo, protinus reliquum dari oportet: quoniam alterum reſpectu alterius diuiſionis capax dicitur, vt corpus reſpectu ſuperficiei, & ſuperficies ratione lineæ: corpus autem, cùm tres habeat dimenſiones, ſecabile omne exiſtere neceſſe fuerit: quare lineam quamlibet partibilem eſſe oportet. Duodecimò, Si linea, & tempus quoddam impartibile eſt, ſed quæ in tempore inſecabilia ſtatuũtur, ſunt E inſtantia, & nunc ipſa, quare tempus ex inſtantibus conflabitur: ſed tempus ex inſtantibus non componitur: alioqui enim ſibi mutuò coaptata eſſent. Sed non poſſunt vllo modo cohæreſcere, cùm non conſiſtant: quare nec puncta ſibi continua dici poſſunt. Quam ob cauſam compoſita impartibilia magnitudinem nullam efficient, quoniam congeſta hæc maiorem locum non occupabunt. Linea quidem lineæ addita planitiem maiorem non efficiet, quotcunque numero tandem congeſſeris: ita quoque res habebit, ſi puncta infinita congeras, amplius ſpatium hæc non occupabunt, cùm ne locus quidem vllus ſecundùm ſe punctis attribuatur. Quocirca magnitudo continua nulla ex impartib. attolletur, nec puncta conficient lineam, neque inſtantia tempus conſtituent. Decimotertiò, Si linea ſit ex punctis, vt quidã dicunt, punctum puncto cohæreſcere neceſſe fuerit: ſed punctum cùm inſecabile ſit, connecti cum alio nequit.

A ἔτι πᾶσα γραμμή, ἢ ἄπειρος, ἢ πέρας ἔχει. ἡ δ' ἄτομος οὐκ ἄπειρος. ὥστε πέρας ἕξει. οὐδὲν δὲ ἄλλο τι τὸ πέρας, ἢ αὐτὴ ἡ ἄτομος. εἰ δέ γε πέρας ἕξει, καὶ διαιρετὴ ἔσται. τὸ γὰρ πέρας ἄλλο, καὶ οὗ πέρας. ἢ ἔσται τις γραμμὴ οὔτε ἄπειρος, οὔτε πεπερασμένη. ἔτι οὐκ ἐν ἁπάσῃ γραμμῇ στιγμὴ ἔσται. εἰ γὰρ τῇ ἀτόμῳ, οὐκ ἔσται· καὶ εἰ ἐν τῇ ἀτόμῳ οὐχ ὑπάρχει στιγμή, οὐδ' ὅλως ἐν γραμμῇ ἔσται. αἱ γὰρ ἄλλαι ἐκ τῶν ἀτόμων κατ' ἐκείνας εἰσίν. ἔτι εἰ μηδὲν τῶν στιγμῶν ἔσται μεταξύ, ἢ γραμμή· εἰ μεταξύ, ἄρα γραμμή· ἐν ἁπάσαις δὲ πλείους στιγμαί· οὐκ ἔσται ἄτομος. μόνον γὰρ τὸ ἄτομον τῆς στιγμῆς ἐστιν. ἔτι οὐχ ἁπάσης ἔσται γραμμῆς τετράγωνον. τὸ γὰρ ἁπτόμενον, ἢ ὅλον ὅλου ἅπτεται, ἢ τὶ μέρος τινὸς μέρους, ἢ ὅλον μέρους· ἡ δὲ στιγμὴ ἀμερής· τὸ δ' ὅλον ὅλου ἁπτόμενον, ἀνάγκη ἓν εἶναι. ἔτι πῶς ποτε εὐθεῖα ἔσται γραμμὴ, καὶ περιφερής; οὐδὲν γὰρ διάφορος ἡ σύναψις, οὔτε τῶν στιγμῶν, οὔτε τῶν ἀμερῶν ἐν τῇ εὐθείᾳ καὶ τῇ περιφερεῖ. τὸ γὰρ ἀμερὲς, τοῦ ἀμεροῦς εἴπερ ἅπτοιτο, ὅλον ὅλου ἅπτεται. μᾶλλον μὲν οὖν οὐκ ἔστιν ὅλως τὰ ἀμερῆ ἀλλήλων ἅπτεσθαι. Εἰ γοῦν αἱ μὲν γραμμαὶ διαφέρουσι, ἡ δὲ σύναψις ἀδιάφορος, οὐκ ἔσται δὴ γραμμὴ ἐκ τῆς συνάψεως, εἰς τὸ γίνεσθαι μίαν τήν τε εὐθεῖαν καὶ τὴν περιφερῆ. ὥστε οὐδὲ ἐκ στιγμῶν. ἔτι διαιροῖτ' ἂν ἅπαντα καὶ ἀναλύοιτο εἰς στιγμάς. εἰ [δὲ] ἐκ στιγμῶν καὶ ἀμερῶν συνετέθησαν, καὶ ἡ στιγμὴ μέρος σώματος ἔσται, εἴπερ τὸ μὲν σῶμα ἐξ ἐπιπέδων, τὸ δ' ἐπίπεδον ἐκ γραμμῶν, αἱ δὲ γραμμαὶ ἐκ στιγμῶν. Εἰ δ' ἐξ ὧν πρώτων ἐνυπαρχόντων ἕκαστα ἐστὶ, στοιχεῖα ἐστὶ ταῦτα, αἱ στιγμαὶ ἂν εἴησαν στοιχεῖα σωμάτων. Φανερὸν οὖν ἐκ τῶν εἰρημένων ὅτι οὐκ ἔστι γραμμὴ ἐκ στιγμῶν, ἀλλ' οὐδὲ γραμμὴ ἄτομος καὶ ἀμερὴς, ἀλλὰ πᾶσα διαιρετὴ, καὶ εἰς ἄπειρα διαιρετή. ἔστι δὲ στιγμὴ ὡς πέρας τὸ ἐλάχιστον, γραμμὴ δὲ ἐλαχίστη οὐκ ἔσται, ἀλλ' ἀεὶ ἐλάττων τῆς προτέρας, καὶ ἀεὶ διαιρετή. ὥσπερ οὖν ὁ ἐλάχιστόν τι ὂν τῶν ἐν τῇ οἰκίᾳ, καὶ οὐδὲν συμβαλλόμενον πρὸς αὐτὴν, οὐ λέγεταί τι τῶν τῆς οἰκίας, καὶ ἐπὶ τῶν ἄλλων ὡσαύτως. τί γὰρ πρὸς τὴν σφαῖραν, φέρε, τὸ μέλαν συμβάλλεται; ἢ πρὸς τὸ ἀνδριάντα εἶναι, τὸ ἐπὶ δεξιὰ τῆς πόλεως ἵστασθαι; οὕτως οὐδὲ τὸ ἐν τῇ γραμμῇ ἐλάχιστον, ὅπερ ἐστὶ τὸ πέρας καὶ ἡ στιγμὴ, πρὸς γραμμὴν συγκεινόμενον ἔσταί τι. ὥστε οὐχ ἁρμόσει μὲν ἐπὶ γραμμῆς τὸ ἐλάχιστον. ἡ στιγμὴ δ' ἐν αὐτῇ ὡς πέρας ἔσται, καὶ τὸ ἐλάχιστον· ὅπερ οὐκ ἂν εἴη πρὸς τὴν γραμμὴν συμβαλλόμενον. οὐκ ἄρα ἔσται γραμμὴ ἄτομος.

A Quod enim connectitur cum altero, aut vt totum cum toto, aut vt pars cum parte coniungitur, aut vt parte aliqua cum toto cohæret. Sed partem linea non habet: quare eo modo non cohærent, & apta puncta ſunt inter ſeſe. Quòd ſi totum toti alteri puncto connexum ſtatuas, vnum plane & inſecabile fuerit quod ex vtriſque componetur. Decimoquartò. Quo pacto efficientur altera recta, altera circularis linea? Nam neque quo ad coaptationem, neque quo ad puncta, differentia vlla erit inter rectam & circularem. Impartibile B enim ſi attingat impartibile, totum cum toto coniungi neceſſe eſt: an potiùs minimè atoma cohærere inter ſeſe poſſe dicendum eſt? Conſtat autem, lineas ſpecie differre haſce inter ſe: coaptationis verò nulla differentia: quare ex impartibilium connexione linea nulla conſtabit: alioqui eandem rectam & circularem fateri adigeremur. Sequitur igitur vt ex atomis compoſitio nulla exiſtat. Decimoquintò, Si verum eſſet, quod iſti aſſerunt, tum reſolui omnia in puncta neceſſe foret. Nam corpora in ſuperficies, hæ verò in li- C neas, quæ porrò diſtraherentur ac diſcerperentur in puncta: quare meritò rerum omnium elementa ſtatuentur puncta eſſe. Ex his itaque oppidoquam conſpicuum eſt, lineam neque ex punctis componi, ad hæc lineam nullam impartibilem exiſtere, quin potiùs infinita ſectione diuidi quamlibet poſſe. Punctum ſanè cùm finis ſit lineæ, eſt minimum quiddam, linea verò minima nulla eſt, ſed data quacunque minor deſignari poteſt ſemper diuidua. Quemadmodum itaque quod in ædificio minimum eſt, nec quicquam il- D li, quod ad rationem ſtructuræ pertineat, adfert, pars ipſius nullo modo dicitur: ita ſimiliter in reliquis etiam, res habebit. Quid enim, quæſo te, ad ſphæram adiicit, ſeu albo, ſeu atro colore depicta ſit? quid ſtatua auctior erit, ſiue à dextra, ſiue ſiniſtrâ oppidi parte eam locatam dixeris? ita nec quod minimum eſt lineæ vllum momentum attulerit, punctum ſcilicet. Nam id ſubſtantiæ lineæ prorſus addit nihil. Quamobrem quod minimum quiddam appellatur, ea appellatio lineæ non quadrabit, in ipſa verò id, quod punctum, & terminus nuncupatur, rectè minimum appellari poterit, nihil ſcilicet lineæ adferens. Ex quo ſequitur, lineam indiuiduam nullam exiſtere.

ΠΕΡΙ ΞΕΝΟΦΑΝΟΥΣ.

ARISTOTELIS DE XENOPHANE, ZENONE, ET GORGIA.

Ioanne Bernardo Feliciano, Interprete.

A ÆTERNVM eſſe inquit, quicquid eſt: ſi quidem fieri non poteſt, vt ex nihilo quippiam exiſtat. Siue enim omnia facta ſint, ſiue non omnia, vtroque modo efficietur vt ex nihilo fieri ipſa concedendum ſit. Nam ſi omnia fiant, nihil præexiſtere: ſi æterno alicui alia accedant, amplius & maius vnum ipſum effectum iri aſſerit. Quod autem amplius & maius ſit, id ex nihilo etiam proculdubio exiſtere: quippe cùm neque in pauciore amplius, neque in minore eſſe maius poſſit. Quod B verò eſt æternum, infinitum eſſe, cùm neque principium, vnde extiterit, habeat, neque finem in quem fieri aliquando deſierit: at infinitum eſſe vnum: ſi enim ſint duo, aut plura, fines ea eſſe inter ſe, ac ſeſe mutuò terminare, ſed vnũ ſimile ſibi vndequaq; eſſe: eo quòd ſi diſſimilia plura eſſent, nõ iam eſſet vnũ, ſed multa. Vnum autẽ ipſum cùm æternũ ſit, & immenſum, & ſibi vndequaq; ſimile, immobile etiam eſſe: non enim moueri poſſit, niſi exceſſerit. Quod autem excedit, neceſſe eſt, vt vel in plenum, vel in vacuum excedat. Quorum C alterum, hoc eſt, plenum, admittere nullo modo poſſit: alterum, quod eſt vacuum, nihil ſit. Sed ſi res ita ſe habeat, doloris quoque & ægritudinis, & morbi expers eſſe, atque eiuſmodi, vt neque ſitu tranſponi, neque forma diuerſificari, neque alteri poſſit commiſceri. Eo quod ex omnibus his, vt & vnum multa fiat, & quod non eſt, procreetur, & quod eſt, intereat, neceſſariò efficiatur, quæ ſanè fieri nullo modo poſſunt. Etenim ſi vnum quid mixtum ex plurib. dicatur, ſintque multæ res, quæ in ſe mutuò moueantur: vt mixtio, vel tanquã in D vno plurium compoſitio, vel receſſione quaſi mixtorũ ſuperadditio ſit, efficeretur vt illo modo, eorũ quæ à ſeſe mutuò ſepararẽtur, mixta eſſent: hoc ſi ſuperaddito eſſet in auerſione, ſingula, quæ ſub ſe mutuò poſita ex mixtis ſunt, detractis primis manifeſtarentur: quorum neutrum euenit. hoc autem modo etiam multa eſſent, nec nobis tantummodo eſſe viderentur. Quocirca quia res eſſe ita nequit, neq; fieri poteſt vt multa ſint, ea quæ ſunt, ſed non rectè eſſe ea videantur: quandoquidẽ multa etiã alia ſenſu omni apparent ratione neq; eadẽ gigni,

neque id quod eſt, multa, ſed æternum, & infinitum, & ſibi vndequaque ſimile eſſe conuincere affirmat. Nunquid igitur primum non omni ſumpta opinione, neque omni quod apparet, incipiendum eſt, ſed ſemper eo, quod maximè eſt firmum ac ſtabile? Quare ſi omnia, quæ in opinionem veniunt, & apparent, non rectè exiſtimantur, nihil fortaſſe conuenit vt huic etiam opinioni & dogmati acquieſcamus, quod nihil ex nihilo fieri ſtatuit: quippe cùm vna etiam quædam ex non rectis hæc opinio ſit, quam ex ſentiendo quodammodo cùm in multis eſſemus, exiſtimauimus. Sin autem non omnia falſa ſunt, quæ nobis apparent, ſed aliqua etiam horum rectæ exiſtimationes habentur vel ex demonſtratione, quæ maximè rectæ eſſe videantur ſumi debent, quas identidem certiores eſſe neceſſe eſt, vel quæ ex illarum rationibus demonſtrandæ ſunt. Si enim ſint duæ inter ſe contrariæ opiniones, quemadmodum, ſi multa facta fuiſſe dicat quiſpiam, neceſſe eſſe, vt ex iis quæ non ſunt, extiterint: ſi verò id eſſe non poteſt, ea quæ ſunt, multa minimè eſſe: efficeretur etiam vt ens quodcunque eſt, infinitum eſſet: atque idcirco, etiam vnum. ex vtriſque his ſanè ratio concluſa ſi ſimili modo probabilis eſt, nihilo magis vnum eſſe quàm multa demonſtrat. At ſi altera ſtabilior eſt ac certior, quæ ex ea collecta fuerint, magis fuiſſe demonſtranda cenſendum eſt: quæ quidem ſi in eum incidant, qui vtraſque has opiniones habuerit, licèt ea quæ ſunt, adhuc moueantur, probabilior tamen hæc eſt, citiùſque hanc quàm illam opinionem omnes admittent. Quorum etiam ſi eueniat vt contrariæ ſint enunciationes, & impoſſibile eſſe, vt & factum ſit quippiam ex eo quod non eſt, & non multæ res ſint, à ſe mutuò hæc conuincantur, quid magis ita rem ſe habere aſſereret quiſpiam? Neque enim vbi demonſtrauit, rectam eſſe opinionem, à qua incipit; neque magis certam, quàm de qua demonſtrat, ſumendo diſſeruit. Magis ſi quidem ſumitur veriſimile eſſe, vt ex eo quod non eſt, aliquid fiat, quàm non multa ſint ea quæ ſunt. Nam de ipſis his admodum dicitur, & fieri ea quæ non ſunt, & non multa facta fuiſſe ex iis quæ non ſunt, atque non hæc è vulgo quilibet, ſed ex iis nonnulli aſſeruerunt, qui ſapientes etiam habiti ſunt. Iam verò Heſiodus:

Primum ante omne aliud, inquit, *Chaos extitit, inde patenti*
Pectore cunctorum ſedes firmiſſima tellus,
Atque amor, is cunctis ſpecie inmortalibus anteit.

Ex quibus alia, genita fuiſſe, ipſa autem hæc ex nihilo. Multi præterea alij eſſe nihil, ſed fieri omnia aſſerunt: ex iis quæ non ſunt, omnia quæ fiunt, exiſtere affirmantes. Vt nonnullis videri, etiam ex iis quæ non ſunt gigni omnia quæ fiunt, perſpicuum iam ſit.

At verò fieri ne poſſint, nec ea quæ dicit, omittendum videtur, ſed illud conſiderandum vtrùm ex iis quæ ſumit, id conficiatur, an nihil vetet, quominus alio modo ſeſe habere res queat. Illud ſanè eſt, quod primum ſumit, fieri ex eo quod non eſt, nihil poſſe. Nunquid igitur omnia eſſe ingènita neceſſe eſt? An nihil prohibet, quin alia ex aliis exiſtant, atque id in infinitum progrediatur? An etiam reflexio in orbem ſit, vt alterum ex altero procreetur, dum ſemper ita aliquid eſt, & infinities ex ſeſe mutuò ſingula gignuntur? Nihil profectò obſtat quin omnia genita ſint, etiamſi nihil ex eo quod non eſt, fieri concedatur:

nullúmque ex nominibus quæ vnum conſequuntur, prohibet quin infinita etiam ea quę ſunt, apud ipſum appellemus: propterea quòd ille quoque infinito attribuit, vt omnia & ſit, & dicatur. Nihil item vetat etiamſi infinita non ſint, quominus in orbem generatio eorum circumuoluatur. Adde quòd ſi omnia gignuntur, & eſt nihil, vt nonnulli dicunt, quo pacto vnum æternum erit? Nam de vno quodam quod ſit, quaſi ſit, & concedatur, ita diſputat. Si enim, inquit, genitum non eſt, ſint æterna, quaſi eſſentiã rebus ineſſe neceſſe ſit. Præterea, etiamſi quàm maximè fieri nequeat, vt quod non eſt, factum ſit, aut quod eſt, interierit, quid impedit tamen, quin alia genita ſint, alia æterna, quemadmodum etiam Empedocles inquit? Nam cùm omnia etiam ille eadem conceſſerit, & quicquam eſſe impoſſibile ex non ente creari:

Quodque eſt diſrumpi, & conſumitur, interiturum,
Semper enim ſtabile mixtum, quocunque feretur.

Ex iis tamen quæ ſunt, quædam æterna eſſe inquit, ignem, aquam, terram, & aërem, reliqua ex his & genita eſſe, & gigni. Nulla enim alia iis quæ ſunt, vt exiſtimat, generatio eſt,

Mixtio ſed tantùm, & mixtorum abſtractio, cuius
Vis hæc, natura mortalibus appellatur.

Generationem autem æternis non ineſſe, neque ea generari dicit, quòd impoſſibile id prorſus ſit. Vnde inquit: Quî ſit enim vniuerſo eſſentia, & vnde profecta eſt? Sed, dum ignis & cætera miſcentur, & componuntur, multa hæc generari, dum ſegregantur, & abſtrahuntur, corrumpi aſſerit. Verumtamen mixtione & ſegregatione multa eſſe; natura autem quatuor abſque cauſis, vel vnum: vel ſi etiam infinita ſtatim extiterint hæc, ex quibus compoſitis gignuntur, ſegregatis corrumpuntur cætera. Quemadmodum Anaxagoram quoque affirmare nonnulli dicunt, ex iis quæ ſemper eſſent, & infinitis, generari ea quæ fierent. Quod ſi ita eſſet, nequaquam æterna omnia eſſent concedenda, ſed nonnulla etiam quæ & gignerentur, & genita ex iis, quæ ſunt, fuiſſent, necnon in ſubſtantias quaſdam alias corrumperentur. Accedit, quòd nihil vetat, quin vna quædam ſubſtantia & forma vniuerſum ſit, ſicut & Anaximander, & Anaximenes inquiunt, aliter quàm eſſe vniuerſum, Anaximenes aërem aſſerẽs, & quicunque alij ita vniuerſum eſſe vnum cenſuerunt. Id enim & figuris, & multitudinibus, & paucitatibus, & dum rarum, & déſum euadit, multa & infinita ea quæ & ſint, & gignantur, efficit. Cùm verò Democritus quoque aquam, & aërem & vnumquodque, quod ex multis his eſt, fluxione differre aſſerat, quid prohibet etiam ita multa & oriri, & interire, dum vnum ex ente in ens antedictis differentiis ſemper mutatur, & nihilo tamen aut amplius aut minus totũ ipſum efficitur? Quid item vetat, quin interdum ex aliis corpora & gignantur, & è contrario corrumpantur? Si autem etiam hæc quiſpiam conceſſerit, ſitque aliquid ingenitum, quid magis id infinitum eſſe demonſtratur? infinitum enim eſſe, inquit, ſi ſit quidem aliquid, ſed genitum tamen minimè fuerit: quippe cùm & generationis principium, & finis, termini eius ſint. At enim quid obſtat, id quod ingenitum eſt, ex antedictis finem habere? Nam ſi genitum eſt quippiam, id habere principium illud cenſet, vnde ea quæ gignuntur, exiſtunt. Sed quid vetat quæſo, quin etiamſi genitum non fuerit quicquam, principium, non ex quo genitũ ſit, ſed alterũ habeat? ſintq; ad ſeſe mutuò terminantia ea quæ æterna ſunt?

A Quid prætereà impedit, quominus totum ingenitum ſit, & infinitum, ea verò quæ in ipſo gignuntur, ſint terminata, cùm & principium generationis, & finem habeant? Porro etiam, ſicut Parmenides inquit, nihil prohibet vniuerſum eſſe vnum & ingenitum, & tamen eſſe terminatum,

Orbiculare, vt ait, *globoſe perſimile vndique moli,*
A cuius medio ſpacia in quaſcunque ferantur
Partes æqua, vt nec maius nec firmius vllum.

Cùm enim habeat medium & extrema, finem habet, quamuis ingenitum ſit: nam etiamſi, vt ipſe inquit, vnum ſit, atqui id corpus alias tamen ſui partes habet, quæ ſimiles inter ſe ſint. Simile enim ita dicit vniuerſum eſſe non alteri alicui, quod B terminatum eſſe arguit. Nam ſi infinitum eſt ſimile, & ſimile alteri eſt ſimile; duo igitur, vel plura entia ſunt, non vnum, neque infinitum. Sed fortaſſe ſimile ſibi eſſe ſimile dicit, ipſumque, inquit, ſimile eſſe vniuerſum, eo, quòd ſimilibus partibus conſtet, cum ſit vel aqua vniuerſum, vel terra, vel quippiam aliud huiuſmodi. Conſtat enim hunc cenſere vnum eſſe vnumquodque, quod duplicibus partibus conſtet, & corpus ſit, quod ſanè infinitum minimè eſt. Nam vniuerſum ipſum eſt infinitum. Quare hæc licèt ingenita ſint, ad ſeſe mutuò terminant. Adhæc, ſi æternum & infinitum ſit, quo pacto eſſe vnum corpus poteſt? nam ſi ſit diſſimilium partium, erunt multa, & ipſe quoque C ita exiſtimat: ſin autem tota aqua, vel tota terra, vel quodlibet aliud vnum id ſit, multas proculdubio partes habebit: quemadmodum Zeno etiam ens eſſe conatur demonſtrare id, quod ita vnum eſt: erunt igitur etiam plures eius partes paucioribus & minoribus, & diuerſæ prorſus, ſi ita nullo neque accedente, neque recedente corpore, alterabile ſit. At ſi neque corpus ſit, neque latitudine, neque longitudine vlla præditum, quomodo eſſe infinitum poteſt? Quid obſtat quin multa & numerabilia huiuſmodi ſint? Quid prohibet etiam quin licèt plura vno eſſe dicantur, infinita tamen magnitudine ſint? Sicvt Xenophanes quoque ipſe infinitam eſſe terræ profunditatem, & D aëris aſſerit. Id quod etiam Empedocles declarat, cùm quoſdam reprehendens, qui ea nullo modo eſſe poſſe dicebant, cùm tamen res ita eſſe videretur:

Quandoquidē, inquit, *eſt infinito terra ipſa profundo,*
Necnon ampla que & immenſa ſpatia ætheris alti,
Vaniloquo qui hominum multorum effunditur ore,
Naturam vniuerſi ipſius conſpicientium.

Nihil abſurdi inſuper eſt, ſi cùm vnum ſit, non vſquequaque ſimile fuerit. Si enim ſit aqua vniuerſum, vel ignis, vel quodcunque aliud tale, nihil vetat quin plura quàm vnū ens eſſe dicamus. Quandoquidem vnumquodque non prorſus ſimile ſibi ipſi eſt, cùm partim rarū partim denſum ſit, etiamſi E in raro vacuum non inſit. Nihil tamen obſtat quin in raro ſeparatim aliquibus in partibus ſecretum vacuum inſit. Quare ſi totum partim denſum partim rarum ſit, & ſimili modo plenū vniuerſum, rara pars minùs plena erit quàm quæ denſa eſt. Quod ſi etiam ingenitū ſit, ac propterea eſſe quoque infinitū concedatur, vt neque aliud atq. aliud eſſe infinitū poſſit, neq. ita continuò vnum erit appellandū. Quo pacto enim infinitū totum, vel vacuum non totum eſſe vnum poteſt? At verò immobile etiam eſſe inquit, ſiquidem vacuum non eſt. omnia enim dum mutāt locū, mouentur. Sed primum hoc nō omnib. probatur, ſed eſſe vacuū quoddā aiūt, quod tamē corpus nō ſit. Queādmodū Heſiodus quoq. in generatione, primū ante omne aliud chaos inquit ex-

titiſſe: quod quaſi ſedes quædam entibus ſubſterneretur. Tale quid etiam vacuum quaſi vas quoddam, ac receptaculum, quod medium intercedat, requirimus. Deinde etiam ſi vacuum nullum ſit, neque ita quippiam fortaſſe non moueretur. Nam Anaxagoras quoque cùm hoc ante ipſum tractarit, & non ſolum ſatis ſibi eſſet id pronuntiaſſe, vacuum non eſſe, moueri tamen ea quæ ſunt, inquit, etiam ſi vacuum non ſit. Simili modo etiam Empedocles moueri quidem ſemper, inquit, ea quæ ſimul tempus in omne mouentur aſſiduè, nihil eſſe in vniuerſo vacuum affirmans, vnde ſuperueniens fuerit quicquam: ſed cùm in vnam formam concreuerit, vnum vt iam ſit quicquam, neque, quod vacuum, neque, quod ſupereffluat, vllum eſſe inquit. Quid enim prohibet, quin in ſeſe mutuò ferantur, & deuoluantur omnia, dum hoc in aliud atque aliud in aliud, atque ita deinceps ſemper transmutatur, quo ad primum vltimum redierit? Quin etiam forma rei licèt in eodem loco permaneat, mutationem vel alterationem cùm alij tum ipſe ille aſſerit: vt ex iis etiam quæ ab ipſo dicuntur, nihil obſtet quominus res dum ex albo nigrum vel ex amaro dulce fit, moueantur. Nam ſiue non eſſe vacuum concedamus, ſiue plenum admittere nihil poſſe, id nulli impedimento eſt quin alteratio efficiatur. Quamobrem neque omnia æterna, neque vnum neq; infinitum eſſe neceſſe eſt. Sed neque infinita multa, neque vnum ſimile neque immobile ſiue vnum ſit, ſiue multa quædam. His autem ita conſtitutis, nihil ex iis quæ ab illo dicta ſunt, & tranſponi & alterari res vetat, cùm etſi vnum ſit vniuerſum, motio exiſtat, dum & multitudine & paucitate differt, & alteratur, nulla re alia accedente: nam ſi modò quicquã id eſt, quod accedit, corpus nõ eſt: etſi multa ſint, dum ea inter ſe ſimul commiſcentur, & ſecernuntur. Mixtionem enim neque ſuperadditionem eiuſmodi eſſe, neque compoſitionem, qualem inquit veriſimile eſt: vt vel ſtatim ſeparata inter ſe ſint, vel in auerſione dum alia aliis ſuperoccurrũt, à ſeſe mutuo ſeorſum ferantur: ſed ea quæ mixta ſunt, ita eſſe compoſita, vt quælibet pars cum qualibet confuſa ita ſit, vt non compoſita, ſed mixta eſſe videantur, neque deprehendi, qualeſnam partes eorum ſint, poſſit. Quia enim non eſt corpus aliquod, quod minimum ſit, vnaquæque pars, ſimili modo ac totum commixta eſt.

DE ZENONE.

Fieri non poſſe inquit, vt ſi quid eſt, id factum fuerit, hoc de Deo aſſerens: quippe cùm neceſſe ſit, vt quod factum fuerit, id vel ex ſimilibus vel ex diſſimilibus extiterit, quorum fieri neutrum queat. Neque enim ſimili magis conuenire vt à ſimili procreetur, quàm ſimile procreet: eo quòd æqualibus vel ſimilibus omnia eadem erga ſeſe mutuò inſint. neque diſſimile ex diſſimili poſſe exiſtere. Nam ſiue ex imbecilliori robuſtius, aut ex minore maius, aux ex peiore melius, ſiue è contrario præſtantiora ex deterioribus fierent, ex non ente quippiam efficeretur: id quod eſſe nullo pacto poteſt. Æternum igitur hac de cauſa eſſe Deum affirmat. Si autem Deus eſt id quod præſtantiſſimum omnium eſt, vnum debere eſſe ipſum inquit; nam ſi duo aut plures etiam eſſent, præſtantiſſimum & optimum omnium ipſum eſſe nullo modo liceret:

A quippe cùm vnuſquiſque ex multis Deus ſimilis, atque iccirco talis foret. Deum enim & Dei potentiam eiuſmodi eſſe, vt præſideat & dominetur, non ſubiiciatur, vt in eo quòd non eſt præſtantior, Deus non ſit. Si igitur plures cùm ſint, partim ſint ſeſe mutuò præſtantiores, partim inferiores, Deôs nullo modo fore: cùm Deus inferior eſſe, & ſubiici natura non poſſit. Si ſint æquales, non fore ea natura Deum, vt præſtantiſſimum omnium ſit: propterea quod æquale neque melius, neque peius æquali ſit, neceſſe eſt. Quapropter ſi eſt, & talis eſt Deus, vnum ipſum ſolum eſſe: neque enim aliter omnia poſſet, quæcunque vellet, quippe cùm ſi eſſent plures, minimè ipſe eſſe ſolus poſſet. Cùm verò vnus ſit, ſimilem quoque ipſum ſibi vn-
B dequaque eſſe ait, quantum ad viſum & auditum, reliquóſque omnes ſenſus ſpectat: alioqui enim efficeretur vt non præſiderent, & dominarentur, ſed ſibi mutuò Dei partes ſubiicerentur, id quod fieri nullo pacto poteſt: ſi autem vndequaque ſit ſimilis, globoſum quoque eſſe: non enim partim eſſe, partim non eſſe, ſed vndequaque eſſe huiuſmodi debere aſſerit. Cùm itaque ſit æternus, & vnus, & globoſus, neque infinitum, neque finitum eſſe ipſum cenſet: eo quòd infinitum non ens ſit. Quod neque medium neque principium, neque finem, neque aliam quampiam partem habeat: eiuſmodi infinitum eſſe inquit: ens autem tale eſſe, quale eſt non ens, procul dubio nō poſſe: ſi plu-
C ra ſanè ſint, ea ſeſe mutuò terminare. Sed vnum neque non enti; neque multis ſimile eſſe debere. vnum enim nihil habet, ad quod terminari queat. Id prpterea quod huiuſmodi eſt vnū, quem Deum eſſe affirmat, neque moueri neque immobile eſſe inquit, quippe cùm immobile illud ſit, quod non eſt: nam neque aliud in ipſum, neque ipſum pertranſire in aliud poteſt: moueantur autem ea, quæ plus vno ſunt: alterum enim in alterum moueatur neceſſe eſt. Quòd ſi id quod non eſt, ne moueri quidem poteſt: cùm id quod non eſt, nuſquam ſit: quæ verò in ſe mutuò tranſmutantur, plura vno ſunt: propterea ſanè effici ait vt duo, vel quæ plura vno ſunt, moueantur: quieſcat autem nihil,
D quod immobile eſt: vnum verò neque quieſcat neque moueatur: cùm neque ei quod non eſt, neque multis ſimile ſit. In omnibus autem ita ſeſe habere Deum inquit, vt æternus & vnus, & ſimilis, & globoſus cùm ſit, neque infinitum eſſe, neque finitum, neque quieſcere, neque moueri ipſum aſſerat.

Ac primum quidem etiam iſte non ſecus ac Meliſſus, ſumit, id quod fit, ex eo quod eſt, gigni. At enim quid obſtat quin neque ex ſimili, neque ex diſſimili id quod fit, ſed ex nō ente exiſtat? Adde quòd nihilo magis efficietur, vt Deus ſit ingenitus, quàm vt reliqua etiam omnia: quandoquidem omnia ea ſimili vel diſſimili conſtiterunt: quod fieri non poteſt. Quare vel nihil erit præter
E Deum, vel reliqua etiam omnia erunt æterna. Præterea præſtantiſſimum eſſe Deum ſumit, potentiſſimum atque optimum ita appellans. Id autem ex lege minimè videtur: ſed in multis præſtantiores ſeſe mutuò eſſe Dii dicuntur. non igitur ex eo quod videtur, hanc de Deo conſenſionem ſumpſit. Accedit, quòd Deum eſſe præſtantiſſimum non eo ſenſu dicitur, vt erga aliud quippiam huiuſmodi ſit Dei natura, ſed quantum tantummodo ad ſuam ipſius affectionem attinet: nam ſi ad alterum ſpectemus, quid prohiberet, Deum non ſua ipſius æquitate & fortitudine, ſed ex aliorum imbecillitate excellere?

At Deum ita eſſe præſtantiſſimum intelligit nemo, ſed quia ipſe quàm optimè fieri poteſt, affectus eſt: nihilque ei, quominus bene & rectè ſeſe habeat, deeſt: quippe cùm ita ſeſe habenti ſimul illud etiam eueniat, neceſſe. Ita verò eſſe affectos etiam ſi plures ipſi ſint, nihil vetat: vt omnes quam optimè fieri poteſt, affecti, & præſtantiſſimi erga alios, nō erga ſe ſint: nam ſunt proculdubio etiam alia. Cùm enim præſtantiſſimum Deum eſſe dicat: id aliquorum eſſe neceſſe eſt: at verò vnum vndequaque videre & audire nihil conuenit: neque enim ſi non etiam hac parte videt, minùs videt, ſed ea parte non videt. Sed fortaſſe cùm inquit vndequaque ipſum ſentire, id ſibi vult: vt ipſum optimè ita affectum eſſe ſignificet, ſi ſimilis vndequaque ſit. At ſi ſit talis, cur globoſus potiùs quàm aliqua alia forma eſſe præditus debet, quia vndequaque audit, & vndequaque dominatur? Quemadmodum enim cùm ceruſſam vndequaque eſſe albam dicimus, nihil aliud ſignificare, quàm in omnibus eius partibus albedinem eſſe inſitam, volumus: quid impedimento eſt, quominus ita quoque illic vndequaque videre, & audire, & dominari dicatur, vt quamcunque eius partem quiſpiam ſumpſerit, eo modo eſſe affectam intelligamus? Sicvt igitur neque ceruſſam, ita neque Deum hac de cauſa globoſum eſſe neceſſe eſt. Porro neque infinitum neque finitum eſſe, corpus cùm ſit, magnitudinemque habeat, qui fieri poteſt? Præſertim cùm infinitum id ſit, quod finis capax finem non habeat. finis autem & terminus in magnitudine, & multitudine, & in omni demum quantitate ineſt. Quocirca quod finem non habet, magnitudo cùm ſit, infinitum eſt. Adde, quòd cùm ſit globoſus, finem quoque habeat neceſſe eſt. extrema enim habet: ſiquidem habet medium, à quo plurimùm abeſt: habet autem medium, cùm globoſum ſit. à medio verò extrema ignis circumeunt, extremum enim corpus, an fines habere, nihil refert. Neque prætèrea ſi non ens eſt infinitum, iccirco ens infinitum non erit. Quid enim obſtat quin nonnulla ſint, quæ eadem tam de ente quàm de non ente dici queant? Nemo ſiquidem eſt, qui non ens nunc ſentiat. ſed ens quoque non ſentire nunc quiſpiam poteſt. Quæ vtraque & dici & conſiderari ſanè poſſunt. Non album item non ens eſt: nunquid igitur propterea omnia quæ ſunt, eſſe alba dicendum erit, ne quippiam idem de ente, & de non ente ſignificemus? an nihil impediet quin ex iis etiam quæ ſunt, aliquid album non ſit: omitto quòd ita alterum quoque negationem admitteret infinitum, niſi id quod antea dictum eſt, magis ex eo quod habet, vel non habet, vnumquodque eſſe eſt exiſtimandum. Quare etiam ens vel infinitum erit, vel finem habebit. Fortaſſe etiam non enti infinitatem attribuere abſurdum eſt. non enim vnumquodque quod finem non habet, infinitum dicimus, ſicvt neque inæquale, id quod non eſt. Accedit, quòd Deus vnus cùm ſit, finem quantum ad alium Deum ſpectat, non habet. ſi verò vnum tantùm eſt Deus, vnum etiam tantùm partes ipſius Dei erunt. Nam illud quoque abſurdum eſt, ſi iis quæ multa ſunt, accidit, vt ad ſeſe mutuò ſint finita ac terminata, propterea ſequi vt vnum finem non habeat. multa ſiquidem ſunt, quæ & multis & vni eadem inſint: nam etiam eſſe ipſum commune vtriuſque eſt. Abſurdum itaq; fortaſſe eſſet, ſi propterea non eſſe Deum aſſereremus, quia multa ſint, ne in hoc ſimilis eſſe ipſis videretur. Ad hæc quid prohibet, Deum, etiam ſi vnus ſit, finitum eſſe, & fines habere? quemadmodum etiam Parmenides vnum eſſe ipſum inquit:

A θέλοι δ' ἂν οὐδεὶς οὕτω τὸν θεὸν φάναι κράτιστον εἶναι, ἀλλ' ὅτι αὐτὸς ἔχει ὡς οἷόν τε ἄριστα, καὶ οὐδὲν ἐλλείπει καὶ τὸ εὖ καὶ καλῶς ἔχειν αὐτοῦ. ἅμα γὰρ ἴσως ἔχοντι, κἀκεῖνο ἂν συμβαίη. οὕτω δὲ διακεῖσθαι καὶ πλείους αὐτοὺς ὄντας οὐδὲν κωλύει ἅπαντας, ὡς οἴονται ἄριστα διακειμένους, καὶ κρατίστους τῶν ἄλλων οὐχ αὑτῶν ὄντας. ἔστι δ' ὡς ἔοικε καὶ ἄλλα. κράτιστον γὰρ εἶναι τὸν θεόν φησι. τοῦτο δέ τινων εἶναι ἀνάγκη, ἕνα τε πάντα ὁρᾶν καὶ ἀκούειν, οὐδὲν προσήκει. οὐ γὰρ εἰ μὴ καὶ τῇδ' ὁρᾷ, χεῖρον ὁρᾷ ταύτῃ. ἀλλ' οὐχ ὁρᾷ. ἴσως τοῦτο βούλεται τὸ πάντῃ αἰσθάνεσθαι, ὅτι οὕτως ἂν βέλτιστα ἔχοι, ὅμοιος ὢν πάντῃ ἔτι τοιοῦτος ὤν.

B διότι σφαιροειδὴς ἂν εἴη, ἀλλ' οὐχ ὅτι ἑτέραν τινὰ μᾶλλον ἔχων ἰδέαν, ὅτι πάντῃ ἀκούει καὶ πάντῃ κρατεῖ. ὥσπερ γὰρ ὅταν λέγωμεν τὸ ψιμμύθιον, ὅτι πάντῃ ἐστὶ λευκόν, οὐδὲν ἄλλο τι σημαίνομεν, ἢ ὅτι ἐν ἅπασιν αὐτοῦ τοῖς μέρεσιν ἐγκέχρωσται ἡ λευκότης· τί δὴ κωλύει οὕτω κἀκεῖ τὸ πάντῃ ὁρᾶν καὶ ἀκούειν καὶ κρατεῖν λέγεσθαι, ὅτι ἅπαν ὃ ἂν τις αὐτοῦ λαμβάνοι μέρος, τοῦτ' ἔσται πεπονθός; ὥσπερ [δὲ] οὐδὲ τὸ ψιμμύθιον, οὐδὲ τὸν θεὸν ἀνάγκη διὰ τοῦτο εἶναι σφαιροειδῆ, ἔτι μήτε ἄπειρον, μήτε πεπεράνθαι. σῶμά γε καὶ ἔχον μέγεθος πῶς οἷόν τε, εἴπερ τοῦτ' ἔστιν ἄπειρον, ὃ ἂν μὴ ἔχοι πέρας δεκτικὸν ὂν πέρατος. πέρας δ' ἐν μεγέθει καὶ πλήθει ἐν γίνεται,

Terminum enim & finem alicuius quidem eſſe neceſſe eſt,non tamen ad aliquid. Non enim neceſſe eſt vt quod habet finem, ad aliquid aliud finem habeat, tanquam finitum ad id referatur, quod deinceps ſubſequitur infinitum. Sed finitum eſſe, nihil aliud eſt, quàm extrema habere. quod autem extrema habet, vt ad aliquid ea habeat,neceſſe non eſt. aliquibus enim non accidit, vt finita ad ſeſe mutuò ſint. Præterea quod inquit de eo quod immobile eſt, & mouetur, ſimili modo vt ſuperiora, abſurdum fortaſſe eſt. neque B idem eſſe non moueri & immobile eſſe, exiſtimare quiſpiam poſſet: ſed non moueri eſſe negationem. quemadmodum etiam non æquale, quod de non ente etiam verum eſt. immobile verò de eo iam dici, quod quodammodo ſeſe habet, non ſecus ac inæquale. ſicvt etiam quieſcere. cui moueri contrarium eſt. nam negationes, quæ à primo exiſtunt, de contrariis etiam ferè dicuntur. Non moueri igitur de non ente etiam verum eſt, quieſcere autem non enti non ineſt. Simili modo autem neque immobile eſſe idem ſignificat. At iſte immobile eſſe pro quieſcere ſumit, & id quod C non eſt,quieſcere inquit, quia tranſitionem non habet. Sed ſicvt ſuperiùs etiam diximus, abſurdum fortaſſe eſt, ſi, quia aliquid non enti attribuimus,id de ente non eſſe verum dixerimus,præſertim ſi negatio fuerit, cuiuſmodi eſt non moueri, & non tranſire. Multa enim, vt etiam dictum eſt, de entibus ſimili modo dicuntur: alioqui verum non eſſet, ſi multa eſſe non vnum diceremus, eo quod non ens quoque non vnum eſt. In quibuſdam verò contraria videntur conuenire, cùm ex negationibus minimè loquimur. Neceſſe ſiquidem eſt, æquale vel inæquale eſſe quicquid multitudine & magnitudine conſtat: par item,vel impar, ſi numerus ſit, eodem modo moueri vel quieſcere, ſi ſit corpus. Præterea ſi etiam ea de cauſa D non mouetur Deus, & vnum, quia ea quæ multa ſunt, mouentur: dum in ſeſe mutuò tranſeunt, quid vetat quominus Deus quoque in aliud moueatur? Si autem ipſe non mouetur, quid vetat, partes ipſius omnia ambientis Dei in ſeſe mutuò moueri? quippe cùm vnum, quod Zeno inquit, multa natura eſſe videatur. Corpus enim Deum eſſe ſtatuit, ſiue vniuerſum hoc,ſiue quodcunque aliud ita appellet. Nam ſi eſſet incorporeus Deus, globoſus eſſe qui poſſet? Ita quidem ſanè, cùm nuſquam eſſet, neque etiam moueretur, neque quieſceret. At cùm ſit corpus, quin moueatur, ſicvt dictum eſt, nihil prohibet.

DE GORGIA.

NOn eſſe quippiam inquit, & ſi ſit, cognoſci non poſſe, & ſi cognoſci poſſit, eſſe tamen eiuſmodi, vt nequeat manifeſtari. Præterea ſe nequaquam quæ ab aliis fuerint dicta, compoſuiſſe, qui de rebus diſputantes, contraria, vt videntur, inter ſe ſibi ipſi pronunciant: dum alij vnum & non multa, alij è contrario multa & non vnum quiddam, ingenita, nonnulli genita eſſe omnia demonſtrant. Ipſe enim aduerſus vtroſque ratiocinatur in hunc modum. Neceſſe, inquit, eſt vt ſi quid ſit, neque vnum, neque multa,

neque ingenita, neque genita, id nihil ſit. Nam ſi quicquam horum non ſit, altera his oppoſita proculdubio erunt: hoc eſt, neque vnum, neque multa, neque ingenita, neque genita non erunt. Atque hæc partim vt Meliſſus, partim vt Zeno aggreditur, demonſtrare poſt primam propriam ſuam demonſtrationem, in qua neque eſſe, neque non eſſe quippiam inquit. Si enim non eſſe, eſt non eſſe, non ens nihilo minùs erit, quàm ens: quippe cùm non ens ſit non ens, & ens ſit ens. Quare nihilo magis eſt res eſſe, quàm non eſſe. at ſi ſimili modo, inquit, ſicvt non eſſe, eſt eſſe, oppoſitum non erit. Nam, ſi non eſſe eſt eſſe, eſſe vel non eſſe conuenit. Quare nequaquam ita, inquit, quippiam erit, niſi eſſe & non eſſe idem ſit. eſt autem idem, atque ita nihil quicquam eſt. Nam non ens non eſt, & ens entium, quandoquidē idem eſt quod non ens. atq. hæc quidē ipſa, ratio illius eſt.

Sed ex iis quæ dicit, nullo modo efficitur vt nihil ſit. Cùm enim inquit, ſi non ens eſt, non ens, & ens eſt ens, ſimili modo & non ens, & ens eſt, perinde ac ſi eſt abſolutè ac ſimpliciter ſumatur: id neque apparet, neque neceſſe eſt. Sed ſicvt de duobus ente & non ente alterum eſſe, alterum non eſſe dicitur. quapropter non ens eſſe, verum non eſt. Quia igitur non eſt, non ſequitur vt neque eſſe neque non eſſe vtrunque, neque alterum non ſit. At nihil erit, inquit, ſi non eſſe & eſſe ſimiliter ſunt. quandoquidem erit aliquid etiam non eſſe. Sed nemo eſt, qui non eſſe, eſſe prorſus dicat. Nam ſi non ens eſt non ens, non propterea efficitur vt ſimili modo vt ens, non ens ſit: quippe cùm illud ſit non ens, ens autem ſit: adde quòd, ſi etiam abſolutè ac ſimpliciter verum eſſet, cùm dicimus non ens eſſe, mirum quidem profectò id videretur: ſed ſi tamen ita eſſet, verùm ex eo magis eueniret, vt omnia eſſent, quàm non eſſent? Ita enim contrarium proculdubio efficeretur. Si enim & non ens eſt, & ens eſt, omnia ſunt: cùm & ea quæ ſunt, & ea quæ non ſunt, ſimili modo ſint. Non etenim eſt neceſſe, ſi non ens eſt, vt etiam ens non ſit. Verumtamen ſi ita etiam quiſpiam conceſſerit, vt & non ens ſit, & ens non ſit, nihilominus omnia eſſent, eo quòd ea quæ non ſunt, ex illius ratione proculdubio eſſent. Præterea, ſi idem etiam ſit & eſſe & non eſſe, neque ita magis vt non ſit, quàm vt ſit, conficietur. Nam quemadmodum ille inquit, ſi non ens, & ens idem eſt, non ens autem non eſt, etiam ens non erit. quamobrem nihil erit: ita quoque vice verſa dicere omnia eſſe non poſſumus. ſi enim non ens eſt, & ens eſt, omnia erunt. Poſt hanc rationem ſubiungit ſi ſit aliquid, eſt vel ingenitum vel genitum eſſe. ſi verò ingenitum, infinitum id fore ex Meliſſi enuntiatis ſumit. Infinitum autem nullo modo eſſe, cùm neque in ſe ſit, neque in alio: duo enim ita, vel plura eſſent: ipſum vnum quod eſt, & illud in quo eſſet. nunquam autem cùm ſit, neque eſſe prorſus, ex Zenonis ratione de ſede aſſeritur. Hac de cauſa igitur ingenitum non eſſe affirmat. quin etiam neque genitum: eo quòd nihil neque ex eo quod eſt, neque ex eo quod non eſt, gigni queat. Si enim ens, inquit, tranſmutetur, nequaquam ens ampliùs erit, ſicvt ſi non ens gigneretur, non ens ampliùs non eſſet. Sed neque ex non ente genitum eſt: ſi enim non ens non eſt, genitum nihil ex nihilo eſſet. Sin autem eſt non ens, quia neque ex ente quicquam gignitur, iccirco neque ex non ente.

Εἰ δὲ καὶ εἴη, φησὶν, ἐν πλείοσι καὶ ταὐτὸν, οὐδὲν κωλύει μὴ ὅμοιον φαίνεσθαι αὐτοῖς, μὴ πάντῃ ὁμοίοις ἐκείνοις οὖσι καὶ ἐν τῷ αὐτῷ, εἴ τι ἐν τοιούτου εἴησαν, ἀλλ' οὐ δύο εἶεν. φαίνεται δὲ οὐδ' αὐτὸς αὐτῷ ὅμοια αἰσθανόμενος ἐν τῷ αὐτῷ χρόνῳ, ἀλλ' ἕτερα τῇ ἀκοῇ καὶ τῇ ὄψει, καὶ νῦν τε καὶ πάλαι διαφόρως. ὥστε σχολῇ ἄλλῳ πᾶν ταὐτὸ αἴσθοιτό τις. οὕτως οὐκ ἔστιν, εἰ ἔστι γνωστόν, οὐδεὶς ἂν αὐτὸ ἑτέρῳ δηλώσειεν, διά τε τὸ μὴ εἶναι τὰ πράγματα λεκτά, καὶ ὅτι οὐδεὶς ἕτερον ἑτέρῳ ταὐτὸ ἐννοεῖ. ἅπαντες δὲ καὶ οὗτοι ἑτέρων ἀρχαιοτέρων εἰσὶν ἀπορίαι. ὥστε ἐν τῇ περὶ ἐκείνων σκέψει καὶ ταῦτα ἐξεταστέον.

A Quocirca ſi neceſſe eſt, vt ſi quicquam eſt, id vel ingenitum ſit, vel genitum: hæc autem fieri nequeunt: vt quicquam ſit, fieri etiam nullo modo poteſt. Præterea, ſi quicquam eſt, inquit, id vnum eſt, vel plura: ſi autem neque vnum, neque plura, nihil eſt. Si enim vnum eſſet, incorporeum id eſſet, ſicvt in Zenonis ratione dictum eſt. Si verò vnum ſit, nihil eſſe: quin neque etiam multa. Si enim vel vnum eſſet, vel multa, neque moueretur quidem quippiam, inquit. Si enim moueretur, vel non vnum amplius eſſet, vel non ſimili modo ſeſe haberet: ſed partim non eſſet: partim non ens genitum eſſet. ſi item mouetur, transfertur, ſi transfertur, non continuum ens diuiſum eſt, neque quicquam hac parte eſt. Quare ſi vndequaque B mouetur, vndequaque etiam diuiſum eſt: vndequaque igitur etiam non eſt. Deficit enim ea parte, inquit, qua diuiſum ab ente eſt; diuiſum loco vacui appellans, quemadmodum in Leucippi rationibus, quæ vocantur, ſcriptum eſt. Si igitur nihil hæ demonſtrationes conficiant, omnia eſſe. Oportet enim vt quæ cogitantur, ſint: & non ens, ſiquidem non eſt, ne cogitari quidem poſſit. Quod ſi ita ſit, nullum eſſe mendacium inquit, neque ſi in mari currus decertare quiſpiã dixerit, eo quod ea omnia etiam ſint. Nam quę videmus quoque & audimus ſingula, propterea ſunt, quia cogitantur. Si enim non propterea, cur ſicvt ea quæ videmus [illegible] ſunt, ita magis ea quæ videmus eſſe dicendum eſt, C quàm quæ cogitamus? quippe cùm, ſicvt illic multi eadem poſſent videre, ita hîc multi cogitare eadem poſſemus. Ac quæ quidem cogitantur, talia ſunt. Sed quænam ſint vera, incertum eſt. Efficitur ergo, vt etiam ſi quippiam ſit, cognoſci à nobis res minimè*queant. Si verò, inquit, cognoſci etiam poſſunt, quo pacto manifeſtare eas quiſpiam alteri poterit? Quod enim vidit quiſpiam, id quo modo oratione alteri explicabit? vel quomodo id alteri audienti & non videnti poterit manifeſtari? Nam ſicvt viſus ſonos non percipit: ita neque auditus audire colores poteſt; ſed ſonos tantummodo. Et dicit quidem ille qui loquitur, ſed non colorem, neque rem dicit. Quomodo igitur D rem quiſpiam ab altero vel verbis, vel ſigno aliquo alio ſibi exponi petit, quam ille conſiderauit? Qui enim colorem intuitus non eſt, ſed orationem audiuit, ignorat colorem, & orationem percipit: qui verò è contrario colorem inſpexit oratione auditu minimè percepta, non colorem, ſed orationem ignorat. Quare cogitari neque color, ſed videri, neque ſonus, ſed audiri tantummodo poteſt. Sed ſi etiam cogitari poteſt: & cognoſcit quidem ac recognoſcit ille qui dicit: qui audit tamen quo pacto idem cogitabit? non enim fieri poteſt vt idem in pluribus, & ſeorſum collocatis ſit. vnum enim duo eſſet. Verùm ſi etiam idem, inquit, in pluribus ſit, nihil obſtat quin id non ſimile diuerſis appareat, qui non prorſus ſimiles inter E ſe ſunt. Quin etiam in eodem quamuis vnum, & non duo ſint, idem non prorſus ſimile ineſt. quippe cùm neque idem ipſe ſimilia in eodem etiam tempore ſentire videatur: ſed alia auditu, viſu alia, & antea & nunc diuerſo modo percipiat, vt difficulter admodum omnia eadémque aliter ſentire quiſpiam queat. Ita fit vt etiam ſi cognoſci res poſſit, eam alteri explicare quiſpiam poſſit: propterea quod, & res ipſæ explicabiles verbis non ſunt, & idem prorſus quod alter, cogitare poteſt nemo. Sed omnes quidem etiam hæ veterum aliorum dubitationes ſunt. Quocirca hæc quoque perpendenda atque excutienda in diſputatione de illis videntur.
